It is likewise strange to hear the uncompromising air of finality with which opponents of foreign aid remark, "The giveaways have to stop. Charity begins at home." For them, there ends the argument. It is difficult to understand why, for all the statement claims is that charity begins at home. It doesn't end there. It is not completed and perfected until it reaches out to the farthest ends of the earth to all who are in need.

The law of love, the law of charity in all great religions is stated tersely by Christ, "Love thy neighbor as thyself." And lest we wonder who is our neighbor, He told the parable of the Good Samaritan. The lesson of that story is that every man is our neighbor.

Moreover, to communicate to us the importance and the practical nature of such love of neighbor, He went further and spelled out a graphic account of the judgment: "I was hungry and you gave me to eat; I was thirsty and you gave me to drainк * * * naked and you covered me. * * * Amen I say to you, as long as you did it for one of these, the least of my brethren, you did it for me" (Matthew 25:35–40). It is on this basis that at the end of time we as individuals will be judged. We have no reason to believe that nations will be judged differently—perhaps sooner than we think.

But the objection has often been raised that charity is the responsibility of the individual. Such an attitude ignores the fact that the state comes into being to fulfill for us collectively what we cannot do alone. In our vast world, we cannot reach all who need and have a claim on our charity and, thus, the state acts as our agent. When it gives, it is ourselves giving.

But charity is not fulfilled by mere giving. Emergency will dictate that food and other necessities be distributed quickly and freely. But continued alms tend to destroy the basic self-respect and initiative of the recipients. And by a strange and universal quirk of human nature, the donors come to be hated.

Every effort, therefore, must be made to develop methods and programs which also fulfill the needs of the human spirit. When food, clothing, and other necessities are distributed, the beneficiaries should be required to do some work for themselves or their community. To plan such works, to carry them out, to reward willing cooperators, may seem burdensome, but it would certainly increase the recipient's self-respect and aid in developing self-help and improvement.

This idea is not new. It has been successfully carried out. Government and private agencies could develop these methods. We feel sure that Congress, the United States people, and the peoples of the recipient nations would not object to such practical and fruitful charity.

Alaska Friend

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. BARTLETT. Mr. Speaker, an editorial appearing on June 1 in the Fairbanks (Alaska) News-Miner, put into words the gratitude felt by Alaskans toward Senator NEUBERGER for his effective assistance in connection with inclusion of Alaska in the highway bill as it passed the Senate. Under leave to extend my remarks, I should like to include that editorial here:

HATS OFF TO THE OREGON SENATOR

Senator RICHARD NEUBERGER, of Oregon, has submitted a very important amendment to the Federal highway construction bill now being considered by Congress. He tacked on a provision that gives Alaska a fair share of the benefits as well as a share of the special taxes that will be levied. As things stood before he wrote this amendment, Alaska was destined to get the taxes, but none of the benefits.

There is a strong possibility that his amendment will be clipped off the bill before is is passed by both Houses. Nevertheless, Senator NEUBERGER has proposed this aid to Alaska, and he is fighting for it. Maybe he'll win.

We doff our hats to the Oregon Senator. He is standing up in Congress for a voteless Territory, and he certainly can be counted as a real friend of Alaska.

Joseph Capsin

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. THOMPSON of Texas. Mr. Speaker, some years ago a Navy veteran, Mr. Joseph Capsin, faced total disability due to severe arthritis. Once he became convinced that his condition was apparently incurable, at least by the medical standards which then prevailed, he made up his mind to put his long bedridden hours to useful purpose. From his modest home in Honolulu he undertook what has become a prodigious correspondence in behalf of those who might need his assistance. Anyone who is downtrodden, or otherwise in need of a friend, particularly if he is a veteran, has only to make his case known to Joe Capsin to secure the active and vigorous asistance of Joe and his remarkable ability to present each case to someone who will help to carry on the fight.

On the 19th of April 1956 the Oahu Chapter No. 1, Disabled American Veterans, passed a resolution, the text of which reads as follows:

RESOLUTION

Whereas Joseph Capsin, as chairman of the committee on employment security, Oahu Chapter No. 1, DAV, has rendered outstanding service to Disabled American Veterans; and

Whereas despite his own physical handicap which keeps him confined to bed, said Joseph Capsin has brought good cheer and hope to Disabled American Veterans in need: Now, therefore, be it

Resolved by the Disabled American Veterans, Oahu Chapter No. 1, That Joseph Capsin be and is hereby highly commended for his meritorious work which he has performed for the benefit of his fellow DAV members as chairman of the committee on employment security; and be it further

Resolved, That Joseph Capsin be and is hereby recommended for the award of the certificate of merit to be issued by the national commander of the DAV; and be it further

Resolved, That copies of this resolution be forwarded to said Joseph Capsin at 426 Namahana Street, Honolulu, T. H., and to the national commander, DAV, national headquarters, Cincinnatti, Ohio.

Adopted in Honolulu, T. H., this 19th day of April 1956, by Oahu Chapter No. 1, DAV, Department of Hawaii.

WALTER SIN NING WONG,
Adjutant, Oahu Chapter No. 1.

Approved:

AH KEE LONG,
Commander, Oahu Chapter No. 1.

Joe's reaction to the resolution is quite typical of the man. He wrote me the following letter which he asked that I place in the CONGRESSIONAL RECORD so that it would reach the attention of those who he feels played a part in the service he has rendered mankind:

HONOLULU, T. H., *June 13, 1956.*

Hon. CLARK W. THOMPSON,
Member of Congress, Committee on Agriculture, House Office Building, Washington, D. C.

DEAR CLARK: I have been honored more than I deserve by Oahu Chapter No. 1, DAV, Honolulu, for my casework in behalf of various of their members. The chapter has recommended me for the award of the certificate of merit to be issued by the national commander of the DAV.

Much as I appreciate this recognition, I want even more to share it with yourself, with your colleagues and others who helped me nail these cases down.

May I say "Mahalo" and "Aloha" to the wonderful people whose names follow, without whose strong and ready hands I could have done nothing:

Senators: Wayne Morse, Alexander Wiley, Estes Kefauver, William Langer, Barry Goldwater, Hubert Humphrey, Lister Hill, Lyndon B. Johnston, Paul H. Douglas, Ralph Flanders, A. S. Mike Monroney, Clinton Anderson, Stuart Symington, James H. Duff, Robert S. Kerr, J. William Fulbright, Dennis Chavez, John J. Sparkman, Olin D. Johnston, Charles E. Potter, Thomas C. Hennings, Warren G. Magnuson, "Scoop" Jackson, Albert Gore, Mike Mansfield, James E. Murray, Richard L. Neuberger, George A. Smathers, William F. Knowland, Arthur V. Watkins, Matthew M. Neely, Margaret Chase Smith, Homer E. Capehart, the late Alben W. Barkley, Joseph R. McCarthy, John J. Williams, William E. Jenner, Warren G. Magnuson, George W. Malone, John O. Pastore, Walter F. George, Richard B. Russell, Theodore F. Green.

Representatives: Yourself; George P. Miller, John F. Shelley, Clair Engle, Charles S. Gubser, Harlan Hagen, Chet Holifield, Cecil R. King, John A. Blatnik, Philip J. Philbin, John Lesinski, Wayne L. Hays, Victor Wickersham, Aime J. Forand, Frank M. Karsten, John W. McCormack, James Van Zandt, Joseph W. Martin, Jr.; Lenore Sullivan, John W. Byrnes, John D. Dingell, James P. S. Devereux, E. L. (Bob) Bartlett, John E. Fogarty, Charles M. Price.

Governors: Edwin C. Johnson, James Folsom, Frank Clement, Adlai Stevenson.

Columnists: Drew Pearson, Joseph C. Harsch.

Cartoonists: Daniel R. Fitzpatrick, Ross A. Lewis, Herblock, Walt Partymiller.

And from Honolulu: Hon. Delbert E. Metzger, my good friend and legal adviser; Ellsworth W. Taylor, my good friend and tutor in history and English; Earl J. Dye, of Ellen Dye Candies, my good friend and supporter;

and finally, there are many others, but the list is too long.

With warm regards and all good wishes.

Sincerely,

JOE CAPSIN.

It is of interest to Members of Congress to know that the recommendation of the Oahu Chapter has been forwarded to the national commander, DAV, Maj. Gen. Melvin J. Maas, United States Marine Corps, retired, who was for many years a Representative in Congress from the State of Minnesota.

Fancy Footwork on the Washington Post and Times Herald

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, when the Washington Post and Times Herald failed to carry Drew Pearson's column, which had today's dateline and which appeared in other papers, I began to check into the situation. I believe I have come up with some information which my colleagues in the House may find interesting.

First, I want to point out that I am very often in agreement with the Washington Post and Times Herald, which is, as this newspaper itself so often and so proudly points out, 1 of the country's 10 leading newspapers. Secondly, the vice president and executive editor of this great newspaper, James Russell Wiggins, was president last year of the Commission on Freedom of Information of the American Society of Newspaper Editors.

But what happens when the Washington Post and Times Herald, which has run many editorials praising the Moss committee for its stand on the uninterrupted flow of news relating to the activities of the Federal Government, itself refuses to print "all the news that is fit to print"?

This is a very interesting point and it is raised by the fast footwork of this great newspaper in substituting a local news column by Pearson for his regular column for today which appeared in such newspapers as the Wheeling (W. Va.) News-Register. Some of these other newspapers that carried Pearson's column today have not made such a career of freedom of the press as the Washington Post and Times Herald has.

We are getting along toward elections now and I remember well that during the last campaign the Washington Post and Times Herald chose that particular time to drop for several days the biting cartoons of its world-famous Herblock which happened to favor the Democrats. Perhaps now, despite its lip-service to the cause of freedom of the press, lip-service which has taken in a lot of people and helped greatly in building this newspaper's vast national prestige, the Washington Post and Times Herald is getting ready for this year's campaign by dropping other columns with which it disagrees. The excuses made by this newspaper for dropping Herblock were, I recall, quite pitiable and unworthy.

It is with sorrow then, and some anger, that I submit for the information of my colleagues Drew Pearson's column which they, otherwise, would not have an opportunity to see. After all, the CONGRESSIONAL RECORD is really an organ of free expression not just some of the time, or part of the time, but all of the time. This freedom of expression, Mr. Speaker, is basic to the freedoms which are our glory and our great heritage—freedoms which we must ever maintain for all, whether we agree with these opinions or not:

(For release, Monday, June 25, 1956)

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

WASHINGTON.—The most important question, next to the status of Eisenhower's health, is whether the American people are getting the true facts about his health.

There have been so many conflicting statements by distinguished doctors, some of them at the top of their profession, regarding, ileitis that the public is confused. It's quite possible also that the President himself may be confused.

To ascertain whether the public has been getting the whole truth, here is a review of the various health incidents in the President's life and the public statements made about them by his personal doctor, Maj. Gen. Howard Snyder and his press relations expert, Jim Hagerty.

On August 4, 1953, a statement that Eisenhower had high blood pressure was flatly denied by Hagerty. Yet in 1948, Kay Summersby, the British WAC who was Eisenhower's secretary during the war, wrote in her book, Eisenhower Was My Boss, on pages 30 and 167: "He was inclined to suffer from high blood pressure and neuritis was likely to visit his shoulder." "The general suffered bad headaches and complained about his blood pressure."

The neuritis, now diagnosed as bursitis, is still with the President, while high blood pressure is contributory to a heart condition.

SECRET ILLNESS IN PARIS

In May 1952, just before Eisenhower was to leave Paris, he suffered a 10-day siege of what was probably ileitis. Several high Republicans were in Paris to see him to prepare for the GOP convention, but were told Ike was busy with final plans concerning the defense of Europe, could see no one. Meanwhile he was running such a high fever that he was delirious and talked of moving troops and calling General Staff meetings.

Meanwhile, newsmen who did not know he was sick wanted a farewell press conference; the GOP politicians were getting restless; and General Ridgway was soon to arrive. A public appearance became inescapable.

Finally a French specialist was called in to assist Dr. Snyder. He took Ike off antibiotics, and shortly thereafter the general was well enough to ride to the airport to welcome Ridgway, though wearing dark glasses. His car was rushed to the privacy of an airplane hangar immediately afterward to let Ike rest.

This incident was never revealed to the public, but it was known to the doctors who pronounced him fit from "head to toe."

DIGESTION IN DENVER

On September 24, when Ike was first stricken in Denver, Dr. Snyder first announced at 8 a. m. that the President had suffered a "digestive upset." At noon the summer White House announced the President was suffering from "indigestion."

It was natural for Dr. Snyder to suspect indigestion, because Ike had a long history of what is now publicly called ileitis. Not only did it occur in Paris but in Key West, and several times in Washington. Later, it was admitted at the summer White House that Snyder had noted the "first sympton" of a heart attack as early as 2:45 a. m. though at 8 a. m. he called it a "digestive upset."

On February 15, 1956, immediately after Dr. Paul Dudley White's preduction that Ike could carry on "5 to 10 years" of active life, Dr. Samuel Levine, of the Harvard Medical School, challenged that anyone could predict a heart patient's life. Whereupon White agreed with Dr. Levine and pointed out that he had hedged his own prediction with such qualifying phrases as "uncertainties of the future," "chances," and "should." The public, however, didn't get Dr. White's fine print.

On May 12 when Eisenhower was given his "head to toe" physical examination, he was pronounced in splendid condition. Not a word was said about his long history of stomach upsets, now called ileitis.

On June 10, Dr. Snyder blandly told newsmen that Ike had had ileitis before. When newsmen inquired how the doctors could make an accurate diagnosis so rapidly, it was explained that they were familiar with his previous trouble.

On June 14, when newsmen asked Hagerty why the ileitis condition hadn't been given to the public after the "head-to-toe examination" he replied: "It didn't show up," and he referred newsmen to a previous statement by Snyder.

"In the head-to-toe examination," Snyder had previously explained, "there was no inflammation of the ileum."

Yet Snyder had cared for Ike in repeated cases at Key West, in Paris, in Washington, and had blandly admitted to newsmen that the President had a history of ileitis.

That is part of the record of how the American people have not been told the truth about the President's health. It's strongly suspected that perhaps the President himself has not been told the entire truth either.

The President's Health

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. DINGELL. Mr. Speaker, because of the great interest in the matter, I ask permission to insert in the CONGRESSIONAL RECORD an article by Drew Pearson and one by Walter Lippmann on the President's Health. The articles follow:

[From the Washington Post and Times Herald]

PRESIDENT'S HEALTH IS PEARSON TOPIC

(By Drew Pearson)

Most American newsmen, along with this writer, were remiss in not reporting the real health of President Roosevelt when he ran for reelection in 1944. Less than 6 months after that reelection he was dead.

There were some legitimate reason's why F. D. R.'s health was not reported, among them wartime censorship, the fact that we did not see him much during the war, plus a natural hesitancy to report the unpleasant possibility that a man may die in office.

But when the Presidency of the United States influences, as it does, the peace and prosperity of the world, it is essential that American voters know the real facts of health, even beyond the medical bulletins, before they nominate or elect any man to the most important office in the world.

President Eisenhower himself has frankly expressed grave doubt about his health, even while the politicians, exactly as in Roosevelt's case, have been determined to make him run again.

Accordingly, here are some of the facts beyond the brief medical bulletins regarding the health of the man for whose speedy recovery the American people pray today.

Before the President was given his emergency operation it was necessary to administer a vitamin K, intravenously, in order to thicken his blood in preparation for the surgery. This was because he has been given an anticoagulant (Dicumarol) ever since his heart attack in Denver, which makes the blood so thin that if care is not taken there is a danger that it may seep through the body tissues.

If the thinning effect of the anticogulant had not been counteracted there could have been serious, even fatal, bleeding during the operation.

ANTICOAGULANTS

The administration of Dicumarol at Denver, though it can be dangerous, is considered one of the most important factors in Ike's heart recovery. Dicumarol was first recommended by Col. Thomas Mattingly, the heart specialist of Walter Reed Hospital, who had recently been studying at the Cornell Medical School under Drs. W. T. Foley and Irving S. Wright, two of the Nation's top experts on anticoagulants.

Dr. Foley had worked in a Japanese prison camp during the war, where he found that the nonfatty prison diet almost compeltely eliminated heart disease.

Dr. Wright, who his past president of the American Heart Association and is in charge of the vascular research section of the New York Hospital-Cornell Medical Center, recently gave significant testimony regarding anticoagulants before the Senate Appropriations Subcommittee.

At the beginning of his testimony, Dr. Wright noted that anticoagulants have been used on thousands of heart patients.

"Included in these," he observed, "is the President of the United States."

At one point, Senator LISTER HILL, of Alabama, asked: "Well, now, these anticoagulants you only use where the patient has had some form of thrombosis?"

"No," replied Dr. Wright. "We use them mostly after they have had one or more attacks, because it is not possible at present to predict with accuracy whether they are going to have an attack in the future."

Dr. Wright acqnowledged that administering anticoagulants can be dangerous.

"An anticoagulant should never be given except under careful laboratory and clinical supervision," he warned. "Because if a patient takes an excessive amount of anticoagulants he may have hemorrhage."

Dr. Wright sounded one optimistic note when he said:

"Though the use of anticoagulants for the acute episode is not completely established because of lack of time and study, there is strong evidence that following their episode these patients tend to live with fewer complications, and probably longer when they are on anticoagulant therapy."

While the Nation prays that the anticoagulants will reduce the complications, the public must realize that the chance of complications does exist. Any doctor who says otherwise is mixing politics with medicine.

[From the Washington Post and Times Herald of June 21, 1956]

TODAY AND TOMORROW

(By Walter Lippmann)

THE DOCTORS AND THE PRESIDENCY

The President, it appears, is taking it as a matter of course that the country is expecting him to decide once more whether he will run again. It may be useful to remind ourselves that the situation in which he finds himself is peculiarly difficult for him. For the doctors who must advise him, and for the press which must keep the people informed, the root of the difficulty is not so much medical as it is constitutional.

The President is the key figure in the American system; without his active guidance and control the system does not work. The President is elected for a fixed term of 4 years, and if he becomes in some measure incapacitated, there is no one to take his place. When, therefore, the President has had a serious illness, the crucial question is not his life expectancy. If he dies, the system provides that the Vice President take over. The crucial question is whether he can count on his energy and his personal powers over a period of 4 years.

For the system, as now established, makes no provisions for invalidism or for failing powers. This is what is in the back of people's minds when they listen to the medical opinions of the doctors. They are waiting to be reassured about the President's health for the next 4 years.

It is here that a misunderstanding, such as it is, has arisen between the doctors and the public. The doctors have been talking about the President's recover from his heart attack and from his operation. The politicians, who are playing for very high stakes, have been treating what the doctors say as an expert verdict on the President's fitness to carry the burden of the Presidency for a second term. These are not one and the same.

Owing to the fact that the President has a fixed term of office and that there is no one to substitute for him if he cannot carry the burden, the doctors are being pressed to make a prognosis which must, in the nature of things, be highly speculative. They are expected to say not only whether he has recovered from his heart attack and is recovering from the ileitis but really whether he will be in full vigor during a second term. If this were a parliamentary government on the British model, this question would not arise. The head of the Government would not be committed to a fixed term, and therefore it would not be necessary to do any medical guessing about what will happen in the future over a period of years.

The question does arise here, and in the case of President Eisenhower, given his age and medical history, it is a momentous question. The American system, as it works now in practice, cannot do with a sick or a failing President.

It can be said that the system is more defective than it needs to be, and that some of the worst features of it—as they were exhibited when Garfield and Wilson were disabled—could be remedied. It should become the established practice that when the President is ill, the Vice President takes over until the President recovers. There is little doubt that this is what the authors of the Constitution intended.

Any sick President—it might have been Eisenhower himself—can put this constitutional arrangement into effect. He can invite the Vice President to sign official documents, let the action be challenged in the courts, and have its validity tested promptly in the Supreme Court. The Vice President would not, of course, be sworn in as President. He would remain the Vice President, temporarily discharging the powers and duties of the President.

The alternative is the device of the regency, as operated by Mr. Sherman Adams during the two illnesses of President Eisenhower. This device has worked well enough because the President has not been badly incapacitated for a long time. The device would not work at all well in case of prolonged disability, such as invalidism or the failing powers of age. For the country would not long like the office of President administered by men who have not been elected to any office.

But when all has been said and done about remedying the gross defects of the system, it will still be true that there is no substitute in a presidential system of government for a strong President in the full possession of his powers. This truth is the point of reference for the decision that must be made by the President, and, if he decides to run, then later on by the country.

From what the President said when he was making his first decision we know that after the doctors have said all that they are able to say, he has no choice but to reach his conclusions by applying his commonsense, informed by his experience of the office of President. The country will have to make its judgment in the same way.

Custer's Last Stand

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. O'HARA of Illinois. Mr. Speaker, today is the 80th anniversary of a tragic and historic event. It was 80 years ago today that Custer with 224 men under his command fell in combat with the Sioux Indians, one of the few times in our natiinal history when an entire command of American soldiers was destroyed, without a single survivor left to tell the story.

That the story of Custer's last stand has lost none of its interest to Americans is evidence by the Chicago Tribune of this morning devoting the larger part of four columns on its first page to a reproduction of Walter S. Oschman's famous painting and the beginning of John R. Thompson's account of the battle of June 25, 1876, which by unanimous consent I am extending my remarks to include, as follows:

LAST STAND OF CUSTER BATTLE AGAINST ODDS

(By John H. Thompson)

Mrs. Elizabeth Custer, astride her own horse, watched beside her husband, Lt. Col. George Armstrong Custer, mounted on his favorite sorrel, Vic, as the 7th Cavalry Regiment, almost 600 strong, rode out of Fort Abraham Lincoln in the Dakota territory.

The date was May 7, 1876. The band played "Garry Owen," the 7th's new anthem, and then broke into "The Girl I Left Behind Me," bringing tears to the eyes of wives who lined the street. For a great many, including Mrs. Custer, it was the last time they saw their husbands.

BATTLE 80 YEARS AGO

On June 25, 80 years ago today, Custer, not yet 37, known as the daring boy general of the Civil War, made his last stand on the bluffs above the Little Big Horn River in southeastern Montana. His foe, the Teton Sioux Indians, annihilated a major portion of his command. Custer reverted to his permanent rank of captain after the Civil War and then was promoted to lieutenant colonel.

That battle, one of the most controversial in the Army's history, originally had been called, inaccurately, Custer's massacre. It was, in fact, a true battle, a last stand against what has been called the finest light cavalry in the world, the plains Indians.

Custer was found amid a heap of dead soldiers on a hill. With him died 224 other men. Not one soldier who was with Custer that afternoon survived to tell the story, but 2 miles away other members of the regiment held out until relieved by a column of infantry.

CUSTER GIVEN LEEWAY

Brig. Gen. Alfred H. Terry, commanding the department of the Dakotas, had expected to find the Sioux camped near the junction of the Big Horn and Little Big Horn Rivers. Custer's cavalry was to hit them from the south, pinching them against Terry's slower moving infantry, coming down the Yellowstone and Big Horn Rivers from the north.

But Custer's orders gave him considerable leeway. It was estimated that he would face 1,000 Sioux, or at the most 1,500. What lay ahead were 2,000 tepees, and 4,000 to 8,000 warriors.

Custer did not know that he was following the trail used by reinforcements of Chief Crazy Horse. Only a week before they had routed another Army column on the nearby Rosebud River, a defeat unknown to Custer.

Early on June 25, believing his dusty column moving north had been spotted by the enemy, Custer split his command into four sections and pressed forward. He told his officers he was certain the 7th cavalry could take care of anything. He ignored the warnings of his Indian scouts.

RIDES IN SUPPORT

Maj. Marcus A. Reno was given Troops A, M, and G, told to ford the Little Big Horn to the left (west), and attack with his 112 men when he came in sight of the teepees. Capt. F. W. Benteen, with Troops H, D, and K, was to sweep far out on Reno's left flank.

The pack train was left with 85 soldiers of Troop B for escort, while Custer rode off with Troops I, F, C, E, and L, on Reno's right, but separated from him by the river and high bluffs. Custer said he would support Reno with the main column.

Coming in sight of the Indian village, Reno was surprised at its apparent strength. Before him lay the lodges of the Hunkpapa, most fierce of the warrior societies, under Chief Gall, the Santee, Ogala, Brule, Minneconjou, Sans Arc, Blackfeet, and Cheyenne.

"Left front into line" called Reno. "Load pistols. Gallop."

"And away we went down the valley," Trooper John (Big Fritz) Siversten was to recall later.

TAKEN BY SURPRISE

Other members of Reno's command remember seeing Custer, "Yellow Hair" or "Long Hair" as his Indian enemies called him, with others on the high bluff across the river, cheer the charge and wave their hats, before they rode off and disappeared.

Gall, Chief Rain in the Face, and other Indian warriors later said the attack took them by surprise—but this is doubtful. While they rushed to their grazing horses, all was confusion in the village as old men, women, and children fled south.

Reno, new to Indian fighting, and apparently worried over the size of the enemy force, halted his charge short of the village. He ordered his men to fight dismounted. They had single shot carbines and pistols, while the Indians had new Remington and Winchester repeating rifles in addition to bows and arrows.

Had Reno held on with his charge, say the Indian veterans, he would have split the village, leaving it wide open to an attack by Custer from the north. His halt gave the Indians time to form their lines.

RENO ORDERS RETREAT

Reno fell back into a strong position in timber, near the river. As the Indians advanced, he ordered a withdrawal across the river to the opposite high bluffs. Confusion resulted, and in the retreat he lost 35 men.

As the Indians were pressing their attack, Chief Gall received word of Custer's presence, north of the village, where he had come under attack from forces led by Crazy Horse, Rain in the Face, Red Horse, Two Moons, and other chiefs.

Leaving a covering force to contain Reno, Gall and his whooping warriors raced back to join the attack on Custer. About this time, some of Reno's people heard two volleys fired, 5 miles downstream, in Custer's direction, in what was later interpreted as a distress signal.

It was about this time, too, that Custer's last message got through. It was to Benteen, on the far left flank, and it said: "Benteen, come on. Big village. Be quick. Bring packs."

INDIANS LAUNCH ATTACK

Benteen came on, at a gallop, but was only able to reach Reno's beleagured forces, pinned down by Indian sharpshooters. Custer remained alone downstream.

In later years, Chief Gall told how the Indians formed their lines on a ridge, lower than Custer's, and then launched their final attack.

Gall hit Custer's left flank, using both mounted and dismounted fighting men, while Crazy Horse, Crow King, White Bull, Sitting Bull, Hump, and other chiefs drove hard against the center.

Some writers, trying to reconstruct the battle, have it that the battle lasted from noon until evening. Gall and other chiefs said that Custer's last stand was over in 35 minutes, before the warriors cut their scalp locks and others looted and mutilated the dead.

Custer escaped mutilation. Among the dead were his younger brothers, Thomas and Boston, and a New York war correspondent, Mark Kellogg.

With Custer disposed of, the Indians turned their full force on Reno and Benteen, for 2 more days. The Indians were readying for the kill on June 27 when they spotted the dust of Terry's feared infantry, and escaped to the south.

Many reasons have been offered for the Custer tragedy. Captain Benteen [later a general], had this to say:

"Too many Indians, good shots, good riders, and the best fighters the sun ever shone on."

Foreign-Aid Program Should Be Scrutinized

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I am including at this point an article that appeared in the Beloit Daily News on the subject of our foreign-aid program.

The overwhelming evidence is that our people are demanding that this program be carefully examined in the light of present-day world conditions.

The article follows:

[From the Beloit Daily News of June 16, 1956]

FOREIGN AID PROGRAM SHOULD BE SCRUTINIZED

Although the Senate Foreign Relations Committee upped the foreign-aid bill by some $715 million more than the House proposed, supporters of program are not so sure that the full Senate will give its approval.

The drastic House slash in President Eisenhower's foreign-aid proposal cannot be laid entirely at the door of isolationists, economizers or those who may be seeking political capital because it is an election year. The margin of passage of the bill was too large for that.

There is ample evidence "back home" that a growing number of citizens is not satisfied that we are getting our money's worth out of the foreign-aid program, not especially now, but for some months past.

When the program first was launched it was designed to get European countries on their feet economically, and to help rearm the free world in the face of Russian, and later, Chinese threats.

Now that Europe is in good shape and the free world is partially rearmed, some consideration should be given to the present world situation with Russia inaugurating seductive manners along with new economic and political approaches.

There are a number of questions that need answering. How wise is the present emphasis on military aid, especially because of the shift to nuclear weapons? Would it be more desirable to place less emphasis on grants and more on long term loans? Should we step up our technical assistance programs (point 4) which are generally considered one of our more successful aid ventures?

Should we give more attention to short term projects—those that are more immediately beneficial—such as streets, highways, bridges, sanitary developments—rather than long term projects like hydroelectric and industrial plants? What should our attitude be towards neutrals?

Proposals have been made for a comprehensive, nonpartisan study of our entire foreign aid program. It is too late now to expect such a study would produce results applicable for this present measure. But a study now would be beneficial for next year.

Candidates in either party who stand for an overhauling of our foreign aid will find voters receptive.

Fifteenth Anniversary of Deportation of Over 40,000 Lithuanians by the Soviet Union

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following petition submitted to President Eisenhower by the Lithuanian-American youth organizations calling attention to the cruel and unjust deportation of more than 40,000 Lithuanians from their homeland by the Soviet Union:

PETITION

JUNE 14, 1956.

The Honorable DWIGHT D. EISENHOWER,
President of the United States,
The White House, Washington, D. C.

On this sad date, June 14, commemorating the 15th anniversary of the cruel deportation of more thaln 40,000 Lithuanians from their native land to suffering and death in the Siberian wastelands, we the undersigned members and supporters of the Lithuanian American Youth organizations, consider it our duty to submit respectfully to you on this occasion the following statement:

On June 15, 1940 the Soviet Union, by force and in violation of treaties, invaded and occupied, and continues to occupy and despoil Lithuania. After 1 year, mass deportations of the Lithuanian people to Siberia and other Asiatic regions of the Soviet Union were begun. As a result of these deportations up to the present day more than 150,000 Lithuanians have been banished from their homeland and imprisoned in slave-labor camps of these regions.

Many of those deported died because of hunger, intense cold and overwork. However, numerous letters from Siberia which are being currently received in the United States show that a part of those deported are still alive and that they are suffering intensely under difficult conditions in these desolate areas of the Soviet Union.

Therefore we respectfully petition you, Mr. President, and the Government of the United States of America to explore all possibilities for righting the wrongs done to Lithuania and to take all possible measures to:

1. Restore sovereign right and self-government to Lithuania;

2. Return as soon as possible our deported parents, sisters, and brothers to their native country of Lithuania.

Following are the signatures of 38,324 members and supporters of the Lithuanian American Youth organizations.

Kennedy for Vice President?

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I am happy to call to the attention of the Members of Congress a very noteworthy editorial appearing in the Chicago Daily Sun-Times today.

I know that it reflects the feelings of the majority of the citizens of the great Commonwealth of Massachusetts, who, regardless of political party, are proud of the record that Senator KENNEDY has established in the State and the Nation.

The editorial follows:

KENNEDY FOR VICE PRESIDENT?

There has been increasing talk that if Adlai Stevenson is the Democratic presidential nominee, his running mate may well be Senator JOHN F. KENNEDY, of Massachusetts.

To the practical politician the possibility of a Stevenson-Kennedy ticket has a certain allure. For one thing, KENNEDY is a Roman Catholic, and, as some of the politicians see it, KENNEDY's presence on the ticket might tend to offset the antagonism toward Stevenson that arises from his being a divorced man.

Moreover, many politicians of both parties feel that the day is now past when a Catholic, particularly one seeking the vice presidency, would necessarily be a handicap to a national ticket. In fact, they feel that under certain circumstances such a selection might be helpful.

But apart from such considerations, the politicians who look favorably on KENNEDY cite his youth—39. He is only a few months younger than Senator RICHARD M. NIXON, of California, was when he received the Vice Presidential nod in 1952.

In addition, KENNEDY comes from the strategically important Bay State which, after years of voting for Democratic presidential candidates, went overwhelmingly for Dwight D. Eisenhower in 1952.

Yet, despite Ike's better than 200,000-vote margin over Adlai in Massachusetts, KENNEDY managed to beat one of Mr. Eisenhower's principal supporters, the then Senator Henry Cabot Lodge, by 70,000 votes. Many Democrats feel that KENNEDY's unquestioned personal popularity in his home State might serve to return it to Democratic ranks in 1956 if he were No. 2 man on the ticket.

That belief may be no more than wishful thinking. For just as it has been proved that a popular President cannot transfer his glamor to a congressional candidate he wants elected, neither is there any evidence that a Vice President who is popular in a given State could carry it for his running mate who might not be as popular or even downright unpopular.

Nevertheless, there is no doubt that young KENNEDY has an extremely pleasant personality with a broad appeal. He is respected by many business leaders no less than by many labor leaders. Rank-and-file political workers are drawn to him and, conversely, so are many intellectuals.

His recent address at Harvard commencement ceremonies have been favorably commented upon by the intellectuals and scholars whose cause he defended against attacks by anti-intellectual politicians.

"The political profession," KENNEDY told the graduates of his alma mater, "needs to have its temperature lowered in the cooling waters of the scholastic pool. We need both the technical judgment and the disinterested viewpoint of the scholar to prevent us from becoming imprisoned by our own slogans."

KENNEDY is himself a scholar of some ability. His recent book, Profiles in Courage, is a scholarly study of United States Senators who had the intestinal fortitude and firmness of principle to risk sacrificing their careers by supporting causes that were unpopular—though right—in their day.

But a politician, to remain in office, has to be a politician first. It was only when he was laid up for many months, recovering from an operation to correct World War II combat injuries, that KENNEDY found time to write his book.

His frank admission at Harvard that scholars might be better trusted than pressure-beset politicians to find real solutions to such matters as the long-range farm problem was itself a courageous concession.

The fog of anti-intellectualism that has lately gripped this country is contrary to American tradition, as KENNEDY pointed out. In trying to help to lift it, he was rendering the country a real service.

It is easy to see why the youthful KENNEDY appeals to so many ordinary citizens—and to the politicians of his party.

"Snow Job" Seen To Run Ike Again

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. DINGELL. Mr. Speaker, a very interesting chronicle of how a sick man is being driven by desperate politicians to an arduous 4 years of toil at a job for which he has neither enthusiasm nor health was written in the Washington (D. C.) Post and Times Herald of Wednesday, June 20, 1956, by Mr. Drew Pearson.

That man is, of course, Dwight D. Eisenhower, and the task is the Presidency. Parenthetically it is a job which would probably last longer than the life expectancy of one who has undergone two such serious attacks according to standard insurance mortality tables. The desperate men are the White House staff and the Republican Cabinet members and politicians who see their hold on their jobs slipping with each new attack the President undergoes, and weakening as the public awareness of the seriousness of the President's two sicknesses increases.

While I sympathize with these men, it is said to have one's job depend on so slender a thread, nevertheless, the good of the country demands a more sound base than the shaky state of the President's health, the crumbling sands that the job security of these men rests upon.

The article is as follows:

"SNOW JOB" SEEN TO RUN IKE AGAIN

(By Drew Pearson)

There's been a heat wave in Washington. Despite this, the greatest snow job ever seen by newspapermen is taking place in the Nation's Capital.

It's a snow job to convince a 65-year-old man who has had a serious heart attack plus a major operation, who's laid up for 4 days with an intensely uncomfortable tube reaching to the pit of his stomach, and a tube stuck in the veins of his arm to get nourishment, and who didn't want to run in the first place, that he must, come what may, run again.

It's also a snow job to convince the American public that this man will be hopping out of bed in a short time, more fit than ever to run, and that he's making major decisions affecting the peace of the world despite a post-operation fever and the excruciatingly uncomfortable tube through the nose to the depths of his bowels.

Vivisection with all its cruelty could be no more inhuman than the almost public torture to which a little group of aids have put this man for the purpose of convincing him, as much as the public, that an unwilling, weary body must be thrown into the political breach again.

SETBACK FOR PEACE

However, there are things more important than winning an election or keeping a political party in power.

This country was shaken and set back in the quest for peace when a Democratic White House staff and a President's wife hid from the country the fact that Woodrow Wilson was incapable of performing the duties of his office.

The country again was set back in 1944 when a group of willful Democratic leaders bent on staying in power, rammed through the nomination of the aging, perhaps dying, Franklin Roosevelt as the war was coming to an end, when Harry Truman had little preparation for the great postwar task ahead.

Today a little group of willful Republicans are determined to make history repeat.

However, one man who will not put political greed ahead of country, I am convinced, is Dwight D. Eisenhower—if he knows the facts. But the cabal around him has been conducting a careful psychological snow job as he lies helpless in bed, not only to keep the facts from him but to keep them from the public—facts which the Mayo Clinic and the New England Medical Journal report regarding the probable recurrence of his stomach ailment.

PSYCHOLOGICAL BUILD-UP

The pattern is exactly that followed at Denver and thereafter to convince an un-

willing, reluctant, even protesting President, that he must be the vehicle for their return to power.

That pattern is ably described by Fletcher Knebel of Look magazine, published by Ike's close friend, Mike Cowles.

"Hall decided on a huge bluff," says Look, in describing how the GOP chairman carefully built up the public's and Ike's own confidence that he could run after his heart attack. "He decided to face the New York newsmen and tell them that nothing had changed. Hall had not the faintest hope that Ike ever would run again * * * but he boldly told the incredulous newsmen there had been no change.

"Gradually he erected a psychological framework * * * and gradually Ike came to believe it was quite natural that a man who had had a heart attack should run for President.

"Had the wrong thing been said at that time," revealed Knebel, "the idea of a second term might never have been considered seriously. Milton said privately there wasn't 'one chance in a hundred' that Ike would seek another term. Mamie assumed her husband would be through with politics."

But the men around Ike, using astute psychological build-ups, saying the right thing at the right time, completely reversed that negative attitude.

FATAL MIDNIGHT

The rest of the story is well-known—except the manner in which the work piled up, the tempo of the White House pace stepped up. First, there were few appointments, then a full schedule. First, there were to be no ceremonies, no dinners, then a round of Gridiron Club, White House Correspondents, White House Photographers dinners. At first there was to be no campaigning, then definite hints, in fact, demands that there must be some barnstorming, that Ike would have to tour the restless farm belt.

Politics is a cruel business. The more the Democrats talked about a part-time President, the faster became the pace—until that fateful midnight June 7 when the pace proved too much.

Then within minutes after the patient had come out from the anesthetic, the psychological build-up, the snow-job began all over again.

"He will be able to run as planned," announced Maj. Gen. Leonard Heaton, who if the same patient were still in the Army would have retired him for both health and age, but who now pushed him as he lay dazed and helpless with a tube down his stomach and a tube sticking in his arm, into the much more crushing burden of another 4 years as President.

A New Thought on Foreign Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, recently Benjamin F. Fairless, president of the executive advisory committee of United States Steel Corp., said:

Sometimes I think that instead of merely continuing to pour gifts into these backward nations, we would serve them better by devoting more of our efforts to showing them how everyone makes a profit when people exchange goods and services with each other. We should explain to them that no person can make a legitimate and honest profit without serving or supplying other people with something they want and need.

I believe that a correct understanding and acceptance of that idea would do far more to feed and clothe the world's people than would all the charity of which we are capable. Further, it would increase the self-respect of people who would no longer be objects of charity. They would become skilled and proud producers, and thereby earn the service of others by serving them in turn.

And to serve each other better is—I suspect—the real reason why we were put on this earth in the first place.

Mr. Speaker, this suggestion by Mr. Fairless has considerable merit; however, our Socialist friends and do-gooders will reject it immediately. They believe that only the Government is capable of making decisions for the people and directing production and services for all of the people without profit but to the state.

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. BOW. Mr. Speaker, in an extension of remarks made in debate on the amendment I offered to the Mutual Security Act of 1956, my colleague from Minnesota said that for us to insist on full sovereignty over every American soldier off duty wherever he is would require us to withdraw United States troops from all foreign bases, that it would mean abandoning the world to the Kremlin. He said the adoption of the Bow amendment would force us to give up the whole program of world security and withdraw from all our foreign bases; that at one stroke the Kremlin would have won. This is a good example of the scare argument which proponents of the status of forces agreements advance as a last resort.

There has never been any proof offered that this would be true. In hearings before the Foreign Affairs Committee no country was named as having demanded the right to prosecute our servicemen as a condition for permitting them to help defend that country. Granting Iceland exclusive criminal jurisdiction over our troops has not prevented a demand that we leave. If our troops are permitted to stay it will not be because they can try our men in their courts. It will be because the money we pour into Iceland through manning the air base there accounts for about 20 percent of the gross income of that country.

Tied in with the scare argument is a bit of smear technique. There is the covert suggestion that anyone who now seeks to recover constitutional rights for our servicemen is in league with Russia. The smear has often been substituted for argument by advocates of a cause when not sure of their position. I do not think it will receive credence in this instance. There are too many loyal, forthright, patriotic Americans who are demanding that the status of forces agreements be changed. The agreements contain provisions and the procedure for seeking modification. I presume even the molders of the agreements thought these might be needed and used. "Such agreements are often revised," a court in Japan observed in an opinion last month in a case in which an American officer was a defendant.

This Japanese court, in the same opinion, also said:

It is a well-established rule of international law that an armed force stationed in a foreign country in accordance with a treaty, is not subject to civil or criminal jurisdiction of the receiving state.

The same persons who seek to scare and smear will also sneer at that statement. They will say that a similar declaration by Chief Justice Marshall in 1811, the opinions of our Supreme Court in two later decisions, our position taken in the Supreme Court of Canada in 1943, the declaration of this rule of international law in the Uniform Manual of Courts-Martial, are all wrong. In order to ignore authority to the contrary they announce dogmatically that such a rule did not exist and seek to quell remonstance with this scare, smear, and sneer logic. Our internationally minded statesmen stubbornly refuse to make an effort to improve the position in which they forced our servicemen. They refuse to use the provisions of the agreement which make revision possible.

Tax Discrimination Against Good-Neighbor Travel

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the San Antonio Evening News of June 19, 1956, with reference to H. R. 5265. I agree that the present discrimination as to travel taxes should be removed. I hope final action on this proposal can be had before adjournment.

The editorial follows:

END COSTLY TAX DISCRIMINATION AGAINST GOOD-NEIGHBOR TRAVEL

Currently stalled in congressional conference committee is a bill (H. R. 5265) that is of major importance to San Antonio and all south Texas. Adjournment is nearing; and unless the people in this region are heard from in no uncertain terms, the bill may die in that pigeonhole. Should that happen the depressing effect on commercial air travel will touch most everyone's pocket, however indirectly.

Briefly, the history of the issue is this: The Federal Government during World II imposed a 10-percent tax on transportation, not to raise revenue particularly but to discourage travel on war-burdened facilities.

Currently, the transportation tax is still levied on all domestic travel. But travel to foreign countries is not taxed at all, except to Mexico, Central America, the Caribbean, Alaska, Canada, and Hawaii.

That is obvious discrimination. And it is discrimination that hurts one of San Antonio's major sources of commercial income—tourism. We are, of course, primarily interested in removing the tax discrimination against travel to Mexico, Central America, and the Caribbean, for which San Antonio is a major air gateway.

Both Houses of Congress have approved a tax-removal bill, thus agreeing to its propriety in principle. And Uncle Sam, in the Inter-American Economic Conference at Rio in 1954, pledged its good neighbors that the tax discrimination would be eliminated.

The Texas congressional delegation has worked hard to reform the transportation-tax law for equitable treatment among all travelers and all areas. Civic and business groups of the major Texas cities, including San Antonio, have added much to the effort.

All that should not be allowed to go wasted by failure to reach conference agreement on minor differences before congressional adjournment. Write your Congressman and Senators today; let's get this costly discrimination removed.

A Personal Report

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. MULTER. Mr. Speaker, the following column by Stewart Alsop, as it appeared in the Washington Post of June 24, 1956, makes interesting reading:

JOE GETS THE LOWDOWN ON IKE

(By Stewart Alsop)

(EDITOR'S NOTE.—This is a personal report from Stewart Alsop to his brother and partner, Joseph Alsop, who has returned from abroad.)

DEAR JOE: You will find that the President's second serious illness in 9 months completely overshadows the political scene here at home. Indeed, you will feel, I think, as though you were hearing a cracked record playing over and over the refrain that became so familiar last fall and winter: "Will he run? Will he run? Will he run?"

But there is a difference this time. You remember how, in the first weeks after the heart attack, it was universally assumed that the President would withdraw. This time, you will find, almost everybody assumes that the President will stay in the race.

You remember also how, as the weeks and months passed after the heart attack it seemed more and more likely that the President would run, until his announcement in February came as no surprise at all. I wonder if the same thing might happen again in reverse?

As I wrote a few days ago, the Republican high command expresses absolute confidence not only that the President will run, but that he will so announce very shortly. It is of course vitally important to the Republican leadership that the President end the current speculation by making his "positive" announcement as soon as possible.

But Press Secretary Jim Hagerty swears that the President has given no hint of his intentions. So there may well be more than a pinch of wishful thinking in the confidence I reported.

The President himself, as he lies stricken for the second time in 9 months, must be thinking long and hard whether he can carry on for four more years. As you know, we newspapermen have all become amateur physicians since the President's heart attack and operation. But it is not necessary to go to a medical school to understand a few harsh facts.

Coronary thrombosis is a serious disease. So is ileitis, especially within a few months of a coronary. There is a risk of recurrence in both diseases. And, in the President's case, the risk is, obviously, compounded.

A few days ago, we got a letter from an insurance executive, from which I quote excerpts:

"Mr. Eisenhower is not an insurable risk on any basis because of the coronary attack. * * * Expectation of life according to the standard mortality table would be about 4.30 years. Now take the recent ileitis. * * * Here expectation of life if 3.54 years. What the life expectation is in combination we don't know. We all know that while the mortality table is quite an accurate guide there are people who outlive it. Mr. Eisenhower will get more than normal care. But if he is not an acceptable risk for life insurance on not 1 but 2 counts, is he an acceptable candidate for the presidency?"

After the President's heart attack, you remember, we discussed at length the problem of writing about matters that had both profound political implications and painful personal implications.

It is repugnant to write in cold statistical terms about the life expectancy of a well-loved human being. But when the office of the presidency is involved, we agreed, the risk that its occupant may die in office, or become incapacitated, simply must be considered.

The risk is always there, of course, because we are all mortal. But it is irresponsible to pretend that the risk is not especially great in the President's case. Perhaps the risk is worth taking.

You and I have been critical of the Eisenhower administration, particularly in the defense field (and you should read the testimony before the Symington committee—we owe an apology to our readers for having been blithering optimists). But it is true, as you wrote at the time of the President's heart attack, that "Dwight D. Eisenhower's greatest single contribution has been bringing us all back to a sense of true American style."

Very great risks may be worth taking, in order to continue that contribution. A candidate for the presidency need not necessarily be an acceptable risk for life insurance.

But I think you will be angered, as I have been, by the attempt to propagate the myth that the President is already in fine shape; that he has his hands firmly on the reins of Government; that the very serious operation he has undergone has been as good for him as a nice long vacation, and so on.

Where so much is at stake, the facts must be faced. No doubt the President, as he lies in his hopital bed, or sits in his wheel chair, is facing them squarely.

Can Any Nation Keep Neutral?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1956

Mr. DINGELL. Mr. Speaker, occasionally in these troubled times it happens that voices of great men rise to clearly enunciate issues and to dispel the fog of misunderstanding, ignorance and distrust which cloud our understanding of basic problems. Such a problem has been that of the new policies of neutralism and nonalinement which have begun to manifest themselves throughout the world, particularly in Asia. This problem has been especially difficult because of the nature of the peril of Communist Russia and its expansionism, which although it changes its form in many subtle ways, to deceive the gullible, never really changes its ultimate end: the conquest of the world, and the subjugation of the remaining freemen throughout the world.

Such a voice is raised by a true friend of America, the Honorable Carlos P. Romulo, Ambassador to the United States from our sister democracy and ally, the Philippine Islands. I here insert into the RECORD an excerpted version of a speech which I took from the Detroit (Mich.) Times of June 11, 1956, together with the editorial comment which precedes it, which is also worthy of note:

CAN ANY NATION KEEP NEUTRAL?

(Editors Note.—The fatal flaw in the neutarlism policies of some Asian-African nations was brilliantly set forth in the speech to graduates of the University of Richmond by Carlos P. Romulo, Philippines Ambassador to the United States. The speech has significance in view of the recent visit here by President Sukarno of Indonesia, advocate of neutralism. Because of that the Detroit Times publishes here an excerpted version of the Romulo address.)

(By Carlos P. Romulo)

During the Asian-African conference held at Bandung in April of last year, President Sukarno of Indonesia and other Asian leaders spoke eloquently and with reverence of the ideas of the men who made revolutionary America.

They invoked the names of Jefferson, of Washington, of Paul Revere. They saw, and rightly so, in the gathering power of 20th century Asia, a special affinity with the 18th century American revolutionaries.

But they did not always reveal their understanding of the message that came to us of this century from your forebears of another era.

Some of the participants at the Bandung conference used the names of your illustrious men of 1776 to justify a stagnant neutralism in these days of conflict between Soviet imperialism and democratic freedom.

No man, no nation, wanting to be free or to remain free, can be neutral today.

Neutralism assumes, by the very meaning of the word, that there is some good in both sides, some evil in both sides.

Neutralism means that one can stand aside and let others fight out the great issues of modern man.

Neutralism is the wife who watches the bear chase her husband, and who says impartially, "Go it, husband. Go it, bear."

CAN YOU BE A NEUTRALIST?

Is it really possible to stand aside today? Is it really possible for anyone, anywhere, to be a neutralist?

If there is little difference between freedom and totalitarianism, then the answer is "Yes."

If there is no important difference between being a free man and being a slave, then the answer is "Yes."

If slave-labor camps, ridicule of religion, suppression of free ideas and thinking, dishonesty and duplicity in human affairs, idolatry of a man as a hero and a patriot for over a decade and then suddenly debunking him as a murderer and a traitor—and this by his former associates and accomplices—if all these mean nothing to us, then the answer is yes, we can stand aside and be neutral.

Communism prepares for world conquest, whether by war or by the clever uses of cold peace.

To fail to see the difference, superficial as well as basic, between the United States of America and the Soviet Union is to dispute the facts of life of this century.

Is it possible to conceive that Thomas Jefferson, alive today, would be neutral between his credo and the Soviet philosophy?

Yet we find some of the Asian and African neutralists—and Europeans as well—using the principles of America's great men of freedom as arguments for neutralism.

What Jefferson and Washington said about colonialism, about man's freedom, is as true as it was in the days of the American revolution.

The subjugation of man is as wrong today as it was then.

The evils of colonialism were bad then. They are bad today.

REAL PURPOSE OF COMMUNISM

But to use the desire for freedom from an old colonialism to blind oneself to the menace of the new colonialism, communism, is to play the ostrich.

It is worse, for the ostrich has only himself to lose. The neutralist leader today endangers all his own people and the rest of the world as well.

We know now that self-government is the neutral state of organized man. It is compounded of self-knowledge, self-respect, and self-control. It is the product of love for one's homeland and for one's countrymen.

But it will not work at all without an overriding love of that abstract idea—liberty. You cannot have proper government without liberty, and you cannot have liberty without proper government.

That is why I am disturbed by the new neutralism, which accepts the old fallacy that liberty is a sometime thing—like the curate's famous egg, good in spots.

The Dutch, the French, the British colonial powers had faults. Refusing to understand the tremendous urge of great peoples for self-government, they stayed so long that they had to be removed, sometimes forcibly.

But if Dutch or British or French imperialism was wrong, how wrong then is Soviet imperialism.

Never in the history of man has there been an imperialism so destructive of the free spirit, so ruinous of man's yearning for self-respect, so cynical about the dignity of the individual, so designed to degrade men rather than improve their lives, as the imperialism of the Soviet Union.

The actual purpose of the Soviet imperialists is to destroy the free powers, not to gain freedom for the colonial peoples.

THAT KIND OF APPEAL IS SUICIDE

The true nationalist leader understands this—he should understand it instinctively. He wants freedom for his people. He does not equate the Soviet Union with the free world. He does not insist that the conflict between the Soviet Union and those nations which are still free is no concern of his.

He does not say:

"I shall walk on the other side of the street."

Instead he says:

"I am for freedom; therefore I am against communism."

Some neutralist leaders say to the free world:

"We want your help. Give us food. Give us know-how. Give us capital. Give us the tools, and we will build our freedom. But do not ask us to be your partners. We do not want you to give us arms.

"We want no military assistance. For we are neutral between you and the Soviet imperialists. It is only a matter of degree between you and the Soviet."

I suggest that this kind of appeal is not neutralism but suicide. The differences between the free world and the Soviet world are not academic. They are real.

The new imperialism which today smiles and bows and tips its hat in courtesy is not interested in Asian freedom or African nationalism. Soviet imperialism is interested only in the advancement of the Soviet Union and the suppression of those ideas which are the basis of the free world, the hope of oppressed people everywhere.

It does not allow a special category for those who would be neutral, any more than Hitler or the Japanese did in World War II.

Petition in Support of the Siler Bill, H. R. 4627

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements. All signers of these petitions are bona fide residents of Alabama:

ALABAMA WOMAN'S CHRISTIAN TEMPERANCE UNION,
BIRMINGHAM, ALA., *June 7, 1956.*

Hon. KENNETH A. ROBERTS.

DEAR SIR: We should appreciate you using your influence to help get those beer ads off the air. Don't let us down please. Vote to report Siler bill, H. R. 4627, favorably.

Please find enclosed petition with 26 names favoring the Siler bill.

Any service rendered to help bring about better legislation will be deeply appreciated.

We are,

Very truly yours,
Mrs. MAE S. WALTON,
State Legislative Director of Alabama and W. C. T. U. Members of 45 Local Unions Over the State.

To Our Senators and Representatives in Congress:

We, the undersigned, respectfully petition you to exercise the proper discretion vested in you by passing legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce, and its broadcasting over the air, a practice which nullifies the rights of the States under the 21st amendment to control the sale of such beverages. At a time when 1 out of 10 drinkers is becoming an alcoholic there should be no encouragement to increase the use of such beverages. Children and youth are being misled to consider them harmless, especially by the powerful audio and visual suggestions of radio and television.

R. E. Sansing, Woodstock, Ala.; Bertha S. Martin, Vance, Ala.; Mrs. A. G. Sansing, Mrs. R. E. Sansing, Woodstock, Ala.; Mrs. R. C. Ellison, Birmingham, Ala.; Mrs. N. C. Oglesby, Gadsden, Ala.; Mrs. J. D. Sansing, J. D. Sansing, Woodstock, Ala.; Mrs. Blanche Hubbard, Mrs. Leonard Kornegay, Eoline, Ala.; Mrs. W. T. Reaves, Jr., Centreville, Ala.; Mrs. Charles I. ASHLAND, ALA., *June 11, 1956.*

The Honorable KENNETH ROBERTS,
House of Representatives,
Washington, D. C.

MY DEAR MR. ROBERTS: We, as members of the Woman's Missionary Union of the First Baptist Church, of Ashland, Ala., wish to express our approval of bill H. R. 4627, which, if passed, will outlaw alcoholic beverage advertising from radio, television, and national magazines, and also bills H. R. 7922 and H. R. 800, which will prohibit the serving of alcoholic beverages to passengers on aircraft in flight.

Mrs. Thurman Brewer, Mrs. Harold Green, Mrs. Doster Jordan, Mrs. J. W. Sertell, Mrs. Clarence Haynes, Mrs. Cecil Jenkins, Mrs. Cecil Sims, Mrs. C. C. Workman, Mrs. Herbert Pace, Mrs. Lena Stephens, Mrs. C. M. Pruit, Jr., Mrs. Bill Carpenter, Mrs. Lewis Walker, Jane M. Hardegree, Mrs. J. M. Herren, Mrs. J. J. Kirk, Mrs. R. Y. Gilbert, Mrs. Hal Haston, Mrs. E. W. Yorbrough, Miss Olin Thorp, Miss Dosia Haynes, Mrs. J. W. Stewart, Mrs. Claude Thomas, Mrs. A. G. Cusick, Mrs. Rita Allen, Mrs. B. C. Hooton, Mrs. J. R. Allen, Agnes Thorpe, Mrs. W. F. Saxon, Mrs. Amon Waits, Mrs. J. T. Nichols, Mrs. W. B. Robertson, Mrs. Robert Piltard, Mrs. A. T. East, Mrs. J. Y. Allen, Mrs. John Ferman, Annie Belle Workman, Mrs. F. B. Carpenter, Mrs. H. W. Hooton, Bertie R. Cason, Mrs. Radford McMath, Mrs. E. D. Riley, Jr., Mrs. Loellys Jordas, Mrs. Lester Gilbert, Mrs. Homer Yarbrough, Mrs. Elwood Gaither, Mrs. W. B. Dozier.

Address by George Meany, President of the AFL-CIO, Before the Graduates of the FBI National Academy

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, June 25, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. George Meany, president of AFL-CIO, before the graduating class of the FBI National Academy on June 8, 1956.

Mr. Meany in his address emphasizes the dangers of communism and the necessity for being alert to those dangers. It is interesting to note that his views are very similar to those of Mr. J. Addington Wagner, national commander of the American Legion, and that the leader of the Nation's largest veterans organization and the leader of the largest labor organization both continue to express the absolute opposition of their groups to the Communist threat.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY AFL-CIO PRESIDENT GEORGE MEANY TO THE 57TH GRADUATING CLASS OF LAW ENFORCEMENT OFFICERS AT THE FBI NATIONAL ACADEMY

I sincerely appreciate the honor and I welcome the opportunity of addressing you today. We are living at a time when the protection of American institutions is largely synonymous with the defense and very survival of human freedom everywhere. The

graduation exercises of a select group of men who are to bear such important responsibilities in the protection of our American institutions are, therefore, most unique and meaningful.

It is now 15 years since a president of the American Federation of Labor was honored with an invitation to address your commencement exercises. In the decade and half that has elapsed since my distinguished predecessor, the late William Green, addressed your institute many profound changes have taken place in the lives of whole nations—yes, in the lives of each and every one of us too. Much history has been made during these years. Sometimes I think too much history has been made. Humanity would be far better off today, if it had been spared some of this history.

It is not my purpose to talk about waters which have flown over the social, economic, and political dams of yesterday. Nothing would be more futile. I will instead try to deal with some of the most pressing problems which you of the American law-enforcing world and we, of the labor world, face in common. We face them as citizens of a great democracy. We face them as patriotic members of a free nation on whom there now rests the primary responsibility for preserving and protecting freedom while promoting peace.

What a task. And what an enemy we face. I do not take to mincing words. It takes just as little sense, and spells out just as much nonsense, to refuse to call an enemy of freedom what he really is, as it would to refuse to call a spade a spade. This is commonsense. This is good citizenship. This is truth. And that is why this is healthy democracy, that is, good Americanism.

Since the close of World War I, human freedom and individual dignity, which are the very essense of the American way of life, have made much progress in some countries. But human liberty and decency have also been increasingly menaced by a new enemy. This foe of freedom is a total enemy of all cherished values and individual dignity. His enmity to free institutions is organized on a total basis. His movements and activities, aspirations, and actions are totalitarian in nature. The common aim of all totalitarian movements—whether they be Communist, Nazi, Fascist, Falangist, Peronist, or Titoist—is to grab all power for the total destruction of all free institutions and freedom and for the setting up of a dictatorship. This dictatorship is to have total power over every human being in every phase of life, political, economic, cultural, spiritual, and whatnot.

That such a dictatorship leads to the horrible debasement of society, to outraging every human value, to savage brutality instead of rule by law, was most painfully dramatized in the latest revelations by Khrushchev regarding some of the crimes committed under the instructions of his late mentor and master, Stalin.

Of course, these various totalitarian enemies differ here and there, or now and then, in the degree of the total power they actually achieve and exercise. They never differ in the degree of total power they would like to wield over the people.

In varying degrees, these sworn enemies of all our democratic institutions pose as militant radicals. They use high-sounding phrases to hide their objectives. But none of them is actually progressive or really radical. One may be a reactionary without being totalitarian. But no one can be totalitarian without being reactionary. There is nothing as retrogressive, as ultrareactionary, as the totalitarian party organization—or front—whether it be of the red, brown, black, or yellow hue.

The Communist brand of dictatorship is, in many respects, the most subtle, sinister, and dangerous enemy of freedom. It demagogically poses as a higher form of democracy. It poses as a political movement, though it is anything but a political party in the normal democratic sense as we know it and live it. Furthermore, it operates as a worldwide conspiracy, as a fifth column, in every free country, with its head and heart in Moscow.

The only patriotism the Communist knows is loyalty to the clique or despot who happens to be at the helm of the Russian dictatorship at any particular moment.

That is why we of American labor have always said: There are no American Communists—there are only Communists in America. These subversives are fanatical believers in the doctrine that their end—Soviet world domination—justifies any and every means.

In view of the illusions some people who specialize in wishful thinking now have about the Soviet orbit moving toward democracy, it is most urgent that we take a sober and realistic look at the Communist "new look" and "big smile" tactics. You need no agitation or explanation from me on this score. The Communist criminals, like other dangerous criminals, are no less dangerous when they are well masked. In fact, when they are well masked they are even more dangerous. Political subversives who seek to rob the American people of their liberties are not good citizens or gentlemen merely because they say they are for freedom, or merely because they wear kid gloves in the process of their criminal operations. Well masked, fully camouflaged Communists, do not make the face of communism less ugly or its aim less sinister.

Any system of government in which a party is the government—particularly when there is only one party with absolute power over every walk of life—cannot be government by law. And without government by law, there can be no freedom.

No confessions in New York, no self-denunciation in Prague or Warsaw, no revelations in Moscow, no popular front or united front maneuver can alter this truth. Where the party is the state and has all power, there tyranny is unbridled. Tyranny cannot be reformed. It must be abolished.

Perhaps the most important reason why communism is the most dangerous totalitarian enemy of human liberty and human decency is because the Communist conspiracy has chosen the ranks of labor for their principal field of activity. The Communists have made the capture of the trade unions their main purpose and chief road to the seizure of power.

In modern industrial society, in the days of large-scale production and automation—on the threshold of the atomic age—control of the trade unions by Communists would enable the agents of a hostile foreign power to subvert our economic life, impose industrial paralysis on the land, and establish a firm foundation for overthrowing our democratic government and replacing it with a dictatorship over all our people—including the workers. This is exactly what happened in Czechoslovakia.

In our own country and in every other land outside the Iron Curtain, the Communist Party and its network of front outfits are a dangerous military installation of a hostile foreign power. Here we have a subversive conspiracy, a fifth column, employing the camouflage of a national political party and masquerading as a movement of social reform.

Can you imagine what chance democracy would have in present-day Germany, if the trade unions of the federal republic had fallen into Communist hands? Imagine what could happen to human freedom in our own country if the Communists were in control of the AFL–CIO. Consider the frightening instability of democracy in France and you will find it is, in small measure, due to the fact that the Communists have won commanding positions in the trade unions of that country.

Here, I must add that thanks largely to the special activities of American labor in support of the democratic free trade union organizations in Italy and France, the Communist grip on labor has been shaken there. These Soviet agents can no longer call the paralyzing political general strikes they used to inflict on the people of France and Italy.

We of American labor approach this Communist problem and face the Communist menace as citizens and as trade unionists. We fight this enemy unrelentingly, without a letup. We don't fall for any of the Communist maneuvers, because we do not believe in doing business with them—on a partnership or any other basis. We fight this enemy with the philosophy of democracy. We fight communism with practical deeds as well as hard-hitting publications in many tongues. We expose their fallacies and frauds and put communism in its proper and ugly light by comparing its Soviet paradise with our human American institutions and achievements. These are not always perfect—but they are always getting better.

If you will take a look at the Communist press in our country or in any other country, on either side of the Iron Curtain, you will see that we are under constant bitter attack. This obviously because our policies and activities really hurt the enemies of freedom everywhere.

Our philosophy as American citizens is that democracy and dictatorship cannot mix. The one is the very opposite of the other. They have nothing in common. They negate each other.

Our philosophy as trade unionists is that without democracy there can be no free trade unions and without free trade unions there can be no democracy.

To us of American labor, freedom is not only an ideal but a most vital and vested interest. That is why we do not go in for delegation exchanges with Moscow, Peiping, Warsaw or Bucharest. We have nothing to get from them and nothing to sell them. Not until there are free trade unions in these countries will there be freedom in these lands. As we see it, not until the Russians are free to visit each other and exchange opinions and have freedom of communication with each other will it be possible for Russians or Americans to correspond and communicate freely with each other and really get to know each other. That applies to Cabinet members and military experts no less than to union officials.

We have refused and will continue to refuse to lend respectability or provide democratic friendship and approval to any regime which has destroyed democracy at home and is dedicated to the destruction of democracy abroad. We did not send delegations to Fascist Italy, Nazy Germany, of Falangist Spain and we won't send any to Russia, Mao Tse-tung China, or to any other paradise behind the Iron Curtain. We were militantly anti-Nazi and not just non-Nazi. We are militantly anti-Communist and not merely non-Communist.

No change of facial expression or gestures by the Soviets—no formal dissolution of the Comintern or Cominform—will cause us to relax in our opposition to communism. Nor will we reduce our activity, demobilize our forces or dismantle our machinery for fighting communism.

As we see it, communism is no longer a spectre in the sense Karl Marx once spoke of it. Communism has become a deadly reality. Millions of Russians, Chinese, Poles, Germans, Balts and others whose unmarked graves have yet to be revealed—tell only a very small part of the gruesome story of the transformation of communism from spectre to reality. The curse of communism is not the cult of the individual but communism itself. It is the cult of communism which is the enemy we face and must vanquish. I am

confident American labor will adhere to its principles of devotion to freedom and our free institutions above all else. As long as communism adheres to the doctrine of world subversion and domination, the Communist powers will constitute a real threat to the way of life, to the progress and even to the very survival of our country and every other free country. As long as any government is totalitarian, that is—as long as it denies to its own people the enjoyment of democratic liberties, no real and enduring peace—based on genuine mutual trust—can be achieved through agreements with that government.

In our own midst, at home as well as abroad, the Communists have also redoubled their talk of coexistence with the rest of us. In the name of the Geneva spirit, the Communists and their dupes are now calling for an end to every legal effort to curtail their subversive activities and their efforts to infiltrate our free institutions. The Communists like nothing better and want nothing as much as to be given a free hand to use our democratic liberties for the purpose of subverting and destroying our democratic society.

In the interest of self-preservation, governments and societies founded on the principles of liberty must protect themselves by taking measures against subversive movements and their activities. He is no liberal who does not believe in safeguarding democracy and its liberal institutions. True liberalism is the very opposite of every brand of totalitarianism.

Communism, however, is not only a threat. It is also a challenge. It has been well said that "the practice of freedom is freedom's best defense." Yes, the challenge of Communism must be met with sound economic, social, and cultural policies—with policies and practices aimed at eliminating every vestige of racial discrimination in our community—with policies aimed at elevating the levels of human dignity and raising the standard of living. Here, we of the American trade union movement have a great role to play. I can assure you that we will seek to play this role in the spirit of the best of American traditions and in furtherance of the highest American ideals.

The better the America we build, the stronger and the greater the America we will have to meet the Communist challenge. I urge with equal vigor that we be strong enough in a military sense and help make our allies strong enough to deter Soviet aggression.

I hope I have shed some light on the way we of American labor look at the world we live in—on the way in which we are trying to build up our country at this critical hour. The tasks we face are not simple. They are complicated and difficult. We will meet them through trial and error. I do know that if we all pull together we shall certainly be able to pull apart any enemy that seeks to undermine and threatens our democratic way of life.

Upon your return to your respective communities, you will undoubtedly come into contact with trade-union organizations and representatives. First of all, keep in mind that there is no more dangerous fallacy than the notion or suspicion to which some still cling—the notion that to be pro-labor is to be pro-Communist. Any law-enforcement officer who makes sympathy for the great cause of free labor synonymous with support of communism can only injure the most vital interests of the American people and the highest ideals of our Nation.

Remember, trade unions, like other institutions of human beings, are not perfect. We are not free from error. We are not above the law. However, we want you to realize that our trade-union movement is basically clean, healthy, and patriotic. We hold that no one can be a good trade unionist if he is not a good citizen in the best sense of the word and in all his relations with the community. In this spirit, I wish you the fullest success in the fulfillment of your special duties as well as in the furtherance of our great common goal—to keep America the land of the free, the land which shall be unstinting in its devotion to democracy and human well-being—a nation worthy of the destiny history has chosen for the American people.

Motor Skyway

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. ROBERTS. Mr. Speaker, under unanimous consent, I include in the CONGRESSIONAL RECORD the article Motor Skyway in Dixie, which appeared in the Ford Times. Motor Skyway in Dixie describes the infinite pleasure possible for motorists when traveling through this magnificent mountain region, located in Talladega County, a few miles south of the Bankhead Highway near Anniston, Ala. Its beautiful scenery and inspiring vistas bring pleasure to many motorists; and its colorful history of Indian wars—the country where Andrew Jackson defeated the Creeks—is of special interest to children. For years I have advocated additional roads to this park and have urged the Forest Service to make this beautiful recreation center, which is the highest spot in the foothills of the Blue Ridge Mountains, more available to the people of Alabama and all the Nation's tourists. I expect to continue to urge such action.

The article follows:

MOTOR SKYWAY IN DIXIE

(By John McCormick)

If you examine a road map of Alabama closely you will see, a few miles due south of Anniston, a faint little trail labeled "Motor Skyway," traversing a rather blank portion of the map in a northeasterly to southwesterly direction.

This small portion is uncluttered with map symbols because it is in the center of the Talladega National Forest. On its winding, lofty course, the Motor Skyway goes through Cheaha State Park and to Cheaha Mountain, which, with an elevation of 2,407 feet, is the highest point in Alabama.

The Talladega National Forest covers 92,000 acres and is part of the old stamping grounds of the Creek and Cherokee Indians. It extends from the Georgia border southwestward into Alabama, reaching the Coosa County line near Sylacauga.

To drive the Motor Skyway, go south from Anniston to United States Highway 78 and turn toward Heflin. Before you get to Heflin you'll see the sign pointing to the narrow road that turns right toward Cheaha Mountain. This twisting stretch of dirt, gravel, and a dab of blacktop is the Motor Skyway.

It's a rough, dusty journey, but riding this blue ridgeline that angles upward to the rooftop of Alabama is an adventure when compared with rolling over conventional highways. After 8 or 10 miles you come to a forest tower where you can stop and be welcomed by the ranger and his wife. From the tower top on a clear day the view extends more than 50 miles—clear into Georgia.

From the ranger station the Motor Skyway continues its climb westward. At a distance you see the State's new television tower, and several miles later come to the stone observation tower near its base, built on the mountain's highest rock. Not far away you discover a 14-room lodge with a fine kitchen and dining hall, and cabins scattered through the pines. There are local oddities, too—the rock garden, Noah's Ark, and the old standby, a balancing rock. From this rock it seems that most of northern Alabama is in your view.

There is also a remarkable little mountain lake in a natural bowl below the lodge where guests swim and fish. It's stocked with bass and bream.

Continuing from the lodge there's a drive of something over 20 miles to historic Talladega, just north of where the motor skyway ends. Here, at Fort Leslie, Andrew Jackson defeated the rebellious Creek Indians in 1813. In 1847 Talladega was the gold-mining center of east Alabama.

Of present and immediate interest in Talladega, however, is the renowned Purefoy Hotel, which serves an "all you can eat and eight kinds of meat" dinner, along with perhaps 30 supporting side dishes, all for a ridiculously low price. Relax after dinner at the Purefoy until nightfall before taking the motor skyway back through the cool night air. It's good to stop now and then to see tiny lights speckling off in the darkness of the rolling countryside as if they had just fallen from the deep, starlit sky. You will suspect that maybe the composer of Stars Fell on Alabama got his inspiration on this very drive.

After a time the lights of Talladega fade away behind and the lights of Anniston begin to glow in the distance. Back on Cheaha's top, you've seen the motor skyway from northeast to southwest and halfway back again.

Arab Defiance of the United Nations

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. MULTER. Mr. Speaker, those who would undrstand the Arab-Israeli situation should read the following letter, as published in the New York Times of June 22, 1956:

ARAB VIOLATIONS CHARGED—POLICY TOWARD ISRAEL DECLARED TO CONTRAVENE U. N. CHARTER

To the EDITOR OF THE NEW YORK TIMES:

In your issue of June 7 Rafik Asha, permanent representative of Syria to the United Nations, taking exception to an editorial you published on June 2, makes a number of statements that call for comment.

Mr. Aha attempts to demonstrate that the representative of Syria, Ambassador Ahmed Shukairy, did not make the outrageous statements before the Security Council to which your editorial refers. According to the official United Nations verbatim record of the Security Council meeting held on May 31, Mr. Shukairy stated:

"To advocate the idea of a mutually acceptable solution must inevitably lead to a reversal of all the resolutions of the United Nations * * *. The establishment of Israel, its membership in the United Nations and all other resolutions * * * will have to be revoked. Then, and only then, can the United Nations look forward to a solution 'on a mutually acceptable basis.' "

It is difficult to see how Mr. Asha can claim that the conclusion that Mr. Shukairy urged the revocation of "the establishment

of Israel, its membership in the United Nations and all other resolutions" does not correspond with the facts.

CLAIM OF COMPLIANCE

Mr. Ash claims that "the three pillars of Arab policy on the Palestine question" are in compliance with the Charter, the armistice agreements and the resolutions of the General Assembly. Seen in the light of Arab practice and propaganda, these pillars appear to be of extremely frail construction.

The duty to comply with the provisions of the Charter did not prevent Syria, together with six other Arab States, from committing armed aggression in Palestine in 1947–48, nor did their regard for U. N. resolution, so often professed since then, prevent them from committing that aggression for the purpose of defeating the U. N. resolution on Palestine of November 29, 1947.

Respect for the Charter does not seem to deter the Arab States from persisting in their deliberate violation of other sections of the Charter, such as article 2. Though themselves members of the United Nations, they refuse to recognize "the principle of the sovereign equality of all its members" (art. 2, par. 1). As Mr. Shukairy explained to the Security Council, one of the member states of the United Nations—Israel—and all the rest of what was formerly Palestine, "is nothing but southern Syria."

BOYCOTT POLICY

The Arab pillars also do not seem to be obstacles in the way of an actively pursued policy of economic, political and diplomatic boycott against a fellow member of the United Nations. Nor do they stand in the way of the imposition of an illegal blockade by sea and air against a neighboring state.

The only Arab policy these pillars do support is that of obstinately refusing to abide by Security Council decisions, such as the one of September 1, 1951, on the Suez blockade, which outlaws the maintenance of a state of war against Israel, and of deliberately sabotaging some of the most important provisions of the general armistice agreements, thereby frustrating the very purpose of those agreements, that of "promoting the return of permanent peace."

The fact that Mr. Asha endeavors to explain away some of Mr. Shukairy's statements may possibly indicate that Mr. Asha does not share Mr. Shukairy's views about the wisdom of uttering them. But, unfortunately, there is nothing in his letter to show that his government disowns their substance.

JOSHUA H. JUSTMAN,
Director of Press Relations, Delegation of Israel to the United Nations.
NEW YORK, *June 15, 1956.*

Importance of a Vote

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial from the San Diego Union for Friday, June 22, 1956, which discusses the outstanding representation of his district and splendid showing made by our colleague, the gentleman from California [Mr. WILSON] in his contest for the Democrat nomination on Tuesday, June 5, 1956. The editorial follows:

IMPORTANCE OF A VOTE

The importance of each individual vote will be dramatically apparent as absentee ballots are counted today.

One vote either way could determine whether Representative BOB WILSON, Republican, will be elected in the primaries or if he will go into a runoff in November against George Cheney, Democrat.

Representative WILSON has a total Democratic and Republican vote of 95,786 as against 35,062 for Mr. Cheney. In the contest for the Democratic nomination, however, the Son Diego Congressman trails his opponent by 210 votes.

Whatever the result of the absentee count, the total vote cast for Mr. WILSON is indicative of the outstanding representation he has given San Diego. Now seeking his third term in office, his popular vote margin has increased substantially with each election.

The Single-Weapon Fallacy

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. PATTERSON. Mr. Speaker, I wish to call the attention of this distinguished body to a thought-compelling article entitled "The Single-Weapon Fallacy," written by Dr. James D. Atkinson which appeared in the June edition of the magazine Army.

Dr. Atkinson is an assistant professor of government at Georgetown University and has written extensively on international policy and military defense for a number of magazines. So significant is his recent article that I would like to here insert it in the CONGRESSIONAL RECORD:

THE SINGLE-WEAPON FALLACY

(By James D. Atkinson)

In every crisis at arms since the dawn of time, nostrums guaranteed to solve the most complex problems of military security have found anxious buyers, looking for a cheap way out. The artlessness Barnum found in all of us comes out at such times; perplexed people faced with massive complexities are easy targets for slogans that discourage thought and provide an emotional escape hatch. Whether the slagon is "the Maginot Line begins where it is required and ends where it is no longer needed" (1929) or "security through air power" (1956), rational inquiry and discussion are shut off.

We may be sure that in the fourth century before Christ the Indian general, Porus, believed that his elephants would defeat Alexander's Greco-Macedonian army. Yet the battle at the Hydaspes River was decided by the teamwork of Alexander's infantry and cavalry.

THE FIXED IDEA OF A SUPER-CANNAE

Count von Schlieffen dominated German planning in the years before World War I. Unfortunately for Germany and fortunately for her enemies, Schlieffen was himself dominated by a fixed idea. He had found the one simple answer that guaranteed victory. Like Douhet, Mitchell, "Bomber" Harris, and other fixed-idea airmen of a later period, Schlieffen believed that one big battle—a super Cannae—would decide the future war. In fact, the parallel between Schlieffen and the air extremists is even greater since the German held that a battle which annihilated the bulk of the enemy forces in the opening phase of the war would paralyze the will of the enemy and, correspondingly, the will of his allies, and victory would be quick and relatively cheap. Schlieffen's belief in a super-Cannae battle of annihilation was reinforced by his conviction that industrial organization would force wars to be violent but short. Just as the air extremists of 1956 speak of a future war in terms of days, so Schlieffen in the years before 1914 ruled out a long war as being impossible in the modern age.

The fixed-idea people, whether soldiers, sailors, airmen, or statesmen, are, however, always running into unforeseen circumstances—which is a part of war itself. As Maj. Gen. J. F. C. Fuller has written: "It is absolutely true in war, were other things equal, that numbers—whether men, shells, bombs, etc.—would be supreme. Yet it is also absolutely true that other things are never equal and can never be equal. There is always a difference, and it is the differences which by begging to differ so frequently throw all calculations to the winds."

The dangerous and tragic truth was, however, that Schlieffen's simplification and the younger Moltke's acceptance of it so permeated the thinking of the German general staff that few ever questioned it and none seriously challenged it. Germany went down the road to war committed to a fixed strategy—a one-shot proposition which, if anything should go wrong, would lead not to victory but to defeat. And something did go wrong. As Dr. Gordon A. Craig states in his penetrating analysis, The Politics of the Prussian Army, Schlieffen's single-mindedness "disregarded not only the demographic, technological, and industrial factors which affect the war effort of great powers * * * but also the political and psychological forces which are apt to make peoples fight even against hopeless odds."

THE SINGLE IDEA OF SHELLS AND MORE SHELLS

The German commitment to a single idea in planning for the war was matched by the Allied belief after the war had dragged on that victory could be achieved by the accumulation of a massive weight of explosives that would literally batter the western front into rubble. The cry was for shells, shells, ever more shells. General Fuller cites the case of the distinguished British general who "proved" mathematically that ending the war was only a matter of dividing the front into sectors 15 miles long by 2 miles deep and then firing one shell per yard into the tiny little subdivisions. Unfortunately this kind of thinking differs little from that of 1956 air extremists who equate war with total destruction and forget that the great military leaders of history from the Duke of Wellington to Generals Eisenhower and MacArthur always knew that war destruction was incidental (and to be avoided as much as possible) to the object of achieving a more perfect and enduring peace.

Before the Second World War German military planners took notice of the lessons of the First World War and developed close cooperation among all ground arms and services and excellent air-ground cooperation. General von Mellenthin, for example, in his careful study, Panzer Battles, points out that German success in the Battle of France was due to the reintroduction "into warfare (of) the decisive factor of mobility," and that this was possible because of the close cooperation of all arms, especially the "expert handling of the latest modern arms—Luftwaffe, parachutists, and armor."

Partly because of Hitler's lack of appreciation of sea power and partly because his military advisers were likewise too continental-minded, German planning did not include sea power. Thus, the Wehrmacht ar-

rived at the English Channel in June 1940 with tremendous ground-air capabilities, but with extremely limited naval capabilities. Hermann Goering had assured Der Fuhrer that the Luftwaffe would eliminate the need for naval power, but the single-idea strategy failed again, and Hitler turned on the Soviet Union. Even there, however, effective sea power would have been of great advantage to Hitler. Admiral Friedrich Ruge's Der Seekrieg, 1939–45, suggests that an understanding of sea power would have dictated the capture of Leningrad and the creation of a Baltic Sea supply route that would have relieved the arm's transportation and communication difficulties along the far-flung eastern front.

THE SINGLE IDEA OF RACIAL SUPERIORITY

If, as Dr. Craig has indicated, Schlieffen's strategy had failed to appreciate the political factors in warfare, Hitler was completely blinded to the political-psychological elements of warfare by his almost pathological belief that the world was roughly divided into Herrenvolk and Untermenschen with, perhaps, some races occupying a rather gray shade in between. Somewhat as mass bombings hardened the resistance of the German people, so did the Hitlerian racial concepts fix the pattern of resistance in the occupied countries, especially in eastern Europe and the Soviet Union. Thus the Germans tossed away the opportunity to bring about the collapse of the multinational Soviet state. Since 1945 we have learned that Soviet leaders themselves feared appeals to their oppressed minority peoples more than German bombs, and now that Stalin is being toppled from his pedestal, the unwillingness of millions of Soviet minorities to fight for communism is being attributed to Stalin's preparedness failures.

On the Allied side, the World War II successors of Douhet and Mitchell were ready with an undated version of the old "shells, more shells, and still more shells" of World War I. The new version was "bombs, more bombs and still more bombs" and the argument again hinged on a statistical basis which proved that Germany could be easily and quickly knocked out of the war. The most amazing of the many arguments presented is that cited in Flight Lieutenant Blunt's The Use of Air Power, in which he states that "the C.-inC., Bomber Command, is said to have made the statement that if we could send 1,000 bombers a night over Germany, the war would be over in 6 months; whilst, with 20,000 aircraft, he would finish it in 1 night."

THE SINGLE IDEA OF BOMBS AND MORE BOMBS

The 1956 air extremists have really added nothing new to this now old "shells, shells and more shell" argument. In essence, this is the argument of mass destruction, and whether it is 20,000 aircraft with high-explosive bombs or 1,000 or 100 aircraft with hydrogen and atomic bombs, the concept is quick victory through pulverization of so many square feet of enemy land and buildings and the atomization of so many hundreds of thousands or millions of people. Unconsidered is the possibility that if each side completes this neat mathematical formula there might be other factors and other forces which would have a final effect.

Fortunately, the pulverization concept was only partially accepted by President Roosevelt and Prime Minister Churchill. These great wartime leaders not only proved that a coalition could coordinate its efforts and wage war successfully, but they also understood the necessary interrelation of economic, political, and psychological factors with elements of ground-sea-air warfare. It was the teamwork of ground-sea-air forces which made possible the successful invasion of north Africa, Sicily, and Italy, the channel crossing, and the sweep through France and into Germany. The very efficiency of this teamwork obscured its successes. And so after the war the advocates of the one-service solution found they could totally disregard such truly outstanding work as that of the Tactical Air Force in isolating the battlefield and functioning as an integral part of a winning air-ground team, and promote the thunderous explosions of the two atomic bombs dropped at the end of the war. One of the few voices raised in the analysis of what might have been done with greater tactical airpower was that of Gen. Sir Giffard Martel who wrote that "it can be argued with much reason, however, that we would have won the European war more quickly and efficiently if we had put rather more weight on cooperation between the Army and the Air Force from the start, instead of depending so much on the power of air bombardment alone."

The introduction of the atomic bomb into warfare at the close of World War II launched a debate on military policy which is still going on. The atomic bomb was, of course, a most spectacular development, and its use in warfare left an impression on men's minds as no previous weapons, even gunpowder, had done. Thus Sir William Beveridge expressed the immediate reaction of many when he wrote in the London Times, August 14, 1945, that "the atomic bomb has almost certainly relegated all other weapons of modern war—tanks, battleships, guns, rifles, and trained conscript masses—to the museum." This line was quickly taken up by the air extremists and has, with little change, been reiterated ever since. Perhaps the mere repetition over so long a period of time has had much to do with its success, since it has depended but little on historical analysis or proven fact.

The atomic destruction nostrum did not go completely unchallenged, however, and in 1947 Milton Shulman, in Defeat in the West, seriously questioned the theory that "given enough atom bombs, any power could guarantee for itself ultimate victory in a future war." The record of "Germany's defeat in World War II convincingly destroys such theories," he asserted.

THE SINGLE IDEA OF VICTORY THROUGH ATOMIZATION

This military policy debate came to one climax in the United States in 1949 with the controversy over the B–36 bomber. This occasioned a reexamination of the entire question of United States strategy. Testifying before the House Armed Services Committee in October 1949, Adm. Arthur W. Radford struck at the heart of the matter when he said: "The plane itself is not so important as the acceptance or rejection of the theory of atom-blitz warfare which it symbolizes. It is fortunate that honest doubts as to the adequacy of the B–36 have served to bring this more vital issue before the country. I do not believe that the threat of atomic blitz will be an effective deterrent to a war, or that it will win a war. Admiral Radford then went on in terms which indicated that he saw the entire picture rather than the one-service eye view. He pointed out that the atom blitz was a "fallacious concept" which promised a "short cut to victory" but that there were grave dangers in the panacea way to win a war. "We must realize that we cannot gamble that the atomic blitz of annihilation will even win a war," he said. "We must realize if war is forced upon us, we must win it, and win it in such a way that it can be followed by a stable, livable peace."

The Korean conflict temporarily interrupted the great debate over military policy. It also came as a cold shower to the air extremists for, contrary to the theories which had seemed so logical "unforeseen circumstances" intervened, upsetting their previous theses as to what kind of war would occur.

To begin with, the deterrent power of the world's greatest air force, possessing as it did the only significant nuclear weapons at the time (June 1950), did not deter the Communists one iota. Far more shocking to the air extremists was the fact that the real deterrent had obviously been army forces, for these, to the Soviet mentality, were a measure of American intent, of American will. Thus, when the United States Seventh Infantry Division was withdrawn from Korea, the interpretation of this event by the Soviets was that the United States had no firm commitment to the defense of the area and hence a "liberating" army of North Koreans could simply walk in. (A thought-provoking article on this which I earnestly recommend to all readers appeared in the April 1956 issue of Military Review by Lt. Col. Wallace C. Magathan, Jr.) No amount of air gymnastics or bomb rattling was sufficient to prevent the launching of the kind of war which the United States was, because of a weakened Army, unprepared to fight. True, the mighty Strategic Air Command did serve the role of a force in being, and no fair-minded observer would denigrate this fact. But, as so often in the history of warfare, the best sounding theories of the air extremists proved the wrong kind of practice when a concrete situation arose.

The conclusions drawn from the Korean war are equally worthy of attention. Thus, General Van Fleet has stated that "after the battle for White Horse Mountain during which American artillery had reduced a Chinese Communist division of 30,000 men to 15,000 and the crack 15th Army of the Chinese Communists had failed to rout the ROK 4th Division, we could have accomplished just about any mission we chose." The General then went on to say that our forces could "have sent an armored column through the weakened part of the Red lines and enveloped their entire front-line army."

A Navy leader has gone farther. Admiral C. Turner Joy has stated that military victory in Korea "was not impossible, nor even unusually difficult." In this instance, Admiral Joy viewed war in its entirety—as an effort which required the cooperation of all contributors in achieving, in terms of human life, an economical victory.

A distinguished Air Force officer has indicated that mass destruction was not really necessary to win in Korea. General George Stratemeyer has said that "when MacArthur launched his attack to gain the Yalu River, I had enough air strength to stop the Chinese and prevent their troops being supplied."

CONTROVERSY IS PREFERABLE TO INADEQUATE SECURITY

As the United States faces an uncertain future in which a plenitude of nuclear weapons and their means of delivery will be in the hands of the Soviet Union, it becomes the urgent duty of every American to reexamine the past and peer into the future. Neither propaganda smokescreens nor sincere assurances that all is well should deflect us from the duty of examining not only the kinds of war which we may be called upon to fight, but also the kind of deterrence most likely to prevent wars—total and limited. The former Chief of Naval Operations, Admiral Denfeld, expressed the military man's point of view plainly 7 years ago during the B–36 hearings: "Public airing of service differences, while regrettable, is preferable to inadequate national security." Those who strongly believe that the Army has a commanding role to play not merely in winning a war, but even more in preventing one, have, in the national interest, a right and a duty to speak up.

Prof. Arnold Wolfers, writing in the winter 1956 issue of the Yale Review, helped to clear the atmosphere on the entire problem of deterrence by questioning whether the suppositions that we must fight an all-out war are tenable. "If (these suppositions) are correct, military preparations for anything but total war in Europe would be meaningless

and wasteful; if they are erroneous, exclusive concern for unlimited warfare might prove disastrous."

An interesting facet of the thinking which is so preoccupied with this single-idea warfare is laid in the May 1956 issue of the magazine Air Force. In a staff study called the Army's Atomic Dilemma, the statement is made with reference to airpower that "as long as it is broken into bits and pieces, and parceled out among three individual services with one mission, it will not be used effectively." The staff students go on, however, to reveal their actual trend of thought by stating that "as long as there are three individual services, it is difficult to see how overlapping, duplication, and waste in manpower, money, and facilities can be prevented." The allegation that there are duplication and waste is incidental to the implication that not "3 individual services" but only one (obviously the Air Force) is necessary.

We have here once more the one-big-answer technique. Before World War I it appeared in the guise of the super-Cannae, the one big land battle which would end the war. Before World War II it appeared under the Douhet doctrine, as when Maj. Al Williams wrote, "If the issues between England and France on one side, and Germany on the other are destined to be settled by force, the decision, win or lose, will be reached in a matter of 72 hours, in short, via a true air war." Now, in 1956 it seems that our defense troubles can be settled by putting all our eggs in one basket, the all-out air basket. And wonderful to relate, we can save money. But can we save human lives? Can we save our world? Will not our commitment to a single course of action and to one weapon deny us freedom of action?

AIR-MINDED OR WAR-MINDED

Is it not time that the air extremists should, to use General Fuller's apt expression, "cease to be air-minded and become war-minded"? Then they will view warfare not in the Ludendorff and Douhet concepts of total war and total destruction, but rather in the sense that war is the servant, not the master, of policy. From such a base effective deterrent forces can be established, and war, should it come, can be limited.

Airpower has men who are war minded. Asher Lee, the author of works on the German and Soviet air forces, is one. In his 1955 book, Air Power, he devotes several sections to parachute and airborne troops, supporting the Army, naval airpower, and the like. Even more significantly, he attempts to examine the future without any dogmatic presumptions that ground and sea forces will not have a major role. Thus he states: "To what extent will guided missiles used in defense and offense affect future air operations? They will clearly impose much greater coordination between the services. They will mean that the Army must have greater control over tactical offensive operations than in World War II. They will call for a unified air defense system in which interservice differences are completely sunk in a supranational interest." Here speaks an authority on airpower who is war minded rather than single-service minded. Asher Lee examines the job to be done. He is unwilling to permit the weapons or the delivery system to dictate what should be done. The distinguished naval historian, Samuel Eliot Morison, reveals the United States Navy's adherence to the same position. "The commander of an operation or mission uses any necessary weapons or forces, whether they be ground troops, ships, tanks, or planes," Morison wrote in his latest volume on United States naval operations in World War II.

The constant reexamination of our military policy is not an academic exercise. Soviet power and Soviet policy are never static. Even before it was emphasized at the 20th party congress in February 1956 that communism might triumph in some areas through parliamentary means, Khrushchev had hinted at the way in which Soviet tactics might deal with an American one-solution air policy. For, on November 4, 1955, Mr. Khrushchev reportedly told the Turkish Ambassador that "Turkey was foolish to remain in NATO since, if there is any difficulty, Turkey will be the first to be eaten up and your friends will not be able to help you." As Soviet policy has unfolded, we can see that Mr. Khrushchev was hinting to Turkey that she was in grave danger by remaining in NATO while the United States, committed to the one-big-war-or-none military policy, was gradually losing both the means and the will to engage in either limited or unconventional (cold) warfare.

American armed forces are more and more being tailored for fighting one big war. Yet Secretary of Defense Wilson, testifying before the House Appropriations Subcommittee on 24 January 1956, stated that "actually, there is no way of knowing exactly what Russia will do; how she will attack." It is no secret that the United States Army, as presently constituted, lacks the capabilities for limited operations, although land forces would be the key to success in all types of warfare. Further, the concentration on one big war or none raises grave doubts as to whether the Air Force could give any support to the Army. The story of Korea and the many failures of air support are too well known to bear repetition, but have we learned anything about air-support and airlift requirements from Korea? Must we be the victims of Soviet freedom of action because we are the prisoners of a one-big-war-or-none idea?

Fortunately, a master of coordinated warfare has shown how the United States can regain freedom of action and do so with the least risk of an all-out war of mutual destruction. General of the Army Dwight D. Eisenhower wisely wrote in Crusade in Europe: "Our Mediterranean experience had reaffirmed the truth that unity, coordination, and cooperation are the keys to successful operations. War is waged in three elements but there is no separate land, air, or naval war. Unless all assets are efficiently combined and coordinated against a properly selected, common objective, their maximum potential power cannot be realized."

General Eisenhower's view of warfare looks toward the future rather than the past. It holds that the United States must have a reasonable degree of readiness for fighting the one big war, but that the United States can and must afford a readiness for all the likely types of war. Such a military policy offers America the freedom of action necessary to meet the tactical changes for world conquest instituted by the Soviet leaders with the liquidation of the Stalin myth.

Crocodile Tears

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. DEROUNIAN. Mr. Speaker, I should like to call to the attention of our colleagues the following truism which appeared as an editorial in the New York World Telegram and Sun on June 21, 1956:

THOSE CROCODILE WEEPERS

Our country is suddenly filled with curbstone experts on ileitis—folks who didn't know there was an ileum in the human body until a couple of weeks ago when Ike went to the hospital.

All the doctors who participated in the President's diagnosis and operation agree there should be no serious after-effects, and Ike should be up and about his business soon. But some doctors who have never examined Ike's insides are rushing into print with contrary testimony.

We've always believed any M. D. is entitled to respectful attention on medical matters, especially if that M. D. has intimate knowledge of the patient.

But it is not hard to discount the crocodile tears of the left-wing politicians and pundits who are crying out against the "awful conspiracy of the GOP heirarchy to force a sick and reluctant President to run again."

If Ike doesn't feel like running, he won't. If he feels like running, he'll run.

Never mind those Jeremiahs who are lugubriously muttering that Ike doesn't really know how sick he is—they weren't for him in 1952 and won't be for him this year, even if Ike qualifies for the Olympic team as a high hurdler.

Support of Mine-Subsidence Legislation

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution drawn up by the Coaldale (Pa.) Advisory Council supporting my bill, H. R. 9073, and Senator LEHMAN'S bill, S. 3137, which provide for the same type of relief for the victims of mine subsidence as for the victims of floods and other disasters:

COALDALE ADVISORY COUNCIL,
Coaldale, Pa.

GENTLEMEN: Attached is a copy of a resolution passed Monday, June 14, 1956, by Coaldale Advisory Council with representatives from nine additional coal-region towns concurring in its purpose by their presence at the meeting and by pledging their support to our effort.

It was decided to ask all municipal authorities, all veterans' organizations, all service clubs, and all interested coal-region residents and property owners to join us in petitioning Congress for passage of H. R. 9073, as introduced in the House of Representatives by Congressman DANIEL J. FLOOD, of Luzerne County, Pa.

H. R. 9073 is a bill to provide insurance against flood damages and for other purposes. It contains this phrase: "And land subsidence due to an underground cave or man-made excavation." If passed by Congress the proposed legislation will provide a means for insuring 1- to 4-family homes to the extent of $10,000 and any other personal property in 1 location to the extent of $100,000.

We urge your organization to adopt this resolution, or one similar to it and forward same with your request for action to the Representative from your congressional district and to the two United States Senators from Pennsylvania.

Inasmuch as Congress may adjourn in July, time is important. Any action taken by your organization should be taken as soon as possible.

You may further aid this cause by circulating this resolution to other organizations

in your particular area and by seeking to enlist as much help as possible from individuals in your area and from your local newspapers.

If additional information is desired, contact the undersigned.

Sincerely,

W. E. PISKLAK,
Secretary, Coaldale Advisory Council.

Whereas, extensive portions of the Borough of Coaldale have been affected by mine subsidence, thereby causing great financial loss to real-estate owners; and

Whereas said real estate owners, under present laws and statutes, have no redress and no possibility of recovering damages due to said mine subsidence; and

Whereas there has been proposed before Congress bill H. R. 9073 jointly sponsored by Representative DANIEL FLOOD and Senator HERBERT LEHMAN providing for the same type of relief for the victims of mine subsidence as for the victims of floods and other disasters: Now, therefore, be it

Resolved and it is hereby resolved by the Advisory Council of the Borough of Coaldale, That the Representatives and Senators from Pennsylvania furnish their complete and entire efforts to do all things necessary for the passage of said bill H. R. 9073 before the adjournment of the present session of Congress.

The Presidency Today

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 2, 1956

Mr. PELLY. Mr. Speaker, a former president of the Washington State Bar Association, and one-time dean of the University of Washington Law School, Alfred J. Schweppe, has reviewed a book called The Presidency Today for the American Bar Association Journal. This book, by two authors, Edward S. Corwin and Louis W. Koenig, is a 1956 publication of the New York University Press.

Since Mr. Schweppe concludes his review with an observation that this book, The Presidency Today, should be a must for every Member of Congress, I include the text of the review for the edification of all Members interested in the growth of power by the office of the Chief Executive:

THE PRESIDENCY TODAY

In this small, timely, and provocative volume, the authors rapidly review the Presidency in perspective from Washington's time to the present day, with stress on the historical growth of Presidential powers, especially in wartime—powers which first burgeoned large in Lincoln's administration and came to a climax in that of the second Roosevelt and in the Korean "police action" of Mr. Truman. They observe with Norman J. Small that "Nothing is more evident in the history of the Presidency than the steady accumulation of power by that office."

In the area of Presidential prerogative, based on the conduct of the office by the second Roosevelt, they tend to overenlarge the Commander in Chief area without consideration of such decisions as *ex parte Quirin* (317 U. S. 1, 25–6, 29 (1942)) and *ex parte Milligan* (4 Wall 2, 139 (1866)) which appear to limit the Commander in Chief function to "the command of the Armed Forces and the conduct of campaigns," except as Congress may otherwise provide under the "necessary and proper clause." As pointed out in the Quirin case, the Commander in Chief area is subject to reasonable regulation by Congress under the "necessary and proper clause," the scope of which with respect to the other two departments, the Presidency and the courts, is not always remembered. (See Constitution of the United States of America. Annotated 1952). Government Printing Office. Edward S. Corwin, Editor, p. 307; United States Senate hearings, S. J. Res. 1, April-May 1955, p. 600.)

While criticising the 50-destroyer deal just prior to World War II as violative of existing statutes, they appear dissatisfied with the Steel seizure case, largely, however, as being inconsistent with prior precedents of Presidential seizure of power in emergencies. They do not advert to the basic theory of the Court's decision as perhaps best expressed in the concurring opinion of Mr. Justice Jackson where after pointing out that "much" of what is said in *United States* v. *Curtiss-Wright Corp.* (299 U. S. 304 1936)—partly relied on by the authors—is "dictum," he continued:

"It was intimated that the President might act [in external affairs] without congressional authority, but not that he might act contrary to an act of Congress."

They speak of a "presidential emergency power to adopt temporary remedial legislation [executive orders] when Congress has been, in the judgment of the President, remiss." And they say this notwithstanding article I of the Constitution vests "all legislative power" in Congress, which was the basis of the Steel Seizure decision, and notwithstanding the Court has repeatedly said in other cases that the President cannot "make laws." The nullity of the executive order in the Steel Seizure case ought to settle this point. On this phase they conclude: "The best escape from presidential autocracy in the age we inhabit, is not, in short, judicial review, which can supply only a vacuum (sic?), but timely legislation."

The authors mildly query the claimed enlargement by treaty of the power of the President to make war, without declaration by Congress, in case of an attack on one of our treaty allies in Europe or Asia, and discuss also the great inroads on the constitutional treaty role of the Senate by the wide use of executive agreements, published and unpublished.

They sympathetically analyze the problem of Presidential confidences and refusal to furnish executive records and papers to Congress.

They wisely suggest "a closer working relationship between the President and Congress" and to this end comment on the recurrent proposal to give cabinet members seats in Congress. For themselves they urge consideration of a new type of cabinet consisting of legislative leaders and department heads with seats in Congress.

One of the currently timely discussions is the excellent defense of the present electoral-college system as against various proposed reforms which they convincingly establish would have the practical and highly detrimental effect of irreparably damaging the two-party system, of greatly increasing the danger of electing minority Presidents, and of actually destroying the device invented by the Founding Fathers to minimize popular emotional influence of the moment in the selection of the President.

They forcefully condemn the idea of a presidential primary as being ineffective, misleading, often unattractive to the bulk of the voters, characterized by uneven participation of candidates who tend to handpick their battleground, impossible for conscientious persons holding public office with current duties to perform, inordinately expensive, prohibitive for many competent but inadequately financed candidates—indeed, an antidemocratic instead of a democratic device, which would generally limit candidates to the few who could command big campaign money, while, at the same time, having a disastrous effect on party cohesion. (Note statement of Adlai Stevenson, March 28, 1956.) They make a convincing case that presidential primaries should be abolished.

With the illnesses of Presidents Wilson, Roosevelt, and Eisenhower as the take-off point, the writers stress the increasing importance of the Vice Presidency. They quote President Eisenhower in 1952 as saying that the "national conventions should choose the Vice President primarily for his acceptability as a close working partner" and that "a Presidential nominee should step aside if the convention did not abide by his preferences."

The authors conclude, as they began in the preface, with the assertion that "methods must be devised for making the national legislative powers more readily available when need for important action arises"; and, if not at hand, the need "will be filled by the power that is at hand at all times, that of the President."

The contents of this timely book deserve the attention of every American and should be a must for every Member of Congress. Congress could well give immediate heed to the problems and suggestions which it puts forward.

Who Are Our Friends?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following editorial which appeared in the New York Times of June 21, 1956:

TITO IN MOSCOW

It must be said that Yugoslav President Tito's visit to Moscow and the two Yugoslav-Soviet statements issued yesterday contain elements that are disturbing. These elements were perhaps summed up best by Marshal Zhukov when he expressed his confidence that in any future war Yugoslav and Soviet troops will fight "shoulder to shoulder." There was no adequate reply to this remark in the subsequent statement of the Yugoslav Foreign Minister that he hoped there would be no future wars.

Moscow, it is true, went all out in its effort to woo the Yugoslav visitors. The warmth and scale of the reception given these visitors are without precedent. Under these circumstances there was great pressure on Tito to respond with equal warmth and expression of friendship. The result was the creation of an atmosphere in which Marshal Zhukov's remark becomes understandable, whether or not there was specific basis for it. Further in the governmental comunique it became more difficult to distinguish the Yugoslav and Soviet positions on foreign policy. And in the party communique we are promised a joint effort by both Yugoslav and Soviet Communists to form what seems in effect a world bloc of Leftist forces.

All this must raise questions before American public opinion. We welcome Yugoslav Vice President Kardelj's statement in Foreign Affairs that his country desires American friendship irrespective of whether American aid continues. But we must wonder why no opportunity was taken publicly in Moscow to point out explicitly that Yugoslavia's own experience is the best proof that American aid does not "enslave" a nation, the latter notion being a Soviet stereotype which still prevails.

Yugoslav-United States cooperation has benefited both countries in the past and could benefit both in the future. This cooperation does not require Yugoslav-Soviet enmity and therefore has not been disturbed by this past year's normalization in Moscow-Belgrade relations. That cooperation would be disturbed, however, by any evidence that Yugoslavia has abandoned its hard-won independence and again become an instrument for the accomplishment of Soviet aims.

Los Angeles County, Calif., Resolves in Favor of First $50 Exemption Earned by Blind Persons

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. DOYLE. Mr. Speaker, I have just received the following letter, dated June 19, 1956, together with the following resolution from the assistant city clerk of the city of Los Angeles, Calif. And since I am cordially in favor of the purport of this resolution, I take particular pleasure in making these brief remarks about it and place it in the Appendix of our daily CONGRESSIONAL RECORD.

It is my good fortune to count amongst my friendship list a goodly number of blind persons; totally blind most of them. Several of them have frequently spoken to me of what a great economic and personal blessing it would be to them if they could not only be permitted to earn $50 a month but how encouraging it would be to their hearts, souls, spirits, and daily needs also, if the first $50 which they might earn could be disregarded in computing the aid to them.

It appears crystal clear to me that the earning ability of folks who are under the social security law should be capitalized upon more than it is to the end that their independence of action and ambition should have worthy recognition and that thus the dignity of the individual should be further maintained and fostered instead of having them accumulate a further sense of dependence on aid of any sort at any level, or as a result of the benevolence of government.

CITY OF LOS ANGELES, CALIF.,
June 19, 1956.

The Honorable CLYDE DOYLE,
House Office Building,
Washington, D. C.

DEAR SIR: At the meeting of the Council of the City of Los Angeles held June 19, 1956, resolution was adopted memorializing the Congress of the United States to enact such legislation as is necessary to permit recipients of aid to the aged to earn $50 a month, which amount shall not be deducted in computing aid to such recipients.

Certified copy of said resolution is transmitted herewith for your information.

Very truly yours,
WALTER C. PETERSON,
City Clerk.
By A. M. MORRIS,
Assistant City Clerk.

"Whereas in 1950 the Congress of the United States amended the social security law to provide that the first $59 per month of income earned by a blind person shall be disregarded in computing aid to such person, thereby allowing a blind person to earn this amount in addition to his aid; and

"Whereas legislation is presently before the Congress of the United States which would extend this same benefit to recipients of aid to the aged; and

"Whereas it is the belief of the City Council of the City of Los Angeles that there is an abundance of odd jobs and temporary employment in this State that could be capably filled by aged persons; and

"Whereas the present public-assistance program discourages these aged persons from seeking such employment by requiring that any and all earnings be deducted from their aid: Now, therefore, be it

"Resolved, That the City Council of the City of Los Aneles respectfully memorializes the Congress of the United States to enact such legislation as is necessary to permit recipients of aid to the aged to earn $50 a month, which amount shall not be taken into consideration in computing aid to such recipients; and be it further

"Resolved, That the city clerk of the city of Los Angeles is hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States."

Presented by Ernest E. Debs, councilman, 13th district.

Seconded by Don A. Allen, councilman, seventh district.

I hereby certify the foregoing to be a true and correct copy of resolution adopted by the Council of the City of Los Angeles at its meeting held June 19, 1956.

WALTER C. PETERSON,
City Clerk.
By A. M. MORRIS,
Assistant City Clerk.

Results of 1956 Questionnaire

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. HILLINGS. Mr. Speaker, following my custom of previous years, I recently sent an opinion questionnaire to the Democrat and Republican voters who reside in the 25th Congressional District in order to obtain their views on some of the important issues facing our country.

Thousands of replies have been received in response to my questions. So many replies have been received that it is an impossible task to answer each individual. A large number of people added comments to the questionnaire which have increased the value of the poll as a gage of public opinion.

Mr. Speaker, we who serve the American people have an obligation to seek out the views of those whom we represent. I am pleased and gratified at the response of those public-spirited citizens who have written to me and I wish to take this opportunity to thank each of them.

The following is the compilation of answers:

1. Are you satisfied with the Eisenhower-Dulles foreign policy? Yes, 72 percent. No, 18 percent. No opinion, 10 percent.

2. Should the United States send arms to Israel? Yes, 17 percent. No, 67 percent. No opinion, 16 percent.

3. Are the United States immigration laws too severe? Yes, 16 percent. No, 69 percent. No opinion, 15 percent.

4. Should the Federal gasoline tax be increased to provide more adequate highways? Yes, 42 percent. No, 48 percent. No opinion, 10 percent.

5. Do you believe existing Federal laws provide adequate old-age benefits for our senior citizens? Yes, 43 percent. No, 43 percent. No opinion, 14 percent.

6. Should the Federal Government encourage private industry to provide workers with a guarantied annual wage? Yes, 32 percent. No, 53 percent. No opinion, 15 percent.

7. Should the Federal Government spend money to help the individual States build more schools? Yes, 58 percent. No 33 percent. No opinion, 9 percent.

8. Local authorities have primary responsibility for control of smog. Should the Federal Government assume a more active role to help solve the smog problem? Yes, 56 percent. No, 36 percent. No opinion, 8 percent.

9. The Federal Government has eliminated segregation in the armed services and in the District of Columbia. It has also supported racial integration in the public schools. Do you believe these measures are sufficient? Yes, 64 percent. No, 19 percent. No opinion, 17 percent.

10. In your opinion, whose legislative policies would be best, if serving as President of the United States? Eisenhower, 88 percent. Kefauver, 4 percent. Stevenson, 8 percent.

Dr. Wesberry Heads Baptist Pastors' Group

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. DAVIS of Georgia. Mr. Speaker, Members of the House of Representatives were gratified to learn that on May 29th Dr. James P. Wesberry, pastor of the Morningside Baptist Church in Atlanta, was elected president of the Southern Baptist Pastors' Conference in Kansas City, Mo.

Dr. Wesberry served as Acting Chaplain of the House of Representatives in 1949, and formed many devoted and lasting friendships among the Members of the House while serving in that capacity.

Dr. Wesberry is one of the most beloved and outstanding ministers of the Baptist church. His talents and ability have received recognition not only in Atlanta and in Georgia, but throughout the entire Baptist denomination.

It is with pleasure I insert herewith a news item from the Atlanta Journal announcing Dr. Wesberry's election as president of this great group of Baptist pastors:

[From the Atlanta Journal of May 30, 1956]

DR. WESBERRY HEADS BAPTIST PASTORS' GROUP

(By John J. Hurt)

KANSAS CITY, MO., May 30.—Dr. James P. Wesberry, pastor of Atlanta's Morningside

Baptist Church, is the new president of the Southern Baptist Pastors' Conference.

Dr. Wesberry was elected at the closing session Tuesday night when the report of the nominating committee was accepted.

The Atlanta minister will arrange the program and preside over the conference when it meets in Chicago next year for 2 nights and a day preceeding the Southern Baptist Convention sessions.

The Southern Baptist Convention received Wednesday from its home mission board a report showing it had loaned $5,510,000 for church construction in the last 29 months. Loans for an additional $2,190,000 have been approved and will be made.

G. Frank Garrison, assistant executive secretary of the board with headquarters in Atlanta, made the report for the period since January 1954, when the convention provided additional loan funds. Mr. Garrison also said that when the convention projects its next budget for capital needs additional funds should be provided. He did not indicate the specific amount.

The report showed that of the $5,510,000, allocation of $3,189,000 had been made to churches in the 20 Western States and States where Southern Baptist work is comparatively new. In Georgia, 33 churches received $466,000, while 7 others have been approved for $106,000.

Woman's Missionary Union, which closed its 3-day session Tuesday night, re-elected Mrs. J. I. Alford, of Covington, as one of its vice presidents. She also was named a trustee of the organization. Mrs. Alford is president of Georgia's Missionary Union.

Mrs. David Boyd, of Atlanta, and Mrs. Guy N. Atkinson, of Norman Park, were elected trustees of the Carver School of Missions and Social Work at Louisville. Miss Janice Singleton, of Decatur, executive secretary for Georgia, was made a member of the committee on nominations, with Mrs. John J. Hurt, Atlanta, as an alternate.

Essay by Willowbrook Junior High School Student, 23d District, California, on Daniel Webster

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to insert the text of an essay written by Verna Dean Gates, a student of the Willowbrook Junior High School.

This very interesting and important junior high school is in Compton, Calif., and the principal thereof is William W. Jones. At this significant school are several companies of California Cadet Corps which have made an outstanding record in junior high school functions in California.

The occasion of Miss Gates writing this essay grows out of her visit, accompanied by her distinguished school principal, to the Nation's Capital several weeks ago after they had the honor and privilege of visiting Valley Forge, as Willowbrook Junior High School was one of the winners of the annual Freedoms Foundation competition against the junior high schools of our great Nation. Mrs. Jones accompanied Miss Gates and Principal Jones on their pilgrimage to Valley Forge to receive the award for the school which they ably represented. The wording of the award is as follows: "For outstanding achievement in bringing about a better understanding of the American way of life."

The reason Miss Gates wrote her essay on Daniel Webster was because when I called her attention to the fact that the only quotation or verse on the walls of the House of Representatives was one by Daniel Webster I asked her to tell me something about him and she frankly stated she did not know very much about him so I invited her to read up about him and write me her report. Following is the text thereof:

DANIEL WEBSTER

(By Verna Dean Gates, Willowbrook Junior High School, June 11, 1956)

When I had the privilege of visiting our Nation's Capitol last spring under the sponsorship of Freedoms Foundation, our Congressman, CLYDE DOYLE, personally guided us into the assembly room of the House of Representatives. He pointed out many interesting features of this historical room and particularly called my attention to an inscription on the wall. The only words on the wall of that room. They were the words of a great American named Daniel Webster. These are the words of that quotation:

"By the blessing of God may these United States become a vast and splendid monument, not of oppression and terror, but of wisdom, of peace and of liberty upon which this world may gaze with admiration forever."

Daniel was a great compromiser. He did many great and wonderful things. He made a treaty with Canada. This enables tourists from the United States and Canada to go across each other's borders with a minimum of redtape and as little investigation as possible.

In Daniel's lifetime there was great controversy between the Northern and Southern States. Daniel's compromising kept the States together for a long time.

Daniel had a very good friend named Colonel Mannings. He was always trying to persuade Daniel to agree with the North instead of the South. In Daniel's heart he thought slavery was the most inhuman thing that a person could do. But he wanted to be President so much that he would not express his feelings. Colonel Mannings thought this was a very cowardly way to act.

In an address before Congress he told the Congressmen that he fully agreed with the South. This shocked the northerners very much. By saying those words he did not become President. Colonel Mannings was very disgusted and thought he would never forgive Daniel.

Four years before Daniel died Colonel Mannings forgave him for what he had done and once more was his friend.

Daniel Webster was human and like the rest of us apparently had his faults, but he will always be remembered as one of America's greatest orators and a statesman who lived for his country above everything else.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, Scott, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Wofford, ———, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

Appendix

Commencement Address by Hon. Lister Hill, of Alabama, at Woman's Medical College of Pennsylvania

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 26, 1956

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a commencement day address which I delivered at the commencement exercises of the Woman's Medical College of Pennsylvania, at Philadelphia, Pa., on June 7 last.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF THE HONORABLE LISTER HILL, UNITED STATES SENATOR FROM ALABAMA, AT COMMENCEMENT EXERCISES OF THE WOMAN'S MEDICAL COLLEGE OF PENNSYLVANIA AT PHILADELPHIA JUNE 7, 1956

President Gordon, doctors, distinguished guests, graduates, students, and friends, I am happy and honored to be with you on this auspicious occasion. I share your pride in this splendid institution, which enjoys the distinction of being the only woman's medical college in the United States, this institution that has become so important a part of our Nation's great center of medical education, this institution that has made historic contributions in securing for women their rightful place in medicine.

I come as one who has deep roots in the medical history of Philadelphia and I rejoice at the opportunity to nourish them once again.

It was in Philadelphia that my father, a suregon and practitioner of medicine for more than 50 years, was privileged to study at Jefferson Medical College under the renowned Samuel D. Gross.

It was here that my father acquired much of the foundation as a student and seeker of medical knowledge that prepared him to go forth into the night and by the light of a kerosene lamp in a crude cabin in Montgomery, Ala., perform the first successful suture of the human heart in America.

It was here that he formed warm friendships which endured throughout his lifetime.

And it was from here that he went forth to study under Joseph Lister, whose name I proudly bear, and it was at the time that great benefactor of mankind was enunciating and fighting for the acceptance of the principles of aseptic and antiseptic treatment of wounds, the treatment which gave birth to modern surgery.

Being with you today has a special significance for me—not only because of my father's association with Philadelphia; not only because of my efforts in the United States Senate in the field of health; but as the son of a doctor, the nephew of a doctor, the brother-in-law of two doctors, the first cousin of five doctors, and as one early imbued with a deep and abiding interest in doctors, and in the progress of medicine and medical care in our Nation. I appreciate the more the signal honor of having the opportunity to say to you on this your graduation day that which tens of thousands of men and women and children will say to you through the years yet to come.

Some will say it with their voices, some with their eyes, all in their hearts will say that which I would be the first to say to you:

Thank you for what you have done.

Thank you for what you will do.

Thank you for what you are.

Thank you for becoming doctors; for having taken the hard way; for having fought off the easy; for having worked and studied; for having sacrificed so much. Thank you for having had so early in life the wisdom to know that only in a life of constant study and service to your fellow man can your own lives be rich and meaningful.

We need you as doctors. People—some in fear, some in pain, some in danger—need you and need the art and the science you have learned.

In our society you have achieved a place of stature and of honor. The place you have won carries with it a formidable array of responsibilities. These responsibilities are many; they are varied; some are difficult to discern; too many are easy to forget; all are a challenge.

The first challenge is the challenge which confronts the woman in medicine in her capacity as a citizen. In matters of economics, of sociology, of social welfare, and particularly of the relationship of health and Government, that which you say and do will be accorded a respect unsurpassed by that given to any other member of your community.

In the past few years the revolutionary strides in the field of health have been achieved largely because of the willingness of men and women in medicine to assume the responsibilities of citizenship. Through vigorous leadership and cooperation with professional and lay leaders, and with legislators, doctors have contributed mightily to an ever-expanding pattern of progress in medicine and its related fields.

This progress is attested by the fact that last year in Congress under our Hill-Burton program, which will celebrate its tenth anniversary in August, we sharply increased the funds for the construction of hospital and health facilities.

The Hill-Burton program has helped States, communities and nonprofit organizations to build critically needed hospitals, health centers, laboratories and expand facilities for medical education. Already more than 2,000 hospitals and health facilities have been built. Hundreds of them are in communities where there had never been a hospital. Almost 900 additional projects are now under construction or will soon be started. Last year for the first time funds appropriated were designated for the constuction of rehabilitation facilities, diagnostic and treatment centers, nursing homes and facilities for the care of patients with chronic illness, as well as for research in the management and administration of hospital care.

With the active and indispensable roles played by men and women in medicine, we established the National Institutes of Health at Bethesda and inaugurated the programs for medical research—research through which we have already accomplished so much and which is so vital for the future progress of medicine and the health of our people.

It was through the initiative of members of the medical profession that we discovered to our consternation that the greatest library of medicine in the world, the Armed Forces Library, the library on which so much of our research depends and the contents of which are irreplaceable, is currently housed in a building constructed in 1887 and condemned over 30 years ago. Congress acted promptly, and I think I can promise you that soon we shall have a truly national library of medicine, adequately housed and properly located.

These programs and many others have been hammered out and shaped with the aid of members of the medical profession and suchs professional organizations as the American Medical Association and the American Hospital Association and similar groups. We in the Congress could never have developed such programs without the counsel, the cooperation and the leadership of the medical profession.

In determining the role of Government in the field of health, the leadership of women doctors is all important. The humanitarian concern for people and for their welfare, with which you as women are so richly endowed, coupled with the training and experience you have gained as physicians and scientists, bids you accept the responsibilities of citizenship and exercise the leadership which your position demands. Your determination to do so can mean the difference between an age of progress or an age of stagnation in the field of health.

United in the cause of bringing health and happiness into the lives of our people, we must go forward into a new day of health.

We must continue to carry forward the great programs already inaugurated and already proven so successful.

We must intensify and enlarge our medical research. Through research we will find the keys to unlock the doors to the cause and cure or prevention of so many diseases that have plagued and baffled mankind through the centuries.

We must train more doctors and dentists.

We must meet the crucial shortage of professional nurses, practical nurses and auxiliary hospital and health personnel.

We must provide more protection against catastrophic illness. We must extend voluntary health and hospital insurance to more of our people. We must meet the special and difficult problems involving the aged, the indigent, and the unemployed.

In these and many other fields government at its different levels—Federal, State, county and municipal—can and must do much. I am happy to tell you that last week the Senate Committee on Labor and Public Welfare, of which I happen to be chairman, recommended to the Senate a bill authorizing Federal funds for training nurses and other health personnel, for training doctors in mental health and in public health and for the establishment of research projects in these fields. I hope that we shall soon recommend a bill providing funds to assist in construction of medical educational and research facilities.

As we move forward along the whole front in the battle for better health for our peo-

ple, we must remember that the doctor is ever the central figure in the drama of medical care. All else is but to assist him, to help him achieve the best possible results. And I hasten to add that I use the masculine "him" in a generic sense only. If the doctor is to do his best he must remain free and uncontrolled. Only as the doctor finds the inspiration and enjoys the right of individual action that freedom gives—to explore, to inquire, to discover, to serve in his own way—only then can we give his best, only then can we continue the marvelous progress of American medicine.

We must preserve the incentives of our free medical system, the incentives for individual effort, iniative and resourcefulness, the incentives to give the best we have, the incentives that flow from the free choice and personal relationship of the doctor and his patient.

Equally as important as the responsibilities of citizenship is the challenge which will confront you as individuals entering into a noble profession. From the days of women doctors in ancient Greece until little more than a century ago, women were excluded from the medical profession. The belated reentry of women into medicine—marked by the historic founding of this school—and the skepticism which unfortunately and unjustifiably is still in the minds of many may cause any lapse in meeting your responsibilities to be regarded more gravely than might be the case of a man.

Of utmost importance is constant vigilance in maintaining your intellectual integrity and the high standards which your profession calls upon you to uphold: Thou shall not bear tales but shall guard thy patient's confidence; thou shall not gamble with a patient's life; thou shall scrupulously avoid the temptation to let moneymaking and cupidity supplant ethics—the ethics with which I know you are now imbued. Nourish and hold fast to the ideals which led you to enter the medical profession; the ideals which won for medicine universal recognition as the most idealistic of all the secular professions.

Another challenge to you as individuals is the responsibility of understanding the importance of the cross-fertilization of knowledge and of the necessity for close and continuing contact between practitioner and scientists that is the hallmark of today's medicine.

My father once illustrated the importance of the relationship between doctor and scientist by telling me how in 1864 Joseph Lister, walking home with the professor of chemistry, Thomas Anderson, heard of certain papers on fermentation and putrefaction which had been recently published by a then little-known French chemist, Pasteur. Lister read these papers and found himself convinced that minute living particles floating in the air often turned the surgery of his day into a charnel house.

This casual meeting with Anderson, plus the reading of a newspaper article on carbolic acid, led, in 1867, to Lister's laying down the great principles of the modern treatment of wounds.

A fourth challenge that will present itself to many of you is that of preserving the wonderful missionary spirit that characterizes so many outstanding graduates of your school—to name but a few, Drs. Clara Swain, May Selye, Sara Seward, and Anna Kugler in India; Drs. Coombs, Reifsnyder, Root, and Fuller in China; and Dr. Rosella Sherwood Hall in Korea.

These and other valiant women missionaries, graduates of the Woman's Medical College of Philadelphia, have added splendor to the traditions of women in medicine. They have shown us in this distraught world in which we live today that through personal discipline, through wisdom and compassion, we can win for our people the affection, the understanding, and the loyal support of other peoples.

Through your dedication and devotion to the ideals of your profession you will add years to the lives of our people. And when the time comes for some of your patients to leave this earth, it will be your understanding, your compassion, and your gentle ways which will convert moments of fear and anguish into moments of peace and serenity. Never forget the admonition of the gentle Joseph Lister, "Let not mercy or truth forsake thee; bind them about thy neck."

I hope that you will also accept the responsibility of encouraging more women to enter the field of medicine. I was surprised to learn that last year, out of 28,000 students of medicine in this country, only some 1,500 were women and that the percentage of women students of medicine is now less than 5 percent of the total. We need not fewer men but more women in medicine.

Those who preceded you and passed down through the ages the traditions of women as doctors were few in number. So, relatively speaking, are you few in number. Yet your opportunities to enrich these traditions are as boundless as are the limits of today's ever-expanding world of medicine—the world you are about to enter.

On this your graduation day, as you pass through the portals of your beloved college into a profoundly challenging way of life, I wish you health, goodness, and usefulness as doctors, as scientists, as citizen, and as individuals. I pray that the blessings that befall you may be as abundant as will be the happiness I know you will bring to the lives of others.

It must ever be a glad distinction to have consecrated your lives to serve as those who have gone before have served—healing the sick and making whole the maimed, protecting the mother in childbirth and watching over the infant so newly come to this world, bringing life and health and happiness to your fellow man—following in humility and with faith in the footsteps of Him who nearly 2,000 years ago was called the Great Physician. I salute you, doctors, on the commencement of your service to mankind.

Campaign Fund-Raising Drive in Alexandria, Minn.

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 26, 1956

Mr. HUMPHREY of Minnesota. Mr. President, several references have already been made on the Senate floor to the imaginative bipartisan campaign fund-raising drive which was recently conducted in Alexandria, Minn. An article appearing in the current June 25, 1956, issue of the New Republic describes this Alexandria experiment. This article was written by a talented young Minnesotan, John Obert, of the Park Region Echo in Alexandria.

Mr. Obert has just received an unusual recognition of his journalistic talents by being selected a Nieman Fellow for study at Harvard University. Mr. Obert is the only newsman from a nondaily newspaper to receive this award in the history of the Nieman Fellowships. I ask unanimous consent that his article on the Alexandria fund-raising campaign be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN EXPERIMENT IN CAMPAIGN FINANCING

(By John C. Obert)

When FRANCIS CASE of South Dakota took the Senate floor on February 3 to reveal that he had been offered $2,500 for his forthcoming campaign by an oil man interested in passage of the Harris Natural Gas Bill, he precipitated a deluge of newspaper headlines, the veto of the bill by the President and an effulgence of pious declarations of intention by the Senate itself.

Many things were going to be done to make sure such a thing never happened again, the Senate said, and, with admirable alacrity, a special committee was appointed to conduct a specific investigation into the Case episode, a general investigation of lobbying, and campaign contributions was authorized and preliminary work on a new corrupt practices bill was begun. The new legislation was aimed, it was reported with much fanfare, at requiring complete reporting and publicity of all campaign contributions and with establishing a realistic limit on contributions and expenditures.

Majority opinion in both parties has always frowned on financing elections with big gifts from potential favor seekers. But the question has been: If not their money, whose?

In Alexandria, Minn., we have proved that the public is willing to shoulder the responsibility.

It was on a cold, blustery day in late February when Minnesota's commissioner of agriculture, "Barney" Allen, bumped his broad-hipped frame through the door of the editorial offices of our newspaper, the semi-weekly Park Region Echo to ask for and receive the Echo's pledge of promotional support for the testing of a mass fund-raising plan, conceived jointly by Philip Graham, publisher of the influential Washington Post and Times Herald, and himself, the test to be conducted in Douglas County, Minn.

Nine weeks later, on a wind-swept, rain-drenched night in early May, Joe Tomlinson, district manager for an automobile club, and Wayne Bye, a young farmer, walked up the steps of a home in Alexandria, rang the doorbell, collaborated on a sales pitch, accepted a contribution for political campaigns. Tomlinson was Douglas County Democratic-Farmer-Labor chairman, and Bye was Douglas County Republican chairman. Their joint solicitation of that home in Alexandria, Minn., launched the Nation's first bipartisan fund-raising drive.

From the day Barney Allen first broached the experiment to the night it was carried out, many obstacles were met and overcome. Not the least of these was the outspoken condemnation of the plan by Ed Willow, State Republican finance chairman. Though Philip Graham supported Eisenhower in 1952, the fact that Allen and the Park Region Echo are allied with the Democratic-Farmer-Labor Party aroused understandable suspicion in some Republican circles. Willow, for one, contended that the all-party plan would "sap the vigor of the individual political parties" and "blur traditional party lines." National Republican Committeeman George Etzell, who later recanted, initially charged that the plan was "a Democratic scheme loaded in favor of the Democrats." This in spite of the fact that the Republican Party will get the largest share of the money raised by the bipartisan campaign.

For the money is to be divided into three equal parts, one earmarked for the Presidential campaign, one for the Congressional campaign and one for the gubernatorial campaign, and each third is to be divided among the parties on the basis of the party

vote cast for these respective offices in Douglas County at the last general election.

In three nights of formal canvassing by 40 teams of solicitors, each made up of a Democrat and a Republican or a party member and an independent, 75 of every 100 Alexandrians approached contributed to the all-party campaign. And only 200 people earmarked their entire contribution for one or the other party. To date, with a large number of follow-up calls still to be made, a total of $1,200 has been collected from 930 contributors, far better than the $1-a-voter average sought.

As an editorial in the Kansas City Star pointed out, this should indicate that there is a source of some $62 million in campaign money, with no strings attached, awaiting the political parties if they'll only join hands to go after it. Some of us here in Alexandria are convinced that the Graham-Allen plan, implemented by certain Congressional actions, can raise nationally three times $62 million.

The Alexandria experiment was a success for a number of reasons, not the least of which was community pride in pioneering something new. The next community to try out the all-party fund raising plan will not have that extra incentive and will meet with similar obstacles. Something more is needed to excite the public's imagination and challenge the political parties to cooperate. That somthing might be Federal sanction of the plan, official bipartisan approval and encouragement in the form of a charter granted a national foundation for political campaign contributions, coupled with a new Corrupt Practices Act clearly defining the rules for raising and spending campaign money and requiring full reporting and publicizing of such contributing and spending. But the special Senate committee set up to reexamine the present system has done nothing since the Case incident disappeared from the news headlines.

Alexandria, Minn., has shown that it is practical to pay for campaigns without relying on potential influence-buyers to write the checks.

The United States Senate has the next move.

The American American Legion

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, June 26, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a guest editorial from the Newport Argus-Champion, of Newport, N. H., published by Nicholas J. Mahoney, entitled "The American American Legion."

I feel that this editorial is outstanding, and I commend it to all.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Manchester (N. H.) Union Leader of June 25, 1956]

THE AMERICAN AMERICAN LEGION

At a time when a considerable segment of the population is puzzled by the penchant of educators for inviting men of questionable loyalties to address college students, it is refreshing to have the American Legion come to Newport.

The Legion represents basic, intelligent Americanism. It is comprised of those who have made sacrifices to maintain our method of government. Its membership is composed of American citizens who fought in the three bloodiest wars in history. The Legion and its auxiliaries are the hard core of America.

It is inconceivable that the Legion would invite Alger Hiss to address its members, as Princeton did for its student body. No Oppenheimer, adjudged a security risk, would be welcomed as a lecturer as he is at Harvard. No Sweezy, * * * while appealing a verdict of contempt of court, would be granted the privilege, * * * as he was at the University of New Hampshire.

Such men are strange to the activities of the American Legion.

It is doubtful that those who hide behind the fifth amendment, or secretly pledge their allegiance to a system which exists to overthrow our Government, could understand the fervor with which the Legion promotes activities which are designed either to strengthen America or to aid those who have suffered as a result of sacrificing for America.

The Legion, as an entity, is but 37 years old. Yet in that comparatively short span, as the age of countries is computed, it has become a proud tradition in America. It is militant in its efforts to maintain America in the forefront, strong but just.

Members of the Legion do more than uphold the Constitution. They foster a respect for it in others, including the young. They engage in a myriad of causes, all designed to keep alive the spirit which is America's greatest heritage. They influence legislation to assure fair treatment for those who have fought for America.

They shelter with a protective mantle the wives and orphans of veterans. They aid veterans and their families to secure the full benefits due them by law.

Under the legion's sponsorship, boys all over America play baseball in junior leagues. The organization conducts nationwide oratorical contests, promotes Boy Scout troops, encourages scholarship below college level, fosters interest in good government with its Boys' State and Girls' State.

It works hand in hand with the Federal Bureau of Investigation in exposing subversives.

Conceived during war, the American Legion is dedicated to peace, but not peace at any price. Its members, already having offered themselves in defense of their country, are motivated by the determination never to let America become weak and subservient to a tyranny.

To that end, its chorus of almost 3 million voices is raised and its indefatigable efforts are devoted.

That's the organization whose New Hampshire department has chosen Newport for its convention. Our town is proud to be host to the American Legion, its ladies, and its auxiliaries.

We hope its deliberations are successful and fruitful and that the visit of legion members to Newport is so pleasant they will want to return again and again, not only as legionnaires but as welcome visitors.

The latchstring will be out.

The Presidency

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, June 25, 1956

Mr. HUMPHREY of Minnesota. Mr. President, I ask unanimous consent that two columns by Mr. James Reston, relating to the Presidency, which columns have been very educational and informative, be printed in the Appendix of the RECORD.

There being no objection, the columns were ordered to be printed in the RECORD, as follows:

[From the New York Times]

THE PRESIDENCY, III—A COMMENTARY ON THE LOSS OF LEADERSHIP IN LEGISLATION DURING PRESIDENT'S ABSENCE

(By James Reston)

WASHINGTON, June 19.—Tuesday is legislative day at the White House, and Maj. Gen. Wilton B. Persons, who runs interference for the President on Capitol Hill, was in his office this morning at 7:40 a. m.

He looked decidedly unmilitary—a tall, ruddy, 60-year-old man with receding gray hair, sportily dressed in a rough raw silk tan sports jacket, tan trousers, braided sports belt, two-toned shoes, white shirt, and a maroon tie figured with Republican elephants.

On his desk, in keeping with the medicinal quality of Washington these days, was a large sign:

"While in this office speak in a low, soothing tone of voice and do not disagree with me in any manner.

"Please be informed that when one has reached 'my age' noise and nonconcurrence cause gastric hyperstalsis, hypersecretion of hydrochloric acid, and rubus of the gastric mucosa * * * and I become most unpleasant."

"Slick" Persons has seldom been unpleasant to anyone in his life, which is why he is the President's liaison man with Congress, and he wasn't unpleasant this morning. In fact, he was entirely relaxed, for the normal Tuesday morning routine had been canceled.

TUESDAY'S SIGNIFICANCE

To anyone interested in the responsibilities of the modern American Presidency, the normal routine of Tuesday morning at the White House is significant.

It is a reminder that the President is not only Commander in Chief, principal administrative officer, ceremonial head, and keeper of the public conscience, but that he is party leader and legislative leader as well.

Coincidentally, the Tuesday morning meeting illustrates President Eisenhower at his best. It clashes with the illusion, now being carefully projected here, that everything goes on as before, regardless of the President's illness.

Normally, the President presides over the legislative council meeting at 9 a. m. in the Cabinet room. (It was moved up from 8:30 a. m. at the suggestion of the physicians after the President's heart attack last September.)

Usually in attendance are the Republican leader in the Senate, WILLIAM F. KNOWLAND; the Republican leader in the House of Representatives, JOSEPH W. MARTIN, Jr.; the chairman of the Senate Republican policy committee, Senator STYLES BRIDGES, of New Hampshire; the Republican whip in the Senate, Senator LEVERETT SALTONSTALL; the Republican deputy House leader, Representative CHARLES A. HALLECK, of Indiana; and the Republican whip in the House, Representative LESLIE C. ARENDS.

In addition to the President, Sherman Adams, the assistant to the President; General Persons, Gerald D. Morgan, the White House special counsel, and the other White House congressional lioson officers—I. Jack Martin (Senate) and Bryce N. Harlow (House)—represent the executive branch.

Depending on what is up for discussion, the ranking Republican members of the congressional committees handling the topics on the agenda and the Cabinet members principally concerned will also attend.

President Eisenhower's leadership in these meetings was at first tentative and respectful toward the congressional leaders. For the first year of his administration, he reigned but did not rule. Then slowly, until his first illness, he changed his tactics.

Unlike Franklin D. Roosevelt, who tended to use the rubber-truncheon approach to Congress, and Harry S. Truman, who increasingly tended to taunt his former associates on Capitol Hill, President Eisenhower always has used the cooperation approach.

He put the legislative program on an organized basis. General Persons prepared for the Tuesday morning meeting by calling a session every Saturday morning of all the principal legislative representatives of the various departments and agencies. Here proposals for the Tuesday agenda were drafted.

On Monday, after consultation with the Republican legislative leaders, General Persons then prepared the agenda, briefed the President on it early Tuesday morning, and left the leadership to the President.

PRESIDENT ENJOYS IT

This is precisely the type of meeting the President enjoys. He runs it informally, and tends to take the judgment of the legislators on what can and cannot be achieved in Congress. But more and more he had tended to be assertive, to put all his powers of persuasion into the meeting, and to work personally with recalcitrant members in the hope of persuading them to back the administration's requests.

Much more than is generally realized, the President has been in private contact with Members of the Senate and House of Representatives by telephone, letter, and in unpublicized meetings at the White House on legislative matters. The general impression here is that these personal contacts have paid off.

For much of the last 9 months, however, the President simply has not been available to carry on this role as legislative leader. It was, of course, impossible during much of the time from his heart attack in September until he resumed his full duties in January. And while he has tried to carry on during his present illness by issuing public statements this week from his hospital bed, the all-important Eisenhower personal touch has been missing.

These absences have also, inevitably, cut the President's contacts with other members of the administration more than is generally realized or officially admitted.

For example, he used to have a regular meeting every Monday with Arthur F. Burns, Chairman of the Council of Economic Advisers, and Gabriel Hauge, the administrative assistant who keeps an eye on the growth of the national economy.

These meetings are no longer held on a regular basis, as part of the system of conserving the President's strength. Messrs. Burns and Hauge still do see the President if something of unusual importance comes up. But today, for example, they held a breakfast meeting at the White House not with the President but with Mr. Adams, General Persons and Mr. Martin of the White House staff.

CONFLICT OF CONCEPTS

The history of the Presidency, as Prof. Edward S. Corwin of Princeton has pointed out, reflects a struggle between two different conceptions of how the President should conduct his office.

First is the conception that the Executive ought to be subordinate to the supreme legislative power.

Second is the conception that it ought to be, within generous limits, autonomous, self-directing and assertive in initiating and pressing for the legislation it wants.

President Eisenhower tended at the beginning of his administration to adopt the first concept. For a time he tended to subordinate himself in the legislative process of the Congress.

In his second, and particularly in his third year, however, he moved close to the second concept, at least to the point of adopting Theodore Roosevelt's conviction that "the action of the Executive [often] offers the only means by which the people can get the legislation they demand and ought to have."

President Eisenhower never did go so far as to agree with the first Roosevelt that the Presidency was "the bully pulpit" of American life. But he did seek more and more to use the Tuesday meeting, the personal contacts and occasionally the persuasive power of patronage on the Congress.

The trouble is that this is an endless battle, requiring the unremitting attention of the President. And unfortunately his illness and absences from the White House have made this impossible.

[From the New York Times]

THE PRESIDENCY, IV—A STUDY OF EISENHOWER'S ATTEMPT TO MAKE UNITY A GUIDING PRINCIPLE OF GOVERNMENT

(By James Reston)

WASHINGTON, June 20.—President Eisenhower came into American political life in a convulsive era as a symbol of unity. Fortunately, he has tried to extend the principle of unity into the machinery of the Presidency.

The essence of his personal power is that nobody is mad at him. Men may differ with him, or feel sorry for him, or ridicule his ingenuous copybook-maxim approach to life and Government, but even then they seldom regard him with personal hostility.

This is a powerful factor that has contributed to his record as Chief Executive, legislative leader, mentor to a divided party, head of a mighty coalition, and even as negotiator with the Russians.

But what happens when he is stricken twice within 9 months and cannot use all his personal powers of persuasion?

The answer to this is that his leadership is seriously weakened by absence and doubts about the future. But while the President is temporarily on the sidelines, the Presidency as an institution has not been uninfluenced by his passionate interest in unity and teamwork.

For example, promptly at 12:30 this afternoon 8 men walked into the Secretary of State's dining room on the fifth floor of the new State Department Building on Virginia Avenue.

The host at luncheon was the Under Secretary of State Herbert Hoover, Jr. The others were William H. Jackson, the Special Assistant to the President for Foreign Affairs; Reuben B. Robertson, Jr., Under Secretary of Defense; Harold E. Stassen, the President's Special Assistant for Disarmament; Lt. Gen. C. P. Cabell, Director of the Central Intelligence Agency; John B. Hollister, Director of the International Cooperation Administration; Theodore C. Streibert, Director of the United States Information Agency; and one of their aids, Elmer B. Staats.

OPERATIONS BOARD MEETING

This was the weekly Wednesday meeting of the Operations Coordinating Board, the least known but probably the most important Eisenhower contribution to the machinery of the Presidency.

The OCB is not a policymaking committee. It has nothing to do with the operations of the Government within the United States. Its sole function is to see that the overseas operations of the Government are being carried out by all departments and agencies in accordance with the policies recommended by the National Security Council and approved by the President.

In short, it is an anticonfusion device. It was grafted on to the Presidency to see that a big Government that is getting bigger does not have one department carrying out overseas policy one way and several other departments carrying it out some other way.

There are so many officials from so many departments operating overseas—on information, agriculture, atomic energy, commerce, labor, immigration, intelligence, and defense—that harassed United States Ambassadors have trouble recognizing them all, let alone keeping tabs on what they are all doing.

Consequently, the OCB was created under the President and the Security Council to coordinate and follow their overseas operations and see that they stayed coordinated.

This is a big job, roughly equivalent to seeing that all mortals operate in accordance with the Ten Commandments. But the idea is clear it is to carry out Eisenhower's passion for teamwork.

It would be wrong to suggest that this was a wholly original idea. In September of 1939, a week after Germany invaded Poland, President Franklin D. Roosevelt established the Executive Office of the President.

This was Mr. Roosevelt's realization, after almost 7 years in power, that the President, without an elaboration of Presidential staff services, could not possibly supervise and unify both Executive policy formulation and execution.

TRUMAN SET UP NSC

This was greatly improved under President Truman with the creation of the National Security Council, a committee of the Cabinet, ably staffed and charged with coordinating security policy.

Since then, however, it has become increasingly (and sometimes painfully) evident that coordinating policy was not enough. Carrying out of that policy had also to be coordinated if United States officials, who have a weakness for thinking in narrow departmental terms, were not to interpret the coordinated policies in a dozen different uncoordinated ways.

The OCB's headquarters are at Jackson Place and Pennsylvania Avenue in an old house once owned by Gen. William T. (if nominated I will not accept, if elected I will not serve) Sherman. It has subcommittees working all over this town.

There are, in fact, more than 40 of them, some "watchdogging" information operations overseas, some studying certain countries, others following whole regions, some checking on atomic energy operations.

At least once every 6 months, each of these committees produces a progress report which goes to the National Security Council and the White House.

Whenever they find that a policy is so obscure that it defies coordinated execution, they yell to the security council for a better one. When they find some eager beaver overseas conducting his own private foreign policy, they blow the whistle on him.

HAS ITS DETRACTORS

That, at least, is the theory. The OCB, of course, has its critics. There are some officials here who think it is the greatest time-killer since the invention of golf. Others blanch at the thought of all those committee meetings, all those bootless, vainglorious speeches, and all those progress reports, which, they charge, are never read by the President.

Nevertheless, the OCB is by general consent a useful new device of the Presidency that is developing authority and coming out of its early development stage.

It has not managed to keep the officials it is intended to serve from making countless contradictory statements. And since its members have vastly different ideas about many operations, the old question arises:

"Who will coordinate the coordinators?"

Just the same, in any study of the President and the Presidency, the Operations Coordinating Board is bound to interest the historians. It cannot make up for the absences of the President. It cannot persuade the Congress to vote the President's foreign aid funds; it cannot coordinate policy (that is the function of the NSC); it cannot provide the leadership necessary to get the United States into an effective international trade organization. But it can help produce some unity in the operations of policies that are already on the books.

Thus, it draws attention to a fact that is seldom noticed, namely that the President has tried to institutionalize his concept of teamwork. And institutions such as the OCB, while far from perfect, are helping carry on as best they can while the President is away from the White House.

How the Mob Moved in on Labor

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, June 26, 1956

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Blinded But Unbowed," which was published in the Manchester Union Leader, Manchester, N. H., on June 25, 1956, as well as the article written by Victor Riesel "How the Mob Moved in on Labor," to which the editorial refers.

The subject matter is certainly of vital importance to the Nation and I am sure these insertions will be of interest to all.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Manchester (N. H.) Union Leader of June 25, 1956]

BLINDED BUT UNBOWED

The blinded eyes of Victor Riesel see clearly, as you will understand if you read the article over the masthead today. His special series relates the ugly picture of what happens to a nation when the "mobs" of criminals take over vast areas of its business and its labor unions. The story that Victor Riesel tells is not pretty, but it is true.

Responsibility for these conditions rests clearly on all of us, but special responsibility rests on politicians of both parties, not only in Washington but in the city halls and in the State capitols, all over the Nation which preferred to use the fantastically huge treasuries for gangsters to get elected, and thereafter wouldn't do anything about the lawlessness.

It rests also on the businessmen, who found it easier to make deals with the gangsters than to fight them.

As far back as December 1952, gang rule was the order of the day on the docks of New York City. The outstanding fact was that it wasn't poor, helpless, small steamship lines and merchants who were forced to make deals with these gangsters. It was the great steamship lines owned by immensely wealthy corporations or families.

In a letter dated December 15, 1952, this writer wrote to the president of one of the steamship lines, an inheritor of untold millions: "It is a little difficult to point the finger of scorn and shame at corruption in Washington when this type of corruption has been encouraged by deals between outstanding American businesses on the one hand and union leaders and gangsters on the other. It is true that you are in a difficult position, but at no time were you and your fellow steamship and stevedore concerns prevented from going en masse to the proper legal authorities and calling for action, as well as presenting your case simultaneously to the public."

In reply, the president of the company wrote back this illogical statement: "While the cost to the —— line was approximately $25,000, this money was not paid direct by the —— line to the boss leader, but was paid for a man on the payroll whom, we understand, did not actually work, which amount, we understand, went to the boss leader who, in turn, was capable of preventing labor disturbances."

In other words, it seemed perfectly all right for this steamship magnate to pay the money to another man who paid the gangsters. Apparently he thought it was ethical as long as he didn't pay the gangsters directly.

The gutless bowing down to the demands of the mobsters and the mob rulers by both Government and big business, not to mention big labor in this country, is not only an immoral and terrible thing which is sapping the vitality of the Nation internally, but it is this same moral indifference, this same boxing to brute force, that has prepared the way for this Nation's surrender to Communist gangsters all over the world. Once you start getting down on your belly to blackmailers and to gangsters, it becomes a habit.

Read Riesel's articles and find out how deep the habit and the cancer have eaten into this Nation's strength.

[From the Manchester (N. H.) Union Leader of June 25, 1956]

HOW THE MOB MOVED IN ON LABOR

(By Victor Riesel)

Only America has a racketeering labor underworld.

This mob has corroded unions, politics, and sections of the business world as deeply as the acid hurled at me burned into my eyes.

It has shot down hundreds of labor officials in the past decade. It has looted union welfare funds of millions of dollars. It has bombed the homes of more than 50 unionists. It has broken the skulls and spirit of thousands of rank-and-file dues papers. It has sold strong-arm squads to unions and employers—squads numbering as high as 500-man raiding parties which have beaten police officers and ripped apart stores and factories. It has even beaten women.

It has forced more than 100 honest union leaders to live under daily bodyguard. Most prominent of these are Walter Reuther and his brother and top aid, Victor, who were shot-gunned by the mob.

When it blinded me, the mob set the world aghast. President Eisenhower was outraged. He decided to move personally.

The President of the United States is but one of America's aroused citizens. Upward of 60,000 persons have written to me since I was attacked. Nearly 1,000 offered their eyes to help me see. (Although my doctors and I know these kindly offers are in vain—there is no possibility of corneal grafting.)

Thousands more proffered other forms of assistance.

I report this as a reflection of the seething but hitherto uncrystalized hatred of the mob by the angered American people who finally are ready to move against the organized crime combine.

CAN RESTORE DECENCY

They can't restore my sight but they can restore decency to their communities. If the people succeed, they will unshackle themselves of the mob which has ridden the backs of workingmen and their employers for 75 years.

The mob? Just what is it, anyway?

Inside labor, the mob is a crime cartel. It is a combination of specialists who have graduated beyond old-fashioned crime—outmoded bootlegging, smuggling, gambling, prostitution, white slavery, and even narcotics. It has moved in and taken over unions across the country, just as the old-time Capone mob moved in and took over theaters, night clubs, restaurants, and other types of businesses.

This labor mob loves the respectability that comes with union positions. They are enthralled by the huge treasuries and the use of other people's money as though it were their own. They aim for more than the billions of dollars in the unions' treasuries. Their greedy eyes are also on the easy money they can make by cutting in on the unions' stock market portfolios, real estate and other investments.

The mob is made up of a series of local barons. They deal in favors which they call "contracts." They throw up picket lines and they remove picket lines on short order.

GET CASH ON THE LINE

They pressure other union officials into making easy wage contracts and they frighten employers into yielding to their own union friends. For each favor there is cash-on-the-line or an obligation which the other fellow must fulfill on demand at a later date.

The mob uses the unions for its businesses. To stay in these businesses, it must stay in office. To stay in office, it must terrorize the opposition. For such terror you need muscle. The mob has it—in abundance.

It has had the muscle and the rackets for 75 years—but the skillfully organized thievery of today dates back to the 1920's—to the days when Lepke and Gurrah and another powerful but little known fellow by the name of "Curley" (tougher even than Lepke) took orders from a polished financial genius with a flair for organization—a man named Arnold Rothstein.

Rothstein was a methodical business expert. He organized and rationalized crime as an efficient and unified industry, just as the legitimate men of big business such as the Rockefellers, Fricks, and Morgans tried to unify the oil, steel and railroad industries.

Rothstein was a man of varied criminal tastes. He bribed the Chicago White Sox to throw the 1919 World Series to the Cincinnati Reds. He controlled gambling, prostitution and narcotics in New York. His fame, his money and his "troops" soon spread across the Nation. Before long, he was the underworld's chief financier.

BOUGHT JUDGES

He bought judges as casually as you or I buy a suit or a dress. He owned hotels, theaters and night clubs, to name just a few enterprises. Soon the labor field intrigued this smooth-as-silk crime tycoon.

When strong-arm men were hired by unions or employers in a strike—although neither side knew it—the muscle men on both ends, who waited in special depots for the word to rush to the attack, all were in Rothstein's pay. For example, back in 1926 the Communists seized the International Ladies Garment Workers Union and looted a million dollars in special funds from the union's treasury. The comrades used this money to finance a strike that same year.

The Communists were the first to bring big-time hoods into the labor field. In the fur industry, they hired a gang of Greek mobsters known as the Black Gloves to keep people in line.

In the 1926 strike in the ladies' garment industry, they hired the Little Augie gang of Brooklyn to smash shops and employers. The businessmen then retaliated by retaining Legs Diamond. Both hoods were ac-

count executives, in charge of muscle, for Arnold Rothstein.

Rothstein was killed in New York Central Hotel in November 1928. Legs Diamond was shot down on the streets. Little Augie went the way of all gangster flesh. But two of Rothstein's other lieutenants survived—for a while. They were Louis Lepke Buchalter and his partner, Gurrah Shapiro.

Lepke was the loving nickname for unlovely Louis. And Gurrah came from the gutteral noises Shapiro would make when he shouted at pushcart peddlers who wouldn't pay him a buck apiece for protection—Gurrah here.

MURDER, INC.

By the midthirties these two men moved into enough businesses and unions to take home $2 million a year before taxes—and who would dare ask them for taxes. After all, they also owned a business called Murder, Inc. They invaded the flower, trucking, bread, and apparel industries, among others. They cut up the field with Lucky Luciano, who once disciplined the Mafia by knocking off 40 underworld insurgents in 36 hours, according to what Murder, Inc.'s Abe Reles and other informants told the Brooklyn District Attorney at that time.

They operated mostly through their terrorization of truckdrivers—who were easily intimidated because they could be picked off alone on the streets and highways.

Slowly they moved across the land, tying up with the Capone mob, the Purple Gang in Detroit and on to the hoods on the west coast.

In the mid-thirties Tom Dewey swooped down on Lepke and Gurrah. He made things so hot for the mob that Lepke went into hiding. Finally the mob could no longer jeopardize its huge take. It warned Lepke to give himself up. Lepke did—he died for murder in the hot seat at Sing Sing. But, as in the days of Rothstein, the mob left many lieutenants. Some of them paid their debt to society and became influential, respectable businessmen in their communities. Others became the modern manicured mob—the kind I've been fighting since I was a kid on the streets of the East Side of New York.

Ileitis

EXTENSION OF REMARKS
OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extracts from "Three-Star Extra" broadcasts on medical testimony concerning ileitis:

FROM THREE-STAR EXTRA BROADCASTS OF JUNE 19, 20, AND 21, 1956

Ray Henle: It is evident that the President's doctors are highly pleased with his progress toward full recovery. But in other quarters, more political than medical, there has been what appears to be almost a campaign to make it appear that the ailment which necessitated the President's operation will force the President to withdraw as a candidate for reelection.

Because of the mushrooming character of this campaign, Three-Star Extra tonight presents some important facts which heretofore have not been given.

Here is the story:

Ned Brooks: President Eisenhower's doctors this afternoon took official notice of the rash of reports, chiefly by antiadministration columnists, that the President's intestinal trouble is likely to return and perhaps cause him to reconsider his decision to run for a second term.

The doctors rejected the claim that his ailment is chronic and they reaffirmed their belief that he will be physically able to continue in office.

For some days, White House press officers have been besieged for clarification from the doctors on the matter of the possible recurrence of the President's ailment.

A number of the inquiries were prompted by the syndicated columns of Miss Doris Fleeson, writing from Washington.

She has quoted a number of medical authorities, all to the effect that the chances of recurrences are strong among ileitis patients.

Among those quoted was the famous Dr. Charles W. Mayo, of Rochester, Minn. In a book written last year, he noted that the rate of recurrence is high, regardless of surgical technique.

Fred Morrison of our staff, has been on the telephone with Dr. Mayo:

Fred Morrison: I reached Dr. Mayo by telephone at his office in Rochester, Minn., this afternoon. I asked him if the quotation from his book, used by Miss Fleeson, represents his opinion of the President's illness. He said that it certainly does not, that Miss Fleeson had not talked to him, and that he did not know she was using the quotation.

He said that from what he knows of the President's case, he thinks he has an excellent chance for full recovery. Dr. Mayo told me that most cases of ileitis occur between the ages of 25 and 40. He said those are the cases he was speaking of in his book. He said when the disease strikes persons older than that, each case must be considered individually, and that is what should be done in the case of Mr. Eisenhower.

He said he saw the President only the day before his illness and that he had never seen him look so well. He then repeated that he believes he has an excellent chance for full recovery.

Ned Brooks: Another authority quoted in Miss Fleeson's column was Dr. Frederick Boyce, professor of clinical surgery at Tulane University, New Orleans.

He likewise has written on the recurrence of ileitis.

But when I talked to Dr. Boyce by telephone today, he said his observations could not apply to the President because he has never had an ileitis patient of the President's age.

He said his experience has been with younger patients, among whom the disease is more prevalent—persons 20 to 40 years old.

He said the records of others are inconclusive as to the older age group and his own experience would throw no light on the case of the President.

To further clarify this medical opinion, Three-Star Extra tonight presents the views of the man who discovered ileitis and whose name is used by medical men to identify the disease.

He is Dr. Burrill Crohn, of New York.

Dr. Crohn also is among those who have been quoted in support of the theory that the President runs the danger of another attack. He has said that the disease recurs in some 30 percent of the cases, but those who quoted him ignored the age factor which enters importantly into the case of the President.

On Sunday, Dr. Crohn appeared on the Smith, Kline, and French television program, March of Medicine, from Philadelphia.

We have the recording of that program and we're going to bring you the significant portions in Dr. Crohn's own voice.

He was asked, "How serious was the President's attack?"

His answer:

Dr. CROHN. I should say the President's attack was a relatively mild attack except that obstruction, which occurs in about 5 percent of the cases, is a complication which calls for immediate surgery.

But the fact that the obstruction occurred does not in any way mitigate his chances for a future recovery. In fact, it is almost an encouragement to believe that he will be perfectly well. The obstruction in itself represents a healing process—a late healing process in a chronic disease. It represents the end stage of a healing process and if the mechanical difficulty is overcome, then you would expect that patient to be well.

NED BROOKS. Dr. Crohn then was asked, "What are the facts about the recurrence of ileitis?"

Dr. CROHN. Recurrence is usually mild. They're limited, usually, to a few inches of the small bowel, they do not spread, they're considered now as medical rather than surgical problems, and it is exceedingly rare to have to go back and reoperate such a case.

The type that the President had—I should say that in his case, with obstruction which represents healing, that the chances are that this surgical procedure will be eminently successful and you should not expect any recurrence of the disease.

NED BROOKS. That was Dr. Burrill Crohn, outstanding authority, the man who first identified the disease ileitis.

Fred Morrison: Three-Star Extra has in its possession tonight a report on the most thorough study of the history of ileitis made since the President's illness. And this report has direct reference to the current political and journalistic campaign to build Mr. Eisenhower's illness into a serious disease which must require him to withdraw as a candidate for reelection.

This study, and the report, were made by Frederick F. Boyce, professor of clinical surgery at Tulane University. Dr. Boyce is one of the medical authorities quoted by some columnists to support their claims that the President's illness is serious and will continue to be so in spite of his successful operation.

He says that an extensive review of the literature and reports on ileitis shows there is no available record of the disease among persons of the President's age. He says that out of all the hundreds of cases reported, there is only one case comparable to that of Mr. Eisenhower. In this case, reported from Chicago, the patient was operated on at the age of 64. Nine years later he is well and there has been no recurrence, with the exception of 1 day's illness 5 months after the operation.

Dr. Boyce says that he never had personal experience with an ileitis patient 60 years of age, or older. He says, however, that his personal experience with older patients bears out the opinion of President Eisenhower's doctors that a recurrence of the disease at the President's age would be highly unusual.

Dr. Boyce said that one of the columnists who quoted him in an effort to show that he believes the disease is likely to recur failed to quote the part of his book which states that the situation is different with patients over 50.

So, Dr. Boyce joins Dr. Mayo and Dr. Crohn in correcting columnists who have incorrectly used their quotations.

But the campaign to picture the President's illness as a serious one continues. The Reporter magazine, which frequently opposes Eisenhower administration policies, joins the campaign today. It is out with an article in which it views with alarm the prospect of the President running for reelection, in view of his illness.

And in an editorial adjoining this article, the Reporter magazine endorses Adlai Stevenson for President.

So, politics roll on around the President's illness.

Text of Adenauer's Address Cautioning West on Soviet Moves

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. JUDD. Mr. Speaker, Chesterton is reported to have said, "Hell hath no fury like that of a noncombatant." Those farthest from the battlefield are often the ones who are surest that they know and are most vociferous in declaring just what the enemy's objectives and strategy are, and how the war should be fought.

But wise persons generally pay more attention to those who have had the closest and most extensive first-hand contact with the enemy—just as sensible persons pay more attention to the judgment of the doctor who is actually in charge of a patient than to the theories of the doctor who has seen only the patient's chart, or the latest communique.

Mr. Speaker, nearly every day one hears or reads theories and speculations, some of them utterly fantastic, regarding supposed benevolent changes in the Soviet Union. In the midst of the voices of confusion, it was most wholesome to have in our midst recently one of the great men of our time, Chancellor Konrad Adenauer, of the German Republic. His record for being right in his appraisals of Soviet actions is as good as that of so many others has been bad. In his address at Yale University on June 11, 1956, he has given us clear warnings regarding the unchanged mail fist of the Communists behind their recently-donned velvet gloves.

Americans and all peoples who want to preserve their freedom are indebted to Chancellor Adenauer for telling us the plain truth. Will we be wise enough to hear and to heed?

Mr. Speaker, under leave to extend my remarks, I enclose Chancellor Adenauer's address:

TEXT OF ADENAUER'S ADDRESS CAUTIONING WEST ON SOVIET MOVES

President Griswold, ladies and gentlemen, I look upon it as a great honor that Yale University today has awarded me the honorary degree of Doctor of Laws.

It is a great distinction to receive an honorary degree from Yale, in particular. I am especially happy to be able to speak at one of the most venerable abodes of American intellectual life.

Let me avail myself of the opportunity to thank your university for having cultivated—in pursuit of its noble ideal of education—the study of German letters even in a dark age. A number of scholars of German origin hold high academic degrees from your university, and the Goethe collection of the Yale library is considered one of the best if not the best outside Germany.

It is, therefore, only an inadequate expression of our thanks that the German Federal Government has made available to scholarships for students of this university in the next academic year. We are glad to be able to receive your young compatriots as welcome guests in Germany and we hope that the exchange of young students, so fruitful for both sides, can be further encouraged in the future.

Ladies and gentlemen, you will now expect me to make some comments on the political situation as it appears to German eyes. Subject to the qualification that discussion of this broad subject within the compass of a short address is bound to remain sketchy, I would like to say this: it seems that we find ourselves at present in a new phase of the great conflict between East and West. The present leaders of the Soviet Union have pushed from his throne—after his death, it is to be noted—Stalin, the exponent of the policy of cruel hardship, of intimidation, of threat and violence. They have struck a fresh note.

AN IMPORTANT QUESTION

It is undeniable that they are making an impression thereby on some people. We cannot tell with certainty the reasons which led them to disavow Stalinism but one thing can be said with assurance: there are no signs to indicate that the disavowal of Stalinism means the acceptance of those spiritual principles which are the foundation of the free world. Instead, there are only new forms and methods used by a new, more dexterous leadership in the Kremlin in order to achieve the old objectives of the Bolshevik regime—the domination of the world by communism—more surely and with fewer sacrifices.

All the free nations are faced here with a question of the utmost importance, with the question: Is an unarmed peace possible? For the German people this question has special significance. Because of their geographic situation they are neighbors of Soviet power—by the Iron Curtain they are cut into two parts. Consequently they are especially disposed, perhaps, to place their hopes in a change of Soviet policy which would achieve the redemption of 17,000,000 Germans of the Soviet zone from enslavement.

Therefore, they are particularly ready to welcome with pleasure any evidence of a genuine change of mind in the leadership of the Soviet Union. But our own experiences have been too bitter and we have seen too clearly the meaning of communism, the methods it uses and the diabolic skill with which its propaganda operates not to react to the latest events in Moscow with the utmost skepticism.

One thing, I believe, is certain—and this was also clearly borne out by the Twentieth Party Congress in Moscow: The leaders of the Soviet Union continue to believe that capitalism is doomed to destruction and their aim is to make communism the dominant power in the world. The theory of "peaceful coexistence" currently being advanced by them does not by any means signify that they are prepared to respect the ideology of the West or even its continued existence.

As far as the Soviets are concerned, "peaceful coexistence"—which they had used advantageously before—is merely another tactical phase in their campaign to weaken the cohesion of the free world and to improve their own position. In line with their goal, they are addressing themselves at present chiefly to the Asian-African nations.

PROOF STILL IS LACKING

So far, I think, the men in the Kremlin still owe us proof that they are ready also in their policy toward the free nations to act in accordance with their repudiation of Stalin. So far, we have heard words but not seen any deeds. We have not seen any significant corrections of the most flagrant manifestations of Stalin's imperialism. Even the allies of the Soviet Union are still denied those rights to which the Soviet Union, by signing the Charter of the United Nations, pledged itself. In this connection I recall to you article II, paragraph 4, of the charter and would ask you to compare the principles laid down there with the reality as it exists in Eastern and Central Europe.[1]

The men in the Kremlin are still not prepared to remove the main causes of the tension in the world. They also refuse to make any real concessions on the German issue—for example. In fact, with regard to the German issue, Mr. [Nikita S.] Khrushchev expressed himself more ruthlessly to French Premier [Guy] Mollet and French Foreign Minister [Christian] Pineau during their visit to Moscow when he stated that he would rather have 17 million Germans on his side than a reunited neutral Germany. Can you think of a more emphatic endorsement of brute force?

I beg you, ladies and gentlemen, to consider the German question, the question of German reunification not only as a German rights but also as a question of natural law. The question of German reunification is the pivot on which European stability hinges and, consequently, world peace depends. Khrushchev quite evidently also sees it in that light.

Throughout the world the Soviets aggravate existing conflicts and endeavor to undermine the West's position in an unscrupulous manner. Their course seems clear to me: They want to lull the vigilance of the free world and to weaken its readiness to defend itself. Above all, however, they want to smash first the mighty protective shield of the North Atlantic Treaty Organization and to drive the United States from Europe so that Europe will fall like a ripe fruit into the Soviet lap and through its industrial potential and the skill of its people will lend the Soviets decisive superiority over the United States.

I consider the new tactics of the Soviet Union more dangerous than the former aggressive conduct, since it plays upon the longing for peace which lives in all men.

What, then, can the West do, what can we all do in this situation? I think it is the task of the responsible statesmen and of all the peoples of our free world to insure that the Soviet scheme does not succeed. First this requires one thing: We must on no account relax even one moment in our vigilance.

It is undeniable that recently the cohesion of the West has weakened and that there are clear indications of a lack of coordination in its foreign policy. Fortunately, the West possesses a great and strong organization which has, so far, deterred the Soviet Union from an attack. I refer to NATO, which was established at a time when the danger of a hot war existed. This danger is not at present acute because the Kremlin hopes to achieve world domination through the slow undermining of the West. The new task is now to prevent this breakup of the West. For this purpose, too, NATO—further developed—is the proper instrument.

FOREIGN POLICY UNITY NEEDED

To my mind one cannot very well pursue an agreed military policy toward a nation without having, at the same time, maximum conformity in foreign policy aims in respect to that nation. The West must not let the Soviets believe that, while it does pursue a common military policy, it is, on the other hand, possible for every single NATO member to pursue its own foreign policy—free from all restrictions—in relation to the Soviet Union.

The mere impression that that is so must be avoided. The Soviet leaders live, after

[1] The text of this paragraph of the Charter reads as follows: "All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations."

all, by the hope that the alliance of the free nations will, in the end, be torn by such deep dissensions as to let final success drop into the Soviet lap, as it were.

The utmost vigilance and justified distrust toward the policy of the Soviet Union does not, however, exclude the necessity for the West to be ready at all times to reexamine its policy to make sure it corresponds to developments in world policy. Thus it is our duty to watch constantly for indications of a genuine change of mind and a genuine readiness for understanding on the part of the countries behind the Iron Curtain. The path we are following in common has so far, in principle, proved to be correct. We must continue this path unwaveringly and no Soviet smile, however enticing, should tempt us to relax in our common efforts before the Soviet side has shown concrete proof of a change of mind—especially with regard to its attitude to other nations oppressed by it.

An essential contribution toward the maintenance of peace must be made by the free nations of Europe. It cannot be denied that, as the immediate threat of war receded in Europe, a selfish way of looking at national interests threatens to spread once more. In spite of this we can state that, through the work of the OEEC [Organization for European Economic Cooperation] and of the Coal and Steel Community, through the admission of the Federal Republic to NATO and through the establishment of the West European Union, a degree of poltical cooperation has been achieved in free Europe from which point the work of the political unification of the old Continent can be successfully carried on.

The concept that the states of free Europe must join in a political and economic unit is a positive result of the last war. Many millions of Europeans, especially also in the Federal Republic of Germany, have been imbued with this idea and it is the guiding principle of the foreign policy of the German Federal Government. The freedom, the very existence of Europe depend more than ever on Europe's ability to realize this concept.

EISENHOWER TALK CITED

Disrupted and disunited Europe must sooner or later succumb to the power threatening the Continent. Europe, however, can survive the difficult and protracted period of growing together only if the United States of America continues to maintain its strong protection of the old Continent. It gave me great pleasure, therefore, that the United States recently demonstrated once again its readiness to do so and its undiminished interest in the creation of a united and free Europe.

President Eisenhower told Baylor University in Texas on May 25 that the United States was patient in this matter. I know how difficult this waiting must be for you as American citizens and what annoyance the Europeans' slowness must cause you. In spite of all the impatience which you might feel, may your great people always realize that by defending in Europe the moral and spiritual values of the West as a whole they are also defending themselves.

The Federal Republic of Germany is prepared to make every possible contribution toward the creation of a united Europe, and I think, when you study the years since 1949, you will find that we have, indeed, achieved quite a few things in this field. In this context a good relationship between Germany and France appears to us to be the nucleus of any European integration. Since the establishment of the Federal Republic we have worked with all our strength to improve this relationship and our efforts are bearing fruit. For example, look at the way in which our two countries during the last few months have dealt dispassionately and constructively with the thorny question of the Saar.

I think I can say that without the European policy pursued by Germany and France this difficult problem could never have been mastered in the way it was. Negotiations with M. Mollet and M. Pineau at Luxembourg on June 4 have strengthened again my conviction of the power and the force of the European idea. The policy of European integration has put on an entirely new basis our relations with those of our neighbors who enjoy the blessing of freedom.

With many of them we cooperate most intimately today in all kinds of European organizations—for the benefit of all of us. Although only 11 years have passed since the end of the last war, we are joined through a military defense alliance with several of our neighbors. Within the framework of the West European Union and the NATO—this seems to me a fact of particular importance—we are linked for the first time in our history, through a partnership which is of the greatest value to us, to that European power with which you have special ties. With Britain. As a result of this policy, a great deal has been achieved in an amazingly short period to overcome old disputes and conflicts.

Let me add a few words on the question of Germany's reunification; better, on the question of the liberation of 17 million Germans in the Eastern Zone. It is not only a question concerning the Germans, not only a question of right, not only a question of the obligation of the four victorious powers to bring about reunification in peace and freedom. In the course of the last few years' developments it has become a European question, a question of great importance in world politics.

A THREAT TO THE WORLD

The control of Germany by the Soviet Union, the exercise of Soviet influence on Germany would mean a shift of power in the world in favor of the Soviet Union which would threaten the whole world, and, also you in the United States.

Unification remains a question of common concern both to the German people and to the four powers who have undertaken to bring it about. We are most grateful to the Western Powers for the attitude which they have adopted on this question. They have stated again and again that reunification of Germany in freedom and liberty constitutes one of the most important elements of a genuine easing of tension, and that the implementation of any general disarmament—in which they are most interested—is not conceivable without simultaneous progress toward reunification of Germany.

As regards the German attitude, it is clear: We shall stand by the obligations which we have assumed. In particular, this concerns also the German contribution to the defense of the free world. In spite of great psychological difficulties confronting us after two World Wars, with disastrous consequences for the German people, and after complete demilitarization, the plans made by NATO and by the German Federal Government regarding the establishment of German forces will be carried out. The announcement of a redutcion in the Soviet Armed Forces will have no repercussions on our defense efforts. Germany wants to be and will remain a reliable partner of the West.

I have referred to the necessity for the West to remain vigilant and not to relax in its defense efforts, although the conflict in which we find ourselves cannot be won by military means alone. This is the reason for my reference to the absolute need for strengthening the West's political cooperation with regard to the Soviet Union. The maintenance of the defensive strength of the West, however, is the first and most indispensable condition for the maintenance of peace and freedom in the world.

The German people in the West and the East are imbued with profound longing for this peace and this freedom. The German people do not want any political adventures in the East. The German Federal Government, therefore, will continue the straight course of its policy pursued so far which, I am sure, will bring us the reunification of Germany. For this the Federal Government and the German people need also in the future the confidence and trust of their allies.

President Griswold, ladies and gentlemen, allow me to end by assuring you of my firm conviction that in the struggle between totalitarian oppression and free self-determination of the peoples a vigilant and united West, upholding its spiritual and moral values, can never be defeated.

I thank you.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. VELDE. Mr. Speaker, I should like to call to the attention of my colleagues the position taken by the education committee of the Peoria Association of Commerce and approved by the board of directors of that organization relative to H. R. 7535, the bill on Federal aid to education. Following is a statement furnished me by the Peoria Association of Commerce:

FEDERAL AID TO EDUCATION

Currently there are two bills pending in the National Legislature relative to education. They are H. R. 7535 and S. 2905. An analysis of these bills presents several features which are quite undesirable in the opinion of the Special School Study Committee. Therefore, the committee would recommend opposition to both of these bills.

We believe that the responsibility and control of schools belongs to the local community. We object to the Federal control that would exist if either of these bills are passed. This control is indicated when, under the language of the present bills, the Secretary of Labor would have the authority to determine the prevailing wage rate for any particular locality basing it on whatever overall geographical area he selects. The law does not provide for appeal from the Secretary's determination.

Both bills provide that a Federal Administrator would have the authority to rule on such questions as relative effort, relative needs and relative urgency. There are other provisions in these bills which make them less than desirable.

One of the greatest strengths of the United States is an educational system relatively free from Federal control. It is the opinion of the committee that it is impossible to provide Federal funds without resultant Federal control. Therefore, the Special School Study Committee recommends opposition to any Federal grants to local communities or States for educational purposes as provided by these two bills. (This includes both building construction and operational costs.)

Further there is a question as to the need of Federal money to help provide school buildings. Statistics show that current classroom construction is well above the amount needed to house enrollment increases. And that this construction is increasing about 10 percent a year. The recent White House conference on education in reporting on "What are our school building needs," stated:

"No State represented has a demonstrated financial incapacity, to build the schools it will need during the next 5 years, but, with the exception of a few States, none of the States presently has plans which indicate a political determination powerful enough to overcome all of the obstacles."

This would indicate that there is no State unable to meet their school-building needs, if they have got the courage to do it. This is particularly true in the local situation where Peoria has one of the highest tax evaluation per pupil ratio in the State, and one of the lowest tax rates for educational purposes.

A Railroad Dies

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I insert an article that appeared in the June 20, 1956, issue of the Bangor Daily News, a newspaper in my congressional district:

A RAILROAD DIES WITH SIGNING OF DECREE HERE

A railroad died Wednesday.

In an interlocutory decree signed by Chief Justice Raymond Fellows, of the Maine Supreme Court, the corporate existence of the European & North American Railway was dissolved after having been on the books since 1871.

European & North American was unique in the annals of railroading in that it was organized and its stock sold under the slogan of "The new short route to Europe."

The line was organized with the plan in mind of being a connecting link to New York with the Canadian maritime provinces and Halifax, serving a vast area and speeding traffic to Europe.

Its founders felt that such a line going through Maine to Halifax would expedite European travel and freight by at least 1 day.

Plans for the E. & N. A. were actually discussed as early as 1850, but it was some years later before they became a reality.

BANGOR EXTENDS CREDIT

The city of Bangor extended credit to the extent of $1 million to aid the enterprise and the Maine Legislature granted 734 acres of land for right-of-way, so the road was established for $4 million, or about $40,000 a mile.

Toward the turn of the century steamship companies began to improve their service out of New York, with the result that the voyage to Europe was stepped up from New York.

As a result, European & North American, which was a connecting link to Nova Scotia, began to lose business to such an extent that the bondholders finally foreclosed, reorganized the company with themselves as stockholders, and leased tracks, stations, and rolling stock to the Maine Central Railroad.

That occurred April 1, 1882, on a 999-year basis.

ROLLING STOCK SOLD

Last November European & North American sold its tracks to Vanceboro, the station in Bangor and its rolling stock to Maine Central for $3,152,000.

With that transaction there was no further need for existence of the corporate organization and petition was filed in the supreme court for its dissolution.

Signing of the decree Wednesday by Chief Justice Fellows accomplished the dissolution.

George F. Eaton, Bangor attorney, was the last president of European & North American and on the board of directors with him were Charles V. Lord, Harold M. Pierce, Dexter S. Smith, Horace S. Stewart, Henry J. Wheelwright, Wade F. Brackett, Malcolm E. Morrell, Jr., and Harry B. Wyman, the latter two treasurer and clerk, respectively.

Qualifications of Appointees to the United States Supreme Court

EXTENSION OF REMARKS
OF
HON. HENDERSON L. LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. LANHAM. Mr. Speaker, some weeks ago I introduced a bill designed to require certain qualifications for the confirmation of appointees to the United States Supreme Court. It is my opinion that the only way to prevent the Supreme Court from straying away from judicial precedents and reasonable interpretations of the Constitution, is to be certain that men appointed to the Supreme Court are not mere political hacks but are men of legal training and experience. Fundamentally, this approach to curbing and restraining the Supreme Court from usurping the powers of Congress and the States and overriding the rights of the States guaranteed to them by the Constitution, is the proper approach. It is a long-range remedy but is the most promising in the end.

Confirmation of my position on this matter is found in an article which appears in the Wall Street Journal for Tuesday, June 26, by John A. Grimes, and I ask unanimous consent that this article be included with my remarks in the Appendix of the RECORD.

Commenting in its editorial columns on the Grimes article, the Wall Street Journal corroborates my contention when it says:

> The only other protection, really, is a more careful regard for the men appointed to this independent judiciary * * * the justices should be men of judicial mind—which means essentially that they shall have the character of self-discipline. They must see themselves as judges of the law, not legislators.

This corroborates the statement I placed in the RECORD made by one of the great legal minds of America, the Honorable Samuel H. Sibley, judge of the United States Circuit Court of Appeals for the Fifth Judicial Circuit, retired.

Under unanimous consent of the House I include also with my statement and the article by Mr. Grimes, the entire comment by the editors of the Wall Street Journal on the article:

[From the Wall Street Journal of June 26, 1956]

SUPREME COURT—SOME RECENT RULINGS BY THE HIGH TRIBUNAL HAVE SET OFF A HOT POLITICAL CONTROVERSY

(By John A. Grimes)

WASHINGTON.—Two decades ago the United States Supreme Court was caught in a political controversy. On that occasion it was Congress, still controlled by its more conservative Members, which frustrated President Roosevelt's attempt to mold the Court into the image of the New Deal.

Now once again the Supreme Court finds itself buffeted in the winds of political controversy. This time it is primarily the conservative Members of Congress, with support from like-minded State and other political leaders, who would like to see the Court remolded, or at least curbed in its apparent tendency to use judicial authority to increase the central power of the Federal Government.

Why this turnabout in 20 years? And how are the battle lines forming?

Part of the answer to the first question goes back to that earlier battle. Although President Roosevelt was balked in his attempt to pack the Court with Judges subservient to the New Deal philosophy, nevertheless time, death, and circumstances slowly altered the Court's ideological complexion. All but two of the present Justices—Chief Justice Warren and Justice Harlan—are appointees of either Presidents Roosevelt or Truman. Meanwhile, the power of the Federal Government has grown, and with it there has come an altered attitude of the Judges toward Federal power.

SHRINKING LOCAL AUTHORITY

The immediate source of the present controversy, however, is something more recent. In a series of decisions, the Supreme Court has expanded the power of the Federal Government while shrinking the power of State and local governments. To conservatives in and out of Congress the Court his thus seemed to distort the intent of both Congress and the Constitution.

The result has been more than 70 bills proposed in the present Congress which would either reverse some previous decision of the Supreme Court or one way or another, curb its jurisdiction and its power.

The most important of the Court's decisions touching off this counterattack is, of course, its desegregation ruling. In the South this has led to the interposition movement, a plan for the several State legislatures to adopt resolutions holding in effect that the Supreme Court decision was unconstitutional and proposing that the segregation question be settled directly by constitutional amendment.

Criticism of the segregation decision has not been limited to the South. Many lawyers and political leaders elsewhere questioned it on purely legal grounds; they consider it an improper encroachment not only on States rights but on the prerogatives of Congress. Congress had repeatedly refused to legislate what the Supreme Court did by decrees.

But this ruling is only a part of the conservatives' complaint.

In the High Court's last session alone, the conservatives were stirred by decisions that:

Knocked out State sedition laws and held that Uncle Sam has exclusive power in this field. Voided a New York City law which made taking the fifth amendment grounds of discharge of municipal employees. Ruled invalid State laws which ban the union shop for railroads and airlines.

The total effect of these and like decisions over the past few years has been to narrow the field of local autonomy and broaden the power of the Federal Government to act as it will.

Naturally there have been exceptions; the Court, for example, ruled against the Government in the Du Pont antitrust case. Further, the judges do not agree with each other or—from one case to another—always with themselves. This leads to a second complaint, that the Court today is mercurial and undependable.

DIVISIONS OF THE COURT

The alinement of the justices, indeed, is one of the interesting aspects of this contro-

versy. Justices Douglas and Black have long been confirmed liberals—in this instance meaning supporters of Federal authority—and they have been joined by Chief Justice Warren in enough decisions to suggest that the duet is becoming a trio. The conservative bent of Justices Reed, Burton, and Minton has meantime become more clear, particularly through their dissenting opinions.

This has tended to leave Justices Frankfurter, Clark, and Harlan as the floaters, very often holding the balance of power. Lawyers find Frankfurter unpredictable, Clark rather easily s ayed by the majority, and Harlan as yet an unknown quantity—although the most experienced lawyer, he is the newest appointee. In many recent cases enough of these three have floated over to the liberal side to affect the decision.

Most of the 70-odd congressional bills aimed at the Court are designed to overrule one or another of the Court's decisions. Congress has power to do this when the Court decides a case on its own interpretation of the congressional intent in the law or where it finds that Congress has expressed no legislative intent.

For example, the union shop cases were decided on the grounds that Congress specifically authorized this type of labor contract and did not authorize States to legislate differently. Thus Congress could if it wished to, change this decision by changing the law.

But some of these Supreme Court bills would go much further. Just a few days ago the Senate Judiciary Committee approved a proposal which would directly limit the High Court's power to interpret laws passed by Congress.

CURBING THE COURT

If passed, this law would attempt to take away from the Supreme Court the power to interpret Federal statutes as overriding State laws. This, should it come to pass, would be a great abridgment of the Court's present powers.

However, such a law would raise an interesting point. Actually there is no law that says the Supreme Court can declare a congressional statute invalid; it is simply a power assumed by the Court in its early days and now hallowed by tradition. But under this tradition, could the Supreme Court rule invalid a congressional statute aimed at reducing its own power? No one knows for sure; it would certainly stir up a furious storm.

Actually, it is doubtful whether any of these seventy-odd anti-Court measures will get anywhere in the remaining weeks of this congressional session. And when the Supreme Court reconvenes this fall, it is possible that it will alter its own course. It has done so before—just 20 years ago, for one instance—and, as Mr. Dooley once remarked, it follows the election returns (and public sentiment) pretty closely.

But be that as it may, the Supreme Court, which in theory is supposed to be above politics, is once more the center of a major political controversy. Even if next year it adds no more fuel to the flames, the pot is already boiling.

[From the Wall Street Journal of June 26, 1956]

REVIEW AND OUTLOOK—CONGRESS AND THE COURT

When President Roosevelt, in the height of his New Deal days, was frustrated by the Supreme Court his reaction was to pack the Court with justices more subservient to his political philosophy.

Now once more the Supreme Court finds itself in the midst of a political controversy. There are, of course, many similarities that could be drawn between the situation today and that of 20 years ago. But there are also, we think, more important differences, and not the least of them are the remedies proposed now by the Court's critics and the remedy proposed by Mr. Roosevelt. And this difference reflects a better understanding of both the role of the Supreme Court and the problem of the Supreme Court.

In our governmental system of checks and balances the High Court occupies a unique position. The Executive has no real authority to do anything without the sanction of Congress, and where he oversteps his bounds (as has happened) he can be called to task either by the legislature or by the Supreme Court (which has also happened).

The Congress in its turn is held in check by both the Executive and the Court. The President has the authority to veto congressional enactments; there is a countercheck on the abuse of the veto power, for Congress can override a veto by a two-thirds vote. A congressional statute that is unconstitutional can be thrown out by the Court.

It is true that in theory there are also checks upon the Supreme Court. Any act of the Court can be altered by a direct amendment to the Constitution; the Court's rejection of the Federal income tax, for example, was reversed by the passage of the 16th amendment. But this is extremely rare for the reason that the method is cumbersome. Also, in some instances, Congress can correct the Court's interpretation of a congressional statute by changing the language of the law. But this does not apply to major constitutional questions.

So in practice the Supreme Court is by all odds the least restricted of our Government institutions. It can, as its critics have claimed, do just about what it will.

Well, what can be—or ought to be—done about it? How can the public protect itself from Justices who overstep the judicial boundaries when those boundaries are themselves set by the Justices?

One way, of course, is to end the independence of the judiciary. This, in essence, was Mr. Roosevelt's proposal. Established as a precedent, his plan would have made the Court a simple pawn of the White House. It would probably have assured rulings in accord with the dominant political ideas of the times. But it would have also ended once and for all the Supreme Court's functions as a judicial overseer. We would have thus lost the last protection against the momentary whims of the Executive or the legislature.

The only other protection, really, is a more careful regard for the men appointed to this independent judiciary. Within narrow limits, perhaps the Court's field of action can be directed by laws, but all finally boils down to the necessity that the Justices be men of judicial mind—which means essentially that they shall have the character of self-discipline. They must see themselves as judges of the law, not legislators.

If the current criticism of the Court reawakens the public attention to this necessity, it will serve well. And we find it reassuring that among the seventy-odd Court curbing measures, referring to in John A. Grimes' article this morning, there is no serious proposal to revive the Roosevelt treatment.

Guiding Lines for American Overseas Economic Policy

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of the membership of this body, a statement adopted by the executive council, AFL–CIO, on the subject of the United States foreign economic policy.

The statement draws attention to the need for a reappraisal of our foreign aid programs and suggests guiding lines along which our foreign aid programs, in the opinion of the AFL–CIO executive council, ought to move in the years ahead.

I believe that these recommendations merit thorough study and I want to commend them to the careful consideration of my colleagues.

GUIDING LINES FOR AMERICAN OVERSEAS ECONOMIC POLICY ADOPTED BY EXECUTIVE COUNCIL, AFL–CIO, JUNE 7, 1956

American labor has been among the first to urge our Government and other democracies to offer the economically underdeveloped countries adequate help to assure their economic progress, human freedom, and national security. Toward this end, we of organized labor have supported such plans and proposals as point 4, Colombo plan, the U. N. Technical Assistance Program, and President Eisenhower's plea for a universal war against poverty.

The threat of Soviet aggression has compelled the free nations to divert to their defense needs large sums which might otherwise have been used in promoting the well-being of the underdeveloped areas. But since mass poverty and hunger constitute a potentially grave threat to freedom and peace, we strongly urge our Government to increase its assistance to the peoples of the underdeveloped areas.

For more than 3 years, and especially since the 20th Bolshevik Party Congress, the Kremlin has laid marked emphasis on economic and political means for furthering world communism. Realizing that the intensified Soviet economic penetration of underdeveloped countries aims to bring these areas into the Soviet imperialist orbit rather than to promote human well-being and freedom, our constituent convention thus correctly stressed the urgency of American initiative in defeating this sinister Soviet strategy:

"Undeveloped and underdeveloped continents and regions, where many hundreds of millions nurse their grievances and their hopes, constitute a fertile field for Communist operations.

"In dealing with rudimentary human problems the world over, we must be concerned primarily with two immediate needs—the need for food, health, and irrigation in the underdeveloped countries, and the burning desire for independence and equality. By ministering to such fundamental needs we will be on firmer ground as we seek to win new adherents to the free world.

"Integration of our foreign political and economic policies is essential, if the great technical resources and mighty industrial potential of the United States are to be geared to increasing the productivity, raising the purchasing power, and improving the living standards—especially of those economically underdeveloped countries which are devoted to human liberty and peace."

In line with the above evaluation, the AFL–CIO executive council proposes the following guiding lines for an effective American overseas economic policy:

1. Demonstrate to the peoples of the underdeveloped regions, in word and deed, that our interest in their well-being is free from any desire to exploit or dominate them.

2. No interference in each other's domestic affairs or political life.

3. In all countries which have not yet attained their full national independence, representatives of the population are to be drawn into participating in the planning

and application of all assistance programs in order to further the progress of self-determination.

4. Wherever practical, our Government should seek joint efforts with other democracies in undertaking technical aid and economic assistance projects.

5. When such projects are undertaken through the United Nations and its special agencies, their operation must not be subject to the exercise of the veto power.

6. The workers in each country must be guaranteed full opportunity for genuine collective bargaining and decent working conditions in line with the standards established by the ILO and free from racial discrimination and forced labor.

7. The working population of the countries receiving technical assistance should be helped to learn the organization of free and democratic trade unions, farmers' and consumers' associations.

8. In order to secure the maximum cooperation of and support by the working people in attaining the above goals, the respective free trade unions should be adequately represented in all important planning and project commissions.

9. Increasingly, the principal control and ownership of important projects should be placed in the hands of the country aided and in accord with the economic forms their own people democratically determine.

10. Our Government should join with other democratic governments in preparing, through the U. N., an international code to which the recipient nations should subscribe so as to reduce to a minimum the risks and difficulties surrounding private foreign investment and encourage this great reservoir of capital to serve in promoting a healthy and nonimperialist development of the industrially underdeveloped countries.

11. While technical and economic assistance should be accorded to all countries devoted to human freedom and peace, whether or not they are in alliance with the United States, the critical world situation created by Soviet imperialism and the limits on funds available for such economic aid require that countries which have shown in deed that they are ready to join with the democracies in the preservation of peace and freedom should be given priority of consideration in such assistance projects.

12. Expanded economic and technical assistance is of vital importance in the struggle against communism, because it makes people less prone to fall victim to Communist propaganda and subversion. However, the resulting economic improvement is an indispensible supplement to, but not a substitute for, military preparedness and cooperation with other freedom-loving peoples.

In accordance with the above guiding lines, we recommend the following for immediate action by our Government:

1. Enactment into law of the foreign aid bill now before Congress.

2. Set up machinery for coordinating all programs for economic aid and technical assistance to the economically underdeveloped countries "devoted to human liberty and peace."

3. Toward furthering free European unity, economic aid and technical assistance should be rendered to such specific projects for European integration as the establishment of the European Atom Authority (EURATOM); the construction and operation of continental oil pipelines; the unification of the European rail, water, and air transport systems; coordination of electricity and waterpower systems, etc.

4. Toward promoting prosperity in the free world, our Government should call for an international economic conference of nontotalitarian countries to join in preparing a program for eliminating trade barriers among themselves, expanding their respective domestic markets, increasing their productivity and purchasing power, improving their standards of living, securing stability of prices and rational international utilization of surplus manpower. At this conference, our Government should seek the establishment of an international consumers' credit fund of $10 billion to facilitate long-term installment credits especially for the peoples of the economically underdeveloped areas of Asia, Africa, and Latin America.

A Bill To Oblige the Armed Forces To Issue Honorable or Dishonorable Discharges Based Solely Upon the Performance of the Serviceman While Under Military Jurisdiction

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. ROOSEVELT. Mr. Speaker, yesterday I introduced a bill which would oblige the Armed Forces to issue their discharges either honorable or dishonorable discharges, based solely upon the performance of the servicemen while under military jurisdiction. The bill would entirely eliminate unsatisfactory, undesirable, or less-than-honorable discharges based, in most cases, on supposed actions or derogatory information about supposed actions, allegedly performed in civilian life prior to induction.

There has been a steady encroachment by the military into the sphere of civilian jurisdiction. My bill is intended to curb this encroachment. No agency of the Armed Forces should arrogate unto itself the power of punishment for offenses allegedly committed by a civilian in civil life and, most especially, should this not be done when the manner of doing it is such that, in most instances, the victim is seriously hampered in his defense by imperfect knowledge of what he is charged with and no knowledge whatever of who is making the charges.

I am introducing the bill to give ample opportunity for discussion, although I realize that it is too late to get action on it in this session of Congress. It is my hope that my bill will focus attention upon an increasingly unsatisfactory situation and that, when I reintroduce it next year, opinions will have been formed and speedy action will be possible.

The armed services have been promising to do something about this for a long time, and just recently have stated that all undesirable discharges issued of late years will be reviewed. Now, however, we are informed that such reviews will not only take into consideration the man's actual service in the Armed Forces, but will also evaluate the derogatory information previously supplied about him while in civil life. This is exactly what they have been doing all along, and it is exactly what I object to.

If the military has information in its possession which indicates that a certain man would be undesirable in his country's service, they should not induct that man. Once a man is accepted for such service, he should be judged solely on how he carries out his duties while under military jurisdiction. Any other manner of procedure is, at best, an unwarranted encroachment on civil functions and, at worst, a deliberate entrapment.

For the information of the Members, I include the text of the bill:

H. R. 11921

A bill to provide that persons discharged from the Armed Forces who are proferred discharges other than honorable may reject such discharges and receive a court martial, or if not court martialed, shall be given honorable discharges; to provide for correction of records in the case of certain persons not given honorable discharges in the past; and for other purposes

Be it enacted, etc., That subsection (a) of section 9 of the Universal Military Training and Service Act is amended by inserting "(1)" immediately after "(a)," and by adding at the end thereof the following:

"(2) Any member of the Armed Forces who, at the time of his discharge, is proferred a discharge under conditions other than honorable may reject it, unless such discharge is being proferred to him pursuant to a sentence of a court martial. When he rejects such discharge, he shall be tried by a court martial for the offense or offenses on the basis of which he was offered such discharge, unless the military department concerned determines that the evidence in its possession is not sufficient to sustain a conviction of any such offense, in which case he shall be given an honorable discharge. If he is tried by a court martial and found guilty of any such offense, the court martial (whether or not a summary court martial) may prescribe as part of its sentence that he be given a discharge under conditions other than honorable; if he is not found guilty of any such offense, he shall be given an honorable discharge."

SEC. 2. Article 17 of the Uniform Code of Military Justice is amended by adding at the end thereof the following:

"(c) No court martial shall have jurisdiction to prescribe any punishment for any person subject to this code for anything done or not done by such person while not subject to this code, or for any exercise of a legal or constitutional right or privilege."

SEC. 3. Subsection (a) of section 207 of the Legislative Reorganization Act of 1946 is amended by inserting "(1)" immediately after "(a)" and by adding at the end thereof the following:

"(2) Any person given a discharge under conditions other than honorable before the effective date of this paragraph and after March 21, 1947, may apply to the appropriate board for the correction of his record on the ground that he was given such a discharge solely because of something done or not done by him while not subject to either the Uniform Code of Military Justice, the Articles of War, the Articles for the Government of the Navy, or the Disciplinary Laws of the Coast Guard. If a review of the applicant's records do not indicate that the applicant was given such a discharge solely on such ground, the board shall grant the applicant an opportunity for an early hearing, at which the applicant or his counsel, or both, may be present. After such hearing, or opportunity for a hearing, the board shall consider all briefs, evidence, and arguments presented by the applicant, and all evidence in the possession of the military department concerned, and determine whether or not the applicant was given such a discharge solely on such ground. If, before or after a hearing, the board finds that the applicant was given such a discharge solely on such ground, the board shall correct the applicant's records in the military department

concerned so as to show that the applicant was honorably discharged as of the date of his original discharge, cancel the applicant's original discharge, and issue to him an honorable discharge bearing the same date as the date of his canceled discharge."

Conflicting United States Policies Tend To Cancel Each Other Out

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

CONFLICTING UNITED STATES POLICIES TEND TO CANCEL EACH OTHER OUT

(By Edgar Ansel Mowrer)

To most foreigners, and to many Americans, the foreign policy of the United States, sword and buckler of the free nations, seems confused. The more frequently Government leaders attempt to explain it, the more confusing it becomes.

Recently I expressed the opinion that what looks like confusion results from the fact that the administration has not 1 but 3 or possibly 4 separate policies which cannot be made to dovetail.

There are (1) the policy of seeking allies in the work of containing communism militarily; (2) the policy of seeking to "relax tensions" by direct relations and negotiations with the U. S. S. R., hence emphasis upon waging peace, disarmament, piecemeal settlements of outstanding questions like German reunification and, where no settlement is possible, truces, as between Jews and Arabs in the Middle East; (3) competing with the U. S. S. R. for the favor of various neutrals, chiefly by economic support. To these three you may, if you wish, add a fourth policy, that of favoring the liberation of colonial peoples.

Now each of these policies makes sense, taken separately. It is when you pile one upon the others that complications arise.

WEAKENED ALLIANCES

Take the effort to obtain military allies. This offends certain neutrals like India, Indonesia, and Egypt, who haven't enough political perception to notice the Communist threat. The neutrals like the lessening of tensions and the anticolonialism but insist upon their right to flirt with Communists and, like the Arabs in the case of Israel, to wage local half wars.

What is worse, the more the policy of relaxing tension seems to be successful, the more difficult it is to keep our allies upon their military toes. Why, they ask, spend all that money on armaments when the danger of overt Soviet attack is steadily becoming less? And for purposes of negotiation with the U. S. S. R., the thermonuclear power of the United States is enough anyhow.

In short, the more the United States succeeds in improving the diplomatic atmosphere with the U. S. S. R., the weaker its alliances become. Which is obviously the chief reason why the Soviets are so frantically seeking to relax tensions wherever it costs them absolutely nothing. (Actually, as Soviet Foreign Minister Shepilov explained, the Kremlin has no intention of "sacrificing its friendship with the Arabs for the sake of the West.")

Wooing the neutrals is also disruptive of serious military alliances. For if a country can remain neutral, work both sides of the street and still obtain full support from the United States, why not pull out of the military alliance? India, Yugoslavia and Indonesia are getting what they want without the embarrassment of any military commitments.

ANTI-COLONIALISM BACKFIRES

Favoring the liberation of colonial peoples has in every recent case weakened the United States militarily. Tunisia as a French protectorate was a part of the military strength of France, hence of NATO including the United States. Free Tunisia immediately announced that it is joining the Arab League, which is neutral on the Communist side. When Morocco and Tunisia gain their full independence they immediately start helping to liberate Algeria, which the United States has said it hopes France will keep. So long as Britain held the Suez Canal, Egypt was impotent. Once the Egyptians with American help persuaded the British to withdraw from Suez, Egypt's dictator started off on an imperialism of his own, seeking to exercise leadership not only of all the world's Arabs but of black Africa as well. This leadership is certainly not being directed in a way favorable to the United States.

These are some of the main complications that result from having several policies. I think they explain the apparent confusion. If one may criticize, it should not be that they make the United States somewhat ridiculous in the eyes of the world. Our country can take any amount of ridicule—and laugh at it. Their weakness is that—as shown above—they tend to cancel each other out.

If this diagnosis is correct, the time of "agonizing reappraisal" is not far ahead, the moment when Washington policy makers will find themselves compelled to choose what they want most—and drop the rest.

A Strange Situation

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. HOFFMAN of Michigan. Mr. Speaker, history teaches that whenever a nation prints an excessive amount of money, first comes inflation; then a depression inevitably follows.

The expression "not worth a continental" was created in Revolutionary days because the dollar purchased less and less of life's necessities, until it was worthless. One citizen, disgusted with the ever-decreasing value of his savings, caught a dog, plastered it from nose to tail with Continental currency, and turned it loose.

Despite subsequent periods of inflation and depression—we had a depression and panic in 1837, another in 1857, another in 1893, one in 1907, in 1920, and again in 1929—we refuse to profit by our experiences. Last week we made the temporary statutory national debt limit $278 billion. It carries an annual interest charge of more than $7 billion.

Annually Congress appropriates more of your dollars than are paid in taxes because pressure groups insisted. That is no excuse. It is a reason.

Just remember that this is a government "of, by, and for the people." The Congress is only doing what the people or, more accurately, those who make the most noise, demand.

Greater efficiency and economy in the Government's activities I have always, both by speech and vote—and a vote is what counts—endeavored to bring about. But we will never get lower taxes, a balanced budget, until the people accept a share of the responsibility for Federal expenditures.

I am not making any excuse. Not offering any alibi. I will stand on my record. But attention is called to the fact—and it is a fact—that some of those who elect us have, in recent years, been demanding ever-increasing services from the Federal Government, all of which cost dollars; the payment of ever-greater benefits of all kinds.

Because we have appropriated and spent more money than the Government was able to collect, the national debt has increased, until it more than equals the value of all our property. The value of the dollar has shrunk, until it equals but half of what it was before.

The spenders are not a majority, but they make the most noise.—Until those at home who want a sound economy become more vocal, more active, the present procedure will continue. Individuals and pressure groups have been yelling for cake. They cannot get it, eat it, enjoy it, and still keep it. When they call for a particular tune and it is played, they will have to pay the fiddler.

Just as long as the people elect spenders, those who believe that the Federal Government has an unlimited income, can give other nations unlimited billions, meet every demand made for home spending, we will have what I think are excessive taxes, and if we do not mend our ways, ruinous inflation. Make your choice.

Presentation of West Virginia's Daughter-of-the-Year Award to Miss Corma Mowrey

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. BURNSIDE. Mr. Speaker, I was privileged to attend the annual West Virginia Society dinner honoring this year's State son and daughter. The State's son was the late great United States Senator Harley M. Kilgore. Selected daughter was Miss Corma Mowrey, a distinguished West Virginia educator. Under leave to extend my remarks in the RECORD, I should like to include a speech presented that night by Mr. William G. Carr, executive secretary of the National Education Association of the United States:

PRESENTATION OF WEST VIRGINIA'S DAUGHTER-OF-THE-YEAR AWARD TO MISS CORMA MOWREY

(By William G. Carr, executive secretary, National Education Association)

It gives me great pleasure to attend this meeting. In inviting the executive secretary of the National Education Association to present the Daughter-of- the-Year award to Corma Mowrey, the West Virginia Society of the District of Columbia honors the association and the 651,000 teachers of the United States who are members of it.

Apart from the opportunity to join you in paying tribute to your guests of honor, Miss Mowrey and Mrs. Kilgore, there are several other reasons why I am enjoying this meeting with West Virginians:

1. We who engage in nationwide activities depend upon help from the States and local communities. The National Education Association has received magnificent support from the teachers of West Virginia.

2. Many members of the NEA staff formerly lived in your State. At the moment, I can think of six such staff members, each of whom carries important responsibilities.

3. West Virginians have held and still hold some of the most important elective and appointed positions in our association.

4. The association is, as you all know, greatly interested in Federal legislation affecting schools, children, and teachers. Whenever we need the help and counsel of Members of Congress, the office doors of the West Virginia Congressmen have always been open. For instance, from his first day in Congress, Representative CLEVELAND BAILEY has given outstanding leadership in educational legislation. The school-construction bill now before Congress and the Nation is a committee version of a bill which Congressman BAILEY introduced in the first week of this present session. The National Education Association is indebted to the West Virginia congressional delegation for a long record of support on all measures to help children and the schools.

It is an inspiration to meet with an organization that presents its highest award to a member of the teaching profession. These are serious days for education. Never have our schools faced more critical problems. School people need the inspiration that comes from any act which shows that the teaching profession is appreciated. The West Virginia Society of the District of Columbia recognized the importance of education when it selected Miss Corma Mowrey for the Daughter of 1956.

She is worthy of the honor. She has a record of outstanding achievements for education both in your State and in the national sphere.

She is a true West Virginian—born, reared, and educated in your State. During the years since she entered the teaching profession, Miss Mowrey has done outstanding things for young people, for teachers, for Clarksburg (her hometown), and for other communities in your State. Her professional activities soon won recognition. The classroom teachers of the State elected her as their president for 2 years. Immediately afterward, she was elected president of the West Virginia Education Association. So outstanding was her ability that she was employed as a staff member of that organization.

While she was active in education, she found time also to participate in other activities. She is one of West Virginia's 4–H Club All Stars. She is active in church and community affairs.

Two of your West Virginia colleges have granted her honorary degrees. Her citation from West Virginia State College reads:

"True representative of the cause of education—teacher extraordinary—advocate of those qualities which result in high professional status for those who teach—leader for democratic government and for the freedom of the minds of men."

Miss Mowrey's activities in her own State alone would merit the high honor you confer upon her. In addition, however, are her contributions on the national scene.

In 1947 the teachers of America elected her to the executive committee of the National Education Association. In 1949 they made her vice president. In 1950, by unanimous vote, they elected her president—the highest office in our association. And because the National Education Association is the largest professional organization in the world, it may be said that its presidency is the greatest elective responsibility that can be conferred by teachers anywhere in the world.

As the NEA president, Miss Mowrey traveled the length and breadth of our country to visit 45 States, Puerto Rico, and Canada. And she made friends for education everywhere.

During her year as president, our association started its preparation for our centennial year with a plan which we call the centennial action program. This project unites the teachers of America in their efforts to provide better schools for the Nation's youth. That program was launched during Corma Mowrey's presidency. It has been a major influence in the progress of education.

As I look back to the beginning of that program, I recall vividly the presiding officer at our convention. Her sincerity and vision inspired the membership to bold decisions. One of the most dramatic sessions at that convention was the appearance of a choir from Victory High School, Clarksburg. This was the school in which Miss Mowrey had taught. The boys and girls, members of the choir, had solicited funds from loyal citizens in Clarksburg and Harrison County to finance their trip to San Francisco, where they might honor their former teacher.

Miss Mowrey delivered the president's message in her usual inspiring manner. At the end, the audience of some 7,000 paid her a standing ovation. But those young people, her students, were the greatest tribute for her—as they would be for any teacher.

Many achievements for education during these last years have come about because of the influence of Miss Mowrey. Perhaps the most tangible one is her contribution to the new NEA building under construction here in the Nation's Capital. Plans for the new building were initiated in 1952. Since that time over $4 million have been pledged by the teachers of America—mostly through life membership in our association. Back in 1952, we asked our life members to invite other teachers to join their national organization for life and by so doing help to construct an educational center in Washington. Miss Mowrey today has enrolled 602 teachers as life members. This is a national record without a near rival. She alone has been instrumental for having pledged for our building almost $100,000. Since 1952, she has been a member of the NEA trustees.

Miss Mowrey has represented the teaching profession on many foreign assignments. Our association, in order to help in the promotion of international understanding, takes an active part in the World Organization of the Teaching Profession. Miss Mowrey was one of our delegates to two meetings of this world organization—in Canada and in Malta. Her most recent responsibility on the international scene was a 4 weeks study tour of Germany during June 1955 as the guest of the German Federal Government.

The West Virginia Society of the District of Columbia has chosen wisely in its selection of Miss Corma Mowrey for its daughter of 1956.

Miss Mowrey, as a representative of the teachers of America, I am honored to present to you this plaque from the West Virginia Society of the District of Columbia, in recognition of your unselfish, devoted and distinguished service in education. May it inspire you to continued effort and success.

Frozen Orange Concentrate

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I am placing in the RECORD the transcript of a radio broadcast I made recently in Illinois, pointing out the great benefits that have been brought to the orangegrowers of the State of Florida, as the result of the work of our research scientists in the United States Department of Agriculture in cooperation with the Florida Citrus Commission, which I believe will be of interest to most Members of Congress:

This is your Congressman, CHARLES W. VURSELL, in my ninth broadcast in this session of Congress, on the value of agricultural research and extension service to the farmers of our country.

Today, I want to show you how research found a market that greatly increased the price of the farmers' product of an entire State, making it possible for the farmers to more than double their production of that product. I refer to one you have been using in your homes during the past few years—frozen orange concentrate.

This popular drink was developed in 1944 at Winter Haven, Fla., by the United States Department of Agriculture and the Florida Citrus Commission. At that time there was a surplus of oranges. The price was low and orangegrowers were in a bad way financially. The growers needed a new outlet for their crop. Now let's see how this concentrate development helped that situation. Commercial production of frozen orange concentrate was increased so rapidly that production jumped from a quarter-million gallons in 1946 to 31 million in 1949, 47 million in 1952, and to 65 million in 1955, and it's still going up. That is enough to give each person in the United States 9 of those frosty little cans of frozen orange concentrate which, when reconstituted with water, would make 36 glasses of orange juice for each person in this country.

But that's not all. Every gallon of concentrate uses one 90-pound box of fresh oranges. In 1948, Florida produced 58 million boxes of oranges, but only 8 million went into the frozen concentrate since it was just getting started. But by 1952 the story was different. That year Florida produced 72 million boxes of oranges and 32 million went into the frozen concentrate. In 1955 they produced 88 million boxes and 44 million or about half of the crop went into concentrate. In other words, this one piece of research has developed a new market for half of the entire Florida orange crop, which has almost doubled as a result of the development of the concentrate, and the orange-growing farmers are happy.

There are several reasons why frozen orange concentrate has been such a success. One of these is that it tastes like fresh orange juice. Then, too, it is so easy to handle. The housewife does not have to squeeze the oranges. She just opens a can of frozen concentrate, adds three cans of water, stirs it up a little, and she has delicious, ice-cold juice. This development has given the children and adults of this country a wholesome, nutritious orange drink with the fresh juice taste and the vitamin C content of fresh orange juice.

After a satisfactory product was developed, it was necessary to solve a number of problems in transporting and distributing it, from the processing plant to the consumer.

Railroad cars refrigerated with ice did not provide sufficiently low temperatures for the ideal handling of the frozen concentrate. This fact stimulated the development of mechanically refrigerated railroad cars and trucks which can provide any temperature desired.

There are also large savings in transportation costs to the producer and consumer. For example, 1 carload of frozen concentrate contains the equivalent of 12½ carloads of fresh oranges. Transportation costs, including refrigeration, from Lake Wales, Fla., to Chicago is about $715.50 for a carload of concentrate. But this same movement for the 12½ carloads of fresh oranges would cost over $8,000, or more than 11 times as much.

With the solution of the transportation problem it became necessary to provide more freezer storage space in warehouses. Wholesale frozen food distribution plants had to be established and properly equipped. Research people helped determine the best design for these facilities and the most efficient equipment for handling products in such facilities. Frozen food cabinets had to be installed in retail stores throughout the country.

The development of the new product of satisfactory quality, convenient to use, and the facilities necessary to handle it properly throughout the marketing channel brought a tremendous expansion in the market for Florida oranges. Since the juice keeps indefinitely in frozen storage, Florida orange juice became available throughout the year, instead of only a part of the time. With lower transportation costs the area of distribution increased. With its convenience to serve, consumption was increased both in the home and in public eating places and soda fountains where dispensers were installed. Research people even helped with the development and installation of the dispensers in order to make sure that a satisfactory product was served, and that their use would increase sales.

The research which went into the development of this new product, and the research to provide proper transportation, storage, handling, and marketing facilities cost the United States Department of Agriculture about $300,000. The success of the program is indicated by the fact that the housewife is now paying less for frozen orange juice than she paid for orange juice 8 or 9 years ago, despite the rise in the general level of prices. At the same time Florida growers have received an average on-tree price during the past 8 seasons of $1.44 per box, which is more than twice the amount received in the 1947 season. Florida orange production during this same period has increased by 62 percent. Hence, the growers are not only receiving a better price per box, but they also have more boxes to sell. Yes, research pays back big dividends.

I have recited the frozen orange concentrate story today because it shows clearly what research can do to help us find new and more profitable uses for our agricultural products. But we should not wait until the surpluses are breaking the backs of our farm people before we start the research. I'm in favor of keeping our research going all the time in the hope that we may be able to prevent some of the surpluses from developing.

For example, our scientists are now working on a tomato powder, as well as powders from other fruits and vegetables. Right now these things are mostly peeps around the corner but they are encouraging peeps, and our committee believes it would be a dividend-paying investment for us to continue research in these promising agricultural fields. The results will not only help our farmers and consumers, but will also contribute to the steadily rising standard of living of all our people.

United States Pollution Bill Is Backed

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the following news item entitled "United States Pollution Bill Is Backed," by Aubrey Graves, which appeared in the Sunday Star, June 5, 1956:

UNITED STATES POLLUTION BILL IS BACKED

(By Aubrey Graves)

Three antipollution bills, introduced by Maryland and Virginia legislators to reduce pollution in the steadily worsening Potomac River, are aging on Capitol Hill with little prospect for even a committee hearing before Congress adjourns.

But quietly last week, the House Committee on Public Works reported out favorably a proposed measure of nationwide scope. If enacted into law, it could accomplish many of the benefits envisioned in the dormant proposals of Representative JOEL T. BROYHILL, Republican, of Virginia, Representative DEWITT HYDE, Republican, of Maryland, and Senator JOHN M. BUTLER, Republican, of Maryland.

The measure (H. R. 9540) was introduced last February by Representative JOHN A. BLATNIK, Democrat, of Minnesota. It would extend and strengthen greatly the Taft-Barkley Water Pollution Control Act of 1948, due to expire next year. It would apply equally to prevention and control of pollution wherever it exists in the waterways of the Nation.

For a 10-year period, beginning with the fiscal year starting June 30, 1956, H. R. 9540 would make a maximum of $50 million in Federal funds available each year to the States as grants-in-aid to construct sewage treatment and disposal plants.

The procedure would be for the Surgeon General to give formal notification to any State in which pollution was discharged into waters which in his opinion endangered the health or welfare of persons in a State other than that in which the discharge originated.

The next step would be a conference between the water pollution control agencies of the State in which the discharge occurred and of the State or States claiming to be adversely affected.

If the Surgeon General believed, after such conference, that effective progress toward abatement of such pollution was not being made and that the health or welfare of others was being endangered, he would be obliged to recommend to the appropriate State water pollution control agency that it take necessary remedial action.

Should this not be accomplished within 6 months thereafter, the Secretary of HEW would be empowered to request the Attorney General to bring a Federal suit to secure the abatement.

H. R. 9540 is in most respects identical to a bill (S. 890) passed by the Senate at the last session of Congress. The Senate bill, however, provided only $2 million a year for grants to States for personnel training, research, and administration costs. The Senate version did not make any provision for grants-in-aid for sewage treatment and disposal plants.

Sanitary officials here are hopeful that funds provided for this purpose in H. R. 9540 would be included in whatever bill comes out of conference committee.

Another $5 million a year would be authorized to help the States train personnel in water control work, to conduct research and to administer their programs.

Local jurisdictions would have to put up at least one-third of the money spent for personnel training and administrative functions. They would be obliged to put up twice the sum of the Federal grants for construction.

At least half of the construction funds appropriated would be used to build treatment works servicing municipalities of 125,000 population or under.

The act would be administered by the Surgeon General of the United States Public Health Service under supervision of the Secretary of the Department of Health, Education, and Welfare.

Proposals for projects would originate with the various State water pollution control agencies.

To aid the Surgeon General, a water pollution control advisory board would be set up, consisting of nine members appointed by the President, none of whom could be Federal officers or employees.

The Blatnik bill would give the Surgeon General strong enforcement powers wherever State agencies were slow in combatting pollution. Lack of such power in the past in many cases has caused remedial action to be long delayed or not take at all.

Wings for the World

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. JACKSON. Mr. Speaker, the tremendous strides taken by commercial aviation in the United States have not been the result of happenstance. Into the growth of the aviation industry of this country has gone dedicated vision, years of unremitting toil and the visions of men who looked away from the earth to the arches of heaven and contemplated the conquest of the skyways. They were called visionaries by some and fools by others, but history has recorded that they, and not their critics, truly forsaw the future.

One of those who implemented his visions of the future was Donald W. Douglas, president and chairman of the board of Douglas Aircraft Co., Inc., of Santa Monica, Calif. I well recall one of the first Douglas factories, which was located in an old moving-picture studio on Wilshire Boulevard in Santa Monica, and which was the predecessor of the great and modern plants where Douglas planes are fabricated today in several cities throughout the country. Still later, as a schoolboy I recall the thrill that was mine, when the schools in Santa Monica were recessed for a day in order that the youngsters might witness the departure of the Douglas planes on the famous round-the-world flight of the early 1920's.

What was a breathtaking and challenging vision to Donald Douglas during the early days in the aviation industry has, in part, become a reality. The

highways of the air are today almost as numerous as those that thread across our Nation on the ground. World commerce and transportation today looks to the air more and more, and the unfolding era before us hold promise of new adventures and new conquests to match or exceed those which we have witnessed during our own lifetime.

Donald Douglas has been paid many tributes for his contributions to American aviation, but the greatest living memorial to his genius, his faith and his steadfastness is the sleek outline of the great plane that bears his name as it streaks through the skies of the world on the many missions upon which it is employed.

Donald W. Douglas is a great American industrialist, and his career is a study in the possibilities of life under the system of legal and free enterprise. With a dream and a dollar Don Douglas did it the hard way, but in going to the top his success assured hundreds of thousands of jobs and unexcelled opportunities for his fellow men.

At a recent dinner given by the Newcomen Society in North America at San Francisco, Calif., Mr. Douglas was the guest of honor and the principal speaker. He was introduced to the guests by Mr. C. R. Smith, president of American Airlines. Mr. Smith's introduction, and Mr. Douglas' remarks on that occasion were as follows:

WINGS FOR THE WORLD: THE "DC" FAMILY IN GLOBAL SERVICE

INTRODUCTION OF MR. DOUGLAS, AT SAN FRANCISCO ON JUNE 2, 1955, BY C. R. SMITH, PRESIDENT, AMERICAN AIRLINES, INC.; MEMBER OF THE NEW YORK COMMITTEE, IN THE NEWCOMEN SOCIETY IN NORTH AMERICA

My fellow members of Newcomen, I have had the privilege of knowing Donald Wills Douglas for 25 years, and each of those years has added to the cumulative respect and affection I hold for him.

A gentleman, a fine friend, a sportsman, an outstanding eingineer, a talented business executive, a courageous pioneer of great vision, and a splendid American citizen. What more can you ask for in one individual? Newcomen honors him for the reason that he deserves honor, and we are privileged to participate.

Mr. Douglas has often been honored by our Government, especially so for the participation of the Douglas organization in the aircraft production program during the recent war, when Douglas produced about one-sixth of the total weight of airplanes manufactured in the United States of America.

If you traveled by air during that war, in any theater, it is probable that you traveled in an airplane built by Douglas, because the Douglas DC–3, and later the DC–4, were the backbone of our military air transportation program. I remember at one time seeing so many Douglas planes on the line in India, bound for the Hump and China, that I thought I was on the flight line at the Santa Monica plant.

And, if you have traveled by air since the war, it is probable that you travel with Douglas, because the Douglas-built transports have been the most popular in the world; they are as well known abroad as in our own country.

Donald Douglas never has been content to rest on the laurels of past achievement. He has been willing to pioneer in the field of supersonic flight. The airplanes of his design can, it seems, most casually exceed the speed of sound; and no one was especially surprised some months ago to learn that a Douglas Navy plane had exceeded 1,200 miles per hour.

Douglas Aircraft is a great institution and Donald Wills Douglas is a great individual. The country is a better country, and a safer country, by reason of his genius in producing outstanding aircraft, for civilian aviation and for military aviation. I have never known Douglas to produce a poor airplane, and I believe that it never will because Donald Douglas would not be content with a product which did not substantially exceed the reasonable requirement for the job to be done.

We salute him.

REMARKS OF DONALD W. DOUGLAS

My fellow members of Newcomen, it is indeed a rare privilege to be here tonight and to have the unique opportunity of speaking to a group so representative of the finest traditions of three continents.

Through the inspiration and lofty ideals of the Newcomen Society, many important developments in the material and spiritual progress of mankind have been brought into sharper focus, for all the world to see and better comprehend. Before groups such as this, in many lands and stretching back through years teeming with progress and accomplishments, the annals of this society have enriched the heritage of history of the English-speaking peoples.

From Dartmouth, in Devonshire, to Detroit, U.S.A., from Bermuda to Boston, from Montreal to Milwaukee—all over the world—significant chapters in the history of industry, invention, engineering, economics, and transportation have been presented at Newcomen dinners such as this. Respect and reverence for the past and confidence and courage for the future have always been your guide and goal.

In a world torn and perplexed by the clash and clamor of conflicting ideologies, in the atmosphere of doubt and dread so prevalent today, it is reassuring to know that solid groups of leaders in our national and international affairs remain steadfast and serene, determined to preserve and promote good will, good deeds, and good manners everywhere.

It is against this rich and colorful background and before this distinguished audience that I hope you will permit me to tell something of the story of our "DC" family.

I am grateful, Mr. Chairman, for the high honor that has been paid the company I represent. I come before you in all humility because I know that this recognition is not accorded to me alone. If deserved, it properly belongs to 76,000 of our present employers and to literally hundreds of thousands who served us so faithfully during the last war and in the intervening years. To them, and not to me, tribute should be paid.

In a great measure, the story of the "DC" family is the story of the Douglas Aircraft Co. It is the story of men and women whose skills and workmanship, devotion and loyalty, and faith in the future have done so much to build wings for the world. Just as that great "practical philosopher" whose name your society bears contributed so vastly to the industrial revolution by the development of the steam engine, so too, I like to think, have our craftsmen and engineers, those "dynamic dreamers of the drawing board," helped give modern transportation a new dimension.

Back in our shops and laboratories we like to think that the story of the first Douglas commercial airplanes closely parallels, and is indeed a part of, the story of commercial aviation as it is known today.

Manmade wings have become the common denominator of international trade and good will. Their use has made it possible to hurdle barriers of race, creed and geography which for so many centuries have divided mankind into rigid and hostile compartments.

A few years ago, when aggressors threatened our shores and institutions, wings of commerce were turned into wings of defense, and the cargo airplane became the workhorse of military operations. Today global aviation is as commoplace as it is indispensable. People everywhere casually make reservations to hop across continents and oceans overnight, and the great airports of the world are beehives of activity.

It was the military necessity and challenge of the Second World War that laid a foundation for today's universal air travel. It is of interest to note that in that war the military members of our "DC" family, the C–54's, made almost 100,000 crossings of the Atlantic and the Pacific to pioneer the transoceanic services of today. Aviation's tremendous impact on our times and lives is well known. In previous years and at similar gatherings a number of my close friends, and your fellow Newcomen, have told this society how commercial aviation serves this Nation at every level and each hour of its daily life. It is a source of great pride to us of the Douglas organization that our "DC" family from the very beginning played an important part in the aviation accomplishments of the last quarter of a century.

Just what and how big is this Douglas "DC" family? When and how did it begin? Where does it live? What useful service does it perform?

A few vital statistics may help outline in the time available the history, dimensions, and scope of this sturdy and prolific family tree of air transportation.

In our business it is almost impossible to keep accurate, up-to-the-minute records. Our rugged offspring, free to roam over the oceans and continents of the earth and the limitless horizons of the sky, are scattered around the globe. They move about like the four winds and make their homes in strange and faraway places. The latest figures compiled from our own records indicate that more than 52 percent of all aircraft operated by airlines throughout the world are Douglas-built.

Of the 4,765 aircraft of all makes and of all manufacturers and all nations operating in scheduled service, 2,481 belong to the Douglas-winged family.

Of the 165 million passenger-miles flown every 24 hours by scheduled airlines all over the world in all types of aircraft, 81 million, or approximately 50 percent, are logged by Douglas models. Airplanes built by our next highest competitor in commercial aviation fly only 20 percent of the world's total. Our statisticians think that the actual numbers in mileage are considerably greater. The figures I have quoted are based on our sales and service departments reports and do not take into account literally hundreds of Douglas-built aircraft in private or unscheduled operations.

It may be of interest to take a closer look at our DC family by individual models now in operation and consider the daily, regularly-scheduled passenger-mileage they fly. Officially reported by the airlines, there are 1,673 DC–3's accumulating 17 million passenger-miles of service a day, 377 DC–4's accounting for more than 20 million passenger-miles per day, and 164 DC–6's with a total of 15 million. Twenty-three DC–6A's fly 2 million passenger-miles per day and 180 DC–6B's, many of them in transocean service, add another 20 million passenger-miles each 24 hours. The DC–7, the fastest and latest DC family member, now in actual service in North America, contribute 7 million passenger-miles per day or a grand daily total, for all known DC family members currently in service, of 81 million passenger-miles.

This daily mileage is sufficient to send 1 airplane filled with passengers around the world 108 times every 24 hours. Astronomical figures, perhaps, but not mere statistics. They represent people—35 million passengers

on United States-owned airlines alone in 1954, and probably 20 to 25 percent more this year.

All other makes of aircraft, combined, are made up of 10 different models of American types, 12 types built in Great Britain, 2 different types of Canadian manufacture, 3 French, 1 old German make, and 374 miscellaneous. All of them together account for 83 million passenger-miles.

So numerous has become this lustry brood of ours that a few years ago the sharp penciled boys who play around with statistics and shuffle huge stacks of international airline timetables assured me that on the average a Douglas-built airplane takes off or lands somewhere around the world every 6 seconds. This, they said, goes on every minute of every hour, 24 hours a day, Sundays and holidays included.

And these figures, they apologetically explained, are more than 2 years old and are most conservative. Surely here is an airborne empire on which the hurrying sun never gets a chance to set.

Even in modern times genealogy tables and family trees are, at best, risky and uncertain. One recalls a comedian's jesting remark about an experience with a genealogist hired to trace his family tree: "He worked 2 days and I have been paying him hush money ever since." We in the aircraft industry are more fortunate although for us, too, it is difficult to trace every development—to know just when and how a new idea or an improved model was born.

I suppose that in a way it all began for us with the old *Cloudster*, the first airplane to lift its weight in payload, designed and built in Santa Monica in 1920. From the *Cloudster*, 4 years later, came the *World Cruiser* in which the United States Army flyers first circled the globe by air. Built of wood, with fabric-covered wings, these early structures—followed by our C–1 and then by the M–1, 2, 3, and 4—first airplanes designed expressly to carry the airmail, laid the foundation for the DC's that were to come.

Fortunately, the birth certificate and documentation of the DC–1 are available. A brief, two-paragraph letter, dated August 2, 1932, and signed by my friend Jack Frye, then vice president in charge of operations of Transcontinental and Western Air, Inc., started it all. This letter accompanied a two-page specification for a new type of airline transport needed to meet competition in the newly developing transcontinental air travel.

The letter asked if Douglas was interested in building an all-metal, trimotor monoplane with a maximum gross weight of 14,200 pounds with a fuel capacity for a cruising range of 1,000 miles at 150 miles an hour, a crew of 2 and at least 12 passengers.

Needless to say, our answer was an emphatic "Yes." In what now seems an incredibly short time the airplane was designed, built, flown, and tested. It became the DC–1. It emerged with 2 engines instead of 3, carried 12 passengers, had a gross weight of 17,500 pounds, a speed considerably higher than the original specifications. In the spectacular acceptance test, the DC–1 took off from Winslow, Ariz., and proceeded to Albuquerque, N. Mex., on one engine. By the middle of 1935 it had established 19 world records for speed and payload-range-carrying feats.

Rapid changes and improvements in the line followed. Almost as soon as the DC–1 was finished, the DC–2 began to take shape. It carried 14 instead of 12 passengers. Fuel and cargo capacity were increased, and by 1934 the revised model became the DC–2. From an initial order of 26 airplanes, the DC–2 production quantity rose to 138 in 1938, and sales of the model spread around the world.

Then came the now famous DC–3. This is an ideal time and most certainly the right place publicly to acknowledge our debt of gratitude to my good friend C. R. Smith for his part in the development of the DC–3. His tremendous faith in us and in the future of air travel, his boundless energy and clear vision and his uncanny knack of making and inspiring the right decision at the right time, were the catalytic agents that greatly influenced us in taking the steps to build that famous and historic airplane.

The first DC–3 flew in December 1935. It had a gross weight of 24,000 pounds and carried 21 passengers. A few airplanes were designed as sleepers. Before production ceased on this model and its variations, 803 had been built as commercial airplanes and 10,123 as military versions. In addition to the 1,541 in airline operation, it is estimated that approximately 3,000 are still flying and that additional hundreds are in private service by corporations and individuals. And these figures also are conservative.

Over the years people everywhere have told us that without question the DC–3 is the best-known and most beloved airplane ever built in aviation's history. Its exploits in the Second World War are endless and legendary. Affectionately known in the military services as the "gooney bird," it was equally at home and equally useful from the Burma Road to Alaska, from New Guinea to Panama, from the Yalu River to Tasmania. In many lands and in many languages it become a household word. The British called it the *Dakota* and before the war, in Bagdad, street urchins used to point to the sky when KLM's airliners lumbered by and say "there goes a Dooglas Dooglas." Maj. Mahmoud al Hindi told me in 1940 that the word "Douglas" was uniformly applied to all airplanes in Arabia shortly after KLM's DC–2 flew over the country for the first time on its way to Melbourne in the London-to-Australia race.

It would take days to recount the exploits of the DC–3 (C–47) in the last war. This branch of the "DC" family was praised and honored everywhere. In awarding Douglas the exceptional service award the Air Force said the airplane ranks as the best single airplane ever built. With Montgomery at El Alamein, with Eisenhower in Normandy, and in the battle of the bulge, and with MacArthur and Kenney in the Pacific, it was unequaled and indispensable.

If I seem to linger a bit too long in telling the story of this aging member of our family, it is because, like millions everywhere, I love the "old faithful." It always will remain close to my heart.

Progress of the DC's became more rapid, if less colorful, as the years went by. The first prototype DC–4 (and, incidentally, it had three tails when it first flew on June 7, 1938) was sidetracked during the last World War to make room for the C–54, its military version. The C–54 was test flown in March 1942. It began to roll off our production lines in Santa Monica and Chicago in increasing quantities. Before V–J Day, 1,089 of this model had been built. After V–J Day, 74 were finished as commercial transports and several hundred of the cargo versions were subsequently converted to passenger liners and placed into airline operation.

In its own way, the DC–4—(C–54)—was equally outstanding and memorable. It, too, served with distinction on the Burma Road operation, in India, China, South America, Australia, and after the war, in the Berlin airlift, where practically unaided by other aircraft in that operation these rugged Skymasters helped score American's great victory in the cold war with Communist Russia.

The C–54's roamed over Asia's highest mountains, criss-crossed African deserts and equatorial swamps, supplied arctic outposts, carried the mail to our service men everywhere, and brought our wounded from distant war theaters to American hospitals.

The DC–6, America's first postwar passenger transport, completed its test flight on February 15, 1946. It was a distinguished descendant of a truly remarkable family. It was longer and more comfortable than the old DC–4, had a pressurized cabin, a top sped of 370 miles per hour and a range of 2,100 to 3,200 miles. It was followed by the DC–6B. To date, 384 of the DC–6 series have been built and 72 are on order. Its popularity continues undiminished.

On November 29, 1953, a new member of the "DC" family made its debut in spectacular fashion. This was the DC–7, which American Airlines sent streaking from Los Angeles to New York nonstop. Two days later, coast-to-coast nonstop service in both directions was officially scheduled, and a new era in air transportation began.

Longer than the DC–6 and with more powerful engines, this fastest of all commercial transport planes has a top speed of 410 miles an hour and cruises at 365. It has a payload of nearly 16,000 pounds. By contrast, the DC–3 had a payload of 5,000 pounds, cruised at under 200 miles an hour and had a maximum speed of 235. The DC–7 swiftly became the blue-ribbon carrier for such top airlines as American, United, Delta, and National. Pan American and Eastern also ordered DC–7's and are now integrating them into their services.

These postwar DC–6 and 7 planes—if I may indulge in a few more statistics—fly about a million miles a day all over this globe, or the equivalent of 40 times around the world every 24 hours.

The splendid accomplishments of the DC–7 in our domestic service quickly attracted wide attention abroad and brought an immediate demand for a longer-range, overwater version. The DC–7C, designated the *Seven Seas*, was our answer.

We believe it will write a great new chapter in the history of American transportation, worthy of the fine tradition established a hundred years ago by the famous clipper ships which sailed the seven seas and brought America fame and fortune.

Already, from one end to the other of our mile-long Santa Monica plant, rivet guns are beating a tattoo in preparation for the date when the DC–7C will take to the air for the first time.

We confidently expect it to set a new standard in intercontinental air service, just as the DC–7 has done in transcontinental service. Pan American World Airways was the first purchaser of the DC–7C and, in rapid succession, we have added BOAC, Braniff, KLM, Northwest, Sabena, SAS, and Swissair to the list.

With an operating range of nearly 5,000 miles, the *Seven Seas* will be capable of such nonstop flights as Chicago to Amsterdam, New York to Zurich, Cairo to Capetown, Sydney to Manila, and Seattle to Toyko.

The pace of aircraft development is swift and relentless. Before the *Seven Seas* models are in scheduled operation, a newer, more powerful and probably even swifter member of the DC family will be taking shape on our drawing boards and in our laboratories and shops, for in the air, as on the ground, progress, like opportunity, does not linger very long.

Probably the most compelling characteristic of our industry is that it cannot stand still and rest on its laurels. Always we, and the airlines, must move ahead.

Many millions of people have flown many billions of miles since the first of the DC family line stretched its manmade wings and headed skyward. A great many things have happened in and to the world. If this history of our winged family were only a statistical accounting of Douglas activities and commercial results, it would be like sounding brass and tinkling cymbals. We at Douglas like to think that the DC family story is more than mere numbers or dollars. We like to think of it as a chapter in the saga of man's conquest of the air, a story of his progress in the new dimension, both

physically and spiritually. The fact that wings of commerce have also been wings of war and defense, and that the shadow of nuclear destruction was brought closer to us by the airplane, does not entirely dim the hope that the airplane will one day be converted entirely to its constructive uses.

I have great faith in aviation and in the future. Should the days toward which Tennyson cast a poetic glance come in our own time and we enter the era in which "the war drums throb no longer and the battle flags are furled," the airplane will come into its own. It will transport most everyone and everything from every place to everywhere.

It will bring closer to each other all nations and races. It will place any city or village on earth within a few hours' journey from any other. It will multiply commerce and good will and understanding. New skylanes, new trade routes, new and stronger bonds of friendship will replace the old.

Today we stand at the crossroads of destiny. Let us pray that wings for the world will take the right turn to climb higher and serve mankind everywhere.

Look to the Future

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. TUMULTY. Mr. Speaker, in the belief that the House will be interested in the wonderful work being done in New Jersey on old-age assistance, I include the following article by Phyllis Page Bradshaw entitled "Look to the Future":

LOOK TO THE FUTURE

(By Phyllis Page Bradshaw)

You probably feel that old age is millions of years away. Yet your chance of reaching old age, of liking it, and of being useful depends upon what you, in the years to come, do for yourself and for your community.

A CONTINUOUS PROCESS

Aging is like living. It is a continuous process beginning at birth. Approximate classifications have been set up—infancy, childhood, adolescence, young adulthood, middle age, and old age. From a count of birthdays, you may think you belong in one of these groups. Undoubtedly, a part of you does belong there. But aging is a complicated process. It goes forward at different rates for different people. And for each person, aging goes ahead at different rates for different parts of the individual.

Physically, an individual may be very old, but mentally, socially, and emotionally, he may be young. The reverse is usually true, however, physically not so old, but aged mentally, socially, and emotionally. This is the old codger who seems to be 100. He has no friends, no interests, and is a problem to his family. But by counting birthdays, you find he is 20 years younger than that interesting fellow you met at the club the other night.

PEOPLE ARE LIVING LONGER

Interest in our older years is more important than formerly because so many more people are living longer. Life expectancy is about 20 years longer than it was in 1900. The population increase in 1950 for New Jersey was 16.2 percent over that of 1940. Contrast this with the increase of 46 percent in persons 65 and over during the same period. This population shift to more older persons is pronounced in urban industrial areas. This is particularly important in New Jersey—the most urban of all the 48 States. New Jersey is also eighth in population of the States and one of the greatest industrial areas in the country.

ALL OF LIFE CAN BE SATISFYING

Life has been made longer. We now need to make longer life worthwhile. How can this be done? One way is to help people understand that each part of life is different and good, that each part of life can be satisfying. All of us have the capacity to enrich our lives. Usually, this doesn't happen by accident, it takes planning. As with other things, the art of growing older successfully is best learned beforehand. Young adults and middle-aged persons can prevent many of the problems of later life. Some of these problems may be anticipated so that you can prepare for them. The secret of happy later years is preparation.

America has always been geared to youth. This is natural because our tradition shows America as a young, vigorous country. In 1900 the average American lived to the age of 40. Now the average American lives to the age of 70. People can look forward to older years when they live in the present and not according to the customs of the past.

Living in the present includes understanding some of the new problems in life brought about by our increasing older population. Problems are much nearer solution when they are recognized and faced with courage. We will all be affected by the problems, now or later. These solutions are everybody's business. Although each person's problems are individual, nevertheless, certain patterns are found. Some of the problem areas are employment; income; physical, mental, and emotional health; housing; and personal relationships. Much of the difficulty is found not in the problem itself, but in the individual's adjustment to it. The solution to many of these problems depends upon how you feel about them. How you feel determines what you will do about them. Some of them can be solved by your own feelings and actions. Others need community action.

EMPLOYMENT AND RETIREMENT

People value work. It means prestige, position, income. Everyone needs to do something useful, and at present paid employment answers this need better than other activities. We have been brought up in the tradition that people must work to be self-respecting and to insure the respect of others. Many persons do not feel that volunteer service, no matter how important, satisfies this need. Nor does the puttering or "busy-work" relegated so often to older people satisfy them.

Opinions differ with regard to retirement. Some persons look forward to retirement. To others, being put out to pasture when they are still productive seems unjust and leads to personal problems of frustration, lack of income, loss of self-respect. The sore point in the whole problem of retirement seems to be that of setting an arbitrary age limit—usually 65. Individuals differ considerably. Some lose their productiveness before 65, others continue to be capable long past that age.

The individual's attitude toward retirement is most important in determining whether his future will be pleasant and profitable or dreary and miserable. Individual attitudes toward retirement need to be emphasized. When retirement is looked upon as a reward for service, rather than the beginning of uselessness, individuals will retire with confidence. The person who lives for his work alone will be miserable when retirement becomes necessary. Life is an empty void, there is nothing to look forward to. This person feels useless. He resents being put out of his job. Instead of finding other interests, he frets and stews about his own problems. He becomes unpleasant, irritable, faultfinding, and sick.

The person who looks forward to and plans for retirement makes a better adjustment. It is always difficult to change habits and routine. But when life continues to be interesting, when there is something pleasant to do, the retirement days stretch into years of happy living.

FINANCES

Some persons feel that the main problem of age is the money problem. Finances cannot be dismissed lightly. Yet, in many instances, it is the person's attitude toward money, rather than money itself, that creates the problem. Many persons strive to amass money in an attempt to gain security. This is a never-ending struggle, because money alone does not bring security. The frantic search is in reality for emotional security.

Money, however, is our medium of exchange for housing, food, recreation, clothing, and many other necessities. Pensions and social security help here, even though it is often difficult to adjust to reduced income. Today's high cost of living often makes fixed incomes inadequate. Many older persons are financially dependent upon their children who are now middle aged. This, in turn, makes it difficult for the children to make provisions for their own old age. The fear of charity or of becoming a burden is strong. This fear or the reality is one of the main reasons for the unpleasant feeling associated with age.

Take a little time now to figure out what your financial resources will be when you retire. Is there a pension in your future? Will you be able to count upon savings, income from investments, or insurance? Should you do more about your financial future than you are doing now? Do your retirement plans fit into your financial situation? Your income will be reduced. If you can't afford to travel now, is it wise to plan so many trips after retirement? Are your hobbies and interests expensive? If so, you still have time to cultivate some of the many interests that don't cost money. Plan thoroughly and carefully so you won't be caught short when retirement comes.

HEALTH

Poor health does not necessarily go hand in hand with advancing years. Chronic illness is usually associated with old age. Yet the report of the New Jersey Temporary Committee on the Chronic Sick stated that half of the chronically ill are under the age of 45; and almost one-fifth are under 25. Doctors are continually working to control diseases. The life span has lengthened because medical science has succeeded in bringing many diseases under control. People are being educated to public health measures and to preventive medicine.

Regular physical check-ups are important. It's better to keep your health than it is to try to regain it. Begin early to acknowledge your capacity for activity. Make the most of your skills and abilities instead of tackling the more strenuous sports and giving your all to win. This extra effort may not only do physical damage, but brings mental anguish with the realization that it's no longer possible to win.

Face the facts that physical energy, power, and endurance decrease. Speed of movement slows down, vision is reduced. What is often not realized is that skills and precision of movement continue. If energy is carefully used, satisfactory productivity is entirely possible.

There is more to health than the bodily changes that come with years. Mind and emotions are interrelated. Health concerns the whole person, not just the physical body. The familiar expression "You're as old as you feel" is quite sensible. Your feelings—emotions—are a very important part of you. How you feel about something determines to a great extent what happens to you. A zest for living instead of apathy can make

the difference between a full life and a barren one. Too many persons wither away through lack of interests, responsibilities, activities, and social opportunities. The machinery rusts when it is neglected and not used.

USEFUL ACTIVITY

Useful activity is a fundamental need of everyone, young and old alike. This is not always recognized. Persons who have worked all their lives look forward to the leisure of retirement. Without some purposeful activity, time hangs heavily. They feel useless. There seems to be no reason for living. They feel themselves a burden, financially or morally, on relatives. Severe emotional crises follow, which may result in physical or mental breakdowns.

There are many satisfying and even fascinating possibilities to enlarge activities and interests. Learning can open up a whole new world. Education is for the lifetime and is not just a compulsory chore for youngsters. The ability to learn grows through use. Maybe it isn't possible to teach an old dog new tricks. But are we dogs? Some persons may believe we are, but they are the ones who need education to find out that age is no barrier to learning.

Education for adults means much more than catching up with things missed before. Some persons have set out to learn something new and have lost themselves in the subject. This can happen with intellectual pursuits such as history or science. Or it is possible through learning new skills. Often these new skills can help a person to be self-supporting.

One man bought an old table to refinish it. Furniture refinishing became a hobby while he was employed. When he retired, it became a major interest. It also turned into a profitable small business as he purchased furniture, refinished it, then sold it at a profit.

In the last 20 years, great strides have been made in knowledge about people. Education can help people to make better adjustments to changed family and social relationships, to understand and adjust to the physical aspects of aging, to prepare for an active and productive life after retirement.

There is a tremendous need for more activity of citizens in community affairs. Every person is important in a democracy. But democratic living cannot be continued unless citizens participate in civic affairs and in government. Many of the problems of older people cannot be solved individually. Some of these are employment, pensions, social security, housing, public health. Solutions to these problems will depend largely on community action in the future. What can you do now to help solve these problems that will affect you? What are you planning to do when you have more time available?

Many worthwhile services need volunteer help. Tastes differ. What is of interest to one is dull to another. But there is wide variety in civic and service organizations. Many persons have the mistaken belief that their services are valuable only when paid for in money. Some of the most important community work is done on a volunteer basis. One man, upon retirement, was persuaded to serve on a civic committee. Much to his surprise, he became interested. One thing led to another, and he is now one of his community's civic leaders and performs invaluable work.

PERSONAL RELATIONS

Loneliness is one of the most serious hazards of age. Old friends may move away or be lost forever. But there are always new friends waiting to be found. Plan now to make new friends. Create opportunities to meet new people with similar interests. The best way to win friends is to be friendly. The embittered, self-centered, irritable oldster complains about loneliness. He berates relatives for lack of interest and affection: "Nobody cares whether I live or die." Has he forgotten that love is not only receiving? It is giving, too. A friendly, pleasant person who is interested in others never lacks friends. Man is a social animal, and love and affection from others are necessary parts of happy living.

Family relationships change. The parent must realize that children grow up and become adults. Close, loving parent-child relationships can continue throughout life, but only when the parent accepts the child as a grown adult and lets him lead his own life. The dominant parent who tries to force his will on his middle-aged son or daughter can be sure he will be resented and pushed aside as much as possible.

Frequently, problems arise when several generations live together. All of us are aware of or have experienced the situation in which the middle-aged person is caught in the conflicting pull of his responsibility to his children and to his parents. Understanding of personality needs, of human relationships, brings about a better awareness of the problems of each generation and is a beginning in their solution.

INDIVIDUAL PERSONALITY

Although each person is individual and different from anyone else, there are certain basic needs which are common to all. Every person needs love and affection. We must feel needed. We must have a sense of belonging. We need companionship. All of us need to feel important, at least some of the time. We need purposeful and creative activity and recognition for our achievements.

People like to believe they are self-sufficient, but man is a social being and is dependent upon others for the human relationships that make life satisfying. Denying these needs leads to maladjustments and unhappiness. Use them to measure your activities, to determine how satisfactory your plans for retirement will be. Do you have friends who can provide affection and companionship, or must new ones be made? Will your plans for activity satisfy your needs for usefulness, for creativeness, and for a feeling of importance? Other people can help you and make suggestions, but the final decision is up to you.

AGE IS WHAT WE MAKE IT

You are better able to plan ahead when you know what to look for. To retire successfully, you need to do more than look forward vaguely to a time of leisure. Successful retirement needs planning. Those 8 hours of every day will become empty after retirement unless you give some thought to them. Cultivate a variety of interests including purposeful activity, creative work, hobbies, the ability to enjoy recreation, and education. The key to successful retirement is to plan ahead so you can retire to something interesting rather than retire from the job.

When you see and face problems, you have started to solve them. Some you can solve by yourself. Some need community work. Some involve changed attitudes toward age, your own age as well as that of other persons. Greater knowledge about aging, better preparation for as well as a finer appreciation of age will help make all of life satisfying and good.

Glenford W. Lawrence

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 26, 1956

Mr. DOUGLAS. Mr. President, Glenford W. Lawrence was one of our Nation's most dedicated and effective social workers and leaders in the field of adult education, who for many years lived and worked at the internationally known social settlement, the Chicago Commons, founded by Dr. Graham Taylor and long directed by his daughter, Miss Lea D. Taylor.

From my own long acquaintance with Glenford Lawrence and my knowledge of his unceasing service to his fellow men, I came to regard him as a true Christian in the very best sense of that word. While no brief résumé of his activities can fully measure the contribution which Mr. Lawrence made to the Chicago community and to the Nation, I ask unanimous consent to have printed in the Appendix of the RECORD, the very moving remarks by Anthony Scariano, a Chicago attorney, who grew up in that area, at the memorial service for Mr. Lawrence held May 10, 1956, at the Chicago Commons, in tribute to Glen Lawrence and to the great help that he gave to those with whom he lived and worked.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF ANTHONY SCARIANO AT THE MEMORIAL SERVICES FOR GLENFORD W. LAWRENCE, AT CHICAGO COMMONS, MAY 10, 1956

I have been asked by Miss Lea Taylor to participate in this memorial service for Glenford W. Lawrence, and to speak to you especially about Mr. Lawrence's influence on young people. I can best do this by telling you of his influence upon me as a young man. And, again, I can best do this by reading to you portions of a speech I gave recently before some of the Democratic leaders of the First Representative District.

In giving my personal history as a candidate for public office, I told these good people that my father had died when I was 10 years old; that my mother was forced to go to work in a factory to support her four small children; that I had to drop out of high school after my second year in order to help support my family; that after 1 year of full-time work I became unemployed; and that thereafter I became engaged in what seemed to be an endless quest for another job. This was in 1934—the very depths of the great economic depression. I continued:

"During this time I became exposed to forces and influences which were to have a great and lasting effect upon me.

"Chicago Commons, a settlement house very much like the more famous Hull House, was only two blocks from my home. Dr. Graham Taylor, a University of Chicago School of Divinity man, founded the Commons in the nineties, and ever since it has ministered to all types of ethnic, religious and cultural groups in that neighborhood. Dr. Taylor tells the fascinating story of that settlement in his book Pioneering on Social Frontiers.

"I was practically raised at the Commons. My mother was too busy with household chores morning and night, before and after her work at the factory, to devote much, if any, time to her children. All of my spare time was spent at the Commons from the time I was 10 years old. There I played in the gymnasium, danced, attended wood shop, art classes, and current events discussion groups together with Catholics, Protestants, Jews, Negroes, Orientals and Mexicans. I did not know what prejudice really was until I left the tenement-infested area of the near Northwest Side of Chicago for the civilization of university life.

"At any rate, during this period of trying to obtain work, the Commons was very much my second home. I was taught to type in

a WPA-sponsored project there to help me obtain a suitable job, but in vain.

"During all of this time I was being encouraged in all sorts of ways, by Lea Taylor, who had by this time become head resident of the Commons, succeeding her father. By a young divinity student at Chicago University, who was working at the Commons, he gave me his personal copy of Will Durant's The Story of Philosophy for helping him with a study on population trends in our neighborhood. By another young student from Baltimore, a social worker at the settlement, who turned over to me his copies of the Baltimore Sun when he was through with them. By Glenford W. Lawrence, a nationally known social worker and a leader in the field of adult education, a devoted trade unionist who smoked Raleigh cigarettes because it was the only brand to carry the union label. By a young woman attorney who donated her spare evenings to lead current events discussion groups at the Commons.

"We were a happy and yet a serious group; we published our own newspaper and we carried on all sorts of projects relating to the burning issues of the day.

"But, above all, I began to think. A consciousness, a deep awareness of society and its problems began to dawn on me. I was then 18, an age at which most lads would be going off to college in more auspicious times.

"Franklin Roosevelt had been in the White House just 2½ years, and what history had been packed into such a short period of time! We went over Durant's and other good books together. We read the great newspapers together: The New York Times, the Christian Science Monitor, the St. Louis Post-Dispatch, and the opinion magazines such as the Nation and the New Republic.

"We were all set to thinking, especially by Glenford Lawrence, and especially about the great paradoxes which existed in the United States then, and which still exist in nearly all parts of the world today:

"The paradox, for example, of appalling hunger in the midst of busting granaries.

"The paradox of a vast army of unemployed in the face of a great need of products and raw materials of all kinds.

"The paradox of prolonged life and useless and dependent old age.

"The paradox of nations preaching peace while arming to the teeth and preparing for war.

"The dismal spectacle of a lost generation of young people, drifting, deprived of an education, putting off marriage and the raising of families, practically faithless, and already falling prey to foreign influences.

"The climate was an exceedingly conducive one for encouraging the idea of returning to school."

Glenford Lawrence literally led me by the hand back to high school after an absence of nearly three years. He helped many others, too, I know, to "find themselves." I'm quite sure he helped countless others of whom I don't know.

Glenford Lawrence taught that a democracy did not let its worthy unemployed go hungry. He felt deeply that Government had a continuous responsibility for human welfare. He aspired for liberty and justice and the good life. He voiced the deathless cry of good men and good women for the opportunity to live and work in freedom, the right to be secure in their homes and in the fruits of their labor, the power to protect themselves against the ruthless and the cunning. He recognized that man is indeed his brother's keeper, insisted that the laborer is worthy of his hire and demanded that justice shall rule the mighty as well as the weak. He sought to cement our society, rich and poor, manual workers and brain workers, into a voluntary brotherhood of free men, standing together, striving together, for the common good of all. He kept that vision always before his eyes and in his heart, insisting steadfastly that it could and would be attained.

Glenford Lawrence believed that poverty could be stamped out; that the disgrace of involuntary unemployment could be eliminated; that class hatreds could be done away with; that peace at home and peace abroad could be maintained; and that one day a generation might possess this land, blessed beyond anything we have ever known, blessed with those things—material and spiritual—that make man's life abundant.

If any of the young people whose lives he touched ever have any part, be it great or small, in alleviating the complex problems which plague our society, it will be largely, if not solely, because of Glenford Lawrence.

To us young people he was friend, teacher and counselor. He will always be an inspiration to us.

A Case History: The Effect of Changing Patterns in Competitive Sources of Energy on the Industrial Growth and Development of the Kanawha Valley

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. BURNSIDE. Mr. Speaker, the Kanawha Valley in West Virginia is one of the great industrial centers of our Nation. Its future for potential development is extremely promising. At the annual meeting of the Charleston, W. Va., Chamber of Commerce on November 10, 1955, Mr. Philip Sporn, president of the American Gas & Electric Co., discussed the growth of this valley and the effect of the development of new sources of energy upon this expansion. His address will be of interest, I believe, to everyone, and I want to include it in the CONGRESSIONAL RECORD. It is as follows:

The growth of industry in the Kanawha Valley in the past 35 years has been based on a number of factors—character and quality of its people, climate, transportation, water, salt, coal, natural gas, and electric power. These assets in combination have led to the establishment of a thriving industrial valley and one of the world's centers of chemical, electrochemical, and electrometallurgical production. This and adjacent areas constitute also a great center of coal production.

Among the resources with which we have been endowed in this valley, an abundant supply of low-cost energy has been of key importance. In the past our industry has relied for its energy upon hydro power, coal, and natural gas; oil has played only a minor part. Now a new source, nuclear power, is on the horizon and is likely to have significant effects upon the growth and location of industry here and elsewhere.

These competing energy resources, their relative availability and prices have never been static; their relationships to each other display an ever-changing pattern and the prospects of further change in the availability, price, and location of one fuel vis-a-vis others will continue to influence industrial development in the several regions of the country and in this section. It is necessary to understand the past and present role of energy resources in order to evaluate the effects that may result from changes in the future pattern of supplies.

Hydroelectric power had a prominent place in the early industrial development here. In 1901, hydro from the Kanawha River produced the first high carbon ferrochrome in the electric furnaces at Glen Ferris, a plant which has since led to the large Electromet operation at Alloy. Dependence upon hydro power from the Kanawha yielded many years ago to coal and natural gas. These two fossil resources are now important not only for fuel but also raw materials, and their dual uses are exemplified by the Union Carbide and du Pont plants begun in 1920 and 1925, respectively, and by the two powerplants at Cabin Creek and Glasgow. Today we can discern that coal, presently the main source of energy in this region, will play a primary role in future developments, even though nuclear power may also enter the picture.

The great industrial and powerplants just mentioned illustrate coal's importance in three forms: first, as chemical raw materials; second, as the means of producing heat for industrial purposes; third, as the dominant source of the abundant electric power which the valley has continued to enjoy. I would not minimize the part which our fortunate combination of many human and natural resources has played in giving this area its character as a center of the chemical industry. But low-cost electric energy based upon local coal has been and can continue to be one of the decisive factors.

An examination of the chemical industry's history during recent decades, in relation to the changing pattern of fuel supply, may indicate the possible direction of future growth in the Kanawha Valley. I am not going to quote a bale full of statistics, but some figures do help.

The data I am going to cite will not be precise because of changes in classification and other inconsistences over a long span of years, but they are indicative of trends.

Until the beginning of World War II, the Kanawha Valley was the pacemaker in the rapid expansion of chemicals. Comparative figures for all of the United States and for West Virginia show that the total United States chemical industry, as measured by value added, increased from some $200 million per year in 1921 to some $1,820 million in 1939. We may fairly take 1921 as the date of the country's emergence as a major producer of chemicals. The overall expension for the country from 1921 to 1939 was 900 percent. For the State of West Virginia it was roughly $1 million for 1921 and $47 million for 1939, or a ratio of more than 4,700 percent.

Between 1939 and 1947, however, ratios changed. The chemical industry still showed a very rapid increase but the national figure of annual value added rose to $5,360,000,000 while the increase for the State was some $176 million. The growth ratios in this interval were 295 percent for the country and 375 percent for the State.

In the last interval for which we have information, 1947–53, the national figure of value added climbed to $9,300,000,000 and the State figure to $353 million. The growth ratios in this period are 174 percent for the country and 201 percent for West Virginia.

Thus we see that, although this State pioneered the phenomenal development of our chemical industry which started with World War I and, although it maintained a marked advantage for a long time, since 1939 it has been losing position. The growth ratio of West Virginia to the country was 5 to 1 for the interval 1921–39; dropped to 1.27 to 1 in 1939–47; and dropped further to 1.17 to 1 in 1947–53. In recent years, in other words, West Virginia has just about been keeping up with the country as a whole. The experience of the Kanawha Valley, in which so large a part of the chemical industry of West Virginia is located, has tended to parallel

that of the State. Among the numerous reasons for this temporarily discouraging trend, one is outstanding: In the last decade new petro-chemical plants have been moving toward supplies of petroleum and natural gas, especially in the Southwest.

One region in Texas will illustrate the shift, the Sabine area in the upper Texas gulf coast, which takes in principally the cities of Beaumont, Port Arthur, and Orange. Between 1940, when employment in the chemical industry in that part of Texas was a bare 100, it grew to 4,100 in 1953, and at that time ground had already been broken for 3 more major chemical plants.

In the same interval, I know of three very large new chemical plants that we lost to the Southwest. That we lost them was not the result of any lack of enterprise here. We had brought two of these along very far on the road to final negotiations for power supply on the Appalachian Electric Power system; one of them actually had commenced engineering work on a local site. In the end, the principal attraction of the Southwest, since all these operations involve large quantities of power and hydrocarbons, was the abundant, lower cost fuel—gas and oil—that was offered by that territory. The combination of new technology and the competitive advantage which oil and natural gas then held in the Southwest brought about the shift to that area.

The position of the Southwest in this respect can be seen clearly if we compare prices of natural gas in Texas and West Virginia. Price at the well in West Virginia in 1953 was 23.6 cents per thousand cubic feet, or over 3 times the 7.6 cents in Texas. This differential is somewhat less but still striking if we compare average prices at points of consumption. The average revenue of gas utilities per million therms in 1953 in West Virginia was $36,984 and in Texas it was $20,366. West Virginia cost for gas, therefore, in 1953, was more than 80 percent higher than in Texas at the point of consumption.

Happily for us in the Kanawha Valley a partially compensating factor has now set in. From 1933 to 1946 revenue per million therms fell in both States as the Southwest's vast natural gas resources began to be tapped more extensively. Since the end of World War II, however, with the great expansion in consumption of natural gas, prices have risen steadily in West Virginia until they are now about 35 percent above 1946. But in Texas, while it is true that prices have not risen the same amount above the 1946 level, the trend in prices is upward, with every indication that the pressure of demand will result in a continuation of this trend.

These figures all relate to average prices. They take into account, therefore, long-term contracts made, in many cases, years ago. And they are not entirely indicative of what can be done today by a new industrial operation where fuel need is relatively large and its use in process is so large as to constitute a significant item in total cost of production. For such cases there are few locations in the Southwest where gas can be obtained today at less than somewhere between 13.5 cents to 15 cents per million British thermal unit. It is this situation that has materially altered, and promises to alter even more in the future, the competitive position of coal.

It is interesting to look at what has been happening to coal in this same period. The 1939 average price at the mine in West Virginia was $1.76 per ton. In 1945, the price had gone to $3.20 per ton, and by 1953 it was $5.18. For the country as a whole the corresponding figures are $1.55, $3.06, and $4.91. But in the past 3 or 4 years there has been some decline in the price of coal and these prices now show signs of leveling off. This is very significant since the stabilization is taking place in the face of higher wage rates. It is a reflection of technological progress and improvement in labor productivity in coal mining. Gas prices, on the other hand, give every indication, even in Texas, of being in the early stages of a long-term price increase which is likely to become more pronounced as the demand for gas grows and begins to strain the maximum capacity available. Should legislation remove Federal Power Commission control at the wellhead, this trend is likely to be accelerated.

In electric power the State has fared very much better than it has with gas and much better than with coal. The cost per kilowatt-hour for industrial customers of Appalachian Electric Power Co. has declined steadily from 1.23 cents in 1929 to .91 cent in 1953, and thus far in 1955 it is only .88 cent. For the country as a whole there has been a decline from 1.38 cents in 1929 to 1 cent in 1953. The decline has occurred despite the rise in the cost of materials, equipment, supplies—particularly fuel—and the rise in labor costs. It has been made possible entirely by the technical strides in design, construction, and operation of electric power generation, transmission, and distribution facilities, and by the increase in demand and use that declining costs have induced which in turn have provided opportunities for further reductions in cost. And the promise of further advances in power system technology, together with the coal resources available in the State and the hope of stabilizing coal costs, should assure the Kanawha Valley of a continuing abundance of low-cost electric power.

The new competitive energy resource, atomic or, more precisely, nuclear power, is now at the threshold. It is important to emphasize that, while nuclear power is here, competitive nuclear power is yet to come. In order to give perspective, I should say that we cannot say that we are on the brink of competitive atomic power, but it is rash to overlook the fact that competitive atomic power is coming.

Nuclear energy is a major advance in bringing forth a new source of thermal energy; its importance lies, however, in the prospect it opens up of meeting the expanding requirements not in the immediate future but 20 to 25 years from now and beyond. This does not mean nuclear fuel will have no immediate impact on the energy picture—worldwide and United States of America. While at the present time no firm data of nuclear power generating costs are available, there are indications that nuclear power may soon be competitive with conventional power in limited parts of the world and may even be so in some especially high-fuel cost areas in the United States.

But in the Kanawha Valley and in other places where abundant conventional energy resources are economically available, nuclear power is likely to make relatively minor inroads over the next 2 decades on the markets for fossil fuels and the expected growth in these markets. I must say, however, that my confidence in the future of the coal market is based upon certain assumptions about the coal industry. I think these assumptions are valid but it is also necessary that I state them. I am assuming that the coal industry is determined to meet the challenge of competitive nuclear energy and that it will see that challenge clearly. I can amplify this statement in the following way:

(a) The coal industry has both an opportunity and a responsibility as the supplier of one of the basic energy raw materials.

(b) Competitive nuclear fuel will be a freightless fuel and, therefore, it is imperative that coal should meet it on a delivered basis.

(c) The coal industry will need to have the most intimate contact with principal classes of use and independently and cooperatively will have to develop more economical coal and more economical use of coal.

If coal responds to that challenge, then by 1965, when the electric power industry of the country is likely to reach a generating capacity of over 200 million kilowatts, nuclear fuel may power only 5 million kilowatts of that capacity. By 1975 nuclear power, although at that point accelerating its successful penetration, probably will still represent only a fraction of the 400-million kilowatt total industry capacity. If matters eventuate so, then coal will continue to carry the principal share of the country's energy burden for some time to come. Even beyond these next two decades its seems likely that nuclear power, rather than displacing coal, will be required to complement our coal resources and assist coal to meet our total energy requirements by filling some of the gaps likely to be left by dwindling oil and gas supplies.

What does all this mean for the further industrial development of this valley? The decline in the additions to the known reserves of oil and particularly gas and the rise in prices at which they will have to be sold is bound to lower the position of these alternative fuels vis-a-vis coal. These developments can be given a powerful further impetus by the coal industry's vigorous reaction to the challenge of atomic power. Any successes in getting coal out of the ground more economically than at present will be of enormous significance in enabling the industry to hold and expand present markets. And it will be particularly helpful to an area such as the Kanawha Valley, where mining is so close to power-generating plants that here at least coal, like nuclear fuel, can be virtually independent of the effect of freight charges. This view of our situation should open a new era in the expansion of chemical, electrochemical, metallurgical, and electrometallurgical industries. I think there are signs that this new ear may have begun already. Until just a few months ago, it seemed that the economics of lower fuel cost gave the Southwest an unbeatable advantage. But now industries which are so basic to our economy are going through major expansion programs, and they are looking to coal-fired electric power for their source of energy. The present cycle of expansion in aluminum reduction and fabrication, to cite but one example, cannot, it seems to me, be completed without their being located 1 or more, perhaps as many as 3 or 4, such operations in a coal-based area. A number of these are bound to come, I venture to predict, to the Kanawha Valley or to areas very close to it. Such industries, in turn, can attract numerous, important satellite industries built to supply them and be supplied by them.

These possibilities can materialize because the fundamentals for their attainment are here. We have an established, thriving industrial valley; we are rich in natural resources: climate, ample water, salt, fuel; we have excellent transportation facilities. We have a skilled and experienced population from which to draw and we have proximity to markets. Finally, there is every promise of the competitive position of coal coming into relatively more favorable position than has been the case for more than a decade. We have only to back up our optimism with hard work and enterprise to realize a solid, broad based, further growth of industry, and the chemical industry in particular, in the Kanawha Valley. I believe that the industrial future that is open to us in this section can be one of almost boundless possibilities.

Effects of Inflation Upon the Life Savings of Citizens

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, June 26, 1956

Mr. WILLIAMS. Mr. President, in the June 25 issue of Newsweek there appears an article entitled "The Great Swindle," written by Mr. Henry Hazlitt.

The article emphasizes the manner in which the life savings of the citizens of a country can be undermined or destroyed as a result of the inflationary policies of a politically motivated government.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREAT SWINDLE
(By Henry Hazlitt)

We live in the Age of Inflation. It has become a fixed idea among governments that their paramount economic aim must be to maintain "full employment," and that full employment can be maintained only by deficit financing, artificially cheap money, or direct recourse to the printing press.

Once underway, inflation sets in motion powerful special interests which demand its continuance. For it benefits some groups of the population at the expense of all the rest. Inflation is a tax—the cruelest and most wanton of all taxes. Under it, all creditors are systematically swindled.

CYNICAL DEFENSE

"He that would hang his dog," says an old proverb, "gies out first that he is mad." He that would swindle a creditor must first give him a bad name. The late Lord Keynes did this by calling him the "rentier." He implied that the rentier was simply an idle plutocrat who lived on unearned interest at the expense of the struggling workers. In his General Theory, Keynes spoke of "the euthanasia of the rentier, and, consequently, the euthanasia of the cumulative oppressive power of the capitalist to exploit the scarcity-value of capital. Interest today rewards no genuine sacrifice."

But who in the modern world are the creditors, the "rentiers"? They include, in addition to the holders of mortgages and corporate bonds, the thrifty, the small people who put their money in savings deposits or life-insurance policies, and all the owners of Government bonds, who were induced to take these bonds for patriotic reasons. And who are the debtors who are being relieved of the allegedly dreadful burden of having to pay interest and repay capital in currency units of the same value as those they borrowed? They include the big corporations, the big holders of common stocks, and the speculators who have learned how and when to jump in and out and exploit the value of a depreciating currency.

I append a table compiled by Franz Pick for his forthcoming 1956 edition of Pick's Currency Yearbook. This shows the depreciation of 53 currencies in the 10 years from 1946 to 1955, as measured by each government's own cost-of-living index. This table, it will be noted, shows that the United States dollar, the world's monetary pivot, shrank 17 percent in buying power over the past decade. The British pound sterling lost 35 percent; the French franc, 66 percent. The currency units of Chile, Paraguay, Bolivia, and Korea had their purchasing power practically wiped out.

Some of the countries whose currencies suffered worst, such as Formosa and Korea, were struggling with special war or defense problems. But this was obviously not true in Chile, Paraguay, or Bolivia. The truth is that this shocking swindle by governments of their own citizens was brought about in most cases by deliberate monetary or credit inflation. And it was all done under the pious pretense that inflation is a sort of calamity visited on a country by malevolent outside forces, which the politicians and monetary managers profess to be incessantly combating.

More About Our Lack of Foreign Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. MULTER. Mr. Speaker, the following article by Dorothy Thompson from the Washington Star of June 22, 1956, is interesting, if not terrifying reading:

PRESIDENT'S HEALTH SERIOUS ISSUE—SETBACKS IN FOREIGN FIELD CALLED SIGN CHIEF'S ABSENCE IS FELT BY STAFF

We have not discussed the President's second illness because we felt we could add nothing to the thousands of words of report and comment.

However, the idea that the President's two illnesses have actually improved his health and capacities is preposterous. According to this argument, just what anyone over 60 needs is a coronary thrombosis followed by an intestinal obstruction requiring surgery. Nobody, of course, believes this, although many people want to believe it. They want to believe it because the President is greatly and justly beloved; the country, in general, is doing well despite some sticky segments of the economy; and the popular mood is still about dead center.

So the argument that comes increasingly to the fore is that the President always has operated as a Chief of Staff, delegating authority to subordinates and making decisions only when major questions of policy are involved.

This is the way the country has been governed largely during the 9 months which the President has been more or less incapacitated for just about half the time.

But if the staff work is satisfactory, what does it matter? The question is whether it has been satisfactory, and in one respect it certainly has not. In the field of foreign policy Western setbacks have been alarming. We have not made progress on a single front, and there is no substitute leadership in the Western Alliance.

Eden, with the lamentable situation in Cyprus, is beset at home. The French Government, without popular authority, is in a desperate situation in Algeria. Dr. Adenauer's regime is deteriorating daily. The uncommitted nations are increasingly committing themselves eastward. Marshal Tito has made his peace with Moscow. In Italy and France the Communist Parties are purging themselves, not only of the old Stalinists, but of all the leaders who have been subservient to Moscow, enabling them to make overtures to the Social Democrats for a return of the popular fronts.

The House of Representatives has cut over a billion dollars from the foreign aid bill. Although the Senate committee has reinstated most of this, the House vote indicated a grassroots conviction that the vast export of money, arms, and know-how is not paying off.

Dulles suffers from something worse, perhaps, than hardening of the arteries—namely, hardening of the categories. He insists that everything is going satisfactorily and that all we need to do is more of the same thing, although events have pulled the rug from under his feet.

He lacks the foresight and historic insight to envisage probable developments, the elasticity to provide for alternative courses, the imagination to appeal to wide masses of men, and even that fifth sense, essential to all diplomacy, which is tact.

The President and Dulles contradict each other, and then one or another explains that they meant the same thing, though the identity is impossible to establish in understandable English.

The President's leadership and personal responsibility need to be more, not less, strongly exerted.

"Major decisions of policy" are created day by day, in every action of a Cabinet official and every vote in Congress.

This is especially true in foreign policy, where every speech has international repercussions.

To be a world leader a nation must have visible, clear, and responsible leadership.

Nothing can be said against a staff system, but its chief must always have the last word and be on hand to speak it.

The President's age and condition of health are therefore very serious matters.

Our people know it. If they continue to back the President for another term, it will not be because they are not perturbed, but because they have little faith in anybody else. This also is no cause for satisfaction.

Commencement Address Delivered by Gen. Carlos P. Romulo, President of the Fourth Session of the United Nations General Assembly and Philippine Ambassador to the United States, Before the 1956 Graduates of the University of San Francisco, Sunday, June 10, 1956, at War Memorial Opera House

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. McCORMACK. Mr. Speaker, before the University of San Francisco in California a commencement address was delievered by our former colleague and one of the great statesmen of the world, Gen. Carlos P. Romulo that carries a message for all America. It is a ringing address for those who believe in freedom to close ranks against communism. It is also an appeal to us Americans to understand Asia better, its ideals, its aspirations.

Here is a true friend of America who speaking for his country underscores the need of our respecting national sovereignty and national dignity and self-respect of those who are tested friends and allies. I agree with him. He addresses us with frankness and because we cannot doubt his loyalty to democratic ideals his message must be heeded.

Under unanimous consent, I make his speech part of the RECORD:

Exactly 11 years ago this month, an event took place in this hall which will be remembered long after wars and the fear of wars will be forgotten. In this Veterans Memorial Hall, delegates from 50 nations adopted the United Nations Charter.

At the end of the worst war mankind had experienced, representatives of many lands sat down to build man's hope for a better future, a future where men would be brothers under God, where no man's hand would be raised against another, where human dignity and human rights would be respected.

That event, I think, should mean more to each of you today that it did to those of us who took part in it. Not because the United Nations is perfect. It isn't. Not because the signing of the charter has brought an end to man's inhumanity to man. It hasn't. But because of the vision which men saw of the future, a future which belongs to you young people who now enter a world that has need of your idealism, your work, your faith.

The drafting and the unanimous acceptance of the charter was a kind of world-wide commencement for the tired, worried peoples of the earth. I remember well the hours we studied and wrote and worked over the words of the preamble which even today makes me thank the fate that gave me the opportunity to have a hand in it.

Let me read to you from the preamble of the charter:

"We the peoples of the United Nations, determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and to reaffirm our faith in fundamental human rights, in the dignity and the worth of the human person, in the equal rights of men and women and of nations large and small, and to establish conditions under which justice and respect for the obligations arising from the treaties and other sources of international law can be maintained, and to promote social progress and better standards of life in larger freedom.

"And for these end to practice tolerance and live together in peace with one another as good neighbors, and to unite our strength to maintain international peace and security, and to insure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and to employ international machinery for the promotion of the economic and social advancement of all peoples, have resolved to combine our efforts to accomplish these aims."

Those were brave words. They had a vital meaning to us. Remember that the enemy had just been vanquished. Totalitarianism had been defeated. German nazism had been halted. Japanese militarism had been brought low. The enemy which had wrought such havoc, which had trampled on freedom, on human dignity, on the rights of man, had been conquered. But that did not end man's struggle to be free. For as fascism was the enemy of human decency then, so is communism today. Yesterday it was Hitler and Mussolini and the Japanese militarists. Today it is communism, the negation of human personality, the denial of faith in God. The face of freedom's foe has changed; his character is the same.

After Stalin's death many people were hopeful that the Soviet Union would no longer be a threat to those who believe in the sacredness of human personality. There were those who hoped, because the new rulers in the Kremlin cooed like doves, that communism had changed. When Khrushchev and Bulganin smiled, many hoped that a new era was dawning. When the first criticisms of Stalin dead came from men who had praised Stalin alive, many hoped that this was the beginning of a new Soviet Union.

Wishful thinking—every one of these hopes. The evil is not Stalin or any of his successors alone. The evil is the system of communism itself, which denies the rights of the individual, which uses terror and destruction as tools of power, which allows no man to think for himself or express his beliefs or do as he may please.

Just last week, your Department of State released the fullest available text of Khrushchev's attack on Stalin. This horrendous tale of murder, of fear, of lies, of cynicism, of madness in the Kremlin was intended to persuade us that there was a deep difference between Stalinism and pure Soviet communism. We are not convinced.

For the Khrushchev revelations tell us another story. They provide a historic revelation, not of one man, but of an entire wicked system of suppression and hatred.

Who are the present leaders of the Soviet Union but men raised up by Stalin and bred in the Communist system? Who are the Communist leaders but creatures of the ideology which denies that man was created in God's image?

The Stalins may live or die. The Krushchevs and Bulganins may live or die. But as long as the Communist ideology remains alive, free men everywhere are in mortal danger.

This is the lesson that must be learned by those nations which assert a doubtful claim to neutralism in the deep conflict now facing the world.

There can be no standing aside. No nation can be neutral in the face of a clear and present danger.

Some Asian leaders think that, having broken the chains of British or French or Dutch imperialism, they can now ignore an imperialism which is incomparably worse. Some of them say that they are only following in the footsteps of America which in its early years as a republic they claim insisted on its neutrality.

They have either misread or misjudged American history. For the historical facts are: In 1801, a few years after American independence, when Tripoli interfered with American shipping in the Mediterranean, the young, immature United States did not remain neutral. She declared war. A few years later, in 1812, America sided with France against Britain. She was not a neutralist then. In 1821, the United States challenged a Russian order closing the Bering Straits to other than Russian ships. She did not remain neutral. In 1823, the United States established the Monroe doctrine which was a warning to all European nations not to encroach on the territorial rights of the two Americas. That was not neutrality. In 1895, the United States sternly told Britain not to interfere in Venezuela and that the United States was ready to resist any such interference by "every means in its power." Neither was that neutrality. In 1898, America was not neutral when she declared war on Spain, nor did she ride the fence in 1900 when together with a number of European powers, American marines participated in the fight to suppress the Boxer rebellion.

And that is why America is the world leader today. In her youngest years as a nation she did not hesitate to take sides with whatever in its national conscience it believed to be right. America's nationalism was based on a strong devotion to human freedom. Whenever and wherever freedom was imperiled, America was there on the side of freedom.

The nations of Asia and Africa which have recently emerged, or are struggling to attain their freedom, have a strong national feeling. But that new nationalism will have no meaning unless it understands that neutralism between the free world and the Soviet world is impossible.

You cannot strike down one tyranny and smile neutrally upon another which is far worse. These great new peoples of Asia must recognize that their only hope to remain free depends on their joining hands with those peoples committed to the defense of human liberty.

I recall the words of an English writer, George Orwell, who said:

"When one thinks of the cruelty, squalor, and futility of war—and * * * of the intrigues, the persecutions, the lies, and the misunderstandings—there is always the temptation to say: 'One side is as bad as the other. I am neutral.' In practice, however, one cannot be neutral, and there is hardly such a thing as a war in which it makes no difference who wins. Nearly always one side stands more or less for progress, and the other side more or less for reaction."

George Orwell was talking about war in the military sense. But his point is even more important in the war of ideas which engulfs us today. In this war, it makes a very great difference who wins. Our side, yours and mine, does stand for freedom and progress. Their side, Stalin's and Krushchev's, does stand for dictatorship and reaction. You Americans should be proud that you have taken your stand before the world. We of the Philippines are proud to be your partners. And as for our friends in India, and Burma, and Ceylon, and Indonesia, and

elsewhere—well, I hope they profit by our example before it is too late.

These are the days of decision for Asia. But they are also days of decision for America. You cannot maintain your own freedom without friends and allies. And to have friends and allies you must make a conscious effort to win the new nations of Asia.

You young people, who are decision makers in a free society, must make great decisions. And one of them is to decide to understand Asia, its new nationalism, its aspirations, its hopes. You must strive to understand one of the great facts of the 20th century: The rise of Asia.

It isn't enough for America to be on the right side of the fence. It isn't enough to be convinced that communism is evil. You must understand, because you need their help and friendship, why the peoples of Asia feel the way they do.

I believe that the key to the future of the world lies in Asia. Half the earth's population, old in culture, is emerging into a new consciousness of Asia's new political and strategic strength. No longer are they dwellers in a political backwater.

By their numbers, by their resources, by their vitality, the peoples of Asia hold the world in balance, and they know it now as they never did before. You must know it, too, for the good of the world as a whole and for your own particular good as well.

It isn't easy to understand other peoples. It isn't easy to understand your own sometimes. I suspect that it sometimes isn't even easy for the people of San Francisco to understand some of the actions of those who live in Los Angeles.

You graduates will be faced with many problems as you go forth into this confused world. But none will be more important to you than that of understanding of other peoples, peoples of faraway lands, different religions, different backgrounds, different color, different ways of life.

It may be difficult, but not too difficult. What it needs most of all is the desire to understand others—and to make the effort. Unless understanding, sympathetic understanding, is forthcoming, there will be no future for the freeman.

Think back over the history of the emergent nations in Asia. Think of how the ordinary people were treated through the centuries, how they were exploited, how they were looked down upon by the colonial rulers more interested in extracting wealth than in promoting the general welfare.

How would you have felt if your country was run by outsiders who considered you so unimportant that your culture was sneered at; your natural wealth and hard labor exploited while little or no attempt was made to provide schools and hospitals. How would you have felt if you were treated by strangers as if you were less than human?

Would you, with such a background, be so all-fired anxious to join with those who, until so very recently, treated you so thoughtlessly—who felt you did not deserve even the opportunity to learn to read and write and live decently?

That is all over, you may say. It is, in a way. But folk memory lingers for a long time. The resentment built up over centuries cannot be dissipated in a decade. It takes time and above all it takes understanding until the new nations of Asia believe that the European and the American really recognize them as equals, with feelings and rights and desires even as other children of God.

Perhaps you may think some of the Asians are hypersensitive. Perhaps some of us are. But remember that the child is the father of the man. What has happened in the past cannot be wiped out in a moment. Every student of human nature knows that what happens to the child molds the man. That is as true of nations as it is of individuals.

That is why you will find the Asian insisting, sometimes, on what you Americans may take for granted. The Asian insists that he be treated with equality and respect. He has a culture of his own, a future of his own, a way of life of his own. He knows it—but he is not yet sure that you know it. He may not yet be as strong as you are—in the economic or military sense. But he soon will be. He has vast natural resources, his very millions of fellow Asians, his zest for rapid and revolutionary progress, assure him of this. He knows it—but he is not yet sure that you know it.

And this is important: You have friends in Asia, true and loyal friends. Tested friends. But do not make the mistake of taking them for granted. In your endeavor to win new friends don't overlook that friendship, like a plant, must be cultivated if you want it to grow and flourish and fructify. You may, from your own perspective and in all honesty, believe that to take a people for granted is a tribute to it, that you do not question its attachment to you and its adherence to your ideals. Don't forget, however, that 10,000 miles away such an attitude can be misinterpreted as indifference or neglect and it can be distorted to suit Communist ends.

The Asian is proud of his new-won national dignity. He is zealous of his country's sovereignty. God has given him his country and his land and no one can make him believe that that is not his God-given property. No legal formalism will make him give up ownership or title to that land. This you must recognize. Military narrowmindedness that reveals itself in brazen disregard of a people's national self-respect and dignity must not be countenanced by your government in countries where the people's trust and loyalty are imperative for your own national security.

My message to you today is simple: If you do not know these things, you must learn them before it is too late. And you must transform your knowledge into understanding. In return, your rewards will be great. You will have won the friendship and loyalty of a billion human beings—the very kind of friendship and loyalty that the Filipino soldiers demonstrated on Bataan in the first days of World War II—the kind of friendship and loyalty which impelled the common people of the Philippines to stand firm against the Japanese through 3 harsh and terrible years of enemy occupation. Such are the rewards of understanding—and they can be matters of life or death.

But there is a deeper reason for the effort to understand. It is the only way to world peace.

The last world war, in many ways, came about for lack of understanding. Hitler did not understand the psychology of the democracies. The Germans did not understand that free men would fight. On the other side, we did not understand clearly enough, first, why the German people turned to Hitler, and, second, what Hitlerism meant as a threat, not just to Germany, but to the whole free world.

The Japanese did not understand Americans. Because Americans loved fun and games, because they were easygoing, the Japanese thought you were decadent. On the other side, you did not understand the deep Japanese resentment at the slurs and injuries of the white man.

If we are to have peace, if we are to build a world that is peaceful, happy, and humane, then we must learn to understand one another. As a man of Asia, I have no hesitation about telling you frankly that this is your job. In the same way, at Bandung and elsewhere, I have told my fellow Asians that we must recognize our half of the duty to understand the ways of the West.

The burden is not alone for the white man; it is for all men. But it falls most heavily on the most powerful free Nation in the world: The United States of America.

To succeed in your world leadership, to safeguard the freedom that is yours, there must be understanding. On that depends all our futures, yours, mine, and the children you do not yet have. In the new Asia, a giant stands, flexing the muscles of his newfound freedom. He will never again be a slave. He can be—if you want him—your partner.

Clarence Wesley Explains Real Indian Issues

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 26, 1956

Mr. GOLDWATER. Mr. President, we hear much from non-Indians concerning what they refer to as the Indian problem. It is rare, indeed, that we have the opportunity to listen to the wise words of an Indian on the same subject; so it is with great pleasure that today I ask unanimous consent to have printed in the Appendix of the RECORD an article written by one of Arizona's outstanding citizens, a San Carlos Apache, Clarence Wesley. The article, which appeared in the Arizona Republic of June 23, is entitled "Wesley Explains Real Indian Issue."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WESLEY EXPLAINS REAL INDIAN ISSUES

(By Clarence Wesley, president, Inter-Tribal Council)

American citizens, including public officials, generally don't know what the Indian issues really are. The issues are not assimilation, or integration, or emancipation, or Government control over the Indian person, or civil rights in the usual sense of the words.

The real issues are continuing ownership of land; development of human and natural resources; protection of rights solemnly promised by treaty and law; honor in Government dealing with conquered peoples; our day in court on our claims; real opportunity for education of the same quality as is available to non-Indian citizens; adequate Federal assistance in reservation development toward the end our communities may thrive and contribute to the prosperity of the fine State in which we are located; an end to bureaucratic dictatorship and unnecessary Federal regulations; an end to wasteful and constantly changing, insensitive administration of our affairs in favor of a constant policy of minimum interference and maximum assistance to us to help ourselves.

There is something radically wrong with the kind of Federal supervision of Indian affairs we have had when after 135 years of Indian administration, Indians face more problems than ever. The only bright, constructive spots have been a few years under the Indian Reorganization Act, the enactment of the Indian Claims Commission Act which has been inadequately implemented, a rehabilitation act for one tribal group only, and rare, minor measures. Both for the sake of Indians and the general public, this should not be allowed to continue, even for another decade.

What are some of the things that are wrong? Some of the things that could be done to help? Indian tribes in this country today need long-term loans and grants for resources development, both natural re-

sources and human resources. They need a minimum of regulation and control and a maximum of encouragement and technical assistance. Indian tribes need the kind of program that this Nation is making possible in underdeveloped countries in other parts of the world.

As to Federal appropriations for Indian affairs: True, the United States Congress has appropriated millions of dollars to the Bureau of Indian Affairs and does so each year. Beyond that fact, several questions need to be raised. (1) Indians don't receive any payments from the Government, or any services that other citizens don't receive out of tax moneys, from the same source. Indians don't get payments from the Federal Government just because they are Indians.

(2) How much of the Federal appropriation for Indian affairs actually benefits Indians? Many of us who work and plead for development of our resources contend that most of this appropriation goes into salaries—in the central office in Washington, D. C., in eight area offices over the Indian country, and in many reservation field offices. All of them have huge staffs compared to anything that Indian tribes or Indian organizations have to work with. Indian tribes and leaders have protested bitterly against the operations of the area offices on the grounds they furnish just another layer of bureaucrats, they form another buckpassing stop, they duplicate services.

The general attitude of tribal officials and Indian leaders is that authority and responsibility should be vested in the local reservation superintendent where it used to be. Problems of tribes vary widely, and if the reservation superintendent is a good man and tries to work with the Indians, he can do more good than all the higher brass put together. A good superintendent and the tribe's governing officials working together can accomplish wonders and bring about changes of lasting and permanent value on a reservation.

(3) Very few people realize that many tribes pay many of their own tribal employees and administration costs—in other words, many tribes pay much of their own way out of their own tribal income.

Public officials, including Congressmen and American citizens who complain of appropriations for Indians, should ask themselves what all the county, State, and Federal costs of schools, roads, medical care, law, and order for white communities similar in size and number and location to the Indian communities would amount to if they were all lumped together and shown as one appropriation of tax moneys. The totals would be sto staggering that Indian appropriations would look puny.

Money and political power are needed to protect what little is left of our once great natural resources and to develop them not only for our own improved conditions, but for the general prosperity of our State. Modern tribal business corporations, healthy, prosperous, wholesome communities are our goal. The greed of the invaders has gradually taken our wealth from us. We have left only our political power with which to improve our conditions.

Since the courts settled the matter of allowing us to vote only in 1948, our people need much information and encouragement to exercise this effective tool in our behalf. Our Congressmen in Washington are showing more respect for our wishes and our needs as we become more active in our voting citizenship.

Our votes are our greatest hope for the future. The vote of the poorest one among us is just as powerful as the vote of the richest man in Arizona. In counting the votes, at least, we are equal to any other man. Let us not let the golden opportunity of this national presidential election year slip through our fingers. Let us devote ourselves to an all-out effort in voter education among our people in these next few months. Let us make use of the great American tradition and opportunity of political campaigning to get our issues fully aired and discussed, to sound out the candidates who will be seeking our votes, to making our views and our wishes known, to asking for pledges and commitments in advance of the time to cast our votes—this is the only time for political bargaining. When enough of us vote—on the basis of the issues and the records of the men and women who ask for our votes—we can and we will change our conditions, and we will bring about a new respect for ourselves as functioning American citizens, a new respect for our needs and wishes.

Pan American World Airways and the Friendship International Airport

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, June 26, 1956

Mr. BEALL. Mr. President, about 2 weeks ago I spoke before this body on the reasons why Pan American World Airways should be allowed to provide service for the east coast through Friendship International Airport. Since then, reaffirmations of support for Pan American's application to the Civil Aeronautics Board have been announced from Baltimore and Philadelphia, and the city of New York has also joined in the indorsement. Many of the reasons behind this widespread support were outlined in an editorial entitled "Why Pan American?" published in today's Baltimore Sun. I ask unanimous consent that the editorial be included in today's RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY PAN AMERICAN?

The most heavily traveled air route in the world is between the northeast and Florida points. It has been the monopoly of two airlines, Eastern and National. Some time ago the Civil Aeronautics Board decided that the density of this traffic warranted certification of a third carrier and entertained applications. Numerous airlines, including Pan American, made application for certification as the third carrier.

The procedure is that a preliminary decision is reached by a CAB examiner, but with rehearings and a final determination by the whole board on appeal. The examiner rejected the Pan American application in favor of another carrier; and Pan American, convinced of the merits of its case, is now appealing to the whole board. What gives this appeal a special interest in that briefs in support of Pan American's application have been submitted by Baltimore City, the Baltimore Association of Commerce, the Greater Baltimore Committee, and the State Aviation Commission. The decision of these 4 to back the application of 1 private airline against the others is unusual. But there is the best of reasons for this intervention.

The reason is this: that of all the applicants only Pan American proposed to use Friendship Airport to serve the Washington-Baltimore area. All the rest proposed to use Washington's National Airport. Baltimore has argued all along the merits of Friendship Airport as a joint Baltimore-Washington terminal, particularly in the case of long-distance flights and for the benefit of the northeastern Washington and suburban Washington areas. Only Pan American, among all these applicants, proposes to exploit the neglected advantages of Friendship, thus at the same time serving Washington without further congesting National Airport and providing for Baltimore the adequate schedule of north-south flights in first-line equipment which it has never had.

We need not suppose that Pan American specified Friendship rather than National for sentimental reasons. On the contrary, it chose Friendship for sound business reasons.

It sees, first, a passenger potential that has never had adequate service. It sees, second, an enormous potential for a through-air cargo service to Latin America which is at present nonexistent; and since such cargo would originate in industrial and commercial Baltimore rather than Washington, Friendship is the logical terminal. Pan American's election of Friendship rather than National was a business decision.

Over and beyond these matters of immediate interest to Baltimore, there are merits in Pan American's case which were inexplicably disregarded by the examiner. One is that Pan American, on entering the Northeast-Florida service, would link this service with its overseas routes (to Europe in one direction and to Latin America in another) by through flights. This would give both Washington and Baltimore something that they have never enjoyed. Another is that Pan American is admirably prepared to provide first-class equipment immediately. That is because Pan American's present peak European traffic is in the summer—whereas the maximum demand for equipment between the Northeast and Florida is in the winter. The two types of service dovetail perfectly. A third—and this should be particularly impressive to the CAB—is that all profits accruing to Pan American in the Northeast-Florida business would automatically be deducted from the subsidy which it currently enjoys on its overseas flights. The potential saving to the taxpayer is estimated to be in the neighborhood of $8 million a year.

The case for certifying Pan American is an impressive one from every point of view. The special need of Baltimore for the service which Pan American proposes fully justifies our intervention and ought to carry great weight with the Board.

Federal School Subsidy

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I enclose an editorial from the Huntington Herald-Press under date of June 24, and ask that it be included in the Appendix of the CONGRESSIONAL RECORD:

FEDERAL SCHOOL SUBSIDY

Opponents of Federal aid to education are more concerned about Federal control over instruction of our children than the high cost and waste of Federal participation in costs of school-building construction. Most of all, they are unimpressed by that frequent rejoinder of proponents that "because there has been no Federal control in the past there is no danger of it occurring." In the first

place, such a statement does not hold up under examination. In the second, such naivete is colossal when viewed in the light of liberty's history-old struggle with tyranny. Authoritarian penetration does not begin until the apparatus is set up.

But the Kelley bill, which has been reported out of committee and is scheduled to come before the House of Representatives for action this week, provides for Federal aid for local school construction. Principally, its meaning is more cost, more waste, and the frustrating interference of bureaucratic red-tape as compared to local financing and construction.

Indiana is one of the majority States charged a premium for the luxury of Federal aid. Indiana sends more to Washington in taxes than it takes out of the kitty for construction. Because the Kelley bill has arrived at the stage of floor debate in the House, there may be special interest in a recent study by the education committee of the State chamber of commerce of Federal school subsidy as it pertains to Indiana:

"Indiana public-school enrollment was 801,080 pupils in the 1954–55 school year; * * * is expected to grow to 930,000 by 1958–59.

"Expenditures on Indiana public schools have increased from $89 per pupil in the 1939–40 school year to $280 per pupil in 1954–55. * * * From $58,858,000 to $224,575,000 in total outlays.

"The State's contribution to the support of local schools has increased from $29.58 per pupil in the 1940–41 school year to $85.37 per pupil in 1954–55.

"Classroom teachers' salaries in Indiana have increased from a median of $1,321 in the 1940–41 school year to $4,165 in 1955–56.

"The number of teachers in Indiana schools is gaining on the expanding enrollments. As compared with an average of 31 pupils for each teacher in 1933–34 and 28 for each in 1943–44, the ratio was 27 pupils for each teacher in the 1954–55 school year.

"One of the most extensive school-construction programs in the State's history is now in progress. In the last school year, 1,510 new classrooms were built—or 547 more than the number necessary to keep pace with the enrollment increase that year.

"Indiana school communities will need some 1,000 new classrooms per year to keep pace with enrollment increases immediately ahead, plus many more to relieve a backlog of overcrowding and to replace old and unsatisfactory buildings, but they are constructing an estimated 2,000 classrooms this year and planning probably an even larger number for the following year.

"To finance school construction, Indiana school communities may utilize general obligation bonds, cumulative school building fund levies, local school building corporations and emergency credit facilities made available by the State through the common school fund and the veterans school construction fund.

"The Indiana Legislature has been and will continue to be in a position to make available outright grants of State funds for school construction purposes if such grants are found by the legislature to be needed.

"Due to Indiana's economic growth and other factors, expenditures on schools now equal only 2.6 percent of the income of Indiana residents, as compared with 3 percent in 1940. No one contends that there is lack of financial capacity to meet school needs that may exist or arise in the State.

"Under the pending Kelley bill for Federal school construction aid, Indiana could expect to receive an annual grant of $9,177,340—but the cost of this grant in Federal taxes paid by Indiana residents and businesses would be approximately $9,640,000 annually.

"Typically, Indiana is a contributing State in all types of Federal aid. For example, Federal grants of all kinds to Indiana totaled $47,402,499 in the 1954–55 fiscal year—but the estimated cost to Indiana taxpayers of the same grants was $76,477,441."

John J. Eagan Was a Conscientious Politician

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. TUMULTY. Mr. Speaker, the death of John J. Eagan, a great American and a magnificent Congressman, has left a sorrowing community. Mr. Eagan preceded both myself, Mr. Edward J. Hart, and Mr. Oscar L. Auf der Heide, now deceased, as the Representative of the 14th Congressional District in New Jersey. He was known throughout the district as a man of great devotion to his country, kindness for all, and of a character unequalled anywhere. The following personatorial from the Hudson Dispatch gives a brief review of his colorful life in public service:

PERSONATORIAL: JOHN J. EAGAN WAS A CONSCIENTIOUS POLITICIAN

One of the most conscientious politicians we ever knew was John J. Eagan of Weehawken.

Mr. Eagan, who died on June 13, also had a strong independent nature. Independence and conscientiousness do not mix too well with politics when one owes his election to the organization.

However, Mr. Eagan was elected for his first term in Congress from the 11th district, comprising North Hudson, Hoboken, and the Horseshoe in Jersey City, in 1912. His first and second terms came during that interregnum in Hudson County politics between the iron-hand rule of "Bob" Davis and the equally dictatorial control of Frank Hague. During this interlude there had been various leaders striving to take up the mantle of Mr. Davis, who died Janauary 9, 1911, but none succeeded until the welding together of the Hague organization in 1917. Mayor H. Otto Wittpenn, of Jersey City, came nearest to being the county leader of Democratic organization between 1911 and 1917.

So, Mr. Eagan, having been elected twice to Congress, with the support of Hudson Dispatch and its publisher, the late Thomas F. Martin, did not feel any particular obligation to Mr. Hague until after the 1918 election when he got the aid of the Hague organization in his fourth time out for representative. But there came a time, as it inevitably comes when the county leader has succeeded in making his position unchallengeable.

But, while Mr. Eagan conferred with Mr. Hague and tried to follow orders within the limit of his independence, that was not enough. He could not agree with Mr. Hague on all his machinations of a political nature. Mr. Eagan had a final conference with the leader telling him what he thought was good for the party and organization. But Leader Hague was of the strong opinion that he, not Mr. Eagan, knew what was best for both the party and organization. That conference was the last between them.

Mr. Eagan met one of his bitterest disappointments in politics in 1920 when he was defeated in the Warren G. Harding landslide for reelection from the 11th District. Dr. Archibald E. Olpp of West Hoboken, the Republican nominee, was elected by a small majority.

That, Leader Hague believed, would finish Mr. Eagan in politics and planned to have Oscar L. Auf der Heide, former mayor of West New York and then director of Board of Freeholders, to become Representative from the 11th. But after much persuasion from Mr. Martin and others, Leader Hague decided to allow Mr. Eagan just one more term to expiate the ignominy of having been defeated in the Harding landslide. Eagan, always a popular politician, beat Representative Olpp, seeking reelection, and won back the congressional honor in 1922. He sought to run again in 1924, but Leader Hague said Mr. Auf der Heide had been sidetracked for one term so that Mr. Eagan could redeem his political prestige and, having done that, could not forestall the nomination of Mr. Auf der Heide, who was elected.

The first speech we heard made by Mr. Eagan—and he was an orator of local fame—was in the basement of St. Michael's Monastery Church where Holy Name Society used to meet, in 1915. We were then reporter for that territory. William J. Tighe, Union City welfare director, presided at the meeting.

Mr. Eagan was known as a man of his word. While he might not be inveigled into making a promise very easily, if he did so, he did his utmost to keep it. Just as he did when there was a scramble for the West Hoboken postmastership in 1916, and he said that he would recommend the man who got the majority of votes of West Hoboken Town Committee. He did that even though Edward W. Bovers, chairman of the committee, had but a one-vote majority over Theodore "Teddy" Bernhardt, leader of the third ward, who operatde a saloon at Elm and Spring Streets, that town. Mr. Bovers had to vote for himself to break the tie vote.

Mr. Eagan helped many a young man on the ladder of politics. One of these was John G. Meister, who in later days as mayor of Weehawken, had the opportunity to return the favor. In 1941, when things weren't going so well with Eagan School of Business, which the former Congressman had founded, Mayor Meister appointed him township collector in Weehawken. He served in that office, being elected every time he ran until 1955, when his health made him retire from business and seek the quiet of a sanitarium. Before becoming collector he had served on Weehawken Board of Education, part of the time as president.

Mr. Eagan, a stanch Catholic, had been a member of St. Augustine's Roman Catholic Church, since it was built, 70 years ago. He had made his home in Weehawken for 47 years.

In 1897 he married his long-time sweetheart, Miss Susan Hasbrouck, of New York City, a Protestant. They lived in Hoboken until 1909, when they came to Weehawken. Their homelife was built on a great devotion and loyalty, and when Mrs. Eagan, a lovely woman we can attest, died in 1950, Mr. Eagan's heart was broken. After that he began to go down, until 1954 when he became ill and never recovered. He was 84 when he died, and he had crowded into those long years a career of which he was justly proud.

Enough Penalty?

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. WESTLAND. Mr. Speaker, passage last week of H. R. 11619 will pro-

vide heavier penalties for dope peddlers, and for persons in possession of narcotics. Such legislation has been long needed in our country.

There are about 60,000 dope addicts in our Nation today. These unfortunate persons have been led into a practice that can only be described as living death. Many of them are young and face shattered lives and early death because of the nefarious activities of "pushers" or dope peddlers.

This bill has firmed up the policies on imprisonment of these purveyors of narcotics. We have upped the mandatory minimum and extended the permissive maximums for first offenders. I do not think the degree of offense should be of major consideration in this type of traffic. The first offense may have cost the useful lives of hundreds of our citizens. Stiff penalties for any traffic in narcotics would be an effective means of curtailing the number of persons willing to risk capture to engage in this degrading crime.

I voted for the House bill as a step in the right direction. The Senate bill goes much further. I wonder if we in the House have taken maximum advantage of the opportunity to stamp out dope traffic by making the penalties so severe that criminally minded persons would shun it? The saving of thousands of lives every year would be worth millions to the Nation, in addition to being one of the most humane actions that Congress could take.

An illustration of the effective curtailment of the dope racket is the city of Seattle, part of which is in my congressional district. Two Federal judges in that city, Judges Bowen and Lindberg, have taken firm stands against narcotics violators and have issued stiff sentences to convicted peddlers. The drug traffic is considered one of the most profitable of crimes, but the penalties inflicted in Seattle have succeeded in making the business unattractive to the criminal element, and, narcotics authorities agree that it is one of the cleanest port cities in the United States as far as dope peddling is concerned. They credit these two judges with keeping the traffic down to a furtive minimum.

One factor in the apprehension of narcotics violators on which we in the House have not fulfilled our duty is the necessity for telephone surveillance. This is called wiretapping in the vernacular and has been bruited around as a nasty word. By use of the telephone tap, narcotics agents can trace the activities of the behind-the-scenes "big boy" who directs the activities of his underlings from the safety and obscurity of a telephone.

We in the House kept this provision out of our bill because it was opposed in the Senate committee. I believe the public has faith in the Narcotics Bureau, and would like to see them have every weapon at their command to haul in these big shots who are masterminding this terrible, killing, depraved traffic in human destinies. Without peddlers there would be no addicts. I believe we have the obligation to carry this legislation further, if not in this session, early in the next, to include the telephone tap. The Bureau of Narcotics has stated that this device would be one of the greatest deterrents to dope peddling that could be employed.

Thomas J. Watson, Sr.

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks, I should like to pay tribute to a great American, the founder and late chariman of the board of the International Business Machines Corp., who passed away in New York City on June 19, 1956, at the age of 82 years.

Thomas J. Watson, Sr., was born in Campbell, N. Y., February 17, 1874, educated in local schools, and began his career as a bookkeeper in Risley's Market at Painted Post, N. Y., at a salary of $6 per week. He soon learned that his greatest interest was in salesmanship and shortly joined the National Cash Register Co. in that capacity at Buffalo, N. Y. Progressing rapidly, in May 1914 he was selected to head the Computing-Tabulating-Recording Co., which later became the IBM. When Mr. Watson became president of the organization, it had fewer than 400 employees. Today there are more than 59,000 on its payroll. Its offices in the United States number nearly 200, doing business in some 80 other countries as well.

IBM's factories in this country at Endicott, Kingston, and Poughkeepsie, N. Y.; Washington, D. C.; San Jose, Calif.; and Greencastle, Ind. Two more will soon be constructed at Owego, N. Y., and Rochester, Minn.

A short time ago, Mr. Watson selected Ulster County, N. Y., for the further development and expansion of this worldwide industry, and the sentiments of the people of my district at this time are very aptly expressed by the following editorial of the Saugerties Daily Post:

THOMAS J. WATSON, SR.

"The cornerstone of all values is the man, himself, whatever his job," Thomas J. Watson told stockholders of International Business Machines Corp., April 28, 1953.

He was speaking of benefits given to workers, saying that they were not expenses but investment in human assets. It was easy, he said, to send statements of IBM material assets, but these were worthless until the men and women put them to work. There are some 60,000 employees on IBM payrolls. They constitute a closely knit family. It was 42 years ago that Mr. Watson became head of the small organization (Computing-Tabulating-Recording Co.) which later became IBM, now a $629 million company, operating in 80 nations.

To build a worldwide organization out of ideas and ideals in such a brief period is something that resembles a miracle.

The beloved administrator, the esteemed employer, the influential humanitarian, Thomas J. Watson, did far more than give jobs in good surroundings, under good conditions, and with all the advantages which IBM employees have. He was dedicated to improving the lot of humanity as a whole and his benefactions reached worldwide, and touched about every phase of education and public service. He hinged it all on the word "think" and his organization followed through in the community as Kingston and Ulster County well knows from brief acquaintance.

Thomas J. Watson and his organization did more for this area than had been done before. We were about to dedicate a new era by giving to the IBM chairman the greatest community expression, the largest community greeting that he had had in all his illustrious careers. We wanted Thomas J. Watson to feel more at home in Kinsgton than he could feel in any other part of the world, though we well realized that in every community he had gone, he had been given the highest possible honors. Such is our appreciation to the man, and organization which did so much for us, and promised by the accomplishments of a few months, that much more would be done here.

We were saddened to hear Tuesday afternoon that he had died at 1 o'clock in Roosevelt Hospital, a victim of a heart attack. The world, like Kingston and Ulster County, could ill afford to lose Mr. Watson. We would have been much enriched had we more of his philosophy, his principles, and his practices. In the fullness of his years he did marvelous things here. But not here alone. There was great breadth to his interests such as religious, philanthropic, social welfare activities, the problems of youth, education, innumerable charities, and good government.

It is with heavy hearts that we say farewell at a time we counted on a warm greeting and a display of our affection. And yet, how thankful, how appreciative, and how grateful we feel that the life of Thomas J. Watson touched us here in Kingston and Ulster County.

Some Interesting Facts Regarding Our Government

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial from one of the great newspapers of Michigan, printed and published in the congressional district which I represent here in Congress, the Birmingham Eccentric, of Birmingham, Mich., on United States Presidency Is Not a One-Man Job.

It is worth the attention of the Members of Congress and I commend it to their reading:

UNITED STATES PRESIDENCY IS NOT A ONE-MAN JOB

The President of the United States is no longer a person. The Presidency is a huge bureaucracy. It reads the topman's mail, writes his speeches, dictates his correspondence, decides who is permitted to talk with him, does his research and helps to formulate his judgments and policies.

When Grover Cleveland was President in the 1890's, his staff consisted of 8 secretaries and clerks, who had 1 telephone. Everybody knew who was President then. The name was Cleveland. We then had a population of 65 million.

Mr. Eisenhower has 266 assistants, clerks, and stenographers in the While House offices. Other functionaries who gather information and report directly to him number 809, or a total of 1,075. We now have about 167 million people.

Since Cleveland's time, population has increased approximately 154 percent, and presidential assistants about 13,000 percent.

Other civilian employees of the Executive in the Cabinet Departments are as follows; State, 20,000; Treasury, 80,000; Defense, 1,149,000 (this does not include men in uniform); Justice, 31,000; Post Office, 507,000; Interior, 57,000; Agriculture, 76,000; Commerce, 42,000; Labor, 5,000; and the last and newest Department, created by the present administration, Health, Education, and Welfare, has 37,000 to keep us well, see that we educate ourselves, and nurse us when decrepit.

Grand total of civilian executive employees—about 2,004,000.

In addition, we have 47 other independent agencies, with about 343,000 employees.

No wonder the President is overwhelmed. So are we.

Redtaped Hero

EXTENSION OF REMARKS
OF
HON. T. JAMES TUMULTY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. TUMULTY. Mr. Speaker, with the approach of the Fourth of July, I thought it would be fitting to recall the heroic services to his country of Comdr. Charles G. Pape, who is employed in my congressional district. Unfortunately the redtape of the Army prevents Commander Pape from receiving a proper decoration for his activities. Although I saw the Secretary of the Army personally and I know he did what he could the technical regulations of the Army forbade that the commander receive the decoration he so justly deserves. The following editorial from the Jersey Journal of August 21, 1955 sets forth the facts clearly. However, in gratitude to Commander Pape for his glorious exploits in behalf of our country, I am setting forth this article for inclusion in the CONGRESSIONAL RECORD, as a tribute to his patriotism and heroism. The editorial follows:

REDTAPED HERO

Someone should issue a set of leather medals for the Army brass that thought up the reasons for withholding a medal for Comdr. Charles G. Pape, USNR, of North Bergen.

The facts are clear. The record tells how Pape, a Navy engineering officer, worked under fire for hours and hours without rest in order to get into service the port facilities at Safi, Africa, so that the Army could unload the supplies which enabled us to take Casablanca.

Maj. Gen. E. N. Harmon, who commanded that operation, certified the facts and recommended Pape for a Bronze Star.

That wasn't good enough for the Army; the Navy officer got no medal and no reason for not getting it.

It seems that the whole matter is bound up in a mess of redtape, statutes of limitations, and the like. Happily, the new Secretary of the Army, Wilbur Brucker, has decided to review the entire matter now that the case has been brought to his attention by Congressman TUMULTY.

Here's a perfect opportunity to sacrifice a little redtape in the interest of justice and unity among the services.

The Swedish Nightingale

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Bridgeport (Conn.) Post of June 20.

Bridgeport, the largest city in my district, is well known for many outstanding attributes. But it is undoubtedly thought of most affectionately as the birthplace of the greatest showman of them all—Phineas T. Barnum. Each July 4, the city of Bridgeport goes all out in a gala P. T. Barnum festival. In connection with this year's event, the city was visited last week by the Swedish Ambassador Erik Boheman, who received the keys to the city from Mayor Jasper McLevy, a symbolic gesture of friendship toward the Nation which gave Mr. Barnum, and the world, the Swedish Nightingale, Jenny Lind.

The editorial follows:

OUR LINK WITH SWEDEN

What a pleasant bond is constituted between the city of Bridgeport, Conn., and the nation of Sweden, through the memory of Jenny Lind, "the Swedish Nightingale," who attained the peak of her worldwide fame under the inspired theatrical management of Bridgeport's great showman, P. T. Barnum. It is a bond which is treasured on both sides and which is kept alive by observance from year to year as, for instance, in the presentation of the symbolic keys of the city of Bridgeport to Swedish Ambassador Erik Boheman on Monday morning by Mayor Jasper McLevy.

It was a meeting arranged appropriately by the Barnum festival committee, since no celebration of the great showman's life in Bridgeport would be complete without the story of Jenny Lind coming into it.

Jenny Lind "had everything" as the saying goes—a soprano voice of a scope and beauty that occurs perhaps once in a century, with a great musical personality and the face and figure of a beautiful woman to crown it all. No wonder everybody wanted to see and hear her when they were made acquainted with the facts. (Barnum took care of that.)

We cannot help thinking how different the situation would have been today when she might have performed on radio and television, and in that manner might have reached as great an audience in one evening as she did during her lifetime in the middle of the last century. But would it have been the same?

For our part we are inclined to say "No." Those actual audiences which fought their way into crowded concert halls for the sake of getting a glimpse of Miss Lind and hearing her sing at first hand, were rewarded for their pains. The electron waves have never been able to carry the same authority or glamor and, we doubt, ever will.

Lieutenant Robertson Made His Decision

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. HUDDLESTON. Mr. Speaker, on June 14, 1956, Lt. John A. Robertson, 31-year-old Naval Air Reservist of Birmingham, Ala., died heroically and in the highest traditions of the naval service. He had just taken off from the United States Naval Air Station, Municipal Airport, Birmingham, in an F4U Corsair Navy fighter on a routine cross-country flight, when a faulty aileron caused loss of control of his plane. He had no chance to parachute to safety since his plane never gained an altitude of more than 500 feet.

As Lieutenant Robertson approached Tarrant City, a small suburb of Birmingham, trying desperately to extend the plane's glide to an old rock quarry a few hundred yards away, he apparently abandoned all though of saving himself and directed his crippled aircraft to crash in an almost deserted street nearby. He was killed instantly.

Without thought to himself, Lieutenant Robertson waved people on the ground below out of his line of flight and chose to crash his plane where others would not be hurt rather than to try to keep it airborne for a few seconds longer.

The manner of Lieutenant Robertson's death will stand as a memorial to the courageous qualities possessed by the members of America's Reserve fighting force.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial account of Lieutenant Robertson's death, which appeared in the June 15 issue of the Birmingham News, one of the fine daily newspapers of my district:

LIEUTENANT ROBERTSON MADE HIS DECISION

With his plane floundering, controls apparently not functioning properly, Lt. John A. Robertson, of Birmingham, married, the father of two, Thursday made the kind of decision few are called upon by circumstance to make. No harder decision presumably could face a human being.

As his aircraft failed to respond, flying over a residential area in Tarrant, the naval officer is reported by some who saw him to have waved persons below away, and then to have steered his crippled craft so that instead of crashing into homes, or into a chapel where a number of Vacation Bible School children were at play, it plunged into an empty street between houses, indeed, only some 35 feet from 1 where 2 men sat upon a porch.

Lieutenant Robertson, reporters, and officers examining the facts have concluded, chose to take his plane down where others might not be hurt, instead of trying to keep it up perhaps seconds longer, with time's chanceful prospect that, somehow, he might yet get out of it alive.

The lieutenant died heroically, and not only in the service of his country. The decision he made was of the highest order. In time, that may be some comfort to his family, though it will not now lessen grief which this whole community is sharing.

Secretary Wilson Deserves Support

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. DAGUE. Mr. Speaker, it is quite evident from a perusal of the transcript of the remarks of Secretary of Defense Wilson that his use of the word "phony" referred to the reporter's question rather than to the move to increase appropriations to the Air Force by an extra billion dollars. Be that as it may, it is also quite evident that the furore over the use of the word stems from the usual alacrity with which the opposition is bound to pounce upon an unguarded remark by an administration leader in an election year.

To say, however, that by appropriating a billion dollars, or 10 billions for that matter, we shall automatically and overnight attain a military advantage, which we quite evidently have anyway, is extremely phony reasoning, to say the least. And when additional billions are appropriated in the face of the refusal of the executive department to justify the extra money, then we find ourselves in the position of having the Congress dictate our miltiary strategy, which in our system logically rests with the Executive. And when we have a group of amateur military strategists in the Congress pitting their judgment against the considered opinion of the greatest military strategist this age has produced—namely President Eisenhower—then the argument for additional money becomes ridiculous, if not phony.

I am glad to note that the editor of a leading daily newspaper in my district, the Daily Local News, West Chester, Pa., entertains somewhat the same views, and I am pleased to include his article with these remarks:

[From the West Chester (Pa.) Daily Local News of June 23, 1956]

MR. WILSON IS DIFFERENT

This is written in defense of those Government officials who believe in speaking plainly.

Right now it's Secretary of Defense Charles E. Wilson, former head of General Motors, a hard-hitting businessman who speaks his mind and who knows nothing about the niceties of diplomatic language and, furthermore, shows no inclination to learn.

For this fact, we are thankful. There are enough officeholders in Washington so careful as to what they say and how they say it that they never get anything said. Not so, Mr. Wilson.

The Senate is up in the air today because he referred to congressional efforts to boost Air Force funds as phony. As a result the news dispatches out of Washington are carrying the names of Senators who jumped to their feet indignantly and demanded that something be done with Mr. Wilson for making such a remark. It served one good purpose, however. It got into print the names of some Senators of whom we had never heard.

One Member, Senator LYNDON JOHNSON, of Texas, called the remark "revolting to all patriotic Americans." That's typical of the way Texans talk. STUART SYMINGTON, Democrat, of Missouri, a former Air Force Secretary who may be a dark horse at the Democratic Convention this summer, said: "The usefulness of this Cabinet member has come to an end." That's the unpardonable sin in the Senate, jumping at conclusions. And Senator STYLES BRIDGES, of New Hampshire, leading Republican on the Armed Services Committee, said he was "amazed and shocked." Come, come, Senator, surely it can't be that bad to a man who has been in the Senate 20 years.

After the defense chief said what he did, he admitted to reporters that "maybe I shouldn't have said it." Later, however, he said: "But it's all right." Explaining further, Mr. Wilson remarked that what he really wanted to do was to declare "in my shop language" that any increase in the Air Force budget was "unnecessary" and would not stand "analysis." He added that he would like to see the people "who vote for the expenditure also vote for the taxes to produce the money to pay for it." He has a good point there for he has put himself in the position of telling Congress not to give him so much money to spend, and that is indeed a unique position in these days. He's in a class by himself.

When Senator SAM J. ERVIN, North Carolina Democrat, heard of Wilson's phony speech, his blood pressure shot up as he exclaimed: "He is much more concerned about the security of dollars than of our national defense."

That's a phony if we ever heard one. It's Wilson's turn to become indignant and demand a retraction.

Whither Tito? That's Question

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the June 24 issue of the Detroit Free Press by Roscoe Drummond entitled "Whither Tito? That's Question":

WHITHER TITO? THAT'S QUESTION

(By Roscoe Drummond)

WASHINGTON.—The question most often asked about Marshal Tito's visit to Moscow, as a means of trying to measure what is happening, seems to me to miss the mark.

It is a leading question and almost inevitably brings a misleading answer.

The question is: Have the new Soviet leaders taken Yugoslavia's Tito into the Kremlin camp?

The honest answer is "No"; but it is the question that is wrong, not the answer.

The real question is not whether Tito was taken into the Kremlin camp but whether he walked in voluntarily, sat down and felt quaintly at home.

It is going to be very tempting, very easy, for the West to drop Tito like a hot hammer and sickle and maybe the time will come when we should. But it would be foolish not to wait for a fuller disclosure of exactly where Tito is taking his country.

If he is to become an uncritical ally of everything the Kremlin wants, there is no reason why the United States should help strengthen Yugoslavia in order that Yugoslavia can more effectively work for the same anti-West ends Moscow seeks.

Tito's conduct throughout his visit to Moscow seems to me to raise the gravest doubts about where he is headed, and I should think that we would need to take a hard, new look before deciding whether Yugoslavia is a trustworthy neutral.

But all the evidence is not on one side and it is possible that after the first warm glow of Soviet hospitality, Tito may see some things a little differently.

Bear in mind that Tito has asserted his independence and equality at the front door of the Kremlin. It was Khrushchev and Bulganin who came to Tito, not Tito who went to them.

In 1948 Tito threw off the discipline of Stalin. Now in the joint communique from Moscow Tito has successfully asserted the independence of the Yugoslav Communist Party from Kremlin dictation. He forced the Soviet leaders to recognize in principle the equal status of non-Soviet Communist parties.

But of what value is it to the free world to have Tito successfully flaunt his independence before the Soviet leaders, if he uses that independence to follow uncritically, almost totally, the Soviet line?

It seems to me that there are significant changes in Tito's foreign policy and that they are almost wholly anti-Western, pro-Soviet.

In the past, Tito has said that the future of Formosa ought to be settled by peaceful means. But in Moscow, he said that the future of Formosa ought to be settled in accordance with the rights of Communist China—in other words, given to Red China forthwith.

In the past, Tito has said that East-West disarmament ought not to be made conditional upon the reunification of Germany. This time he said that we ought to recognize the existence of two Germanies.

If Tito uses his equality to hew to the Soviet line voluntarily, he would be even a more useful ally of Soviet purposes.

All the facts are not yet in. We need to wait and see—but not too long.

Los Angeles Examiner's New Format

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. HILLINGS. Mr. Speaker, on Monday of this week the Los Angeles Examiner introduced a new typographical design and format. I wish to extend my congratulations to Publisher Franklin S. Payne and Editor Warden Woolard for this innovation which will benefit the readers of this great newspaper.

At this point I include in the RECORD an editorial from the Examiner of Monday, June 25, 1956, which sets forth the policies which guide the newspaper. The editorial follows:

OUR NEW EXAMINER

Today's Examiner establishes a journalistic landmark in the fine art of newspaper design and typography.

It has been made entirely new, with three purposes in mind.

The first is to give our readers a newspaper that will be beautiful in aspect and also be read with fluency and ease.

We are confident that has been accomplished.

The second aim is to add important, entertaining and provacative features and writers to the great array of old favorites who have won such popularity among our

readers. This, too, we believe we have accomplished and hope our regular readers as well as the new friends will enjoy the many reader bonuses.

The third purpose is deeper and more important.

It is to make the Examiner an exact reflection of the vibrant and creative spirit of Southern California, and also a guidepost to its progress.

This requires a newspaper that is independent politically, that informs its readers accurately and impartially, and whose editorial policy is invariably to further the best interests of our country and our community.

Beautiful design and typography alone cannot do that.

It can only be done by a spirit of enlightened dedication to the welfare of the immediate and greater community we serve.

This means greater and wider emphasis on principles the Examiner has always upheld. They spring from the deep conviction that our first duty is to give people the facts, and to comment on the facts with intelligence, courage and integrity.

This attitude applies to everything that touches our lives and fortunes as Americans: education, social stability, spiritual and moral values, the arts and sciences, commerce and industry—but above all, the heart and soul of our entire society, which are American freedom and justice.

That is a large order to fulfill. We are unalterably pledged to do so.

The new Examiner we firmly believe to be the ideal instrument for the purpose.

Its new dress, its new features, its consructive action in public affairs and its independent spirit, form a single unit in the work we have set out to do.

As it progresses and unfolds, we shall count as our greatest reward the share we had in accomplishing it with the people of Southern California.

Postmasters Asked To Deliver Speech Praising Administration

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I include herewith an article appearing in the St. Louis Post-Dispatch on June 20, 1956. The article, entitled "Postmasters Asked To Deliver Speech Praising Administration," follows:

POSTMASTERS ASKED TO DELIVER SPEECH PRAISING ADMINISTRATION—COPIES OF TEXT PREPARED IN WASHINGTON DISTRIBUTED BY REGIONAL POST OFFICE HERE

Copies of a proposed standard speech praising the Eisenhower administration and the "dynamic leadership" of Postmaster General Arthur E. Summerfield, were sent to all first and second-class postmasters in Missouri, Iowa, and Arkansas from the post office's regional office in St. Louis with the request that they present it before various groups, the Post-Dispatch was told today.

George J. Gross, assistant to the regional director of the post office here, said he received the prepared speech from Washington. He sent it last August 30 to the postmasters with a memorandum which said, "It is requested that the attached speech for postmasters be used before business, civic, and church groups and/or radio and television interviews."

The memorandum said that "in every instance" copies of any talks presented should be available for local press outlets in event the speech was delivered.

CITES DEFICIT REDUCTION

The text of the prepared speech praised the Eisenhower administration for having "drastically reduced the annual postal deficit. In 1952 the deficit was $727 million; in 1954 it was down to $339 million; and in 1955 it will be about $365 million despite substantial increases in wages and salaries and other employee benefits."

The eight-page speech continued with considerable detail on "the outstanding accomplishments of the Post Office Department under the leadership of Postmaster General Summerfield."

In the field of employee relations the speech said that "great strides have been made. The lot of the postal people has improved greatly. * * * They are aware of these and other advantages resulting from what the present administration has done to protect the Federal worker and give him greater benefits under overall personnel policies which clearly reflect the friendly climate toward Federal employees that now prevails in Washington."

MORE ACHIEVEMENTS

"In concluding let me emphasize that the accomplishments in your Post Office Department are being matched in other branches of your Federal Government," the text continued. "They are, in actuality, the preliminary steps to more magnificent achievements in the future.

"Every source, every economic guidepost, shows that this present year of 1955 will be the greatest year in the history of our national economy. This peacetime prosperity, not based on the whirligig of inflationary forces artifically created by manmade crises, is a solid platform from which to advance rapidly and far.

"The program for all America is rooted in the tried and proved American formula—individual freedom plus competition plus group cooperation equals prosperity for all, fairly shared. When enacted in its entirety, the program will guarantee that the America our children and their children inherit will be a better, a stronger, a nobler home for human living."

Survivors' Benefits for Our Military—Reserves Versus Regulars

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial which appeared in the St. Louis Globe-Democrat on Saturday, June 23, 1956. The editorial, entitled "Reserves Versus Regulars," follows:

RESERVES VERSUS REGULARS

With the submission of the Bradley report embodying suggested changes in the Veterans' Administration, there has been a great deal of comment and controversy revolving about the Government's obligation to its civilian soldiers.

In the midst of this hullabaloo, the problems of the career soldiers have been almost obscured. It is time to take a hard look at the Regular Establishment, the core around which any expansion of the military in time of war must revolve.

In recent years, the discouraging fact is that the United States has done vastly better for its civilians who have gone into the military service in time of war or crisis on a voluntary or draft basis and who have been on active service as Reserves than we have done for the professional soldier who makes military service a career.

This is due, of course, almost entirely to the fact that the veterans and reserve groups representing the civilian soldier have maintained a continual pressure campaign, whereas a professional soldier has no lobbyist to fight for him.

A typical example of this inequality which presently exists can be illustrated by the case of two captains, one a reservist and the other a regular, with identical family situations, killed in the same aircraft crash. The family of the Reserve officer would receive twice as much as the family of the Regular officer, while the widow of the reservist will receive almost four times as much as that of the Regular after the children come of age.

The widow of a reserve captain with three children under age 18 would receive $661 a month, whereas the widow of a regular captain with three children of identical ages would receive $264. The widow of the Reserve captain would receive $264 when the children come of age and on reaching age 65 would receive $317 a month, while the widow of the Regular captain would receive $70 a month when the children are of age and only $123 a month at age 65.

This illustration simply shouts the question, "Why be a regular?" And it is multiplied in actual operations thousands of times a year.

Perhaps the answer is not that we have paid the Reserve dependents too much but that we have paid Regular officers' dependents too little.

The Nation must depend on its Regular Establishment in times of peace just as much as in times of war. The benefits between the Reserve and the Regular must be equalized if we are to continue to have a regular establishment with high reenlistment rates, and with a morale sufficiently high to be the core of an expanded Military Establishment if war should come.

International Toastmistress Clubs, Inc., Conference Has Original Narration With Observation of Pledge of Allegiance to the Flag of the United States

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. DOYLE. Mr. Speaker, in connection with my emphasis upon the revised Pledge of Allegiance to the Flag of the United States wherein the two words "under God" were officially inserted in said pledge, it came to my attention that the Southwest Region Conference of International Toastmistress Clubs, Inc., were to be in conference in Long Beach, Los Angeles County, Calif., June 2 and 3, 1956. This region includes the clubs located in California, Arizona, Nevada, Japan, and the Hawaiian Islands. In that region are 152 clubs and at the conference there were 534 members registered.

The narration hereinafter set forth having been written by Lee Adelman, of Lynwood, in the great 23d congressional district, I asked permission for unanimous consent to insert the text of the full ceremonies in the Appendix of our daily CONGRESSIONAL RECORD.

The letter hereinafter set forth to me, dated June 9, 1956, identifies the originators of this very interesting and informative and unique ceremony and no doubt this splendid idea will be adapted by many organizations and clubs of American citizens who wish to further emphasize their ceremonies in connection with the Pledge of Allegiance to the Flag of the United States.

I am sure you and all my distinguished colleagues desire to join me in complimenting the International Toastmistress Clubs on this worthy achievement:

JUNE 9, 1956.

HON. CLYDE DOYLE,
1030 New House Office Building,
Washington, D. C.

DEAR SIR: This is your permission to insert into the CONGRESSIONAL RECORD the narration of our presentation of the Pledge of Allegiance as it was given at the recent conference of the southwest region, I. T. C., held in the Wilton Hotel, Long Beach, Calif., June 2 and 3, 1956, provided due credit is given to the two undersigned.

The idea for this particular style originated with Grace Payne Hall, of Altadena, Calif.; and the narration and presentation on the program was the assignment of Lee Adelmann, of Lynwood, Calif.

We are honored to have this inserted in the CONGRESSIONAL RECORD by such a distinguished person as you, Mr. DOYLE.

GRACE PAYNE HALL.
ALTADENA, CALIF.

LEE ADELMANN,
LYNWOOD, CALIF.

PLEDGE OF ALLEGIANCE

(Narration by Lee Adelmann, chairman, Council No. 10, Southwest Region, ITC, June 2, 1956)

Purpose: In repeating our Pledge of Allegiance we should savor the exact implication and obligation of every word. In light of a better understanding, we will reflect an increased beauty and sincerity in our delivery.

Leader: Will you repeat with me, following the outline placed at each table, and please take special note, there are no pauses nor punctuation in the first portion that we will repeat as a group.

Group: "I pledge allegiance to the flag of the United States of America and to the republic for which it stands——"

Leader: The flag is the symbol of our country. It represents to the nations of the world a "Government of the people, by the people, and for the people." We have just promised our support and undivided loyalty to our democratic way of life, and to defend that right at home and abroad.

Group: "One Nation under God, indivisible."

Leader: We have become a united nation, but the cost has been great. Men have fought and died that this Nation might live. Throughout the ice, snow, and starvation of Valley Forge; through the humid jungles and coral islands of the Pacific; and on the barren hills of Korea; across the land of Continental Europe; in the air; on the sea and beneath it's surface; they have prevented the enemy from invading our shores. Because of their courage and sacrifice, we here today are safe and enjoy our freedoms.

Our leaders, with God's help have always tried to solve differences of opinion by arbitration with honor. Lincoln said, "A house divided against itself cannot stand."

Today, as in Lincoln's day, we have grave issues of policy that must be decided: But let us not lose our family solidarity in the attempt. Let us be tolerant of the other person's viewpoint, and conscientiously strive for a meeting of minds.

As we say "one Nation," let us each be deeply aware that we are one in principles and ideals—and differ only in our ways of preserving our mutual objectives.

Group: "with liberty and justice for all."

Leader: There is no restriction expressed here. Let us not express a vow we do not intend to fulfill. These few words require some heart searching—let us all do it.

Now that we have clarified, each in his own mind, our feeling on this sincere and inspiring expression of our belief. Let us repeat together, uninterrupted the "Pledge of Allegiance"—with our faith in it's interpretation obvious to all who listen.

Please rise, have both hands empty. Place the right hand over your heart, and give every word its full meaning.

All "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands; one Nation under God, indivisible, with liberty and justice for all."

(Please be seated.)

Leader: The red stripes for courage, the white for liberty and justice for all, the stars of every State on the field of loyalty. That's Old Glory.

Long may she wave, over the land of the free and the home of the brave.

Foreign Aid's Failures Prove Cut Long Overdue

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following editorial from the June 24 edition of the Detroit Free Press entitled, "Foreign Aid's Failures Prove Cut Long Overdue":

FOREIGN AID'S FAILURES PROVE CUT LONG OVERDUE

(By John S. Knight)

Since World War II, United States taxpayers have shucked out $55 billion in foreign aid.

This lavish spending program began with the so-called Marshall plan which, we were told, was a temporary arrangement to help rehabilitate Europe and restore the war-torn continent to economic health.

But, as with all Government spending, we have seen not an end to foreign aid, but actually a series of increasing commitments all over the world.

From Harry Truman's ECA to President Eisenhower's ICA, such alphabetical agencies as MSA and FOA have poured out an unending stream of dollars. In fact, foreign aid seems now to have become a permanent part of our foreign policy.

SELLING THE PEOPLE THE SAME OLD BUNK

No one begrudged helping Europe to recover from the ravages of World War II. But Europe has long since been enjoying years of prosperity.

Yet the clamor for more and more aid has been outshouting all objections. True, the House of Representatives finally summoned up enough courage to slash the administration's $4.9 billion foreign aid bill by $1.1 billion. But the Senate Foreign Relations Committee has tentatively restored $700 million of this cut under pressure of administration claims that great injury will be done if the House's slash is allowed to stand.

This is the same line of bunk that was sold to the American people when our dollars were supposed to be winning friends, building alliances, and buying off communism.

A POLICY OF INTEREST

But the record shows, as stated so well by a French editor, Raymond Cartier, "the decline of every liberated country into communism or neutralism" and "the dizzy growth of anti-Americanism in decolonized Asia."

Mr. Cartier mentions that "boundless idealism * * * a 'good will' concept of foreign policy * * * still reign firmly in Washington."

But, he adds, "there would be less anti-Americanism in the world if America abandoned its philanthropic aspiration, its vocation of Santa Claus, its transcendential morality, all its missionary trappings, all its Boy Scout gear, and if, at last, it followed openly and intelligently the policy of its own interest."

This is sound advice. But will we take it? Of course not.

We will keep on with our meddling into the lives and habits of people who either do not like or are not yet ready for a Coca Cola civilization.

CAVES TO MANSIONS AND BACK AGAIN

The Hoover studies show that FOA moved a group of Italians out of their hillside caves and built them a modern village. The caves had to be sealed with cement to keep these people from moving back.

In Iran, ICA spent $1.2 million for a road to a dam that was never built. ICA also invested half a million dollars for a survey of Egypt's industrial potential. The report is gathering dust in an Egyptian file cabinet.

These may seem like small items in our multi-billion-dollar adventures in foreign aid, but they are not untypical of what goes on abroad in our naive attempt to repackage the world American style.

OPPORTUNITIES VS. BENEFITS

The incredible John Foster Dulles cries for more foreign aid to win friends; then scares the daylights out of our European allies by his shrill outbursts against the presently smiling Russians.

Two-way Tito, the Yugoslav Communist who shot down several of our airmen some years back, is an old timer on the United States handout list. But Russian Defense Minister Zhukov assured Tito last week that in the event of war, the Soviet Union would fight "shoulder to shoulder" with Yugoslavia.

At Oxford, former President Harry Truman declared that "every person born in the 20th century is entitled to the benefits of the 20th century."

As our barber said: "Harry can talk plainer than that." It may be presumed, however, that Truman means the United States, with its 5 percent of the world's population, is somehow responsible for raising the living standards of the other 95 percent.

Had Truman substituted "opportunities" for "benefits," he would have sounded more like a statesman, and less like a politician.

PLENTY OF PLACES FOR OUR MONEY

The fuzzy thinking on foreign aid is not found exclusively in Washington. All of the professional do-gooders, the one-worlders, and a large segment of a gullible public profess to believe that the world would collapse of these appropriations were cut.

Yet state and local taxes are rising, billions must be spent for a national highway system, new schools and mental insttiutions are needed, colleges and universities seek addi-

tional funds and no relief from high Federal taxes is in sight.

But typically, we stubbornly refuse to pursue our own enlightened self-interest.

THROUGH PROPER CHANNELS

The desirability of assisting other nations to solve their economic problems is not open to argument.

But let us do it with loans through the World Bank, or by privately financed arrangements that are mutually beneficial.

The World Bank, under the leadership of President Eugene Black, has been tremendously effective in meeting these situations. Black, recently described by Time as "the world's leading salesman of the benefits of capitalism," is no mere dispenser of funds. His loans are safeguarded by conditions which meet sound business principles.

Our Government, on the other hand, unrealistically prefers the outdated handout method which has provoked nationalistic antagonisms everywhere.

OUR AID PROGRAM NEEDS REVIEW

Our whole foreign-aid program is sadly in need of review. Are its benefits commensurate with the costs? Is it being wisely administered? Should it be a continuing element of our foreign policy?

The restlessness that is now evident in Congress over the cost of foreign aid is an encouraging development.

Neither Democratic Leader LYNDON JOHNSON nor Republican Leader WILLIAM F. KNOWLAND is satisfied that the administration has made a good case.

Since nothing will be done in a campaign year, the next administration, whether it be Republican or Democratic, should face up to this problem and produce some answers.

STILL TIME FOR CUTS

Meanwhile, the Senate would do well to follow the example of the House and whack at least $1 billion from the $4.9 billion requested by the White House.

Senator GEORGE BENDER, Republican, of Ohio, says he will vote for the bill because the President is for it and "he knows more about foreign aid than I do."

The question should not be resolved by voting blindly for the President' recommendations.

The President can be wrong, and I think he is wrong in this instance.

A $1 billion cut in foreign aid will not damage our prestige in the world, as has been claimed.

On the contrary, it may even win us a grudging measure of respect in those areas where we most need it.

Dio Indicted Here in Union Sellout

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, another case of labor racketeering was reported in the New York Times June 20, 1956. It furnishes another example of the need for a determined, objective, and responsible investigation of labor racketeering by the Federal Government.

Under leave to extend my remarks, I should like to include an article from the New York Times of June 20, 1956, entitled "Dio Indicted Here in Union Sellout":

DIO INDICTED HERE IN UNION SELLOUT—ACCUSED OF $30,000 BRIBERY PLOT TO GUARANTEE LABOR PEACE TO TWO CONCERNS

A New York County grand jury returned an indictment yesterday against a racketeer described by District Attorney Frank S. Hogan as "one of the most powerful underworld figures in the field of labor."

John Dioguardia, better known as Johnny Dio, a 42-year-old hoodlum previously convicted of extortion and State income tax evasion, was named in a four-count true bill accusing him of conspiracy to accept $30,000 in bribes.

Indicted with him in an alleged plot to sell out a legitimate union and guarantee freedom from labor trouble to two electroplating companies were officials of two local unions with strong racket ties.

One was Samuel Goldstein, president of Local 239 of the International Brotherhood of Teamsters. This union started as a unit of the old United Automobile Workers, AFL, in the days when Dio was its regional director here.

The other indicted unionist was Max Chester, secretary-treasurer of Local 405 of the Retail Clerks International Association until he was expelled by the parent union last March. His ouster came after his indictment in another case on shakedown charges.

Dio, who now describes himself as a "labor consultant," is vice president and sole officer of an organization called Equitable Research Associates, with offices at 250 West 57th Street.

Assistant District Attorney Harold A. Birns, who presented the evidence against the three men to the grand jury, said his investigation showed that the Dio organization was in the business of "selling labor peace for a price."

So confident was Dio of his ability to control unions that he offered to post a $50,000 bond to assure fulfillment of his commitment to bar strikes in the two companies, Mr. Birns reported.

The conspirators actually collected $10,000, according to Mr. Hogan, but their confidence in their ability to deliver labor peace proved misplaced. The union they were seeking to dislodge, a unit of the left-wing United Electrical, Radio and Machine Workers, independent, refused to have anything to do with them.

HICKEY TO INVESTIGATE

The indictment of Goldstein brought a new investigation last night into Dio's influence in the International Brotherhood of Teamsters. Thomas L. Hickey, international vice president of the truck union, said he would look into all aspects of the affairs of local 239.

Mr. Hickey said he had questioned Goldstein in response to earlier complaints of shady activities by the local. At that time, Mr. Hickey declared, Goldstein said he had nothing to do with Dio—that he hated him, in fact.

"It must be a case of love and hate being the same thing," Mr. Hickey observed wryly.

Dio's role in obtaining charters for seven newly established teamster locals already is under study by District Attorney Hogan and United States Attorney Paul W. Williams. Six of the locals are carryovers from Dio's term as regional director of the auto union, recently renamed the Allied Industrial Union.

Mr. Hogan has named Dio and Anthony (Tony Ducks) Corallo as the spearheads of an underworld drive to capture control of the teamsters joint council here. The district attorney called Goldstein a go-between in the relations between Dio and Corallo. He said both had thrown their power behind John J. O'Rourke in his fight to oust Martin T. Lacey as president of the union council.

In an unrelated development yesterday the United States court of appeals refused to upset a Federal court injunction restraining Mr. O'Rourke or the international union from taking any steps to remove Mr. Lacey. However, the court did clear the way for a hearing by the union's general executive board on a Lacey appeal in connection with the council's bitterly disputed election last February 14.

HOFFA PRESSES FOR ACTION

Lawyers for Mr. Lacey and his rival signed a stipulation agreeing that the original injunction by Judge Edmund L. Palmieri should not prevent processing of the appeal within the union. However, it was specified that no decision dislodging Mr. Lacey from his $25,000-a-year post could be made effective without court review.

James R. Hoffa, midwest teamster chief and principal supporter of Mr. O'Rourke, was reported pressing for quick action by the parent union to declare his candidate the election victor. However, Dave Beck, the union's president, was understood to be reluctant to get caught in the middle of the Lacey-O'Rourke battle.

How the parent union rules on 16 challenged ballots and on 49 impounded votes cast by the 7 new locals will determine which teamster official is declared the winner.

With the joint council rendered virtually ineffective by the internal battle, Mr. Beck has notified all teamster locals in this city that a special organizing office has been set up here to carry on the unionization functions that would normally be performed by the council.

Joseph Konowe, secretary-treasurer of the Merchandising and Distribution Employees Union, Local 210, was named as Mr. Beck's personal representative in charge of the new office. In a circular letter, Mr. Beck said the office was to be devoid of all personalities and politics. He added that it was to operate on a basis of organizing activity exclusively.

When the idea of a special New York headquarters was set forth originally at a meeting of the union's executive board in Honolulu 3 months ago, Mr. Beck and the board declared that one of its functions would be to establish all necessary procedure to guarantee clean, honorable trade-union conduct. However, there was no mention of antiracketeering in his notice to the locals here.

DIO PLEADS INNOCENT

Dio, who lives at 109 Freeport Avenue, Point Lookout, L. I., pleaded innocent to the conspiracy and bribery indictment in general sessions court yesterday. A similar plea was entered by Goldstein, whose home is at 210-01 Northern Boulevard, Flushing, Queens. Both were freed in $2,500 bail.

Chester, who is at liberty in $15,000 bail on his March extortion indictment, informed the district attorney that he would surrender this morning. His home is at 61-11 229th Street, Douglaston, Queens.

The story of intrigue and failure that led the three men into court started last June when Leonard Kornblum, a partner in the Kings Electro Plating Co., of Brooklyn, and the Kings Automatic Plating Co., of Maspeth, Queens, complained to friends that he was having union trouble.

The union was local 475 of the United Electrical Workers. It had been bargaining agent for the 150 Brooklyn electroplaters for 19 years and it had represented the 50 Queens workers for 5 years. One friend told Mr. Kornblum that if he wanted to get the union off his back, Chester would prove "the answer to your prayers."

That, according to Mr. Hogan, led to some collective bargaining between the businessman and Chester, not over wages and hours, but over how much Chester should be paid for his services.

Chester, then in command of local 405 of the retail clerks, set an asking price of

$35,000, but came down to $30,000 after bringing Dio and Goldstein into the picture.

SUGGESTED MOVE TO YONKERS

At one stage the three adventurers proposed that Mr. Kornblum move his Brooklyn plant to one of the abandoned mills of the Alexander Smith Carpet Co., in Yonkers. But this project fell through when officials of the electrical union reminded the company that their contract required high-severence payments to any stranded workers. It also specified that the electrical local would continue as bargaining agent in the new location.

The three suspects then concentrated on efforts to stop a threatened strike at the Queens plant. They said they would infiltrate the electrical local and arrange for a decertification election that would switch the bargaining rights to Chester's local. Again their efforts came to nothing, but Mr. Kornblum never got back the $10,000 he paid them in two installments during his trusting period.

Mr. Hogan expressed no sympathy for Mr. Kornblum's loss. The prosecutor said the businessman had paid money to escape dealing with an honest union and had chosen instead to "deal with corrupt union officials who, for a price, offered to accompany any employer who didn't care to be burdened by the standards of legitimate unionism."

Each of the indicted men could receive a maximum sentence of 4 years in jail and $2,000 fine.

People Do Want Good Government

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an article from the current issue of Textile Labor by the former mayor of Philadelphia, the Honorable Joseph S. Clark, Jr.

Mayor Clark's outstanding record as head of a great city government is an achievement that won him the respect and admiration of citizens of Philadelphia and the people of Pennsylvania. Liberals and progressives in Democratic, Republican, and independent groups have joined in commending Mr. Clark as an able exponent of the kind of governmental philosophy that is needed in the Nation's Capitol. His strong character, vision, courage and humanitarian principles well qualify him to serve Pennsylvania as a United States Senator.

In introducing the former mayor to its readers, Textile Labor commented:

Clark, like Franklin D. Roosevelt before him, is an aristocrat whose deep feeling for democracy made him a liberal. A graduate of private schools, Harvard and Pennsylvania, he made his political debut in support of Al Smith in 1928.

After service as an Air Force officer in World War II he became leader of the reform movement he describes in this article. He was elected city controller in 1949 and mayor 2 years later. Currently he is the Democratic candidate for the United States Senate.

Through the miracle of television Mayor Clark became well known and respected in my district and in many communities surrounding Philadelphia. He inspires confidence and possesses the quality of leadership needed in these most serious times.

Mr. Speaker, under unanimous consent, I include with my remarks this Philadelphia story published in the current issue of Textile Labor:

PEOPLE DO WANT GOOD GOVERNMENT

(By Joseph S. Clark, Jr.)

For 67 years—from 1884 to 1951—Philadelphia was ruled by an unbroken succession of Republican mayors and Republican city councils. Since 1951 it has geen governed by a Democratic reform administration which won election in 1951 by a majority of 120,000 votes, and reelection in 1955 by an even larger margin.

What caused this upheaval, which has been hailed as one of the most significant events in the recent history of American city government? Is it of purely local significance, of interest only to the 2 million citizens of the Quaker City? Or are there broader implications in this Philadelphia story?

It seems to me that the peaceful revolution which removed the label "corrupt and contented" from America's third largest city, and converted it into a Mecca to which students of city government from all over the world are now making mass pilgrimages, has given much cause for rejoicing to those of us who believe that politics in America is making steady and sometimes spectacular progress.

There was only 1 issue in Philadelphia's elections of 1951 and 1955. That issue was good, honest, liberal government in city hall. The Democrats won in 1951 because they promised to give the people this kind of government. They won again in 1955 because the voters felt that they had made good on this promise.

The appeal of this issue cut across all traditional party lines. While the Democratic Party became the standard-bearer of reform in Philadelphia, the good government victories were actually won by a coalition of many forces.

A look at voter registration will illustrate what I mean. In 1951, 700,000 voters were registered as Republicans and less than 400,000 as Democrats, but in the mayoralty election 450,000 voted Democratic and only 325,000 Republican. In all presidential elections since 1936 Philadelphia voters had similarly disregarded their nominal registrations; Philadelphia had gone Democratic by whopping majorities for Roosevelt in 1936, 1940, and 1944, and by a small margin for Truman in 1948. But the election of 1951 was the first in which Philadelphians declared their independence from party labels in the selection of a mayor, a district attorney and the city council. The Democrats won because they were joined by both branches of the trade union movement, scores of normally nonpartisan civic organizations and thousands of independents.

Lesson No. 1 from the Philadelphia story: The American voter has come of age. His vote can no longer be delivered by party bosses and party hacks. He thinks and acts for himself. The controlled vote is becoming more and more a thing of the past.

Lesson No. 2: Americans are expecting increasing services from all levels of government, and they expect these services to be rendered honestly and efficiently.

Traditionally we have mistrusted government. From our frontier days we have carried into the 20th century the naive belief that politics is unimportant, that the strong can take care of their own, and that the least government is the best government. There has been a serious lag between the realities of a day in which we have delegated more and more vital functions to government to do collectively what we cannot accomplish individually, and an ideology which looks upon the politician with disrespect, if not contempt, and which has, consequently, discouraged many of our best and ablest people from entering government.

For 67 years Philadelphians got the kind of city government which they deserved as long as a majority of them persisted in this old-fashioned attitude. They got either no services from city hall, or they had to buy what little service they got by selling their votes to one of the most ruthless political machines in history. They got subways which had never heard the rumblings of a train, but whose construction had enriched the contractors who built them. They had a police force which protected the rackets and swung its clubs on union picket lines at the bidding of the machine and its financial beneficiaries. You were admitted to the city hospital, if you knew the right people, even though you could afford private medical care; and you could die in the street if you didn't have pull.

Playgrounds were located where favorite sons wanted to unload real estate at exorbitant prices. City contracts were rigged in the interest of favored bidders. Every job in city hall—civil service or otherwise—required political sponsorship, and unless the machine needed 1 honest worker to do the work of 5 drones, you had to pay cash to get it or to kick back part of your salary to keep it.

We won in 1951 because we convinced enough voters to apply the time-honored remedy against tyranny in a democracy: "Throw the rascals out."

Economy and efficiency on one side and expanding municipal services on the other have often been regarded as mutually exclusive. That is another outmoded concept. Increasing numbers of Americans have matured sufficiently in their thinking about government to realize that you cannot have something for nothing—not even in politics. If they are assured that they will receive 100 cents worth of service out of every dollar paid in taxes, they will decide for themselves what they want most—better services or lower taxes. In 1951 they voted for honesty and efficiency—and for better services. They voted for "reform" in the old-fashioned economy sense and at the same time for expanding Roosevelt's and Truman's "liberalism" from the White House to their own city hall.

There is no simple formula to explain why the Democratic reform administration received an overwhelming vote of confidence at the end of its first term. You cannot wipe out 67 years of neglect in 4 short years. Obviously the voters felt that we had made substantial progress on both fronts of our good-government campaign.

Maybe the greatest single change had come about in what we might call the "atmosphere" of city hall. Armed with the rigid provisions of a new home rule city charter, we transformed the city's civil service—Philadelphia has 26,000 municipal employees—from a sham into a reality: Employment based on merit, tenure of office, and promotion based on performance. Once word got around that civil-service examinations were on the level we were swamped with applications from men and women who in the past would have been ashamed to tell their friends they wanted to work in city hall.

Republican holdovers who did not want to work quit; those who stayed started to perform, thousands of them with the pride and enthusiasm of a man who has suddenly been liberated from a bullying boss. In every contact with city hall people began to learn that they no longer needed "pull" to get services to which they were entitled—and that you could not get something illegal no matter how influential you or your "sponsor" were.

We raised taxes by almost $20 million at the end of the first year of our administra-

tion without getting the slightest political repercussion. Last year—8 months before election— I announced in my annual state of the city message that further substantial tax increases would be inevitable, yet in November the Democratic majority increased from 120,000 to 133,000.

There is a tremendous need today for more able, ambitious and devoted people to go into politics. There is a continuing need for more and more political education of more and more people. Our Philadelphia experience is encouraging in two respects: That the American voter is rapidly becoming a highly discriminating judge of issues and candidates; and that he will respect and reward the politician who lives by a single standard of decency and service.

Address by Maurice Simmons, Justice of the Court of Special Sessions, at the Soldiers and Sailors Monument, New York City, May 30, 1956

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include an address by Maurice Simmons, justice of the court of special sessions, retired; past commander in chief, United Spanish War Veterans; and honorary chairman, United War Veterans of New York County, at the Soldiers and Sailors Monument, New York City, May 30, 1956:

In annual memoriam we revisit the secret places of our heart to hold communion with our heroic dead who gave their all to make and keep us a free people. The flintlock of 1776 has become the H-bomb of 1956. And the earth trembles under the march of the Reds to world conquest. For the defense of western civilization we have built foreign bases on the expanding perimeter of dynamic communistic imperialism. The Godless criminals of the Kremlin have joined hands with the supersheiks of the mideastern deserts to forge the Moscow-Cairo axis—in substance a replica of the Berlin-Baghdad axis which in World War I welded together the Kaiser and the Arab chieftains against the West.

The firm Arabian objective is the expulsion of the West and all its works from their oriental terrain. In the mideast lie two-thirds of the world's proven petroleum deposits. This is being wrested from the barren wastelands by Western brains, courage, and capital. Thereby the feudal despots of the deserts have enriched themselves beyond the dreams of the Arabian Nights. By agreement this oil fuels not only our air and naval forces abroad but also the Western European lands. Denied access thereto, their national economies would be gravely jeopardized. Suddenly in this vital area we find the footprints of the Russian bear. The strategic seaways nearby could lead the Russian vandals to their goal of world dominion.

Into Egypt the Soviets are pouring massive armaments. With these, Nasser of the Nile and his Moslem cohorts are readying for the annihilation of Israel. We cradled this oasis of freedom as a sentry at the crossroads of the eastern continents. Together with Great Britain and France we pledged ourselves to prevent the violation of the Palestinian armistice. If now we deny Israel's minimum request for defense armor against the Arabian Goliath will we not be charged with retreat and repudiation?

Appeasement feeds the arrogance of the aggressor. The most powerful nation on earth, shall we tread that treacherous road? Have we so soon forgotten how the British Chamberlain bent the cringing knee to Hitler? The betrayal of Czechoslovakia opened the floodgates of World War II. How much longer shall we vacillate and supplicate under the blackmail of the Arabian sheiks and their Communist bedfellows? While we palaver and procrastinate the match may be dropped into the mideastern oil tank that will explode into world war three. Clear visioned and with heads unbowed should we not as American war veterans be guided by the policy formulated by our comrade, Theodore Roosevelt, "Walk softly and carry a big stick"?

Under Which Plan Are the People Paying for Dams?

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. MOSS. Mr. Speaker, under leave to extend my remarks, I wish to include in the CONGRESSIONAL RECORD an editorial which appeared in the Sacramento Bee of June 20, 1956, "debunking" recent paid magazine advertising attributed to America's independent (sic) electric light and power companies.

The editorial points out that the advertising in question is "rankly deceptive" in purporting to show a State-by-State breakdown of the cost of the proposed Government project on the Snake River in Idaho. It points out that if the Idaho Power Co., a Maine corporation owned in large part by New York and Boston investors, is permitted to develop Hells Canyon as a private enterprise, the people of the United States will be robbed one one of the Nation's last great natural resources.

The editorial in question reads as follows:

UNDER WHICH PLAN ARE THE PEOPLE PAYING FOR DAMS?

Paid magazine advertisements attributed to America's independent electric light and power companies contain this statement:

"Here's about how much the people of each State save in taxes because the local independent electric company, instead of the Government, is building the Hells Canyon power project."

Then follows a State-by-State breakdown of the cost of the proposed Government project on the Snake River in Idaho. The power company statisticians allocate $42,900,000 to the people of California, $68,700,000 to the people of New York, and so on.

It is not stated how this allocation is arrived at, whether on population or the proportion of Federal taxes paid by each State. But either way, the statement is rankly deceptive.

In the first place, money advanced from the Federal Treasury for the Western water and power projects is repaid by the water and power users, and in the case of power at 3 percent interest.

At the end of the payoff period, generally around 50 years, the Federal Treasury is reimbursed. The residents of the area have enjoyed low water and power rates. And the people of the United States are the owners of the dam.

Thus, the cost of the irrigation and power features to the taxpayers in the various States is zero. And the economy of every State and the District of Columbia has been improved by the development of areas which otherwise would be semideserts.

A private company does not build a dam by waving a fairy wand. It costs a private utility as much to build a dam as it does the Government.

And the customers pay for it at higher rates every time they turn on an electric light or a washing machine. The profits and the interest go not to the Federal Treasury but to the utility, its officials, and stockholders.

At the end of 50 years the dam belongs not to the people but to the private company. And to say a local independent electric company is building the Hells Canyon Dam is further deception, inasmuch as the Idaho Power Co. is a Maine corporation owned in large part by Boston and New York investors.

With the construction of three small power dams by the Idaho Power Co. in Hells Canyon, lost will be the opportunity to develop the site for irrigation, flood control, and recreational and navigation benefits which would come from the Government's multiple purpose project.

The people are not being saved anything. In fact, they are being robbed of a chance to utilize one of their greatest and most precious natural resources.

Poor People of United States

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the East St. Louis (Ill.) Journal of June 24, 1956, entitled "Poor People of United States":

POOR PEOPLE OF UNITED STATES

Senator PAUL DOUGLAS thinks the Federal Government should be as interested in the poor people of Illinois as it is in the poor people of Paris. So he is supporting legislation approved Thursday by the House Banking Committee which would set up a domestic point 4 program. Much of the bill includes ideas long advocated by the Senator. Representative GRAY, of Illinois, also is backing the legislation.

The bill would establish an Area Development Administration to make loans and grants to areas like southern Illinois which need more industry. The agency would also help people who are unable to make a living at farming because of poor soil, or the lack of capital, to build up their farms or else learn a more profitable way of making a living. Funds would be available to the agency. Most of the money would be loaned to communities, businesses and publicly owned utilities and reclamation agencies.

The legislation appears to be a sincere attempt to get at the three causes of the poverty and near-poverty conditions which continue in many parts of the United States amid the general prosperity of most Americans. (The Franklin D. Roosevelt Foundation estimates that 19½ million Americans "had insufficient resources in 1950 to meet individual needs at an adequate level of living.") The usual causes of these "pockets of poverty" are lack of industry, soil too poor

for profitable farming and the failure of many people to move from these areas to places where they can get jobs.

However, it will take more than Federal aid for most areas to pull themselves into prosperity. While Federal assistance such as is proposed in the committee-approved legislation can be of considerable aid, it is up to distressed communities themselves to do most of the job of attracting industry and helping its residents to get better-paying jobs.

Unfortunately, the chances for passage of the Area Redevelopment Act are not good. The legislation may be approved by the House, but there is little likelihood that the Senate will get to the measure before the expected mid-July adjournment of Congress.

Nevertheless, Senator DOUGLAS and Representative GRAY are to be commended for the special efforts they are making on behalf of the poor people of Illinois, constituents who have become isolated from the mainstream of Federal Government assistance as well as from prosperity.

White House Secrets Denied Congress Leaked to a Reporter

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. CELLER. Mr. Speaker, it is shocking to learn that the White House has given unlimited and complete access to a friendly newspaper correspondent the confidential minutes of all its Cabinet meetings as well as other documents of a confidential nature. All this material was used in the preparation of a book. This book has been summarized as "a history of the private deliberations of Mr. Eisenhower and his deputies in various fields." For an administration which has grimly fought to uphold the principle of Executive privilege and in so doing has gone to such extremes as to deny legitimate requests of duly constituted committees, this unprecedented dumping of confidential files for public perusal insults the intelligence of the electorate and mocks the serious efforts of the Congress to keep itself informed of the processes of government.

The accusation has been made, and in my judgment justly so, that no other administration has withheld so much information from the people and from the press as has this administration. Yet in one swoop, it has permitted one member of a friendly newspaper to go behind the curtain of the deliberative processes for what seems to be an election advantage to the glorification of the Eisenhower administration.

When I, as chairman of the Committee on the Judiciary, requested the files of the Business Advisory Council from the Secretary of Commerce, this information was denied, even though the BAC is not a Government agency and its records could not be deemed confidential. It is now disclosed that this request was discussed at a Cabinet meeting where Mr. Eisenhower favored denying the request and took a firm stand against congressional attempts to encroach on the prerogatives of the President. It is unconscionable that the administration would cavalierly deny requests of elected officials of the Government, seeking access to records of this sort, and at the same time freely supply them to a journalist who is neither elected nor appointed to any office.

While the matter of leaks is not new to government, in no instance can I recall such irresponsible exposure of Cabinet deliberations en masse, damaging to the Office of the Presidency, to the counsels of his advisers, and disrupting the coordination between the executive and legislative branches of our Government.

It is a shabby use of the advertising techniques so prevalent in promoting this administration. You do not sell the product, you sell the packaging. It is my fervent hope that the President himself was unaware of this monumental mistake of his palace guard.

I insert at this point a most interesting article written by Richard H. Rovere, called Letter from Washington, which appeared in the June 23, 1956 issue of the New Yorker magazine, discussing this subject in detail:

LETTER FROM WASHINGTON

Quite possibly the most unorthodox thing the Eisenhower administration has done to date has been to grant a White House correspondent the privilege of examining the minutes of all its Cabinet meetings and a large number of other documents involving confidential proceedings within the executive branch. The privileged correspondent is Robert J. Donovan, of the New York Herald Tribune, who is widely considered here to be among the ablest and most conscientious members of his profession, and one consequence of his examination of the records is a remarkable book entitled "Eisenhower: The Inside Story," which is to be issued by Harper & Bros. approximately two weeks from now, and which has already served as the basis for a series of articles syndicated by the Herald Tribune in newspapers throughout the country. The book has a number of notable features, but by far the most striking of them is a reproduction, often in diary form and with what is plainly a minimum of paraphrase, of a recording secretary's minutes of the arguments, agreements, and animadversions of the President and his closest associates in camera; though Mr. Donovan has drawn to some extent on information available to anyone and to some extent on his own memory and firsthand observations, his book is actually a history of the private deliberations of Mr. Eisenhower and his deputies in various fields. It is to be assumed that the preparation of such a history was the end sought by the official, or officials, who—assuredly with the President's approval, for the step was too drastic a one to be taken without it—invited Mr. Donovan to inspect the documents and authorized him to make use of them entirely at his own discretion, free from any pressures other than those that might be exerted by his conscience and by his highly developed sense of propriety and feeling for the public interest. It is almost certain, however, that the invitation will have consequences extending far beyond the publication of Mr. Donovan's interesting and instructive book. For what the administration has done is more than merely to make available to a gifted and friendly journalist the materials for a report on its activities; it has given a person unconnected with the Government in any way, and subject to no disciplines or restraints beyond those to which any citizen is subject, the right to acquaint himself to the limits of his curiosity with transactions of a sort that have in the past been withheld both from the courts and from congressional committees authorized to investigate the executive branch and armed with the power of subpena. In effect, as the situation is understood here, the administration armed Mr. Donovan with his own power of subpena and tendered a pledge to comply with his summones except when, in its judgment, matters of national security were involved. And it gave him the further right to acquaint the entire American public—indeed, the entire world—with the details of its affairs.

Needless to say, Mr. Donovan has sought to make the most of his opportunity. He has not gained entrée to the deliberations of the Cabinet simply in order to celebrate harmony and achievement. He shows the President and his advisers in moods of exasperation with one another; he reveals that Mr. Eisenhower had the idea of increasing tax exemptions for lower-income families before the Democrats made it part of their program, and that this Presidential heresy had to be exercised by Mr. Humphrey, who, when the Democrats got around to advancing the plan, called it "silly" and "a quickie gimmick;" he reveals that there were those—the President not among them—who thought in the spring of 1955 that it might help matters considerably if Mrs. Oveta Culp Hobby returned to her successful career as a newspaper publisher and who were, presumably, not enchanted when she finally said that she thought she would go back to Houston and open a branch office of the administration. Mr. Donovan's access to the minutes produces the further intelligence that Mr. Dulles expressed dissatisfaction with the competence of security boards and that Mr. NIXON expressed dissatisfaction with the low rate at which security risks were being turned up in the United States Information Agency, an organization large enough, he seemed to think, to produce a bumper crop of unreliable employees. The Vice President is also shown in a continuing dispute with Postmaster General Summerfield, who wanted to raise postal rates, in order to put his Department on a sound business basis, while Mr. NIXON pointed out that there are some things more important than a sound business basis, among them political support of the kind that might be lost through an increase in mailing costs. A persistent theme is what Mr. Donovan at one point describes as "the muting of emphasis on balancing the budget." Another theme is Mr. Eisenhower's mounting and later subsiding annoyance with what is sometimes referred to as the conservative wing of his party. In his first 2 years, the President could scarcely contain his frustration, and at one time, in 1953, he gave serious thought to leaving the Republican Party and starting a party of his own, as Theodore Roosevelt did; he was dissuaded by the very recollection of Roosevelt's unhappy experience, but he continued, Mr. Donovan says, to ask "whether, after all, the [present] Republican Party was represented by men with the vision and understanding of what was required to lead the United States through the perils of the mid-20th century." After 1954, the question troubled him less, for his own leadership of the Party was more firmly established and the power of the opposing faction was even more than correspondingly diminished; Senator Taft had died, Senator WATKINS had disposed of Senator MCCARTHY, Senator BRICKER had temporarily withdrawn his amendment (which had been by far the greatest source of Presidential annoyance), and the 1954 elections had removed several persons whom the President found offensive and had weakened the authority of quite a few others. One of the many conclusions that may be drawn from Mr. Donovan's study of the Cabinet

minutes is that the factional wars in the administration party are mostly over and done with. Ironically, the one thing that may lead to their resumption is the action of the White House in allowing Mr. Donovan to make public the contents of the minutes, which are a history—necessarily one-sided—of those wars and which contain such encouragements to Party unity as the suggestion made at one meeting that small, or tactical, atomic bombs might be used "to good effect" against supporters of the Bricker amendment. It was a joke, naturally, but Senator BRICKER is unlikely to think it funny. The book is by no means only a narrative of factional strife, or strife of any sort; indeed, if a true balance of its contents were to be taken, the administration and the Republican Party as a whole would doubtless come off very well. But a kind of Gresham's law operates in the reader's mind, with the news of progress and concord being driven back by the news of frustration and schism. The memory of a suggestion to blow up Senator BRICKER and his friends outlasts the memory of how smoothly agreement was reached in the question of tightening credit controls in 1953.

The act of turning over the minutes of Cabinet meetings to a private citizen is more than just unprecedented; it is one for which no precedent could have existed, because this administration is the first in our history to keep regular minutes of Cabinet meetings. If minutes were ever kept before, it was only for a limited period of time and for some end other than the enrichment of the archives. In the past, to be sure, individual Cabinet members and certain Presidents have made notes of their own in the course of their meetings, and have prepared memoranda on the outcome of discussions. A few Cabinet officers have been enthusiastic diarists and have reproduced from memory or from notes the tenor—or even the precise language—of specific colloquies, and have then published them in books or magazines, or have left them to be published posthumously. Various Presidents, from John Quincy Adams to Harry Truman, and various Cabinet members, from Lincoln's Secretary of the Navy, Gideon Welles, to Harold L. Ickes and James V. Forrestal, have been responsible for disclosing details of Cabinet discussions after their return to private life. And since it is characteristic of Presidents and department heads in office to wish to have their views—and information that tends to support their views—transmitted to the public, on innumerable occasions they have advised their journalistic friends of what was said on particular subjects at particular meetings. But never before have there been official records of Cabinet proceedings; never before has the Cabinet had a recording secretary, nor has any Cabinet member ever been charged with performing the functions of one. (It is generally taken for granted here that the minutes Mr. Donovan has used are the work of Maxwell M. Rabb, who in November of 1954 was appointed Secretary to the Cabinet by the President, and was given a staff of assistants; Mr. Rabb had been with Mr. Eisenhower since 1952, as chief aide to his chief aide, Sherman Adams, and it is probable that his appointment in 1954 merely formalized an existing setup. The pre-1954 minutes placed at Mr. Donovan's disposal are also thought to have come from the hand of Mr. Rabb.)

While no one in the Government may ever have itemized the reasons for the nonexistence of recording secretaries and Cabinet minutes, it has always been assumed that one of them was the reluctance of Presidents and Presidential advisers to inhibit discussion by setting down and preserving records. This would be a sufficient reason even if there were no others, but as it happens, there have been several others, the most important of which, perhaps, is that very few Presidents have regarded the Cabinet as in any real sense a deliberative body or council of advisers. The Cabinet is not an official agency of the Government. As far as the Constitution is concerned, there is no such thing as the Cabinet. In law, it has no powers, no duties, no rights, and no definite composition. In practice, it is an institution that takes its form partly from tradition and partly from the temper and passing fancies of the incumbent President. Custom and precedent would make it awkward for any President not to regard a Postmaster General as a Cabinet member in good and assured standing. Customs and precedent would also make it awkward for a President to request the Secretary of State to stay away from Cabinet meetings and to request the under Secretary to attend in his place. (For a while during Franklin Roosevelt's administration, it was frequently said that Sumner Welles, the Under Secretary, had more effective control over American diplomacy, and more influence with the President, than Cordell Hull, yet it was Hull who sat with the Cabinet—a dubious privilege, since Roosevelt made very little use of that body and merely endured its meetings.) On the other hand, the President could, on nothing more than a whim, make the chairman of the Civil Aeronautics Board a Cabinet member, and if he wanted to satisfy tradition, he could ask Congress to change the agency's name to Department of Civil Aeronautics—tradition seeming to dictate that a bureau whose head sits with the Cabinet be called a department rather than a board or commission or agency or administration.

If the delay of 165 years in inaugurating the keeping of minutes can be explained to some extent by the Cabinet's lack of prescribed duties, it is also in good measure attributable to the intimate, confidential, sometimes trivial and sometimes grave nature of Cabinet discussions. For while the Cabinet as an organization has never had the statutory power to do anything or decide anything, as a group of advisers and friends of the President it has often been of great importance. Though most Presidents have at times acted on the principle employed by Lincoln when he took a Cabinet vote and announced the results as "noes 7, ayes 1, the ayes have it," most of them, including Lincoln, have used the Cabinet as a forum for discussion of the most delicate political questions, as a court of arbitration for jurisdictional disputes and conflicts of personality, and as a staging ground for important political operations. Mr. Eisenhower, more consistently than any of his recent predecessors, has used the Cabinet for these purposes. It might be supposed that the more a President relied on the Cabinet as an advisory council, the less inclined he would be to incur the risks of keeping detailed reports of its discussions. But to make this supposition in the case of President Eisenhower is to overlook his military background and the business backgrounds of most of his associates. Indeed, with the advantage of hindsight it is possible to say that the Cabinet innovations instituted by the Eisenhower administration were almost inevitable from the start. The President, as has always been known, is addicted to the staff system and the chain of command. In sizing up the Cabinet, he found it to be a piece of machinery that, with the rust wiped off and a few nuts and bolts tightened, could be put into service as a kind of general staff. Early in his tenure, he made the Cabinet appear more like a staff by inviting the regular attendance of the Vice President and appointing him deputy chief, by bringing in such officials as the Director of the Budget and the Chairman of the Civil Service Commission, and by setting up a formal agenda. From a formal agenda to minutes was only one short step, and in any event the idea of minutes or transcripts would surely have occurred to the merchant princes and captains of industry who are so numerous among the President's advisers and who must be veterans of many thousands of sales conferences and board meetings. Modern business efficiency seems to be largely a matter of the proliferation of records, and as the President himself remarked, according to Mr. Donovan, in a Cabinet meeting on March 20, 1953, the administration is exceedingly proud to be called a business administration when this is taken to mean that it is devoted to a businesslike approach to the problems of government.

But if it was only to be expected that the administration would adopt methods reminiscent of military and business procedures, it could never have been expected that it would shatter precedent by giving a newspaper reporter carte blanche to scrutinize the most confidential records and to ask all the readers he can attract to join him in a consideration of the passages he regards as the most interesting. Such a development would have seemed particularly unlikely in view of the administration's general policy on public information, which in the main has been less permissive than the policies of most of its predecessors. Mr. Donovan, in his book, offers no clue to why so large and sudden an exception was made. Neither he nor his publishers explain who in the White House conceived this strange enterprise in the first place or what any of those who authorized it had in mind at the time they did so. It can be taken for granted, of course, that whoever was responsible had at least partly in mind the political good of the administration. One can easily imagine some proud and confident participant in Mr. Eisenhower's crusade reasoning to himself that the record of the administration has on the whole been so good and so nearly above reproach that any examination of it by a fair-minded man would be bound to produce a broadly favorable report. Mr. Donovan, in addition to being universally looked upon as a fair-minded man, writes for a newspaper that has seldom, if ever, failed to appreciate the accomplishments of the present administration. It requires no great mental agility to understand how a member of the White House staff—perhaps Mr. Sherman Adams—might have arrived at the conclusion that a history of the administration by Mr. Donovan would have its points of interest and might be of positive value in the 1956 election campaign. But a proper respect for the intelligence of members of the White House staff also leads one to assume that those who perceived the possible benefits of encouraging such an undertaking would at the same time perceive its hazards. It seems almost impossible that anyone in his senses could fail to see that a person who opens the Cabinet minutes to a reporter on a take-what-you-want basis rivals Pandora in rashness, if not in insubordination.

While the rashness may have been a calculated risk, there can be no doubt that it is a Pandora's box that the White House has opened. Once Mr. Donovan's book has appeared, the administration is likely to find that by releasing the material it has destroyed much of its power to resist congressional trespassing. This is a power it has frequently used and has steadily sought to preserve. In the Army-MCCARTHY hearings, the President refused to allow the Army counsel to tell Senator MUNDT's committee about a discussion that was held by administration officers, mostly of lower than Cabinet rank, on administration strategy in dealing with Senator MCCARTHY. Last March, Senator MCCLELLAN, now chairman of the committee that Senator MUNDT presided over for a while, asked for some working papers concerning the development of policy on trade with Communist nations. The administration refused, on the ground that, as it was stated in Mr. DONOVAN's newspaper, "to supply such papers would be to violate the historic principle of separation of powers which permits the executive branch to keep secret

the process by which it reaches decisions." Mr. DONOVAN's book tells about the Cabinet's discussion of an investigation by a subcommittee of the House Judiciary Committee at which the chairman, Representative EMANUEL CELLER, of New York, requested certain files in the Department of Commerce. At that meeting, Mr. Eisenhower took a firm stand against congressional attempts "to encroach on the prerogatives of the President," and favored denial. He told the Cabinet, Mr. DONOVAN says, that "he was never going to yield to the point where he would become known as the President who had practically crippled the Presidency." Henceforth, it will be much more difficult to sustain this kind of argument. If in the time that remains to the Eisenhower administration it should again feel the need to keep Congress in the dark about any of its internal business, it will have to strain its ingenuity to find an argument for denying requests of high elected officials of the Government seeking access to records of the sort it has quite freely supplied to a journalist neither elected nor appointed to any office. Its ingenuity may meet the test, or the administration may simply stand on what are still its rights and refuse to comply, without making any argument at all. In the latter event, it is not hard to imagine the taunts it will have to endure from offended Congressmen.

The problems raised by the delivery of this material to Mr. Donovan are almost without number. There are already serious unresolved questions about the ownership of papers prepared by Government employees on Government time for Government use, and their exploitation for private gain. Such questions have been raised when Presidents or Cabinet members have used as income-producing literary properties papers they themselves have written or have ordered to be written. Now there is the case of a private citizen's being given a monopoly on a whole category of Government papers. A decision will have to be made on whether the monopoly is to be permanent or temporary. Normally, when Government records are made public, the principle of "equal accessibility" is observed and the archives are opened not to one person but to all qualified persons. The largest of the questions, however, revolves around the keeping of confidences. No doubt every member of the President's Cabinet was aware that minutes were being taken and that any observation he chanced to make would probably go into the record. No on could have known, though, that the minutes would form the basis of a book and a series of newspaper articles. It is safe to assume that this plan had not been hatched at the time; it is also safe to assume that if the Cabinet members had known of the existence of any such plan, they would have been more guarded in their speech. Certainly Mr. Philip Young, the chairman of the Civil Service Commission, would not have spoken even jestingly of vaporizing Senator BRICKER and his followers if he had suspected that the remark might turn up in a book that is being groomed for the best-seller derby. Many members of the Cabinet must now feel somewhat as Aristide Briand did when he learned, in 1930, that Gustav Stresemann's papers were to be published and that they would describe conversations between the two men. "If such a policy is to be followed hereafter," he said, "no statesman would ever dare to speak frankly * * *. And certainly this would not be in the interest of mankind."

Mr. Donovan's book is expected to produce many American echoes of M. Briand's sentiments. It is a unique piece of work in that it is a campaign document that provides as much ammunition for one side as for the other.

RICHARD H. ROVERE.

JUNE 14.

Educational Benefits to Veterans

EXTENSION OF REMARKS
OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. MACDONALD. Mr. Speaker, I have today introduced a bill in the House to amend Public Law 346, 78th Congress, which grants educational benefits to World War II veterans, and Public Law 550, 82d Congress, which grants educational benefits, among other things, to Korean war veterans.

Certain deficiencies in these two laws should be corrected and corrected at once. These deficiencies came to light early this year when a Senate subcommittee, investigating the Communist ownership of GI schools, discovered that under the existing provisions of these laws the Veterans' Administration is required to expend Federal funds for tuition of veterans attending schools which are Communist-owned. In fact, over $3 million was paid out by the Veterans' Administration to four schools which because of their Communist connections should be ineligible to participate in the veterans' training program. These four schools are the Cartoonists and Illustrators School, Inc., of New York City; the Radio and Television Technical School, of Allentown, Pa.; the Robert Louis Stevenson School, of New York City; and the California Labor School, of San Francisco, Calif.

During the hearings it was brought out that under the provisions of Public Laws 346 and 550, the approval of veteran training schools is left solely to the local State-approving agencies, customarily a local department of education, and unless the local department rules otherwise the Veterans' Administration must pay the tuition for the veteran at these Communist-owned schools or Communist-dominated schools.

In order to correct this situation, my bill requires private schools, below the college level, which are training veterans or seeking approval to train veterans, to submit to the Administrator of Veterans' Affairs affidavits signed by the owner or owners and by the members of the governing body that he is not and never has been a member of the Communist Party or any organization that believes in or teaches the overthrow of the United States Government by force or by illegal or unconstitutional methods.

It is estimated that there are approximately 2,400 schools throughout the country that will file affidavits under this proposal. The bill also provides that in the event a school fails to file an affidavit, the Administrator of Veterans' Affairs will not approve the enrollment of veterans in such school. On the other hand, an individual who has been a member of the Communist Party in the past can comply with provisions of the proposed legislation if he files an affidavit that he has terminated his membership and since such termination is opposed to the doctrines, program, principles, and ideology of such organizations. Obviously this bill does not affect colleges or academic preparatory schools.

Mr. Speaker, it is my hope that the Veterans' Affairs Committee will act promptly on this measure so that it can be reported to and acted upon by the House before the 84th Congress adjourns. Passage of this bill will prevent millions of Americn taxpayers' money from being expended to train veterans at Communist-owned or at Communist-dominated schools.

English Honor Truman

EXTENSION OF REMARKS
OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the East St. Louis (Ill.) Journal on June 24, 1956. The editorial, entitled "English Honor Truman," follows:

ENGLISH HONOR TRUMAN

Oxford University, one of the most ancient and honorable, last Wednesday gave former President Harry Truman the honorary degree of doctor of civil laws.

More than that, Oxford gave Mr. Truman, who is traveling in Europe as a private citizen, so warm a welcome and paid him such high compliments that the man from Independence whipped out a handkerchief, wiped his eyes, and blew his nose.

The Oxford chancellor, Earl Halifax, former British Ambassador to the United States, had eulogized the former President of the United States as: "Trust of allies, direct in your speech and in your writing, and ever a pattern of simple courage."

The Missourian who has a reputation for direct speech, was touched by the Oxford tribute. He has not had much praise since he left the White House.

The British press has been most cordial to Mr. Truman. The London Times wrote editorially of the direct and personal part President Truman played in shaping the policies which saved Europe after the war from economic chaos and possibly also from political disaster.

The London Daily Express commented that "he has a warm and homespun personality, but this is only one side of the character of this man who has won such a tremendous place in history."

The News Chronicle said editorially:

"Mr. Truman has done as much as any man living to defend the values which Oxford at her best represents. Mr. Truman's bold decision to give aid to the struggling countries of Europe when Communist conspiracy had nearly overwhelmed them not only gave us a breathing space to recover from the ravages of war: it also marked the assumption by the great republic of the leadership of all the nations who aspire to something better than the one-party state."

When Mr. Truman pastes up his English press clippings for preservation in the Truman library at Independence, he may write across the top of the page: "A prophet is not without honor, save in his own country." (Matthew XIII: 57.)

Appendix

One Thousand Years of Christianity in the Ukraine

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. FLOOD. Mr. Speaker, my colleague, the Honorable THOMAS F. DODD, of Connecticut, has submitted an important resolution, House Resolution 482, condemning the persecution of Christianity in Ukraine. It appears to me that at this time it is most fitting for us to give serious consideration to this resolution for several reasons. First, the observances in this country of the existence of Christianity in Ukraine for a thousand provide an excellent occasion for the passage of this resolution. Second, in contrast to the religious institutions of the other captive nations in eastern Europe, the Ukrainian Catholic and Orthodox Churches have been totally subjected to Russian Communist genocide. They exist today in the underground. And third, this resolution is a challenge to the sincerity of the oligarchical dictatorship in Moscow which ascribes mass murder and genocide to the past Stalin regime. If it is sincere in its touted liberalization program, it would rehabilitate also the Ukrainian Catholic and Orthodox Churches which Stalin liquidated.

The importance of this measure may be gleaned from the dominant facts presented in a statement prepared by Dr. Lev E. Dobriansky, professor of Soviet economics in the Graduate School of Georgetown University and also chairman of the Ukrainian Congress Committee of America. This statement introduces a short memorandum on the persecution of Christianity in Ukraine and messages received by the Ukrainian Catholic Exarchate on the occasion of the 1,000 years observance in this country. As a brief background to the Dodd resolution, I request that this material along with a revealing editorial on "Russian Orthodox Guests—Exponents of Stalin's 'Religion,' " which appears in the current issue of the Ukrainian Bulletin, be printed in the RECORD:

STATEMENT BY DR. LEV E. DOBRIANSKY

The impressive messages that were received on the occasion of the solemn observance of 1,000 years of Christianity in Ukraine furnish eloquent testimony to the superlative thoughts of the eminent Catholic scholar and philosopher of history, Father Don Luigi Sturzo. In his classic work on nationalism and internationalism, this world renowned scholar conclusively observes that the three great ideas which have shaped the history of mankind are religion, national independence and liberty (p. 13). These three majestic ideas constitute a veritable trinity of thought predicating moral and political action that necessarily must encompass the manifestation of all three in the harmonious existence of societies, nationals, and peoples. To contemplate an act upon one embraces correlative contemplation and action upon the others—in the natural spirit of Amor Dei et Patriae.

In Ukraine, which today in its state of captivity is the largest non-Russian nation not only in the primary empire constituted by the Soviet Union but also behind the European Iron Curtain, these fundamental ideas and natural drives have cast the very foundations of the sovereign existence of this nation. In their fixed interrelationship they have formed the essential source of strength and hope to the liberation movements of this freedom-loving people in different periods of enslavement under some imperialist foreign yoke. The contemporary struggle of the Ukrainian nation against the colonial and imperialistic domination of Russian communism—highlighted by the gallant military defense of its independent state following World War I, the brave opposition of its intellectuals to the strangling centralization of colonial control by Moscow in the twenties, the stern resistance of its hardy peasantry to the politico-economic collectivist measures of the foreign oppressor in the thirties, the heroic battles of the famous patriotic and nationalist forces of the Ukrainian Insurgent Army against both Nazi German and Russian Communist totalitarianism in the forties, and the underground operations in political warfare against alien Moscow by all sections of its population in this decade—draws its chief inspiration from the undying faith that Deo adjuvante, non timendum.

In the light of all this, is it little wonder that the religious institutions and clergies of Ukraine were the first and prime objects of attack and liquidation by Russian Communist totalitarianism? This sordid story of our times is well described in summary form in the following memorandum which based a petition leading to House Resolution 482, submitted by the Honorable THOMAS J. DODD, of Connecticut. The many messages following this, received from the highest authorities in the Catholic Church here and abroad, were written in the intimate knowledge of this background on current Russian Communist policy of religious persecution and genocide.

The Ukrainian Catholic Church survives in the underground of Ukraine today. Its existence and free emergence are dependent on the reality of the three great ideas of history—religion, national independence and liberty. Priest and patriot are but one. In this country, hope and encouragement for the eventual liberation and freedom of church, nation and people in Ukraine are steadfastly sustained by the prayers and work of the Ukrainian Catholic Exarchate of the United States of America. Under the great spiritual leadership and guidance of the Most Reverend Archbishop Constantine Bohachevsky and the Most Reverend Ambrose Senyshyn, O. S. B. M., the faithful pursue this work in the certitude of its value to the basic national interests of our own country, the United States of America, and in the certain knowledge that for all nations, including Ukraine, Beata gens, cujus est Dominus Deus eorum.

MEMORANDUM

Christianity has been existing in Ukraine for more than 1,000 years. It has fostered a profound faith in God among the people, and has begotten abiding moral principles, and nourished a new culture and erudition.

In December 1917, Communist Russia invaded Ukraine and in 1919–20 occupied the eastern provinces of this country. The Soviets were bent on extirpating Christianity from these regions. In their coup d'etat they published aggressive antireligious propaganda and terrorized the people with threats of exile, torture, and death.

First, the Communists attacked the church in Eastern Ukraine. Within 10 years, from 1921 to 1931, they unjustly arrested and ruthlessly murdered 34 Ukrainian Orthodox bishops and more than 3,000 priests. Hundreds of thousands of the faithful were inhumanly tortured in prisons or deported to concentration camps in Siberia; a greater part of these innocent people died martyrs to their faith; the remainder still endures the appalling trials and hardships of imprisonment.

The Reds destroyed 80 percent of the churches (many of these churches contained precious historical relics, as for example the golden domed Michalivsky Monastery in Kiev from the 12th century); other churches were despicably converted into warehouses, theaters, and convention halls; monasteries were outraged and cemeteries profaned.

By 1930 the Communists had completely liquidated the entire Ukrainian Orthodox Church, barring it from all public activity.

Though article 123 of the Soviet constitution, which is binding in Ukraine as well as the U. S. S. R., explicitly recognizes freedom of religion, yet, during the first Red occupation of western Ukraine (1939–41), the Communist regime overtly persecuted the church, arresting many Ukrainian priests and ruthlessly murdering 27 of them.

This antichristian terror adopted more hideous means of exterminating Christanity in Ukraine during the second occupation of this country beginning in 1945. On April 11, 1945, the Soviets arrested the metropolitan of Halych and archbishop of Lviv, Joseph Slipyj, 80-year-old Bishop Gregory Khomyshyn, Bishop John Latyshevskyj, Bishop Nicholas Charnetskyj, C. SS. R., and Bishop Nykyta Budka. On June 25, 1946, Bishop Josaphat Kotsylovskyj, OSBM, and Bishop Gregory Lakota were imprisoned. All these bishops were condemned to forced labor for 8 to 10 years and even life; the imputation was lawfully unjust. Some of these bishops (for instance Bishop Gregory Khomyshyn and Bishop Josaphat Kotsylovskyj) later died from maltreatment in prison. Still more, when Archbishop Slipyj's or other bishops' term expired, the Reds would not release them from prison.

In the autumn of 1947, the Communists murdered Bishop Theodore Romza, Uzhorod, Carpathian Ukraine, and in 1950, the Bishops Paul Gojdich, OSBM, and Basil Hopko, Pryashiv, Czechoslovakia, were imprisoned. On January 15, 1951, Bishop Paul Gojdich was tried and unjustly condemned to forced labor for life. Bishop Basil Hopko is now in a concentration camp.

Altogether 10 Ukrainian Catholic bishops have been liquidated by the Reds.

In 1946, the Soviets enjoined the legal continuance of the Ukrainian Catholic Church in Ukraine. Thus, in our own 20th century,

it has been reduced to the sorrowful plight of the Church of the Catacombs, as was the primitive church during the Neronian persecution.

Two thousand secular priests and monks, for rightfully refusing to acknowledge the Patriarch of the Russian Orthodox Church as their head—this church is now subservient to the Communists—were arrested and deported to slave-labor camps. The Reds exterminated all 5 dioceses of the Ukrainian Catholic Church, desecrated 4,440 of its churches and chapels together with 195 religious houses. The Communists continue to oppress mercilessly the Ukrainian laity for remaining steadfast to its Christian heritage, church, and faith.

AUGUST 23, 1955.

His Excellency, the Most Reverend CONSTANTINE BOHACHEVSKY, STD,
Archbishop, Ukrainian Greek Catholic Diocese, Philadelphia, Pa.

DEAR ARCHBISHOP BOHACHEVSKY: With a sense of fraternal charity and devotion I join in spirit with you and Bishop Senyshyn and with your clergy and laity of the exarchate as, on September 5, you commemorate the coming of the true faith to the Ukraine 1,000 years ago.

I shall deem it a duty and a joy to unite with you in prayers of thanksgiving for the blessings of these 1,000 years and in imploring the merciful God to pour out the comfort of His grace upon our sorely afflicted brethren in the homeland.

With friendliest wishes, I remain, dear Archbishop Bohachevsky,

Very sincerely yours,

PARKE L. LEACH,
Bishop of Harrisburg.

TOLEDO, OHIO, *September 3, 1955.*

Most Rev. AMBROSE SENYSHYN,
Stamford, Conn.

DEAR BISHOP SENYSHYN: On the occasion of the 1,000th anniversary of the conversion of St. Olga, Princess of Ukraine, to the one truth faith, I should like to unite with you, Archbishop Bohachevsky, D. D., and all the faithful of the Ukrainian Catholics of the United States of America in commemorating the historical event with a solemn Mass of Thanksgiving.

Through the intercession of this noble Saint may our Heavenly Father, according to His infinite wisdom, bring every consolation into the lives of those people behind the Iron Curtain who are suffering physical and mental torture for their unswerving fidelity to Him and His eternal truth.

Fraternally yours in Christ,

Most Rev. GEORGE J. REHRING, *Std.*,
Bishop of Toledo.

ARCHDIOCESE OF LOS ANGELES,
Los Angeles, Calif., August 17, 1955.

His Excellency, Most Rev. AMBROSE SENYSHYN, O. S. B. M.,
Auxiliary Bishop, Vicar General, Ukrainian Catholic Exarchate, U. S. A., Stamford, Conn.

MY DEAR BISHOP SENYSHYN: I am very happy to learn that you and your devoted Ukrainian people will, on September 5, in Stamford, Conn., commemorate the anniversary of St. Olga, Princess of Ukraine.

I am confident that this recognition of the saintly princess will bring much stimulus to the faith and zeal of your people, and shall be happy to join with them in our supplications on that day.

With sentiments of esteem and respect to your beloved self, I am,

Faithfully yours in Christ,

J. QUORUM MCENSIGN,
Archbishop of Los Angeles.

DIOCESE OF COLUMBUS,
Columbus, Ohio, August 15, 1955.

His Excellency the Most Reverend
CONSTANTINE BOHACHEVSKY,
Philadelphia, Pa.

MY DEAR ARCHBISHOP BOHACHEVSKY: It is with great rejoicing and a feeling of profound gratitude to the Eternal Father in heaven that I join with you and your brother Ukrainian Catholics in observing the memorable anniversary of the baptism of Saint Olga and the beginnings of faith among her heroic people.

The faith of Christ which has perdured for 1,000 years among the Ukrainian people has been an inspiration to the Catholic world and an impetus to the church in Eastern Europe. In these days when they are undergoing a persecution excelling the terror of the Roman emperors the glory of martyrdom is being added to the diadem which crowns their loyalty to Christ. We fervently pray for their deliverance but, at the same time, and admiration of their love for the crucified Savior reaches sublime heights as we witness their unfailing steadfastness in the faith. Certainly, they are examples, dying and living again in Christ, to their brethren in free America.

With sentiments of esteem and joy on the occasion of this anniversary.

Devotedly in Christ,

MICHAEL J. READY,
Bishop of Columbus.

DIOCESE OF ALTOONA,
Altoona, Pa., August 15, 1955.

Most Rev. AMBROSE SENYSHYN, O. S. B. M.,
Auxiliary Bishop, Vicar General, Ukrainian Catholic Exarchate, U. S. A., Chairman, Anniversary Committee, Stamford, Conn.

YOUR EXCELLENCY: I am delighted to learn that the Ukrainian Catholics of the United States will observe this significant anniversary of the baptism of St. Olga, Princess of Ukraine.

May the freedom which they possess here in this country, and which is denied their fellow Catholics in the land of their origin, make them more faithful in the exercises of their religious duties, and may God, through the powerful intercession of St. Olga, grant to the suffering people of Ukraine a new day of liberty.

Sincerely yours in Christ.

R. FINEFAGLE,
Bishop of Altoona.

[From the Ukrainian Bulletin, New York, N. Y., of June 1–15, 1956]

RUSSIAN ORTHODOX GUESTS—EXPONENTS OF STALIN'S "RELIGION"

The Reverend Dr. Eugene Carson Blake, president of the National Council of Churches, announced a few weeks ago that his organization will be host to a nine-man delegation of "Christian leaders" of the Soviet Union to arrive early in June. It is said that their visit is in return for Reverend Blake's own visit to the U. S. S. R. last March.

The nine-man group includes Metropolitan Nikolai (Krutitsky), right-hand man of Patriarch Alexei; Archpriest Konstantine Ruzhnitsky; Archpriest Michael Slavnitsky; Prof. Vladimir Talizin; Archbishop Jan Kiivit of Estonia; Archbishop Gustav Turs of Latvia; Prof. Ararat Saakovich Garivian, of Armenian Orthodox Church; Rev. Alexei Karpov, Evangelical Christian Baptists, and Rev. Alexei Andreev.

Independent of this group, there is already in the United States a five-man group of Russian Baptists, including Rev. J. Zhidkov, president of the All-Union Council of Evangelical Christian Baptists; Nikolai Levindanto, vice president; Alexander Karev, general secretary; Ilya Ivanov, treasurer, and Klaudia Tyrtova—all from the same council.

SPURIOUS RUSSIAN ORTHODOX CHURCH

When all other Russian delegations arrive in this country, it is taken for granted that they represent the Soviet Government and its communist and totalitarian philosophy. In the case of this religious delegation, however, there is danger that far-reaching and misleading confusion may develop in the minds of the uninformed among us as to the true religious situation in the Soviet Union.

Ever since 1941, when Stalin deemed it opportune to suspend systematic religious persecution in order to win the Western Allies to his side, much has been said and written on alleged religious freedom within the Soviet slave empire. There is no need to dwell here upon the basic orientation of Soviet Russian philosophy as enunciated by Lenin toward religion, as it is well known. It has never been repudiated by the present collective leadership.

Although article 124 of the Soviet constitution states that "freedom of religious worship and freedom of antireligious propaganda is recognized for all citizens," Article 122 of the Soviet Penal Code, says:

"The teaching of religious doctrine to children and minors in public and private educational institutes and in schools, or violation of the dispositions respecting the same, [is punishable by correctional labor for 1 year]."—(Matter in brackets added.—Editor.)

Article 126 of the same code goes even farther:

"The exercise of religious rites in state and social schools and factories, as well as erecting in these institutions or factories of any kind of religious emblems—[are punishable by correctional labor for 3 months]." (Cf. Bolshevism and Religion, by Wladyslaw Kania, pp. 11–12.)

When Stalin allowed the reopening of the Russian Orthodox Church, he picked out leaders who were either Communists at heart, or at least in sympathy with communism and its goal of world conquest. Patriarch Alexei, head of the Russian Orthodox Church, is known for his unqualified loyalty and devotion to Stalin the atheist. He called Stalin "a wise leader selected and appointed by God's providence to lead the Motherland along to prosperity and glory." (Cf. Patriarch Alexei, His Words, Speeches and Messages, Moscow, p. 206.) In Zhurnal Moskovskoi Patriarkhii, No. 1, p. 2, 1950, Alexei said of Stalin: "[Our holy church has in him a faithful protector]." (Matter in brackets ours—Editor.)

In like manner, the Soviet Government supported Patriarch Alexei and his church. He occupies the enormous building of the former German Embassy in Moscow, and receives 50,000 rubles a month (compare that with the 2,000–4,000 rubles of a qualified worker's wage.—Editor). He has received many decorations and medals from Stalin for his services to the Communist Party. Since the cold war began, Patriarch Alexei has organized powerful propaganda channels throughout the entire world; he organized, supported, and directed various "peace congresses"; protested against "United States bacteriological warfare" in Korea; attacked the NATO and SEATO systems, and in general, has tooted the Kremlin line, using for this purpose his connections with church groups in the satellite and neutral areas.

DESTRUCTION OF CHRISTIANITY IN UKRAINE BY MOSCOW

This history of the Russian Orthodox Church, as manifested in its activities in non-Russian areas, is exceedingly sad and un-Christian. That church in the time of the Czars was a powerful instrument of Russification and oppression of non-Orthodox populations. Now, under Communist Com-

missars it has become a tool of Bolshevik machinations. The Russian Orthodox Church never forgot nor forgave the Union of the Ukrainian Greek Catholic Church with Rome in 1596, and in its imperious big-brother spirit of "Be my brother or I'll slay you" has acted accordingly. Religious persecution and genocide were integral parts of the Russification programs launched by Peter the Great, Catherine the Great, and Czar Nicholas I. This program was merely perfected by Stalin and his able pupils, Khrushchev, Bulganin, and Molotov.

The Soviet Government's record of religious persecution in Ukraine dates back to the early twenties. However, the all-out genocidal attack on the Ukrainian Authocephalous Orthodox Church took place in the period 1926–1932 and this led to a total annihilation of church organization in Ukraine. Our well-meaning, but politically unsophisticated, hosts of these Russian "Christian leaders" would do a great service for the peace of the world by confronting them with certain pertinent questions. Some which might be asked are:

Where were these Stalin-appointed "Christian leaders," when Stalin and his bloodthirsty NKVD and MVD were liquidating the Ukrainian Autocephalous Orthodox Church on a mass scale? What happened to the four metropolitans of the Ukrainian Autocephalous Orthodox Church—Mykola Boretsky, who disappeared in 1937, and Vasyl Lypkivsky, Ivan Pavlovsky, and O. Vzovenevsky—all of whom were arrested and done away with in 1938? What became of 3,000 Ukrainian Orthodox priests and 34 Ukrainian bishops and archbishops, as well as thousands of lay and monastic clergy arrested by Stalin, the faithful protector?

It might also be pointed out to the visiting church leaders and especially to Metropolitan Nikolai Krutitsky that Prof. Ernst Tallgren (Forced Labor in Soviet Russia, by David J. Dallin and Boris Nicolaevsky) has stated that the most numerous of the political prisoners in the slave labor camps are "Ukrainian farmers, Catholics, and members of the Ukrainian Orthodox Church."

PATRIARCH ALEXEI LED ATTACK ON UKRAINIAN CATHOLICS

In 1945, when Soviet troops occupied western Ukraine, Patriarch Alexei spearheaded a Kremlin-inspired drive to liquidate the Ukrainian Catholic Church. He invited the Ukrainian Catholics to apostatize, using language hitherto unknown in any church: "Where is the Vatican leading you at this present time, by the Pope's addresses at Christmas and at the New Year? To complicity with the abetters of Fascism and to mercy toward Hitler, the greatest scoundrel the world has ever seen." (Cf. Martyrdom in Ukraine, by Walter Dushnyck, the America Press, p. 23.)

On April 11, 1945, the NKVD launched a brutal attack upon the Ukrainian Catholic hierarchy, which included the arrest and trial of 10 Ukrainian Catholic bishops. Out of 3,600 Ukrainian Catholic priests at least 50 percent were arrested, tried, and executed or deported to slave labor camps; many went into hiding while only a small minority succumbed to pressure and accepted the imposed "orthodoxy."

Patriarch Alexei gave an ultimatum to the Ukrainian priests after ordering the arrest of their hierarchy to "break, tear the bonds which bind you to the Vatican." Immediately the Soviet Government, by an official note signed by P. Khotchanko, representative of the Council of People's Commissars for the Affairs of the Russian Orthodox Church on the Council of People's Commissars of the Ukrainian SSR, took oppressive measures. An appeal of 300 Ukrainian Catholic priests to Molotov sent on July 5, 1945, was totally ignored.

The hierarchy went down the path of martyrdom without breaking their ancestral faith or betraying their own people. They included: Metropolitan Joseph Slipy, Bishops Kotsylovsky, Khomyshyn, Budka, Lakota, Latyshevsky, Charnetsky. Some of them were sentenced for collaboration, and some found death in accidents, like Bishop Romzha, of Carpatho-Ukraine; some were kidnaped, like Msgr. Peter Verhun, Apostolic Visitator in Germany, Msgr. Augustine Voloshyn, President of Carpatho-Ukraine, and others.

Thus was the Ukrainian Catholic Church brutally destroyed with the active help and participation of Patriarch Alexei's insidious apparatus, known as the Russian Orthodox Church, supported and financed by the atheistic government of the Kremlin.

On two occasions Pope Pius XII issued special encyclicals, Orientales Omnes (December 23, 1945) and Orientales Ecclesias (December 15, 1952) in defense of the persecuted Ukrainian Catholic Church, which has since come to be known as the "Church of Silence" and the "Church of the Catacombs."

SECRET POLICE-CONTROLLED CHURCH

The National Council of Churches should also be cognizant of the fact that Metropolitan Nikolai Krutitsky has been used by the Kremlin, with his consent and approval, for various international gatherings, where he, behind his ecclesiastical garb, endeavored to promote the political aims of the Soviet Government.

That many Russian Orthodox priests are selected and trained by the MVD is a secret to no one. In 1949 there were rumors that 3,000 agents were trained in the U. S. S. R. and dispatched to the West as ministers of religion. (Cf. Der Kampf des Kommunismus gegen die Religion, by Gary MacEoin, Aschaffenburg, 1952; Communist War on Religion, New York, Devin-Adair, 1951, p. 13.)

Lt. Col. Yuri Rastvorov, who defected from the Soviet secret police in 1954, recently testified before the Senate Internal Security Subcommittee on Communist Infiltration of Churches in the U. S. S. R. He stated that during World War II, when Stalin decided to present an appearance of greater religious freedom, he appointed Maj. Gen. Georgi Karpov of the MVD as the head of the Council of Ministers Committee on Religion in the U. S. S. R. The MVD general's principal task was to see that the Russian Orthodox Church remained completely under secret police control. Rastvorov testified that he knew of two MVD agents who were assigned to enter seminaries as divinity students. "These men," he said, "are now bishops in the Russian Orthodox Church."

Who knows, maybe some of them are in the group invited by the National Council of Churches?

It is gratifying that the number of prominent American leaders who understand the essence of Russian communism and its multiple arms of operation is steadily growing. In our own Congress the resolutions submitted by Senator HUMPHREY, of Minnesota, and Congressman DODD, of Connecticut, on the genocidal persecution of Christianity in Ukraine are aimed to test the supposed reasonableness of the collective leadership, which attributes the horrors of the past to Stalin. The rehabilitation of the Ukrainian Orthodox Church and the Ukrainian Catholic Church would not be posthumous, for they are not dead functionally.

Therefore, the visit of the Russian Christian leaders presents a most appropriate occasion for their responses to questions on the attempted genocide of the church in Ukraine. It is not in the interest of our national security and our moral beliefs to permit uncontested dissemination of regimented misrepresentations on freedom of religious worship and conscience in the Soviet Union, when, as we know well on the basis of irrefutable facts, such do not exist.

Politics in Hells Canyon and What It May Cost the Taxpayers

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. HOSMER. Mr. Speaker, an interesting report has been prepared by Eugene F. Rinta, research director for the Council of State Chambers of Commerce, on the Hells Canyon issue. The report discusses not only the politics currently embroiled in the issue, but accurately shows what the cost of the project would be to the taxpayers of each of the States.

Unfortunately, the report does not include in its State-by-State tabulation of costs the very substantial additional and hidden cost of the Federal project represented by the interest the taxpayers must pay on the money borrowed to build the project. On a 50-year repayment schedule at 2½ percent per year, 125 percent interest would be paid on the gradually diminishing balance of principal.

Elsewhere in today's RECORD, I am discussing the contrasting approach to water-resources development being adopted by the State of California. My hope is that it will be read and compared with the following report on Hells Canyon by Mr. Rinta:

POLITICS IN HELLS CANYON AND WHAT IT MAY COST AMERICAN TAXPAYERS

The majority leadership in Congress seems determined to put through a bill which would add a totally unnecessary burden of one half billion dollars on American taxpayers. The first official move in this direction was made last week by the Senate Interior Committee when it favorably reported S. 1333. This bill, introduced by Senator MORSE, of Oregon, authorizes construction of a Federal hydroelectric project at Hells Canyon in the Snake River between Idaho and Oregon. A similar bill, H. R. 4719, introduced by Representative FROST of Idaho, will be voted on by the House Interior Committee June 26.

Federal construction of this project is unnecessary for the simple reason that the power potential of the Hells Canyon reach of the Snake River is already in process of development with private financing. On August 4, 1955, the Federal Power Commission, acting in accordance with its responsibility under the Federal Water Power Act of 1920, issued a license to the Idaho Power Co. to construct three hydroprojects in the Snake River. Three months later construction workers and equipment were at the site of the first dam to be built and work on it has now been under way over 7 months.

If the Federal Hells Canyon project should be authorized and started, however, the private development would, for practical purposes, have to be stopped. Moreover, the millions of dollars spent and the work done to date would be wasted because the Federal project would be located at a different site than the first dam under the company's plan. There is the probability, too, that the taxpayers would have to bear this loss since the company is proceeding under a duly authorized Federal license.

Since a move is on, nevertheless, to authorize the Federal project, the obvious question is, Why? In considering the question,

account should be taken of these facts from proceedings of the Federal Power Commission on the matter:

1. The decision of the FPC in granting the license to Idaho Power Co. was no hurried action. It was made after lengthy hearings and study and after opponents, as well as proponents, of private development of Hells Canyon had been given ample opportunity to be heard.

2. There is very little difference in the power-producing capacity of the company's three dams and the proposed single Federal dam. The dependable capacity of the former will be 767,000 kilowatts as compared to 785,000 kilowatts for the Federal dam. The Federal project, however, would cost a quarter billion dollars more than the three-dam project.

3. The FPC found that other benefits, such as flood control, navigation, and recreation, "could be effectuated to about the same extent under either the private or Federal plan of development." The Commission noted, however, that under private development these benefits "will be realized without expense to the United States."

4. The Commission concluded that the private company's three-dam project "is best adapted to a comprehensive plan" for developing the Snake River in the Hells Canyon area. It also stated its judgment that "the United States itself should not undertake the development of the water resources of the Hells Canyon reach of the Snake River."

THE POLITICAL ANGLES IN THE HELLS CANYON BILLS

It is clear from the findings of the FPC that the power needs of the Pacific Northwest will be served sooner and just as well by the company's plan as by the proposed Federal project. The main difference is that the Federal project requires involuntary financing by all taxpayers while the private project is being financed by investors. A second difference is that the private project will help finance Government to the tune of almost $10 million a year in taxes.

What, then, is the reason for the present effort to substitute the Federal project for private development at Hells Canyon? The only apparent logical reason is that its supporters believe it will serve a political purpose. Here are some of the political angles in connection with it:

1. The 2 bills being actively considered in the Senate and the House were introduced by 2 Members of Congress who have campaigned in the past and continue to campaign on the basis of putting through a Federal Hells Canyon bill.

2. The granting of the license to the Idaho Power Co. has been termed by some administration opponents as a "giveaway" by the administration; and this charge is being made in spite of the fact that it was a unanimous decision by a bipartisan commission. Nevertheless, some politicians seem to think political hay can be made from the charge, not taking into account, of course, the fact that they open themselves to the charge of taking away money from taxpayers of all the States for an unnecessary purpose.

3. The Federal Hells Canyon project was included in Senate Majority Leader LYNDON JOHNSON'S 13-point program "from the heart" which he announced last November as the legislative objectives of his party in 1956.

4. Representative CHENOWETH, Republican, of Colorado, who has previously opposed the Federal project, informed the press June 11 that he had made a deal with House Speaker RAYBURN to get the Hells Canyon bill out of the House Interior Committee, of which he is a member. By his agreeing to vote for the bill, or abstain from voting, the deadlock in the committee would be broken. In return for this action, he said, Speaker RAYBURN agreed to use his influence to get the $156 million Fryingpan-Arkansas bill cleared for House action. This Colorado project, incidentally, was also included in Senator JOHNSON'S 13-point program.

WHAT THE FEDERAL PROJECT WOULD COST EACH STATE

So that taxpayers of each of the States can see how much money will be taken unnecessarily out of their States to finance the Federal Hells Canyon project if it is approved by Congress, the table below allocates its cost to the States on the basis of their respective shares of the present Federal tax burden. The $508.3 million total cost consists of $356.8 million for project construction, $22 million for interest during construction, and $129.5 million for transmission facilities.

	Percent of Federal tax burden borne by the States	Cost of project to the States
Alabama	0.91	$4,625,530
Arizona	.42	2,134,860
Arkansas	.46	2,338,180
California	9.29	47,221,070
Colorado	1.14	5,794,620
Connecticut	1.88	9,556,040
Delaware	.52	2,643,160
Florida	1.62	8,234,460
Georgia	1.34	6,811,220
Idaho	.25	1,270,750
Illinois	7.59	38,579,970
Indiana	2.41	12,250,030
Iowa	1.26	6,404,580
Kansas	.98	4,981,340
Kentucky	.99	5,032,170
Louisiana	1.10	5,591,300
Maine	.37	1,880,710
Maryland	2.19	11,131,770
Massachusetts	3.24	16,468,920
Michigan	5.66	28,769,780
Minnesota	1.70	8,641,100
Mississippi	.45	2,287,350
Missouri	2.47	12,555,010
Montana	.30	1,524,900
Nebraska	.74	3,761,420
Nevada	.17	864,110

West Virginia	.66	3,354,780
Wisconsin	2.00	10,166,000
Wyoming	.15	762,450
District of Columbia, Hawaii, Alaska, etc	1.25	6,353,750
Total	100.00	[1] 508,300,000

[1] Estimate as submitted by a representative of the Department of Interior to the Senate Interior Committee during its hearings on the bill.

New History of the Democratic Party

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. LESINSKI. Mr. Speaker, no chapter of the history of the Democratic Party glows with greater brilliance than the chapters which record the ideals and the leadership of President Franklin D. Roosevelt.

The fifth part of the New History of the Democratic Party was carried in the April issue of the Democratic Digest and is entitled "F. D. R. Leads America to New Frontiers." I ask unanimous consent that this further chapter in this great political story be included in the Appendix of the RECORD.

I should like to point out in particular the first paragraph of the article, in which we are told of how in 1921, when the Republicans took over our Government they brought in high-priced publicity men to dress up their schemes to benefit favored interests. We have seen the same thing, only in the modern garb of TV, and high-pressure advertising, occur in 1952 and the succeeding years. How long do the Republicans feel they can continue to hide the truth of their actions behind the high-powered pitchmen of Madison Avenue advertising agencies.

F. D. R. LEADS AMERICA TO NEW FRONTIERS: FROM NORMALCY TO THE NEW DEAL—PART 5 OF A NEW HISTORY OF THE DEMOCRATIC PARTY

When the Republicans took over the National Government in 1921, back into control came the men representing the same groups that were the favored interests of Hamilton's day. They moved more carefully now. They hired high-priced publicity men to dress up their schemes in fine-sounding slogans like "normalcy" and "rugged individualism." Instead of openly opposing laws which regulated big business in the public interest, they sabotaged their administration.

But the results were the same: The tariff went up; speculation and credit schemes increased, creating an illusion of prosperity. There was a series of scandals and a long farm depression. Then the whole economy came toppling down in the greatest depression in history.

Deprived of Wilson's leadership, Democrats became confused once again. The party became tangled up in the prohibition issue. But although the party lost three consecutive elections, some victories were achieved. Led by Senator Thomas Walsh, of Montana, Democrats in Congress exposed the corruption of Teapot Dome, a plot to rob the people of hundreds of millions in oil reserves. These were the years of bitter struggle for farm-relief legislation. Though the McNary-Haugen farm bill was vetoed by Coolidge, and again by Hoover, and though the farm program which was written into law in 1929 was an inadequate stopgap, the champions of farm parity in this period laid solid groundwork for the constructive measures for agricultural recovery which came in the New Deal years.

One of the Democratic leaders of this time deserves special mention. His career shows how, in the Democratic Party, men from the humblest beginnings have been able to make important contributions to good government. Al Smith was an orphan boy. He grew up in a tenement house in New York's lower East Side, where lived Irish, Italians, Poles, and other new Americans. Al Smith never had a formal education. But he had a deeper understanding of the common people, of which he was surely one, than any leader of the time. He started in politics at the bottom: poll watching for his ward organization. Through native brilliance and hard effort, he worked his way through every level of government to become four times the governor of New York. In his administrations were nurtured many of the programs later to be adopted on a national scale. Nominated for President by the Democratic Convention of 1928, Smith was beaten in a cam-

paign in which religious bigotry was callously exploited for political advantage. But, like Bryan before him, he had awakened a new spirit which was to contribute enormously to the party's future success.

What ultimately brought victory, setting the stage for the longest continuous period of Democratic government the Nation had seen, was (1) the inability of the Republican Hoover administration to deal with the great depression, and (2), the Democratic response to that challenge. Volumes have been written trying to explain the causes of the national catastrophe which struck the country in 1929 and deepened through the next 3 years. But whatever the cause, the Republicans had no cure. Trapped by their own philosophy of negative government, they waited vainly for the stricken business community to right itself. At the depth of the depression, unemployment stood at 14 million persons. Wages were down 60 percent, business income down 50 percent. One of every four farms was bankrupt, and two-thirds of the Nation's banks were closed. Without jobs, often without food, millions saw their savings disappear and their years of work and education go for nothing.

In this crisis, the people turned once again to the Democratic Party. They elected as President, Franklin Delano Roosevelt who had pledged them a New Deal and fresh opportunity in their economic life. From that day and for the next 20 years, under Roosevelt and later under Harry S. Truman, the Democratic Party worked to make good on these promises. The story of the Democratic Party durng these years is partly the story of how a party helped a country convert economic disaster into unparalleled prosperity, partly the story of how a great leader turned the country away from isolationism to undertake tasks which made it the foremost Nation in world affairs.

Few need to be reminded of Franklin D. Roosevelt. The confident smile, the jauntily-tilted cigarette holder, the magnetic personality are deeply etched into the American memory. Roosevelt combined Jefferson's philosophy and Jackson's courage with Wilson's ability to tap the moral reserves of the people.

When he took office, Roosevelt frankly surveyed the desperate conditions about him, but he did not despair. "The only thing we have to fear," he said, "is fear itself." He regarded the crisis as an opportunity for a modern application of Jefferson's faith in the people and the pioneers' faith in themselves. He said:

"These unhappy times call for plans that build from the bottom up instead of from the top down * * * that put their faith once more in the forgotten man at the bottom of the economic pyramid * * * I, for one, do not believe that the era of the pioneer is at an end; I only believe that the area for pioneering has changed. The period of geographical pioneering is largely finished. But, my friends, the period of social pioneering is only at its beginning. And make no mistake about it—the same qualities of heroism and faith and vision that were required to bring the forces of nature into subjection will be required—in even greater measure—to bring under proper control the forces of modern society."

With these words, the Roosevelt administration set in motion a program that reached to every major source of economic distress.

In retrospect, the speed and the orderliness of the New Deal achievements seem almost equally as remarkable as their magnitude. These features of the Roosevelt leadership are emblazoned on the record of F. D. R.'s first 100 days.

In that relatively brief period, the main structure of the New Deal was built. All of that was done without any semblance of Executive dictation. Measures were submitted to the full test of unfettered debate in Congress and the other public forums. Action resulted not from the cracking of Executive or legislative whips, but from general recognition that the proposals constituted urgently needed reforms. This represented Executive leadership and governmental teamwork in their finest sense.

From the White House came a series of Presidential messages dealing with emergency banking legislation, economy in Government, repeal of prohibition, agricultural and unemployment relief, a new farm program, safeguards on stock-market trading, mortgage relief, railroad coordination, Government reorganization, industrial recovery, world disarmament, and other major questions.

From Congress came legislative enactments which set the Nation on the highroad to recovery and expansion—the Emergency Banking Act, Agricultural Adjustment Act, Civilian Conservation Corps, National Recovery Administration, Public Works Administration, Securities and Exchange Act, Federal Deposit Insurance Corporation, Home Owners Loan Corporation, Tennessee Valley Authority, and the Farm Credit Act, among others.

None of these programs passed without opposition. Roosevelt's New Deal was accused of subverting the American system of free enterprise. Actually, it was designed to save it. The New Deal was based on a concept it took America five depressions to learn: that the roots of free enterprise are in a prosperity that is broadly shared by all elements of the population. The soundness of these programs show up in the fact that, 25 years later, they are an accepted part of American life.

At the same time that it combatted the depression, the Democratic New Deal had vision enough to make longer range plans for the prosperity of the country. America's soil and forests had become depleted through reckless use. A large-scale conservation program was instituted, so that Americans in the future could have the full benefit of this natural wealth.

The potentialities of another resource, water power, had long been neglected. But in programs like the Tennessee Valley Authority, it was used to bring the comforts of modern civilization to people who had never seen an electric light.

Under President Truman's leadership, the major New Deal programs were broadened and extended. The fight against monopoly was stepped up, and slum clearance projects were started to give decent housing to those whom large-city life had crowded together. At the end of 20 Democratic years, the Nation could look with pride at this record:

	1932	1952
Unemployment	14 million	1.9 million.
National income	$87.8 billion	$289.5 billion.
National product	$110 billion	$328 billion.
Worker's weekly paycheck.	$17	$65.
Net farm income	$1.9 billion	$14.1 billion.
Corporation income (after tax).	$3.4 billion (minus).	$18.3 billion.

In 1954 and 1955, the Nation had particular reason to recall with gratitude the constructive work that was done under the New Deal and Fair Deal. President Eisenhower, in his economic report to Congress in 1955, spoke with gratification of economic safeguards which had been erected since the last depression, giving the Federal Government means which had been instrumental in enabling this Nation to ride out the recession of 1953–54. The bulwarks to which he referred included 17 measures—all of New Deal-Fair Deal origin. But, of course, Mr. Eisenhower did not mention either the New Deal or the Fair Deal, or their architects, in pointing with pride to the Federal Government's greater capacity to deal with abrupt swings in the business cycle.

The Nation had occasion to recall Roosevelt's first hundred days somewhat earlier—on April 29, 1953—when the first hundred days of the Eisenhower administration came to an end. It is doubtful if there is one instance of Eisenhower initiative in that period which will be remembered. If anything is remembered, it will be Eisenhower's irresolution in those days—an attitude which is a continuing feature of his administration.

The contrast between Presidents has been preserved in the comments of independent observers, whose appraisals reflect the responsible opinion of the two different periods. For example, on April 30, 1933, the New York Times said:

"The solution of one difficulty after another has been so steadily adopted by the President as now to seem almost his fixed policy. * * * Mr. Roosevelt's courage and resourcefulness and versatility in pressing one high matter after another upon the attention of the Congress are as admirable as they are unprecedented."

On April 17, 1953, Walter Lippmann, sizing up the Eisenhower administration's record in its first 3 months, said: "There is a rather general feeling in Washington that the administration has not yet shown the leadership, direction, and purpose which the country expected and the times require."

As was the case in the times of Roosevelt and Truman, world unrest and a revolutionary system of terror and tyranny were casting threatening shadows when Dwight Eisenhower took office. In the records of his two Democratic predecessors is etched the type of Presidential leadership which strengthens the Nation during a time of crisis, and prepares it for the greater tasks that lie ahead.

The Trend Toward Ignorance

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column of Mr. George Sokolsky's which appeared in the Washington Post and Times Herald on Wednesday, June 27, 1956:

THESE DAYS

(By George Sokolsky)

THE TREND TOWARD IGNORANCE

As we approach the election of a President, how much do we really know about the business of our Government? This question is not asked facetiously; it is a realistic response to the difficult problem of getting at the facts. For instance, at this moment of writing, I hear over the radio that Nasser of Egypt is considering a billion dollar loan from Soviet Russia. What are all the factors which brought about the complete failure of American policy in the Middle East?

It is possible to get at some data, particularly by reading British newspapers and noting the debate in parliament, but the data is inadequate. Too much is hidden.

James S. Pope, executive editor of the Louisville Courier-Journal, made this point:

"To me the most insidious and dangerous thing about this fight for freedom of information is that it goes on day after day. It accumulated to such an extent we could hardly grapple with it. I think one of the most valuable things the newspapermen of this country could do, or the committee of

Congress could do, would be to try to understand why this basic right, of all basic rights, is so disregarded and permitted to slip away from us. I am inclined to think it actually might be more dangerous to vote out of ignorance than not to have the right to vote at all."

Unfortunately our people have become accustomed to voting for a glamorous personality rather than over issues. There has been no realistic debate over domestic issues or the foreign policy since the 1932 campaign, which is very far off.

The fact of the matter is that the American people are not being adequately informed by their Government. Things leak out and the reporters and columnists dig out items, but officially there is too much secrecy for our good, and were it not for a few congressional committees and the occasional off-the-cuff remarks at the press conferences of the President and the Secretary of State which give leads to what has been suppressed, we would indeed be in an informational blackout.

One of the major difficulties is that we are in the shadow of war and officials tend to make use of that to label items as secret which cannot reasonably be regarded as secret. J. R. Wiggins, executive editor of the Washington Post and Times Herald, testifying before a congressional committee, gives this example:

"An example of classification of material not really classifiable, under Executive Order 10501, in our opinion, was the Gen. Matthew Ridgway letter of June 27 (1955). This was classified as 'confidential,' but in explaining the classification at his press conference, the Secretary of Defense said it was withheld because it might be misunderstood if published at the time of the Geneva Conference. We have not found in the definition of the 'confidential' category any mention of matter that might be misunderstood. That the Secretary has thought this appropriate classification gives us some unease about the standards that the Defense Establishment may be applying generally."

Here was an item suppressed for obviously political reasons. But what of the American people? Are they not entitled to know what is going on, why our taxes are so high, and why the expenditures do not achieve the desired results?

We have recently witnessed the spectacle of generals and admirals and members of the Cabinet appearing before a Senate committee and announcing to all the world with some detail that the Russians are beating us in the armament race. On this subject there should be a free debate during the forthcoming election and the facts should come out. Undoubtedly the Russians know what the facts are and perhaps will publish them in Pravda.

Mutual Security Act of 1956

SPEECH

OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11356) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. RADWAN. Mr. Chairman, I want to join with the other members of my committee and the many Members of the House who are taking this opportunity to pay tribute to our retiring chairman, JAMES RICHARDS.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield for a unanimous consent request?

Mr. RADWAN. I yield.

Mr. HOFFMAN of Michigan. Mr. Chairman, I ask unanimous consent that all Members of the House may extend their remarks in praise of the chairman at any point in the RECORD they may desire.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. RADWAN. Mr. Chairman, it is said that some men are born great, that some achieve greatness, and that some have greatness thrust upon them. I am not prepared to say which of these categories would apply to JIM RICHARDS, but I think we can all agree that when the gavel falls for adjournment of the present session, this legislative body will have lost the services of a great man. It has been my good fortune and privilege to have served with Chairman RICHARDS on the House Foreign Affairs Committee and to have received the benefit of his fine leadership. My best wishes go with him as he leaves us for greener pastures.

Mr. Chairman, it is because I hold JIM RICHARDS, our illustrious committee chairman, in such high esteem, that it is all the more difficult for me to disagree with him at this time. Yet I was among those who, in committee, supported President Eisenhower's original request, and I want to lend my support at this time to the Hays amendment which would restore a substantial portion of the cut made by our committee. JIM RICHARDS would be the last person to expect one of his colleagues to act contrary to his firm legislative convictions.

I have always believed in the wisdom of our mutual-security program. I most firmly believe today that this program has been a success from its inception under a Democratic President, to its present state of development under a Republican President. I mention this, Mr. Chairman, because I recognize no partisanship in the field of international affairs. That is why it had my sincere support under a Democratic President just as a great number of Democrats now support it under the leadership of President Eisenhower. I have accepted this program because it coincides with my firm convictions. Even if it did not, I think I could still do so on faith. I speak of my faith in the leadership of the United States of America, and that leadership today is President Eisenhower. As that great American and distinguished Democrat, the illustrious Speaker of this House, Mr. SAM RAYBURN, has pointed out, we have only one President of the United States. He is the voice of America, or we have no voice in the world.

This program is essential to our national security and well-being as a nation and could be justified solely on the basis of our own self-interest. If this program were a part of our defense budget, no Member here today would vote against it. Yet, who can deny that it is just as essential to the defense of this country as are the dollars which we have appropriated for defense this year? It is an absolute fact that the money which we include here for foreign military aid represents a present and future saving in our defense budget. It could just as well be appropriated under the heading of defense. At the present time, we have only 2 divisions in Korea, compared with 6 a few years ago. Why? Simply because the Koreans themselves now have some 20 divisions in the field thanks to our aid and help.

It is as simple at that. It costs us far, far less to equip a Korean soldier in Korea, or a Turkish soldier in Turkey, to hold the line against Soviet communism, than it does to wrench an American boy from his family, and send him off to some foreign land, at the end of a supply line thousands of miles long. The foreign military aid requested by this administration would support about 200 divisions in the armies of our cooperating allies. That is many times the strength of the American Army. Yet those who would cut that request of President Eisenhower today, are the very ones who express great fear that our defense budget is being too drastically curtailed. The fact is that if we were to eliminate $2 billion in foreign military aid this year, our defense budget would have to go up at least $6 billion. You cannot "rob Peter to pay Paul". Neither can those who expres fear that our foreign military aid program is too large, and that our defense appropriations are too small, blow out of both sides of their mouths at the same time.

President Eisenhower is not only our present Commander in Chief, but he led us to victory in the greatest war in history. I do not follow him slavishly when I suggest that his recommendations are entitled to great weight.

There is no lessening in world tension. Everyone agrees that we must remain strong to survive. We are alarmed that some of our European friends feel that the Soviet military threat has ended. Yet there are those who would encourage them in that belief by cutting down the military program for Europe to the point where it cannot operate.

The $600 million which Representative HAYS would restore to this bill by his amendment is a lot of money, by any standard. But measure it against the productiveness of this Nation and our faith that it will survive and flourish. That sum is only fifteen one-hundredths of 1 percent of our gross national production. And we do not offer it in a world-destroying war. We are asked to appropriate it as a deterrent to war. On that basis alone, it is justified. Add to this, the overseas markets we create for our own products, with resultant prosperity in our own land, and add to this the strength we provide to those underdeveloped nations which would otherwise fall prey to Russian communism, and the arguments against the President's recommendations must fall.

The peace of the world and the welfare of those peoples allied with us in an effort to resist the aims of world communism cannot be measured in dollars and cents.

In brief gentlemen, passage of the Hays amendment is essential to the future security of our country.

Why Not Permit an Unbiased Commission of Nine Members To Appraise the Progress and Direction of the Nuclear Electric Power Program of the United States?

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. VAN ZANDT. Mr. Speaker, for many weeks the Congressional Joint Committee on Atomic Energy has listened to numerous witnesses comment on S. 2625, introduced by Senator GORE of Tennessee, which would direct the Atomic Energy Commission to construct six nuclear plants for industrial or commercial use in selected geographical regions.

As a result of the hearings on S. 2625 there has developed three definite trends of thought. One group feels that unless we accelerate our nuclear powerplant program we will lose the nuclear kilowatt race with Russia; another group is of the opinion the present program of the Atomic Energy Commission is in keeping with the development of the art; while the third group contends that the construction of six nuclear industrial and commercial powerplants would destroy the incentive of American industry in the nuclear field where millions of dollars have already been obligated.

Even though S. 2625 has been modified in many ways by the Joint Committee on Atomic Energy there still remains in the minds of many that the most logical approach in determining the progress and direction of the nuclear electric power program in the United States is through the appointment of a nonpartisan Commission on Nuclear Power. The Commission, after a thorough study, would make suitable recommendations as to where we stand as a nation in the kilowatt race with Russia and whether a crash program as now being advocated and costing millions of dollars is necessary.

Mr. Speaker, as a member of the Congressional Joint Committee on Atomic Energy, I have attended most of the hearings and I find myself greatly disturbed as to charges and countercharges regardless of their sincerity. It appears that everyone is groping for the right answer and that unbiased, nonpartisan, expert guidance is the need of the hour. It is for that reason that I have introduced the following joint resolution which would create a commission of nine persons all experts in one or more fields of nuclear science, engineering, economics, and electric utilities.

It will be the duty of this Commission, after a thorough study of the state of the art of electric power generation from nuclear sources in the United States and such other countries as the Commission may deem appropriate, to recommend, if any, revisions of the present nuclear power program of the United States and suggest legislation deemed necessary as a result of its study.

The joint resolution is as follows:

Joint resolution to establish a Commission to appraise the progress and direction of the nuclear electric power program of the United States of America

Whereas the Atomic Energy Act of 1954 declares it to be the policy of the United States that the development, use and control of atomic energy shall be directed so as to make the maximum contribution to the general welfare; and

Whereas the possibility of developing economically competitive generation of electric power from nuclear sources gives promise of making a major contribution to the general welfare of the United States and to the promotion of world peace; and

Whereas questions have been raised whether the present direction and progress of the nuclear power program of the United States are appropriate and adequate to the rapid achievement of these goals: Be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,

(1) That there be appointed a Commission on Nuclear Power consisting of 9 members of which 3 shall be appointed by the President, 3 shall be appointed by the President of the Senate, and 3 shall be appointed by the Speaker of the House of Representatives.

(2) That members of such Commission shall be chosen for their expertness in one or more of the fields of nuclear science, engineering, economics and electric utilities. They shall serve without compensation but shall be reimbursed for travel and other expenses.

(3) That the Commission shall study and report to the Congress not later than January 1, 1957, with respect to—

(a) the present state of the art of electric power generation from nuclear sources in the United States, and such other countries as the Commission may deem appropriate;

(b) the present state of the economics of conventional electric power generation in the United States and such other countries as the Commission may deem appropriate;

(c) its recommendations, if any, for revision of the present nuclear electric power program of the United States and for whatever legislation it deems necessary as the result of its study.

(4) The Commission is empowered to appoint such experts, consultants, technicians, and clerical and stenographic assistants as it deems necesary and advisable. No member of the Commission or individual in its employ shall be permitted to have access to restricted data unless and until the requirements of section 145 of the Atomic Energy Act of 1954 shall have been fulfilled with regard to such member or individual. The Commission is authorized to utilize the services, information (including restricted data subject to the requirements of the preceding sentence), facilities, and personnel of the departments and establishment of the Government.

(5) Vacancies in the membership of the Commission shall not affect the power of the remaining members to execute the functions of the Commission, and shall be filled in the same manner as in the case of the original selection. The Commission shall select a chairman and a vice chairman from among its members.

(6) The Commission, or any duly authorized subcommittee thereof, is authorized to (a) hold such hearings, (b) sit and act at such places and times, (c) require, by subpena or otherwise, the attendance of such witnesses and the production of such books, papers, and documents, (d) administer such oaths, (e) take such testimony, (f) procure such printing and binding, and (g) make such expenditures, as it deems advisable.

(7) The expenses of the Commission, which shall not exceed $_____, shall be paid one-half from the contingent fund of the Senate and one-half from the contingent fund of the House of Representatives upon vouchers signed by the chairman of the Commission. Disbursements to pay such expenses shall be made by the Secretary of the Senate out of the contingent fund of the Senate, such contingent fund to be reimbursed from the contingent fund of the House of Representatives in the amount of one-half of the disbursements so made.

Clover for the Kremlin

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Mr. Joseph Alsop which appeared in the Washington Post and Times Herald on Wednesday, June 27, 1956:

MATTER OF FACT
(By Joseph Alsop)
CLOVER FOR THE KREMLIN

The more you study the Middle Eastern crisis, the more you suspect that the essential preliminary of the Soviet intrusion in the Middle East was the famous summit meeting at Geneva, with all its adman's hopes and glories.

Tentative discussions of the crucial Soviet-Egyptian arms deal had, of course, been opened in the month or two before the summit. Yet before boldly probing for the very vitals of the Western alliance, the Soviet leaders must at least have wished to know how the West would react. They got the answer at the summit.

The President of the United States and the Prime Ministers of Great Britain and France went to Geneva with the singular purpose of proving that the great powers of the West were passionately, unshakably dedicated to peace at any price. There was no better way to encourage the Soviets to take any cold war risk they chose.

In addition, it is now known that President Eisenhower actually mentioned the Soviet offer to sell arms to Egypt, to Bulganin and Khrushchev. According to authentic report, the President was airily told that this was "just an ordinary commercial transaction." Apparently this piece of arrant nonsense was not treated with the contempt and indignation it deserved. So the Soviet leaders left Geneva with complete assurance that they could safely stick a shiv right into the most vulnerable point of the Western Alliance.

Even then, energetic action might well have prevented the worst from happening. Egypt's President Gamal Abdel Nasser had asked for a small quantity of American arms long before he began his talks with the Soviets His sole concern was then to get some arms—any arms at all—to satisfy the army on which his power depended. All competent observers in Cairo agree that Nasser did not foresee the volume results that the Soviet arms deal would produce.

On this point, the American Government had received a long series of frantic warnings from our Ambassador to Cairo, Henry A. Byroade (who is now apparently to be made a scapegoat). These warnings were ignored.

The American arms were withheld. The Soviet-Egyptian arms deal went through.

Thus Nasser emerged as the predominant figure in a greatly strengthened Arab nationalist movement, made independent of the West by Soviet support. Thus the Soviets took the first long step toward capturing Arab nationalism, and using this nationalist movement as the instrument to strike at the vital Middle Eastern oil sources of the Western Alliance.

The American reaction to these tremendous developments was uncertain, to say the least. After the fall of Glubb Pasha in Jordan, however, the British reaction was violent. The British Cabinet decided that Britain would use troops in the Middle East, if this were needed to save the oil that is Britain's lifeblood.

Wisely or unwisely, they proved their resolution by ordering the fight for Cyprus.

Such was the situation when Bulganin and Khrushchev went to London. It can now be revealed that British Prime Minister Sir Anthony Eden and Foreign Minister Selwyn Lloyd used the strongest tone possible in their discussion of the Middle Eastern problem. They flatly accused the Soviets of an intentional attack on an area of vital British interest. They warned they would fight to avoid losing the oil. Khrushchev and Bulganin only replied by hinting that they might agree to limitation of arms shipments to the Middle East if the British would abandon the Baghdad Pact—which they knew was impossible.

The upshot was deadlock. In Cairo and Damascus, the Soviet ambassadors subsequently told the utterly false story that the main theme of Khrushchev and Bulganin in London was the Soviet bloc's determination to give solid support to the Arabs against the Israelis. This was hardly less than an incitement to Arab-Israeli war. If the Kremlin chooses to take that risk, such a war will be a clear gain for the Soviets if the Israelis are defeated, for that will amount to the defeat of the West. And it will also be a clear gain if the Arabs are defeated, for then the Arab nationalist regimes will almost surely be supplanted in the end by Arab Communist regimes.

All the same, in his recent visit to Cairo, the new Soviet Foreign Minister, Shepilov, did not take the final step to bring on an Arab-Israeli war. He did not take the Arab position on Israel's proper frontiers. Shepilov's caution suggests that British firmness, despite its somewhat desperate tone, has made the Soviets at least think twice about the risks in the Middle East. And this in turn suggests that a firm, clear and united Anglo-American policy, if it can ever be worked out, may yet save the day in this critical area.

Writing to Legislators

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 20, 1956

Mr. CANFIELD. Mr. Speaker, the Greater Paterson Chamber of Commerce, of Paterson, N. J., has recently begun the publication of a monthly bulletin with news editorials and advertisements designed to keep its membership appraised of the chamber's programs and opportunities. In the current issue of the bulletin there appears on the editorial page a guide for communicating with legislators and other Government officials issued by the Greater Boston Chamber of Commerce. This guide appears under the caption "Writing to Legislators," and reads as follows:

WRITING TO LEGISLATORS

Chamber of commerce members are frequently asked to make their views known to their legislators, and sometimes businessmen wish to do so without being asked. A guide for communicating with legislators and other Government officials has been issued by the Greater Boston Chamber of Commerce, and we think it worth repeating here:

Don't look down on government and politics: They have their faults but so has business. A disdainful attitude is an expensive luxury these days.

Be understanding: Put yourself in a legislator's place. Try to understand his problems, his outlook, and his aims.

Be friendly: Don't contact your legislator only when you want his vote. Invite him to visit your place of business. Take pains to keep in touch with him throughout the year.

Be reasonable: Recognize that there are legitimate differences of opinion. Never indulge in threats nor recriminations. These are confessions of your own weakness.

Be thoughtful: Commend the right things which your legislator does. That's the way you'd like to be treated.

Don't be a busybody: Legislators don't like to be pestered or scolded or preached to. Neither do you.

Be cooperative: If a legislator or Government official makes a reasonable request, try to comply with it. Don't back away for fear it's a deal or that you're getting into politics.

Be realistic: Remember that most controversial legislation is the result of compromise. It always has been so and it always will be so in a democracy. Don't expect that everything will go your way, and don't be too critical when it doesn't.

Present accurate facts and good arguments: The mere fact that you want or do not want a piece of legislation to go through isn't enough. Present the best case that you can, without unnecessary words.

Give credit where it is due: If an issue goes the way you wanted, remember that legislators always deserve first credit, for their votes decided the issue. Remember, also, that on all the big issues, many organizations and individuals participated on your side.

Learn to evaluate the issues: The introduction of a legislative bill doesn't mean that it will become law. It usually is a long process. Whether you're for or against a bill, take the time to learn the who, what, and why of it, and don't get excited until you have learned. And don't use a cannon to kill a fly. An absurd bill generally kills itself, and it's not wise to attract too much attention to it.

Support your legislator actively: Don't become aloof at the time when he needs help the most, if he is deserving of election.

Bunker Hill Monument Address by Rear Adm. Bartholomew W. Hogan, Medical Corps, United States Navy, Surgeon General of the Navy

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the Bunker Hill, Mass., address made on June 18, 1956, at Charlestown, Boston, Mass., by Rear Adm. Bartholomew W. Hogan, Medical Corps, United States Navy, Surgeon General of the United States Navy.

This address was made by Admiral Hogan on the occasion of the celebration which took place this year on the anniversary of the Battle of Bunker Hill.

There is no man better qualified to have been the orator on such an occasion than Rear Admiral Hogan as he was born and brought up in Dorchester, Mass., which is in close proximity to Charlestown, and, like Charlestown, is a part of the city of Boston.

The address follows:

Here on glorious Bunker Hill we are commemorating today the 181st anniversary of an event which the great seal of the United States memorializes in two famous words—"Annuit coeptis"—God favored our beginnings. And as surely as that half of our national inscription is true, so surely also is its other half true of the Battle of Bunker Hill, that it was the first beginning of the new order of the ages.

Paradoxically, the event we are commemorating was an American defeat, if viewed on the military level. Due chiefly to the exhaustion of their ammunition, the embryonic American forces were here compelled to retreat. But what that bloody hour and a half on this very hillside brought into view of the embattled Boston militia—their mettle and stamina in standing up undaunted to the superior armaments of regular and seasoned troops, their unshakeable will to defend their freedom against any and all forces of oppression—that was indeed a triumph in whose effulgence was effaced the last slightest shadow of the military defeat. And so true is this claim of a triumph that Washington, when informed of the action on this hillside, and told of the gallantry with which our militia had withstood the first two double-column assaults of the British, foresaw at once the final outcome of our revolt clearly enough to announce: "Then the liberties of the country are safe."

About what precisely were they quarreling here on that bygone Saturday in June 1775? Was it an affair, as the great Webster asserted on this spot in 1843, when we were celebrating the completion of this magnificent memorial—was it an affair without "any just cause"? Was it simply, as in the next breath he added, that both combatants merely "wished a battle and wished it at once"? Was it no more than their itch of pugnacity, as I might say, that impelled them to "Cry havoc. And let slip the dogs of war"? Was that, in the words of Webster, "the true secret of the movements on this hill"? As he then told his auditors, he was speaking entirely from a military point of view. This hill, he was saying, in other words, had absolutely no strategical value at the time for either side.

Even when thus understood, they are baffling words; and to me, as both a doctor and military man, they are doubly confusing. Nothing so favors a sick person as a strong will to live. Nothing is so fatal to a soldier as the loss of morale. And so to me, as it ever has been and shall ever be, the true secret of the movements on this hill that glorious June 17 was the staggering blow it struck, first of all, to the spirit and morale of England. For months after that glorious 17th, British journals and magazines were venting their dismay over the astonishing fact that our citizen forefathers had here slaughtered more Redcoats in an hour and a half than the land forces of England, then the best in the world, had seen fall previously in any one engagement, not excluding their greatest—as for example, the cap-

ture of Quebec. And in the same grand measure, secondly, the movements on this hill that memorable afternoon steeled our morale and consolidated the Colonists anew in their noble determination.

"The threats of pain and ruin to despise,
To scatter plenty o'er a smiling land,
And read their history in a nation's eyes."

I grant you that these two results I have just mentioned were not the cause of the Bunker Hill engagement, but the consequences of it. What I am denying, and trust I have also disproved, is the assertion that the true secret of the movements on this hill was a mere itchiness to fight. Unless I have misread entirely the history of those early years, the true secret of the movements on this hill was the gage of steel then thrown by our forefathers to their arrogant overlords across the sea. Its true secret was the Declaration of Independence here made a full year in advance of July 1776. In brief, and in the vivid language of Shakespeare, the true secret was the forthright manly way in which our forefathers here told the world, that they were no longer going to pay tax or servile respect to anybody for wearing their own noses.

We may now return to our former question—what was it they were quarreling about on this hillside? Most heartily I accept Mr. Webster's eulogy of our American Revolution, when he said of it, at the cornerstone-laying of this monument in 1825, that it was "the prodigy of modern times, and at once the wonder and the blessing of the world." That prodigy, that wonder and God-given blessing, commenced here at Bunker Hill. So our question actually asks—what stake were we fighting for in our prodigious revolution? We all know perfectly the answer—the right of men to govern themselves. Or, in other terms, the right of men to their due enjoyment of social justice.

What must be here emphasized, because it is of supreme moment, is the order in this whole business. First the men—which of course means the family—father, mother, and children. For it is not the individual, the bachelor, it is the family that is the cell of civil society. Next, their rights—rights, you will notice, that they derive immediately from one source alone—the superlative fact and title that men are human beings—that they are persons—and were never intended to ask other human beings for permission to wear their own noses. Then, in the last place, and there in that place only, the government that these families freely choose for themselves. We may now reply to our question by saying, that we fought our revolution for the right of each human being to be properly free in the whole orbit of that universal order in which a loving Creator had placed each and every human creature.

Here we touch on one of the most significant issues of our day: The real, true, essential meaning of democracy. It is this living issue that will engage us during the remainder of this address—which I here promise you will not be too long.

I am not going to waste your time and mine in pointing out how widespread and various in our world of today is the disease that the late Henry Adams called the degradation of the democratic dogma. Rather I will get at once to our consideration of this dogma. And the best beginning, as we all admit, is a definition.

President Eisenhower, in his inaugural address, gave us his understanding of democracy in the following words: "It is our faith in the deathless dignity of man, governed by eternal moral and natural laws. This faith," he said, "defines our full view of life." If we reduce this to its elements, we are left with three factors—man, society, and their mutual relation. And again allow me to insist on your noticing the order. This view, this ideal, did it produce the democratic form of government? Or did the form of government produce the ideal, the view? Our whole future depends on the answer. And the answer—mark you—is one, and can be only one. For it is the answer of the eternal law. And the answer of the moral law. And the answer of the natural law. That answer has been graven ineffaceably into the very fiber and texture of your being. For it is also the answer of reason, it is the ideal, the view, that brings into existence the form of government. And any so-called government that goes counter to this ideal, this view, or dares to set aside the corollaries of the ideal, or the view, that travesty is a degradation of the democratic dogma.

Our ideal, our full view of life, was long since explained to us in language which is as precise as it is moving, and as profound in its meaning and import as it is familiar and dear to our hearts:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

We should not have time here to develop all the doctrine that is implied in this second paragraph of the Declaration. Into our Declaration of Independence, as one commentator said, shortly after it was published, Jefferson "poured the soul of a continent." In 1823, when Jefferson was 80 years of age, he wrote his good friend, "Light Horse Harry" Lee, that his manifesto "was intended to be an expression of the American mind." Much as this soul and this mind deserve our study, the present forbids us to pause for it a moment. But I should like to submit to your consideration three conclusions that follow immediately from our great manifesto and charter.

First. The terse quotation from it that I have just read you contains in germ or seedwise, everything essential to an effective democracy. It is a compact blueprint for the democratic form of society.

I am not making this boast simply because the manifesto is an American document. The boast would be just as true, and we in turn would acknowledge the sagacity of the manifesto just as completely, had it been formulated in France, or Spain, or Italy. As a matter of historic fact, the ideas our Declaration of Independence summarizes did not originate in our country, nor were they even elaborated by us. They testify to the slowly accumulated wisdom of man, garnered in the course of many centuries of thought, reflection, and experience, to which harvest many civilizations have contributed a share. But the everlasting glory of America—her greatest in my judgment—is that she was the first to bring these generous concepts and enfranchisements down out of the ivory tower of philosophical speculation—to proclaim abroad that they are relevant and even necessary to the forum of practical living—and to make them the bedrock of a giant nation. On July 4th, 1776, when the Declaration was adopted, postriders carried the news to all of the 13 colonies. Each rider carried also a copy of a letter from John Hancock, the President of the Congress. You can read there what I have just said—that the articles of the Declaration were to be "The ground and foundation of a future government."

Second. Our great manifesto or charter is primarily a view of man and society and their mutual relationships.

The three self-evident truths it enunciates relate exclusively to man. He is created, it says, on a footing of basic equality with his fellow man. He is endowed by his Creator, it continues, with certain rights, of which he cannot dispossess himself nor be dispossessed of by others. Among these and preeminently so, the Declaration concludes, are man's right to life, liberty, and the pursuit of happiness.

Having thus delineated man by some of his judicial attributes, the manifesto then turns to society. Civil society, it tells us, is a voluntary association of men equally created and equally endowed juridically, who have come together for the purpose, first, of securing these rights, and as a consequence and secondly, of prospering through their enjoyment of them, who ceased being just a crowd and became a society by their own free grant to their elected officers of the moral power to govern them—which we call authority. This is what our Founding Fathers meant by their declaration, that governments derive their just power from the consent of the governed.

They well knew the multiple inequalities by which one man has more, or less, than another. They were not concerned with this petty disparity, but with that paramount equality and essential parity by which each man is the equal of another and of every other. Also, they well knew from history how often and how completely man had been despoiled of these rights, even as their own experience under the crown told them directly what their reading had indirectly taught them. As well, then, as any Wordsworth, they had "reason to lament what man has made of man." And therefore, the more reason for asserting as they did, that these rights are integral and intestine to man, being rooted in and royally anointed by his nature. In other words, the Declaration of Independence says of man and his rights just what Christ said of man and his wife—"What God hath joined together, let not man put asunder."

We come now to the third conclusion we have drawn from our Declaration of Independence. Before entering upon its consideration, however, I must first prepare the way for it. For I am afraid it would be quite a surprise to many of our day, to be told of our Founding Fathers, that they were decidedly religious minded men. Yet, they were. About 5 years ago, a scholarly work on the church and state in the United States was brought out in 3 large volumes of 3,000 pages. Its author, Anson Phelps Stokes, was once the secretary of Yale University and also canon of the Washington Cathedral. It took 12 years of research and study to complete this history of church and state. The following quotation will serve, I trust, to predispose you properly for our third consideration: "Much less recognized, but equally clear, is the conviction of the founders of the vital importance of religion to the new nation. I expected, before I began this study, to find this true as far as President Washington and some of his associates. But I have been surprised at the mass of evidence to support the claims of religion in a republic as expressed by men like Thomas Jefferson and Benjamin Franklin, who have often been classed as freethinkers—the founders saw clearly and definitely that, without religion, a democratic government could not succeed. If men are all, as the Declaration of Independence stated, "created equal" and "endowed by their Creator with certain inalienable rights," the maintenance of communion with that Creator, which is the heart of religion, would seem both logical and vital."

Nothing could be truer. Happily it anticipates our third conclusion, that the Declaration of Independence set the foundations of democracy unmistakably on man as a being with religious responsibilities. Let us glance at this in detail.

Democracy, in its final analysis, is based on two axiomatic truths—human equality and human inherent rights. In formulating these truths into its articles, the declaration describes them as "self-evident" truths. What reason does the declaration give us for

accepting these truths as self-evident? One only, and it is this: That human equality and human inherent rights are the handwork and effects of the mind and will of the Creator. The Creator creates men equal. The Creator endows them with certain rights. Men are this because God made them such. Immediately it follows, then, by an imperative of reason, that God had a purpose in this work of His. If a purpose, then also an end. So the conclusion confronts us immediately—if God has established for man an end, toward which his justice expects man to tend throughout his entire life, then man must be free to seek that end. Which necessity was as clear to God in creating man as it is to us now in discussing it. Accordingly, God himself implanted in man an inalienable right to be free. The inference from this, which our Founding Fathers saw with almost inspired lucidity, might be expressed as follows: If the citizens of this Republic should ever become oblivious to their duties to their Creator, it must follow, as night does the day, that in still greater measure they will become oblivious also to their duties to their country. And that can mean only one thing—that our heroic experiment in government of the people, by the people, for the people must straightway and ingloriously perish from the earth.

I might now bring this part of your ceremony to its conclusion. I can think of no better way of doing so, nor do I know a note on which I might close half so appropriate to this occasion, as the following tribute to our illustrious forefathers of Bunker Hill, which was delivered to them 4 months after the battle, in the British House of Commons:

"To a mind who loves to contemplate—the glorious spirit of freedom—no spectacle can be more affecting than the action of Bunker Hill. To see an irregular peasantry, commanded by a physician, inferior in number, opposed by every circumstance of cannon and bombs that could terrify timid minds, calmly wait the attack of the gallant Howe, leading on the best troops in the world with an excellent train of artillery, and twice repulsing those very troops who had often chased the chosen battalions of France, and at last retiring for want of ammunition, but in so respectable a manner that they were not even pursued, who can reflect on such scenes and not adore the Constitution of Government which could breed such heroic men."

Iceland's Disaffection

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Washington Post and Times Herald on Wednesday, June 27, 1956:

ICELAND'S DISAFFECTION

Iceland's election is a reminder of the great difficulty of attaining security through an alliance. In 1949 Iceland adhered to the North Atlantic Treaty, and in 1951 she felt sufficiently insecure to authorize the construction of a great NATO airbase at Keflavik. In the interest of protecting Iceland as well as the United States, this country has spent $150 million on that base. Now the people of Iceland have returned to the Althing a majority of members representing parties that want the United States to withdraw its Armed Forces from that country. Even though a complete withdrawal may not be demanded, the vote is undoubtedly a blow to the cause of security in the Atlantic community.

Unlike the Soviet Union's relations with its satellites, NATO is a voluntary association of nations. State Department spokesmen have already indicated that the United States will withdraw its troops from Iceland if it is so requested. The result would be, however, to leave Iceland dangerously exposed and all of the free world less secure. It is difficult to believe that free Icelanders will carry their protest against the American base to the extent of destroying the only means of defense they have.

On the other hand, it is unmistakably clear that changes will have to be made if Iceland is to remain a valuable ally in the NATO system. The construction of an enormous air base in a country with only about 160,000 inhabitants has strained its economy, caused inflation, created labor shortages, and given the people a feeling of excessive American influence in the handling of their affairs. Aside from this, Britain's long controversy with Iceland over fishing rights brought the Soviet Union into the position of best customer for Iceland fish. Moscow's repudiation of Stalinism has also had its effect. In other words, the United States and Britain have taken Iceland too much for granted while the Soviet Union has been wooing her ardently.

The incident throws new emphasis upon the tightening of cultural and economic as well as political and military ties among the NATO countries. It is up to the United States to find out in detail the causes of Iceland's dissatisfaction over the operation of a NATO base on its shores, and, so far as possible, to remove those causes. Grievances on the part of one ally are almost certain to spread, unless corrected. NATO must not be permitted to fall apart at the seams for want of understanding of our allies or for want of the cement of economic and cultural cooperation.

Education Aid Bill May Fail

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Macomb (Ill.) Daily Journal of June 19, 1956:

EDUCATION AID BILL MAY FAIL

Odds are increasing that the proposal for Federal aid to education will not be adopted at this session of Congress. Time is becoming an important factor.

Merit or lack of merit should decide whether proposed legislation is adopted or defeated. None should be left to the chance of being caught in the logjam that comes with the tail end of a legislative session. But to counterbalance the loss of good legislation in such logjams, it is in order to count the gain of the death of bad legislation. The aid proposal comes under the latter heading.

It is now at rest in the House Rules Committee. If reported out, a minimum of 2 weeks will be required for House action. There is a question whether the Senate would have time to act in the remaining 3 or 4 weeks of the session.

Federal aid to education is not only unnecessary and undesirable. It would be grossly unfair to the many States and communities that have assumed additional tax loads to meet their responsibilities to public education. Having obligated themselves to pay for the facilities they need, they would have to contribute to the schools of States and communities that have not met their responsibilities.

It has been demonstrated here at home that adequate schools are more a matter of willingness to pay than ability to pay. The Colchester Unit District has a very low assessed valuation on a per pupils basis, compared to other districts. But the people of the district met their responsibilities. They not only voted bonds for needed construction, they also voted an increase in the tax rate for education so that they could pay their teachers at the going rate.

The promise of Federal aid would retard local effort. If all States and communities knew definitely that they could not expect Federal aid at this or any future session of Congress, they would be looking to their own resources to meet needs.

Aside from unfairness, there is the objection of Federal interference. It has been contended that the Federal Government can hand out school money and still exercise no control over local schools. Maybe it can but would it? If it did it would be the first time. A measure of control always goes hand-in-hand with Federal subsidy.

There is also the matter of waste. There is always a heavy loss of dollars when the Federal Government collects money and distributes it to States and localities.

Daniel Wolsey Voorhees

EXTENSION OF REMARKS
OF
HON. CECIL M. HARDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mrs. HARDEN. Mr. Speaker, today it was my privilege to participate in a ceremony at the Library of Congress honoring the late Senator Daniel Wolsey Voorhees, of Indiana. The ceremony, and the presentation of a plaque to the Library in honor of the contributions made to the Library by Senator Voorhees, was arranged by my friends and fellow townsmen, the Business and Professional Women's Club of Covington, Ind. Several of the club's officers and members were here for the presentation, and I know you will join with me in bidding them welcome to our Nation's Capital.

Following are my remarks in connection with the ceremony in honor of Senator Voorhees and the inspiring remarks of the Honorable K. M. LECOMPTE, Representative from Iowa, member of the Joint Committee on the Library of Congress:

ADDRESS BY MRS. HARDEN

We have gathered here today to honor the memory of a great son of Indiana, and a great American, who died nearly 60 years ago, but whose works live after him, and nowhere more visibly than in this main building of the Library of Congress. This man is Daniel Wolsey Voorhees, who entered Congress on the day that Abraham Lincoln became President of the United States, and represented Indiana in the House for 9 years, and in the Senate for 20.

A fitting memorial to this statesman has been a long-time dream of my friends and

neighbors, the Business and Professional Women's Club, of Covington, Ind. The great-grandmothers and great-grandfathers of many of them were the friends and neighbors of Daniel Voorhees and his family when he was growing up and when he was entering on his distinguished career.

Daniel Voorhees was born, not in Indiana, but not far from it—in Butler County, Ohio, whose western boundary is the Indiana State line. He was still a mere child when his parents brought him to Fountain County and settled on a farm in Van Buren Township about 10 miles from the county seat, Covington. When he entered college in 1845, he went only some 57 miles southeast of Covington, to Greencastle in Putnam County, where Indiana Asbury University was located, or DePauw, as it is now called. When he entered the office of a law firm for his professional training, he chose the partnership of Lane & Wilson in Crawfordsville, Ind., less than 30 miles east of Covington. In April 1850, well before his 23d birthday, he was ready to hang out his shingle as a young attorney, and he hung it out in Covington, where he practiced for the next 7 years.

By 1857 he was ready for a larger sphere of action and transferred his law office to Terre Haute, some 60 miles south of Covington but, like it, on the left bank of the lovely Wabash River, and still within my Sixth Congressional District. Four years later he went on to Washington, but to us he has always been a Covington man, who left our farm county for the world of larger towns and cities and the stage of national politics.

If we did not forget him, still less did he forget us. All through the 30 years following the Civil War, Daniel Voorhees spoke and acted in the interest of the dirt farmers from whom he sprang—the men who took over from the buffalo and the Indian, cleared the ground, and first brought it under cultivation. During those three decades, the Nation's economic development went forward at an immensely accelerated pace, but it was a one-sided development which vastly enriched certain forms of enterprise, and left the average farmer with little beyond his subsistence. Speaking on tariff reform, Voorhees told the Senate of the United States in March 1890:

"Over 20 million of the present population of the United States, counting all ages and both sexes, are engaged in the cultivation of the soil, and on their productive labor, not only the Government itself leans for support, but also all other classes of citizens derive from the same source their prosperity, their wealth, and, too often, their profuse and criminal luxuries."

The remedies of his time for the inequities that he saw are not our remedies, but he believed with us that a healthy and prosperous agriculture must be at the base of any sound economic structure.

Senator Voorhees' championship of "the farmers and other over-taxed and underpaid laborers of the United States," as he called them, went hand in hand with another kind of advocacy which it does not always, or perhaps even often, accompany. Throughout his career this graduate of a frontier college and of a small-town law office displayed an unsurpassed zeal for the things of the mind. Few practical statesmen of his own or any other day, of his own or any other country, have possessed so clear an understanding of the whole sweep of the civilized tradition, and of the importance of the human mind in social progress. He was a firm supporter of natural science and the increase of human power which it makes possible. But, as he exhorted the literary societies of the University of Missouri in 1874: "No man can properly understand and appreciate the present without correct information of the past. Combine, therefore, as far as possible, the practical and useful ideas of your brilliant age with a full knowledge of the various developments of the human races in other ages and under different circumstances."

It was for this triple purpose—the maintenance of tradition, of scientific progress, and of civilization itself—that he stood out among the statesmen of his day as a friend of the Library of Congress. During his 20 years in the Senate, Daniel Voorhees sought unceasingly to obtain for this Library the physical setting in which its huge potentialities might be realized, as they could not possibly be in the cramped and crowded quarters of the Capitol. The end may well remind us of the Old Testament story: Like Moses, Daniel Voorhees was vouchsafed a sight of the Promised Land, but he might not enter and possess it. In the spring of 1897, this building in which we stand—the new library building—was rapidly nearing completion, and on April 10 the transfer of the special collction present by Dr. Joseph M. Toner, which had been in storage, was begun. On July 24 Congress adjourned, and on the last day of the month the old Capitol Library was closed forever, and the mass transfer of the collections to this building was begun. On November 1, 1897, the new Library of Congress opened for service. Daniel Voorhees could not be there to see it. His health had been failing for several years, and on April 10—the very day on which the transfer of the Toner collection began—he had died at his home, a stone's throw away on Maryland Avenue, and he was buried beside the Wabash in Terre Haute.

Although Senator Voorhees himself could never be in this building, yet his hopes, his aspirations, and his efforts over many years were focussed here, and this building owes its existence in large measure to him. It is only fitting, however, that he should be commemorated here, and we women of Covington have arranged a simple memorial, such as we believe Senator Voorhees himself would have approved, to signify and perpetuate the record of his relationship to this great establishment which has so fully justified his expectations and his dreams. It is my great privilege, on behalf of the Business and Professional Women's Club of Covington, Ind., to dedicate and to present to you, Mr. Librarian, this memorial plaque to Daniel Wolsey Voorhees, which I now unveil.

ADDRESS OF CONGRESSMAN LECOMPTE

Representative HARDEN, Mr. Mumford, Miss Dice, distinguished guests and friends, as a long-time member of the Joint Committee on the Library, I am happy to be given this opportunity to honor a great man of vision, Daniel Woolsey Voorhees. We are indebted to the Business and Professional Women of Covington, Ind., who have afforded us this event as an occasion to remember him.

Indeed, this very building in which we stand is his monument. It was his advocacy, as well as his concept of a national library, to have a separate congressional library building to be located on the grounds of the Capitol, that has had so much to do with this institution's place and standing in the world. Senator Voorhees, more than any other public figure, in 1880, first realized that the American people's library collections would someday exceed the national collections of the older and more populous nations. His was the prediction also that the United States would succeed in its determination to have as complete a repository of human learning and printing as had been known since the beginning of time.

In his endeavors we know how he was assisted by Representatives Reed, of Maine; Cox, of New York; and by his colleagues in the Senate, Senator Timothy Howe, of Wisconsin, Senator Bayard, of Delaware, and one more of very great prominence, Senator Morrill, of Vermont. Much could not have been accomplished, however, had not Senator Voorhees provided the spirit. When he arose in the Senate on May 5, 1880, to sponsor the first important measure for a new library, there were many obstacles to overcome if his idea was to materialize. The congressional collection was a jumble of books and manuscripts, organized like a country store, in the west front of the Capitol. Maps and bulletins were stacked in piles, rather than in files. Every fourth book was shelfless. Another obstacle at that time was the fact that the Congress was undecided as to whether to undertake the expansion of its east front to accommodate its library, or to construct a building to house its collection on Judiciary Square. Even the plans for the design of such a building had varied seemingly between Romanesque, French Renaissance, and the red-brick architecture of the old Pension Building.

There is a picture today which shows a proposed extension of the east front of the Capitol, utilizing turrets, to house the Congressional Library. Fortunately, this was never done. The measure which Senator Voorhees sponsored in 1880 set up a joint select committee, with himself as its chairman, and authorized a commission of three experts to advance plans, designs, and estimates on the feasibility of a new Library building on a new site. The unanimous report of these experts, in substance, led later to the location of the present building and its design along modified Renaissance lines. We find Mr. Voorhees also at the front of those voting for its final creation in 1886, and we can well suppose, as he continued to live in Washington, that he saw and walked in the new building before its completion.

To him, certainly the concept of a great national library was an integral part of a great constitutional government. Senator Voorhees could see that the wealth and store of learning which he knew his Nation must assemble would in the end identify it as a treasure house of truth and information before the world. He knew, as we know, that in this building we would preserve the writings of the past, as well as provide space for the writings of the future. So long as it stands, so long as its collections are for the free access of scholars, there will be liberty in this Nation. The most indestructible thing on earth is a book. It may be burned or disappear, but its ideas and hopes invariably live beyond it.

A philosopher has said: "Some men have only one book in them; others a library." We see now how applicable this phrase is to Senator Voorhees, and we pay him tribute for his vision, fortitude and work in establishing the Library of Congress.

A National Lottery

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. FINO. Mr. Speaker, I read with keen interest John O'Donnell's column in the June 22 issue of the New York Daily News. I am happy to learn that Mr. O'Donnell agrees with me that what this country needs is a good national lottery.

As the Members of this Congress well know, for the past 4 years I have urged the enactment of my bills for the creation of a national lottery. I have recommended this type of legislation as the best means of cutting taxes, reducing

our national debt, and balancing the budget.

Because of my long-standing interest in the establishment of a national lottery, which would enrich our Government coffers to the tune of $10 billion, I have placed a discharge petition on the Speaker's desk on my bill, H. R. 6626.

The realization of a tax cut—as much as $250 a year per person—for the American people lies within the power of this Congress. If the Members will have the courage to banish hypocrisy, we will have opened the door to a lucrative industry. At present, every other country and gamblers are the recipients and beneficiaries of these funds.

This O'Donnell column makes very interesting reading. I urge every Member of this Congress to take time out and digest a few words of wisdom:

CAPITOL STUFF

(By John O'Donnell)

WASHINGTON, June 21.—The Mother of Parliaments, Britain's House of Commons, has just given birth to a perfectly swell legislative child (how to make taxpaying fun and exciting) and we recommend the procedure to our Congress.

Furthermore we challenge the masterminds of our Republican and Democratic Parties when they gather in national convention 2 months hence to think up a more painless method of black-jacking the taxpayer than has been legally accomplished by our overseas cousins.

What the British have done is to run a government lottery. It has all the attraction of the Irish Sweepstakes. It is honest and we should pick up the idea. The correct British term is "premium bonds." The plan works this way: A Briton slaps down 1 pound ($2.80) for his bond. He gets no interest on it, but after holding it 6 months, he qualifies for the lottery draw.

Starting next June there will be monthly drawings by the government and the prize money will be awarded to the holders of lucky numbers. These monthly prizes will total, initially $28,000. The top lucky monthly winner gets 1,000 pounds ($2,800). There are 2 other prizes of 500 pounds ($1,400); 4 of 250 pounds ($700); 10 of 100 pounds ($280); 20 of 50 pounds ($140), and 200 of 25 pounds ($70).

Basically the present British lottery (beg pardon, premium bonds) idea, differs not at all from our own ancient American lottery plan as practiced in lustier days of our republic.

Our first Postmaster General, wise old Benjamin Franklin, set up and ran a successful lottery in Philadelphia to raise funds for constructing artillery defenses against the French and Spanish naval marauders off the Capes and up into Delaware Bay.

The current British idea ran head-on into some religious opposition but weathered the storm. The Archbishop of Canterbury disapproved of the idea—and he lost.

THE PROCEEDINGS ARE ENLIGHTENING

When the same propsal comes up in a future United States Congress, as we hope it does, it may be profitable for Members of House and Senate to read the proceedings in Commons as reported in Hansard (Britain's version of the United States CONGRESSIONAL RECORD) during the June 18 debate—when the lottery idea won, 232–176.

In the Commons debate, distinguished members from Oxford and Cambridge, both Conservative and Labor, found themsleves on opposing sides of the issue. We imagine the same Ivy League battle might take place on Capitol Hill, when and if our Congress gave a legal O. K. to the Treasury to sell $10 or $25 Government bonds to our populace with the inducement that every month the lucky numbers would be pulled out of the hat.

If we ever get into that happy fight, we hope and pray that the educated boys on Capitol Hill will point out that the idea of getting money by lotteries was enthusiastically practiced for profit by Harvard, Yale, Princeton, Dartmouth, Brown, and Kings College in New York long before it changed its name to Columbia.

The interesting feature of the British lottery victory was the personalities and arguments of the leading debaters. Against the lottery bonds and backing up the Archbishop of Canterbury was Laborite James MacColl, distinguished barrister and graduate of Balliol, Oxford.

HE LEARNED ABOUT GAMBLING IN CHICAGO

MacColl pursued his higher education in the University of Chicago during the Capone era and is against gambling, lotteries and above all the exposure of innocent children to the temptation of lucky bond buying by putting bond advertising posters in schools. Furthermore, he was shocked by the fact that his old college friend, Financial Secretary Henry Brooke, who once taught logic at Oxford, could now be so illogical as to put into the official record such "nonsense as to say that a premium bond is not a lottery."

Whereupon Brooke rose in defense of the bond proposal and tartly observed that it was his great regret that he had not the opportunity at Balliol of tutoring the honorable member more thoroughly in logic. Then the argument moved into the attitude of the Catholic Church toward gambling, juvenile delinquency, and bingo (over there it's called bob-a-time).

At any rate, even before passing the bond lottery measure, Commons had legalized "all over Britain bob-a-time sweeps for sport, church and charity."

LOTTERY WILL ATTRACT YANKEE DOLLARS

But it's the British bond lottery which will immediately attract the pounds of American tourists—and their stay-at-home relatives—with the same gambling lure of the Irish Sweepstakes.

Unlike a sweepstakes ticket there is no sudden V-day. Your bond remains in the pool, you can always get your money back and there—natch—is the chance that next month your number will come up. Now a British citizen can buy only 500 of the bonds at a pound ($2.80) each. But an American operation—and we think this is bound to happen—will soon get started, buy the "premium bonds" or lottery tickets through intermediaries and peddle them here to the eager purchasers of sweepstake tickets. They can't be cashed here, but any individual or group can go back to Merrie England and have fun on what he collects.

Well, what are we waiting for? How about one of our national conventions coming up with this idea as a campaign platform? About time we had some fun.

A Bill To Extend the GI Home-Loan Guaranty

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. FASCELL. Mr. Speaker, I am today introducing a bill to extend the GI home-loan-guaranty program. This is the second of such measures that I have introduced. The first proposal, H. R. 10469, was introduced April 12, 1956. The merits of this proposal and the principles set forth therein have been recognized and endorsed by numerous national organizations. They include veterans' groups, labor groups, savings and loan associations, home builders, realtors, and furniture and electrical-appliance manufacturers, wholesalers' and retailers' organizations.

The original intent of the Servicemen's Readjustment Act of 1944 was to provide a period in which our veterans could rehabilitate themselves. That they have not been completely rehabilitated is evident by the fact that some 11 million of these World War II veterans have not yet been able to avail themselves of their GI entitlement.

In an effort to provide a solution to an extension of this program that will be agreeable to all, I am submitting the following for the immediate consideration of my colleagues:

A bill to amend section 500 of the Servicemen's Readjustment Act of 1944 to provide an additional period for World War II veterans to obtain guaranteed loans

That (a) subsection (a) of section 500 of the Servicemen's Readjustment Act of 1944 (38 U. S. C., sec. 694) is amended by striking out "Any loan made by such veteran within 10 years after the termination of the war," and inserting in lieu thereof the following: "Any loan made by such veteran within 11 years after the termination of the war, plus the period determined under the next sentence of this subsection,".

(b) Such subsection is further amended by inserting immediately after the fourth sentence thereof the following new sentence: "The period referred to in the preceding sentence shall equal, in the case of each veteran, 3 months for so much af his active service after September 15, 1940, and before July 26, 1947, as exceeds 6 months and does not exceed 12 months, plus 3 additional months for each 6 months (or fraction thereof) of active service performed by him in excess of 12 months between such dates, but in no event to exceed 24 months; however, if such veteran was discharged or released from active service between such dates under conditions other than dishonorable by reason of an injury or disease incurred in or aggravated by such service in line of duty, then such period shall equal 24 months."

This measure provides for a gradual 3-year termination of the program, as did H. R. 10469. It, however, provides a straight 1-year extension of eligibility to all World War II veterans. Thereafter, during the next 2-year period, it would provide for nine separate stepdowns. However, it allows disabled veterans the benefit of the full 3-year extension. I am advised by the Veterans' Administration that the following would be the effect of this bill for the remaining 2-year period:

First. July 1958 there will be 280,000 eligibles cut off.

Second. October 1958, 670,000 cut off.

Third. January 1959, 805,000 cut off.

Fourth. April 1959, 1,045,000 cut off.

Fifth. July 1959, 1,149,000 cut off.

Sixth. October 1959, 1,595,000 cut off.

Seventh. January 1960, 1,550,000 cut off.

Eighth. April 1960, 860,000 cut off.

Ninth. July 25, 1960, 1,316,000 cut off—including 325,000 disabled veterans.

The Veterans' Administration advises me that it is estimated that there will be 14,178,000 veterans with World War II service only in civilian life as of July 25, 1957, and that 4,912,000 will have made some use of their GI entitlement by that date, leaving 9,266,000 veterans whose entitlement would expire under the exist-

ing law on July 25, 1957, without having used any GI entitlement.

This proposal merits your most serious study and consideration. I am hopeful that my colleagues in the House will join me in calling for immediate consideration of an extension of this all-important program.

Address Delivered by Mr. G. L. Mehta, Ambassador of India, to the Conference on the Forward Look in Technical and Economic Development, Hotel Statler, Washington, D. C., on Tuesday, April 10, 1956

EXTENSION OF REMARKS
OF
HON. ANTONIO M. FERNANDEZ
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. FERNANDEZ. Mr. Speaker, on April 10 of this year I had the privilege of listening to a dispassionate, thought-provoking speech by His Excellency, Mr. G. L. Mehta, Ambassador of India, which reveals the character and commendable attitude and aspirations of the people of that great country more clearly than anything I have ever read.

Just now when Congress is in the process of considering aid to India and other Asian countries, an appreciation of India's point of view, which no doubt reflects that of other Asian people, would be, I think, of considerable interest. The Ambassador's speech, which obviously was prepared with great deliberation, certainly was of immense interest to me.

I shall not attempt to summarize it, for the speech in its entirety must be read to be appreciated. I shall merely quote two sentences, and will then include the entire speech in the RECORD. Speaking of economic development programs and of external aid which is appreciated in helping to carry them out, he said at one point in his address:

> Too great dependence on others is as undesirable as it is unworthy. Nations like individuals have to achieve their own salvation.

At another point he said:

> In the last analysis, economic development of a country can only come about through the whole-hearted efforts of its people; external aid can act as a catalyst, can supplement but cannot supplant national effort.

And again:

> It is far more important that such programs should take root and be continuous than that they should be mere showpieces. Above all, these programs should develop the initiative and self-confidence of the people rather than seek to achieve physical targets by manipulation and coercion.

By unanimous consent, I am inserting herewith in the RECORD Mr. Mehta's speech in full:

PLACE OF TECHNICAL COOPERATION IN ECONOMIC DEVELOPMENT

(Address by Mr. G. L. Mehta)

I am grateful to your organization for inviting me to speak here tonight on the subject of technical assistance and economic development in India. The subject is a vast one, and I can only give, within the limited time at my disposal, a brief account of the problems that face us and the way we are seeking to solve them, partly with the help of generous contributions from some of the more economically advanced countries of the world, but mainly, if you will allow me to say so, through the efforts of our own people.

We in India are experiencing in social and economic spheres a transformation which is in many ways revolutionary, while at the same time orderly, democratic, and largely based on India's cultural heritage. Independence released social forces and national energies for purposive action, almost for the first time in modern Indian history, and their effects have only begun to be felt. New ideas and new forces are at work, social patterns are changing, there is a great spurt of economic activity over the entire country, and a firm resolve to give content and meaning to political independence; all this "sea change" does not, however, imply too violent a change from the past but is being brought about through democratic processes of consultation and consent in which the best of old traditions is sought to be merged with new techniques, in which freedom and initiative are to be reconciled with social justice and equality. In this bold experiment, external assistance from friendly countries is gratefully accepted but so as not to inculcate in our people a psychology of dependence on such assistance. For in the last analysis, economic development of a country can only come about through the wholehearted efforts of its people; external aid can act as a catalyst, can supplement but cannot supplant national effort.

This basic principle is embedded in our development plans, including the technical-assistance programs and community-development projects. Thus out of a total outlay of $4.7 billion, in the first 5-year plan, the finances made available from external sources amounted to $600 million (nearly $500 million from the United States of America), or about 13 percent of the total outlay. Likewise, in a total planned outlay of $200 million on the community-development projects (to which I shall refer later in greater detail), a total of just $12 million (6 percent) was provided by external sources. And this is as it should be, for too great a dependence on others is as undesirable as it is unworthy. Nations, like individuals, have to achieve their own salvation.

Which is also the basic philosophy underlying the various programs of technical cooperation which are referred to as technical-assistance programs. I myself prefer, if I may say so, the term "technical cooperation" to "technical assistance," because programs of this sort should be a two-way operation. It is, and must remain, the responsibility of the recipient countries to initiate requests for assistance, and the speed and effectiveness of the technical-assistance programs depend primarily upon them. Again, it should be a two-way operation in the sense that insofar as such countries can afford it, they must also provide technical assistance and training facilities for other countries similarly situated. In this connection, I should like to state that the development of an extensive technical cooperation program has been a notable achievement of the Colombo plan. There has been an increasing emphasis on the development of training facilities within the Asian countries themselves, which has helped to insure not only a more effective use of the financial resources available but also a deeper understanding of the approaches to economic development. According to the fourth annual report of the Colombo plan, up to the end of June 1955, under the various technical cooperation programs, India secured training facilities abroad for 1,360 candidates and received 734 foreign experts, while 191 Indian technical experts were sent to assist other countries, and 181 foreign nationals were trained in India.

Now, what is this technical assistance of which we hear so much? Technical assistance covers expert advice, training facilities, compilation and dissemination of information, and supply of equipment. As you will appreciate, for underdeveloped countries, the provision of finance alone is not sufficient for development plans to be carried through. Finance is, no doubt, indispensable and yet it does not provide the complete answer. There is a constant need to put available resources to the best possible use; and this postulates the need for experts, technicians, skilled workers in ever larger numbers both for drawing up schemes and for implementing them. Stated simply, whenever a more efficient technique can be substituted for a less efficient one, something is obtained for nothing and this provides, in my view, a good reason for technical aid programs. The acquisition of technical knowledge and skills is, indeed, one of the notable achievements of the first 5-year plan whose period has just ended; and it is even a greater achievement in international cooperation at personal level.

And if I may digress for a moment, I should like to pay tribute to the vision of President Eisenhower's address on December 8, 1953, before the General Assembly of the United Nations in which the atoms-for-peace program was born. Atomic energy is a new and tremendous source of power for a better life, which, if constructively harnessed, offers endless prospects for the nations of the world, and especially the underdeveloped areas for raising the levels of economic activity and standards of living of their people, much more quickly than would be possible under schemes based on the use of conventional power. It is a hopeful sign for the future that efforts are being made by the nations of the world to set up an agency providing for international cooperation in this new field and for the pooling and sharing of raw materials, fissionable materials, and exchange of technical atomic energy information and personnel. It is a matter of gratification that the United States, which is the most advanced country in the field of atomic energy development, is alive to the need for cooperation with other nations in the development of peaceful uses of atomic energy and has already entered into bilateral agreements with a number of countries providing for varying degrees of technical assistance in this new field. We ourselves signed recently with the United States Atomic Energy Commission an agreement providing for the sale to India of heavy water for use in connection with research into and the use of atomic energy for peaceful purposes. Some of our scientists are attending the reactor training school at Argonne and the isotope courses offered at Oak Ridge; others are in Canada and the United Kingdom. As humanity is entering the threshold of an atomic age symbolizing the birth of a new industrial revolution, we may well remember the lessons of history and avoid the pitfalls which led to so much suffering, inequalities, and exploitation in the wake of the first industrial revolution. We should seek, through programs of international cooperation, to utilize this energy as an instrument of common welfare and prevent inequities and imbalance between nations in their use.

The atoms-for-peace program thus also partakes of the nature of technical cooperation programs of which we have been speaking. I may now return to the less spectacular forms of such cooperation. The broad aggregate of outlays on technical cooperation schemes covers a myriad of activities and accomplishments ranging from the reduction of deaths by malaria and other endemic diseases and marked declines in infant mortality to improved strains of agricultural stock and grains and technical advice on such diverse matters as multipurpose irriga-

tion and hydroelectric projects, educational systems, and family planning.

What are the types of technical assistance programs now operating in India? First, there is what has been called in the past point 4 program, now being looked after by the ICA. Under this program the United States provided training facilities for 403 Indian candidates up to the end of June 1955 and nearly 220 American technicians and experts have been working on various projects in India. Then there is the Colombo plan program which was started in 1950 and with the broad features of which most of you, I believe, are familiar. Under the Colombo plan, India has been both receiving and giving technical assistance, once again illustrating the two-way character of these programs. Up to the end of June 1955 326 trainees from other southeastern Asian countries have been undergoing training in subjects such as civil and mechanical engineering, medicine, communications, mining, geology, tobacco, cultivation, flood control, suction-dredging, etc. In addition, 94 nominees of the countries in the region have been given training at the Indian Statistical Institute. Also a total of 12 Indian experts have been provided to Nepal and Ceylon in the fields of banking, irrigation, administration.

There is, again, the U. N. technical assistance program. The number of technicians supplied to India under this program is 402, and training facilities have been obtained for 334. One hundred and ninety-one Indian technicians have been sent to Burma, Indonesia, and other countries and 181 foreign nationals have been trained in India.

And finally, the Indo-United States Technical Cooperation Agreement signed in January 1952 provides for the undertaking of joint projects laying emphasis on agricultural development and in the fields of community development, tube wells, river valley development, fertilizers, and steel for agricultural purposes. I should like to say a few words about the community development project because, being essentially a program for stimulating self-help in rural communities for the all-round improvement of their life, it constitutes an enduring basis for the economic betterment of our people. As Mahatma Gandhi used to say, India lives in her villages—560,000 villages, in which the bulk of the population (80 percent) live. No program which either ignores the village community or does not make adequate provision for their improvement can, therefore, make a real dent on the poverty of the countryside and consequently of the country as a whole.

The revitalization of village life was one of the first tasks of our National Government. And the program was begun on Gandhiji's birthday, October 2, 1952. Roads began to be built, schools, community centers, hospitals, demonstration farms, breeding centers, fruit and vegetable nurseries began to come up. New wells, reconditioning of old wells, paving of village lanes and drains assumed the form of a new mass movement. Men and women, young and old, joined the program in increasing numbers and in the spirit of dedicated service.

Soon, there was a demand for an increase in the number of projects from the 55 the program was started with; but our resources were limited in terms of technical personnel. Therefore, the Government drew up a less intensive program which could be extended more rapidly. This was the national extension service which was designed to provide the essential basic staff and a little finance with which the people could go ahead on the basis of self-help.

According to the latest statistics prepared by the Community Projects Administration, 1,140 community projects and national extension service blocks were allotted throughout India up to February 20, 1956. These covered 124,957 villages and a total population of 81.1 million. Up to the end of September 1955, a total area of 895,000 acres had been reclaimed and 1,557,000 acres brought under irrigation. Substantial progress was also achieved in the fields of education and social education. Twelve thousand new schools were started in various community development areas and 4,359 ordinary schools were converted into the basic type. Thirty thousand adult education centers were functioning at the end of September 1955 and about 605,000 adults had received training. A total of 28,631 miles of roads were constructed, of which 3,361 miles were metaled roads. The people's contribution in cash, kind, or labor to the physical achievements under the community development program during the period October 1952 to September 1955 was of the value of $39,270,000, as against Government expenditure of $65,100,000.

United States assistance to the community development projects has largely been in the shape of machinery for roadbuilding, agricultural demonstration equipment, mobile cinema units for instruction, transport vehicles, and a large variety of other supplies and equipment. A total of $12 million was provided for this purpose against a total planned outlay of roughly $200 million by the Government of India, itself small in budgetary terms relative to the return in the form of general village improvement and restoration of the people's faith in themselves.

A useful yardstick of the success of community development projects and national extension service is the extent of voluntary contributions of the people under the various schemes. The estimated total voluntary contribution of the people in cash, labor, materials, etc., has been nearly half the Government expenditure during the same period. This is the most hopeful sign in programs of national development. For it is far more important that such programs should take root and be continuous than that they should be mere show pieces. Above all, these programs should develop the initiative and self-confidence of the people rather than seek to achieve physical targets by manipulation and coercion.

I do not wish to weary you with the details of other aid projects, but mention must be made of the tube wells program. A tube well irrigates on an average over 400 acres of land and lack of adequate rainfall in many parts of India makes it important that every available water resource be developed for irrigation purposes. Under the Indo-United States joint program, the construction of 3,000 tube wells was undertaken, in addition to 2,000 to be built by the Government from its own resources. A major part of the program has been completed.

This account of the technical cooperation programs operating in India would be incomplete if no mention were made of the programs financed by private organizations like the Ford and Rockefeller Foundations. The total assistance provided and promised by the Ford Foundation is of the order of $11 million and covers a broad range of programs such as the training of personnel for rural development, development of small-scale industry, education, public administration, and research. With a grant from the Ford Foundation, an agency has been formed for evaluating the methods and progress of the rural development program.

A basic feature of all these programs is that they have been integrated into our national plan of development. The responsibility for drawing up programs and formulating schemes rests where it should properly belong, namely on ourselves; and although there is continuous consultation and collaboration between the Government and the foreign agencies concerned, final decisions are made by the Government of India, which not only insures that risks of overlapping and duplication of effort are obviated but also that the programs decided upon are such as to stimulate popular effort, sustain the people's spirit of self-reliance and develop initiative. Perhaps because of this and also thanks to the excellent spirit of comradeship that has developed between the foreign technicians and the local officials and nonofficials engaged on the various projects, the technical cooperation schemes have on the whole worked well and proved effective in promoting economic development.

I may conclude with a few general observations on what has been achieved under our first 5-year plan and on the draft proposals for the second 5-year plan.

The primary object of the first 5-year plan was to lay the foundations on which a more progressive and diversified economy could be built. There were certain urgent problems such as shortages of food and raw materials and persistent inflationary pressures which it had to attend to. But the plan was intended essentially as a preparation for a more rapid advance in the future.

India's economy has responded well to the stimulus of the first plan. Agricultural and industrial production has recorded substantial increases. Prices have attained a reasonable level. The country's external accounts are virtually in balance. Important targets proposed in the first plan have been realized and some of them have, in fact, been exceeded. Some 17 million acres of land have been brought under irrigation in these 5 years and the installed capacity for the generation of power has been increased from 2.3 million kilowatts to 3.5 million kilowatts. Considerable progress has been made with the rehabilitation of railways. A large number of industrial plants both in the public and private sectors have gone into production. The plan has introduced a new dynamic element in conditions which have been stagnant for long. The national income over the last 5 years is estimated to have risen by about 18 percent as against the original expectation of about 11 percent. The development expenditure in the public sector in 1955–56 is over 2½ times the level in 1951–52. Investment in the private sector has also been close to expectations.

The second 5-year plan of which the draft outline was published in February this year, seeks to secure a more rapid growth of the national economy and expand employment opportunities. In the new plan, a total outlay of $10.08 billion has been proposed for investment in the public sector over the next 5-year period. A larger proportion of the resources will be devoted to industrial development than in the first plan. Adequate provision has, however, been made for schemes to augment agricultural production and insure rural development. The plan proposes, for example, an increase of 21 million acres to be brought under irrigation and an increase of 3.3 million kilowatts in electric power capacity. Transport and communications will receive greater attention, being so vital to the development of the economy. The outlay on these projects would amount to 29 percent of the total outlay. The community development program will be further extended so as to cover a population of 325 million—almost the entire rural area—by 1960–61. The main stress, however, is on industrialization. If the power projects are also taken into account as a part of industrial development, the outlay works out to 57 percent. We hope to increase cement production from 4.3 million tons to 10 million tons a year, raise coal production from 37 to 60 million tons, and that of steel from 1.3 to 4.3 million tons by 1960–61. The planning commission believes that as a result of the outlay proposed, the national income would rise in 1960–61 to $28.3 million (22.7 in 1955–56)—a 25-percent increase. Put in another way, the outlay is

expected to produce an increase of 18 percent in the per capita income.

I have endeavored to give you an idea of the magnitude of the problems we face and of the great efforts our people are making to solve them. It is a noble adventure in which I am sure we shall have, as we have had in the past, the understanding and cooperation of all those who value constructive endeavor. We are seeking to build a society of free men and women enjoying the blessings of an economic democracy.

State Sedition Statutes

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. FASCELL. Mr. Speaker, I have today introduced a bill which would restore to the States authority to enforce their State sedition statutes.

I was privileged to be a member of the Florida State Legislature when that body enacted the Subversive Activities Act in 1953. I supported and voted for this measure because I felt that it was a proper field of legislation for a State. Every State and all the citizens within its borders have a major interest in opposing any activity which is designed to overthrow or destroy our constitutional form of government. Our Florida law makes it a felony for any person to knowingly and willfully participate in any way in such activity and prescribes a fine of not more than $20,000 or imprisonment for not less than 1 year nor more than 20 years, or both. Membership in a subversive organization carries the penalty of not more than $5,000 or imprisonment of not less than 1 year nor more than 5 years, or both. Persons convicted of subversive activities are prohibited from filing for or holding public office or of voting in any election. The attorney general of the State, all prosecuting attorneys, the secretary of state, and all law-enforcement officers of the State have the duty and authority to enforce this law.

As we all know, the recent Supreme Court decision in the Nelson case decreed that because the Congress enacted the Smith Act of 1940, the Internal Security Act of 1950, and the Communist Control Act of 1954, the Federal Government had a dominant interest in the legislative field of sedition which precluded the enforceability of the Pennsylvania Sedition Act, thereby nullifying every State statute dealing with seditious activity. This decision constitutes an unwarranted and unnecessary invasion of the rights of the State of Florida.

I do not believe it was the intent of Congress in enacting legislation dealing with subversive activities, to give to the Federal Government exclusive jurisdiction over the prosecution of those who are engaged in such activity within our country, thereby depriving the States of all authority to enforce their sedition laws.

The Attorney General of the United States states there is no conflict from the standpoint of administering Federal and State law. The United States Attorney General is of the opinion that this dual jurisdiction allows for a beneficial and necessary degree of flexibility in meeting the crises of the present and of the future in the field of subversive activities.

It certainly seems to me that the ever-increasing congestion of the Federal docket would make cooperation and participation in this type of court action on the part of the States not only feasible, but judicious. If court actions on sedition charges can be expedited by means of proper prosecution by a State, the Federal Government which is both the individual State and the Nation, will come that much closer to effectively meting out full justice to those who seek to overthrow or destroy it.

To Amend the Federal Longshoremen's and Harbor Workers' Compensation Act

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from today's New York Times entitled "For Better Injury Pay":

FOR BETTER INJURY PAY

Almost a year ago the Senate passed a bill, by voice vote, designed to remedy a serious inequity in the Federal Longshoremen's and Harbor Workers' Compensation Act. The present law follows the widely accepted pattern of most States in providing that those covered by it shall receive compensation equal to about two-thirds of their regular pay while incapacitated by injuries received on the job. It also sets a ceiling on such payments—in this case $35 a week. (The New York State figure is $36.)

The main provision of the Senate bill raises the ceiling to $50. The change would affect over half a million longshoremen and others who handle cargo aboard ships while in port and also most privately employed workers in the District of Columbia and those working overseas for firms with United States Government contracts.

After the bill had gone to the House, the Committee on Education and Labor reported it favorably, but with a $54 ceiling. This was done after thorough consideration and five public hearings at which the arguments, pro and con, were fully aired. In the absence of Government data as to the workers involved, the committee based its ceiling on the official figure for "average wages in manufacturing"—about $80 a week. Two-thirds of this amount would be about $54.

H. R. 10765 went to the Rules Committee almost 2 months ago where it has since lain dormant. It is high time the committee released it for a vote by the House. It should be promptly passed and sent to a conference committee for reconciliation with the Senate bill. In view of the House committee's report $54 would seem to be a more reasonable ceiling than $50 for final, and we hope favorable, congressional action. Such a lead by Congress should be followed by those States in which the ceiling is now lower. Also, the Bureau of Labor Statistics should begin at once to compile, and keep current, the wage data needed for future revisions of these laws.

California Solving Its Own Water Problems

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. HOSMER. Mr. Speaker, the refreshing sight of Americans handling their local problems at the local level, instead of running to Washington for aid, is being presented in the State of California today.

Not only are the problems of areas within the State being approached via the self-help route, but as well, statewide water problems involving total expenditures which are large even by Federal Government standards.

The following article appearing in today's Christian Science Monitor details California's wholesome actions. I hope it will be compared with data I have placed elsewhere in today's RECORD respecting the Hells Canyon project:

CALIFORNIA IS DIFFERENT

(By Harlan Trott)

SAN FRANCISCO.—The lure of Federal aid to the States is no lure at all to some Californians. To them it is a delusion they are anxious to dispel.

Look at what is happening in southern California's Metropolitan Water District where the people have voted to furnish water to considerable land annexed by the district. The law says that any land so annexed must pay its fair share of taxes to the district, the same as if the land had been in the district since it was formed in 1928.

The newly annexed land has been subjected to $171 million in back taxes which the holders are to pay in installments during the next 30 years. The district will issue bonds in anticipation of collecting this $171 million and use the proceeds to pay for improvements that will bring water to the recently annexed land and better serve all land within this great community undertaking that has contributed so much to all other growth and economic use of the land within its boundaries.

California law governing the MWD (Metropolitan Water District) is very different from the Federal law pertaining to the Tennessee Valley Authority which puts no tax or charge upon the holders of the land benefited by the TVA works. Had the newly annexed land in southern California been adjacent to the TVA region, its holders would not have had to pay that $171 million "admission fee." Instead that tax would have been collected from Federal taxpayers in every State regardless of whether the TVA benefits them.

Vernon Kilpatrick, a member of the California Assembly, has an effective way of stressing why we must adopt a way to pay for these essential and expensive public-works projects that is fair and equitable and just. In weighing how the proposed $1.5 billion Feather River project would be

financed in California, Mr. Kilpatrick points out that among those who would reap the great benefits are the large landholders and speculators who now hold vast acreages which the new project would benefit.

Unless these vast public works are properly and fairly financed, this California legislator warns that speculators will make the cost of a brandnew Cadillac for each and every acre they own, and we'll all be paying for it.

More than 4 million acres have been reclaimed in California under State laws very much like those governing the MWD. This is several times the amount of land reclaimed by the Central Valley project under the Federal Bureau of Reclamation and for which people in all the States are taxed to pay.

The method used to finance the MWD is very similar to the California irrigation districts law. It is the traditional American way, dating back to earliest town-meeting times. It echoes the theme running through the Federalist Essays in which Alexander Hamilton, for example, argued in behalf of the new Constitution that under it the power to tax land values would remain independent and uncontrollable by Congress in the most absolute and unqualified sense. Yet he is usually regarded as the greatest Federalist of them all.

Without a dependable supply of water for farms, orchards, homes, and industry, most of California would still be the empty waste of sagebrush and cactus the early geography books showed it was. But California irrigation districts which function much like public-school districts have used the long traditional ad valorem land tax to reclaim more than 4 million acres of desert.

It would be interesting to find out how much the multibillion Federal highway program will increase the value of land. Some experts, for instance, claim the value of the land benefited by the New York subway construction went up seven times the cost of the subways. The multibillion Federal roads project will be paid by taxing road users of the whole Nation, not the holders of benefited land. Wouldn't it be fairer to share the costs?

May not this kind of Federal aid which relieves property owners from taxation explain why the price of land, especially farmland, is shooting up today while prices of farm crops are declining?

The Metropolitan Water District's current expansion program shows that there is a vast tax base potential close to home which hardly anybody mentions these days—outside of California. It shows how significant it is when holders of land willingly obligate their land to pay the district's $171 million admission fee.

California is different, don't you think?

The Veterans Bill, H. R. 7886

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. DIXON. Mr. Speaker, the veterans bill, H. R. 7886, as amended, has lost, through amendment, many of the features which I supported most, retained the features which I supported least, and added discriminatory features which I cannot support at all.

The amendment to limit additional aid to World War I veterans only discriminates against World War II and Korean veterans, their widows, and children. It is, therefore, unfair.

A second amendment cuts almost in half the pension increase to disabled and service-connected World War I veterans, their widows and children. I have the conviction that all service-connected disabled veterans, their widows and children, should have received the full amount of the original bill, with no reduction whatever.

The measure goes so far as to assume every veteran of World War I to be permanently disabled veterans in World War II and the Korean war, together with their widows and children, will receive not one extra cent under this bill.

The fact that the motion to recommit the bill was passed by a majority of 159 to 107 on a standing vote, is evidence that a majority of the Members who were on the floor felt this way, at least before they were subjected to the pressure of a rollcall vote. The best way to help our veterans, their widows and children, would have been to recommit the bill and revise it. Had this been done, its chances to help those who need help most, of passage in the other House, and of escaping a veto would have been greatly increased.

A Vital Victory for Legislative Procedure

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, on June 20 the Milwaukee Sentinel carried an interesting editorial entitled "Vital Victory." It pointed out the parliamentary fight waged in the House by the beloved chairman of the House Foreign Affairs Committee, Representative JAMES RICHARDS, who insisted that the House trim the request for foreign aid by more than $1 billion. The House supported Mr. RICHARDS and the editorial indicates the grounds upon which he made his fight.

Mr. Speaker, the other body is considering a restoration of the full amount originally requested which conflicts with House action. Many of us who feel that Mr. RICHARDS was on sound ground when he waged his fight will support him again in insisting that the cuts made should be adhered to.

The editorial follows:

VITAL VICTORY

Representative JAMES RICHARDS, South Carolina Democrat, scored a vital victory over the administration recently.

He managed to marshal sufficient support from both sides of the House to reject the $600 million foreign aid compromise increase which the administration had sought.

This compromise had followed the $1,100,000,000 cut which Chairman RICHARDS and his Foreign Affairs Committee had made in the administration's original request for $4,700,000,000 worth of more foreign aid.

This was not a victory for Mr. RICHARDS alone. Nor was it a partisan victory. Nor did it stem from irresponsibility, lack of knowledge, or enmity for a sound foreign aid program as such.

It came, instead, from Mr. RICHARDS' and his committee's expert knowledge of the subject:

Their travels and studies in foreign lands, their 2 months of arduous and painstaking hearings, and their reflection of the opinion of the American people that a period of world prosperity is time to taper off foreign aid.

Over the opposition of Democrat Speaker RAYBURN and GOP leader MARTIN, Mr. RICHARDS effectively made several vital points:

That even with the cut, the administration would be receiving some $800 million more for foreign aid than in the last fiscal year.

That the danger to the foreign aid program lies not in its principles but in the possibility of "overspending."

That the House, under our constitutional separation of powers, must not be a rubber stamp to the Executive.

He charged, bluntly, that Messrs. MARTIN and RAYBURN "don't know anything about this bill," that their appeals were emotional, that they were "surrendering to the executive department without facts and figures."

All this becomes all the more important and significant when it is remembered that Mr. RICHARDS is and has been an internationalist.

Yet, as perhaps the foremost expert in the overall field of foreign spending, he is convinced that the extra moneys demanded by the administration would be wasteful.

We hope this great victory for America, and for commonsense, is not upset in the final, formal vote of the House, nor in the subsequent decision of the Senate.

A Public Servant Retires

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. RODINO. Mr. Speaker, I am pleased to include the following editorial tribute to my good friend and a dedicated public servant, Raymond Del Tufo, Jr., which appeared in the June 24 issue of the Newark Star Ledger:

A PUBLIC SERVANT RETIRES

A dedicated public servant, Raymond Del Tufo Jr., will step down from his position as United States attorney for New Jersey at the end of this month.

During the 3 years, less 9 days, that Del Tufo has served the Federal Government and the people of this State, he has amassed an enviable record of faithful and energetic devotion to duty, often in the face of great personal sacrifice.

Elsewhere in the Sunday Star-Ledger, the factual record, the cold statistics of the operations of his office during these 3 years, is related. It is impressive. Despite a heavy rate of new criminal and civil cases within the jurisdiction of his office over this period, Del Tufo and his hard-working staff succeeded in appreciably reducing the backlog of such cases.

In the past 3 years, too, the public has received great benefit from the quick, intelligent handling of trials, investigations, and problems by the United States attorney's office under Del Tufo's direction. All this has been achieved without great stir, without excessive publicity, but with a quiet

efficiency highly commendable in any public office.

Del Tufo leaves the United States attorneyship at the end of this week to return to private life and private practice. In so doing, he leaves for his successor a fine example of public service in an important public office and a high standard to be upheld.

Here's the Whole Question on the Niagara Power Redevelopment

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. MILLER of New York. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Niagara Falls Gazette in addition to an article which appeared in the June 25, 1956, edition of the Gazette by Paul Martin, the chief of the Gazette News Service here in Washington, giving an analysis of the Niagara power redevelopment question. Mr. Martin has spent hours of research and study on this question. He is highly regarded in the field of journalism. I feel it is of the utmost importance to bring his article to the attention of not only my colleagues in the House of Representatives, but the Members of the Senate. This subject is scheduled to be brought up for further consideration and action in executive session by the House Committee on Public Works tomorrow, Thursday, June 28, 1956.

The editorial and Mr. Martin's article follow:

[From the Niagara Falls Gazette of June 25, 1956]

IS SOMETHING COCKEYED IN DEMOCRATIC PROCESS?

"Is this the voice of the people? Can a dedicated, disciplined minority dictate the final Niagara decision, in the heat of an election year? If so, then something is indeed cockeyed in the democratic process."

That is the conclusion of Paul Martin, able and informed chief of the Gannett News Service in Washington, after a complete and careful review and study of the Niagara power development issue.

Martin's analysis of the Niagara question—a completely frank and detailed account of political maneuverings in Albany and Washington during the last 6 years—is published on this page of today's Gazette. It should be read and most carefully studied by every resident of the Niagara frontier who has the future economic welfare of the area at heart.

Information collected and set down orderly by Mr. Martin presents the whole Niagara power picture in a way that should refresh memories of those acquainted with the problem and inform those who have not given the problem much attention.

The article supports the position of Representative WILLIAM E. MILLER and this newspaper and confirms the arguments that have been presented time after time in favor of the redevelopment of Niagara power by private enterprise.

It is such an exact statement of a question of so great nationwide importance that it should also be prescribed reading for every Member of the Congress. We hope Mr. MILLER will have it printed in the CONGRESSIONAL RECORD where it can be read and studied by the Nation's lawmakers.

[From the Niagara Falls Gazette of June 25, 1956]

HERE'S THE WHOLE STORY: PRIVATE DEVELOPMENT OF NIAGARA POWER BLOCKED BY STATE GOP, MILLER ASSERTS

(By Paul Martin)

Representative WILLIAM E. MILLER, Republican, New York, of Lockport, blames the Republican leadership of New York State for blocking free enterprise development of the proposed new $400 million hydroelectric project at Niagara Falls.

Otherwise, he says, "we would have passed a bill in Congress 3 years ago providing for private enterprise, and we would be getting power off the line today."

Instead, a Democratic controlled Congress appears on the verge of enacting legislation that would turn this new industrial development over to the New York Power Authority for State ownership and operation.

It would enable the State Authority to issue tax-free bonds to finance the venture, create an additional bureaucracy to administer it and place a potent source of economic power over labor and industry at the disposal of the politicians.

The new Niagara project will generate more than triple the amount of electricity provided by the largest hydro plant in the entire Tennessee Valley. It will develop more than double the output of Bonneville Dam on the Columbia River.

The Army's Corps of Engineers has 25 federally owned hydro projects in the Nation. The largest, McNary Dam in Washington State, has an installed capacity of 840,000 kilowatts. The Niagara project will produce 1,200,000 kilowatts of firm electric power.

The instrument for bringing this resource under political control, and putting the State government into business on its own account, is S. 1823, known as the Lehman bill.

It is sponsored by Senator HERBERT H. LEHMAN, 78-year-old New York City Democrat, who comes up this for reelection to another 6-year term. The bill is being pushed by Gov. Averell Harriman and the Democratic administration in Albany.

Most controversial feature of the Lehman bill is the so-called preference clause, which would require the New York Authority to give lower rates and first priority in the sale of Niagara power to municipalities, cooperatives, and other public agencies.

New York State is highly industrialized. It had a well-developed pattern of private industry, and a flourishing trade and commerce, long before the so-called public power areas of the Nation were even conceived.

The first hydroelectric plant in the world was developed by private owners at Niagara Falls in the 1880's. This was Adams station, which is still generating power today for the Niagara-Mohawk Corp., successor to the original developers.

Approximately 95 percent of all electric consumers in New York today are served by 5 privately owned utilities. They have been seeking the right since 1950 to develop the new Niagara project as a taxable investment.

These companies are Niagara-Mohawk Corp., Rochester Gas & Electric Corp., New York State Electric & Gas Corp., Central Hudson Gas & Electric Corp., and Consolidated Edison Company of New York, Inc.

MILLER represents the district where the new Niagara project would be built. He has been elected to the House three times in campaigns where the "public-versus-private" power controversy was a major issue.

MILLER reports that the people of his district are overwhelmingly in favor of private enterprise development. He has won consistently on this platform.

The economic transmission distance for Niagara power lies entirely in western New York. Polls taken by Congressmen show a considerable majority of the people in this area favor private development of the project.

An outspoken opponent of State socialism at Niagara Falls, MILLER says:

"The Lehman bill is so socialistic that it threatens the entire power industry in the State of New York. The underlying purpose of the preference clause is not to prefer 5 percent of the people, but to discriminate against 95 percent of them.

"It is designed to force municipalities and cooperatives to condemn existing utility installations in New York to take advantage of the preferential rates. It will destroy the privately owned electric light and power companies.

"If we destroy the established electric light and power industry in New York, what justification is there for keeping it in any other State? If you socialize the power industry of the Nation, every other industry will be dependent on it. We will have gone a long way toward socializing the entire economy of America."

The 5 companies serve more than 14 million customers in New York. They are owned by 310,000 shareholders, and paid more than $80 million in dividends last year, on which the shareholders in turn paid taxes.

The companies have a net worth of more than $3 billion. They have approximately 43,000 employees, and paid approximately $195 million in Federal, State, and local taxes last year.

Former Gov. Thomas E. Dewey has attacked the "preference clause" in the Lehman bill as "bending the knee to Moscow." State Attorney General Jacob K. Javits has rendered a legal opinion that it is contrary to public policy in New York.

But Governor Harriman and Chairman Robert Moses, of the State Power Authority, contend that if the Niagara license is awarded to New York with the "preference clause" they will be able to accept it under existing State law.

From a purely political viewpoint, if Congress now authorizes the Niagara development, 6 years after the enabling treaty was negotiated with Canada, the Democrats will get the credit.

It will be known as the Lehman bill, and may enhance its sponsor's chances of reelection. Its passage will have occurred in the administration of Harriman, who is an aspirant for teh Democratic Presidential nomination, not under Dewey.

It will confront President Eisenhower with a difficult decision on whether to sign or veto the bill. If he signs the measure, he will be repudiating the Republican leadership in Congress.

All this could have been avoided, as Miller point out, except that the GOP State leaders in New York had a devious political hand to play.

They weren't wholeheartedly for free enterprise in this segment of the national economy, and they weren't unreservedly for public power. They wanted to be somewhere in between.

The architects of this curious political philosophy include Assembly Speaker Oswald D. Heck, of Schenectady; State Senate Leader Walter J. Mahoney, of Buffalo, and GOP State Chairman L. Judson Morhouse, of Ticonderoga.

It seems ironical that in the foremost State in the Nation, where there are two major parties and several minor ones, not a single political party can be found that is

willing to stand unequivocally against the Government going into business on its own account.

After the United States signed the Niagara Redevelopment Treaty with Canada in 1950, Lehman and former Representative Franklin D. Roosevelt, Jr., introduced a bill calling for Federal development of the power project by the Truman administration.

To prevent establishment of a Federal TVA-type authority in New York State, Dewey persuaded the GOP-controlled legislature in 1951 to amend State law to include Niagara as well as the St. Lawrence River within the purview of the power authority.

This had never been contemplated in the original 1931 act, drafted by Leland Olds, of Rochester, former secretary of the New York Authority and later a member of the Federal Power Commission.

All during the days that Al Smith, Franklin D. Roosevelt, and Herbert H. Lehman occupied the Governor's chair in Albany, when there was great political propaganda against the so-called "power trust," there was no thought of State ownership at Niagara Falls.

To counteract the Lehman-Roosevelt bill, Senator IRVING M. IVES and Representative STERLING COLE, of the Binghamton-Elmira district, sponsored a measure calling for State development of Niagara. COLE subsequently asked that his name be stricken from the bill.

Before the 1952 election, IVES said that, "If we can get a change in the complexion at the White House and on the Hill, then we will be able to get the right kind of a bill through Congress."

President Eisenhower was elected in 1952 by a landslide, and Republicans took command of both the House and Senate.

The House took up the Niagara issue in 1953, and passed a free enterprise bill by a 262 to 120 margin. All New York Republicans voted for the measure except Javits. Six new York Democrats also voted for it, including Representative LEO W. O'BRIEN, of Albany.

At that time, the private industry bill would have sailed through the Senate. But Dewey used his influence to block it. The Governor came to Washington and made a personal appearance before the Senate Public Works Committee against the bill.

Eight GOP leaders in Albany, including Dewey, Heck, and Mahoney, joined in a telegram urging Members of Congress to vote against free enterprise.

The key man at the White House in blocking the measure was Sherman Adams, chief of staff and former Governor of New Hampshire.

The GOP controlled 83d Congress expired without even again taking up the Niagara issue. In the 1954 campaign, Democrats regained control in Congress, and elected new governors in a number of States, including New York, Pennsylvania, Connecticut, and Maine.

It should be noted that the stand taken by Dewey and GOP State leaders in Albany apparently produced no salutory results in the 1954 election. It won no "liberal" votes in New York City. If anything, it weakened the appeal of the GOP State ticket to normally Republican voters in the Niagara Frontier.

President Eisenhower has consistently taken the position that it is "up to the people of New York" to decide who should develop the Niagara project.

This is an evasion of the issue, of course, since the Federal Power Commission, dominated by Eisenhower appointees, eventually will have to issue the Niagara license.

It also is incompatible with the administration's basic philosophy of getting the Government out of business, and its "partnership" policy in watershed developments.

The administration has championed private enterprise in other power projects, such as Hells Canyon, Idaho, and the Dixon-Yates contract in the TVA region.

It has proceeded to sell to private owners the Government's synthetic rubber industry, inland waterways barges, ropewalks and other business-type enterprises operated by the Armed Forces.

At Niagara, for the first time in the American history of watershed development, a project is presented with no "multiple use" features—no irrigation, reclamation, navigation, or flood control—which have been used in the past to justify "public power" developments.

Privately owned companies stand ready, willing and able to undertake the investment, without the necessity of Government tax-free financing. The companies are subject to regulation of their rates and service, by the New York Public Service Commission, and the Federal Power Commission.

The New York Power Authority, it appears, is beholden to virtually no one. Once it issues its tax-free bonds through the usual New York City investment houses, it operates as a politically appointed corporate entity with almost sovereign powers.

President Eisenhower's position, however, has raised the question: "What do the people of New York want?"

This is a question which the politicians have never allowed the people to answer for themselves in a public referendum on the Niagara issue.

Such a referendum was proposed earlier this year in a telegram which Congressman COLE sent to Robert Moses, power authority chairman. Moses immediately rejected the proposal.

Bills calling for a plebiscite were introduced in the State legislature, but were never brought to a vote. The bills were spiked by GOP State leaders who did not want to "put the party on the spot" in an election year.

Yet the record shows that where polls have been taken, on a local or regional basis, results were uniformly in favor of private industry at Niagara.

This was true in the case of polls taken by Representatives KENNETH B. KEATING, of Rochester, HAROLD C. OSTERTAG, of Attica, and JOHN R. PILLION, of Buffalo. The margin was 5 to 1 in favor of free enterprise.

Even in New York City, Representative JOHN H. RAY conducted a poll on Staten Island and in Queens that ran 4 to 1 in favor of private development of Niagara.

It should be added that the residents of New York City have no practical interest in the Niagara project since they do not stand to benefit by a single kilowatt from the power to be produced at the falls.

Citizens of Ogdensburg—within 30 miles of Moses' new Massena works on the St. Lawrence—voted 2,694 to 1,730 in a special election against converting to a municipally-owned electric system. More than 60 percent of the voters were in favor of private industry.

Hearing records of the House and Senate are filled with petitions from labor unions, farm organizations, chambers of commerce, county supervisors, business groups, and other citizens, favoring the free enterprise development of Niagara.

Testimonials in favor of State ownership are few indeed, and what little there are come from professional pleaders before Congress for the socialization of American industry.

Is this the voice of the people? Can a dedicated, disciplined minority dictate the final Niagara decision, in the heat of an election year? If so, then something is indeed cockeyed in the democratic process.

The Annual Convention of the Fleet Reserve Association

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Our Navy of February 1, 1956:

OUR NAVY'S SPECIAL REPORT: ANNUAL CONVENTION OF THE FLEET RESERVE ASSOCIATION

The more than a thousand delegates assembled at the Hotel Sherman in Chicago, Ill., from the 28th until the 30th of October 1955 for the 28th National Convention of the Fleet Reserve Association. The delegates elected William F. Hickey, a former CPO now a retired lieutenant from Lemon Grove, Calif., as its 1955–56 national president. He is a native of Troy, N. Y., and has been associated with the Navy since 1916. Mike Catania, the man Hickey relieves as national president, moves to junior past president of the organization.

Many important items came out of the annual convention which were of great interest to the average bluejacket. Admiral Grenfell, the Assistatn Chief of Navy Personnel, informed the shipmates present at the convention that the planned promotion figure for men being advanced to CPO in fiscal year 1956 more than doubles those actually advanced during 1955.

Other planned promotions in fiscal year 1956 are 17,600 to petty officer first class, 59,500 to second class, and about 129,700 will sew on their crows for the first time. To enable nonrated men to become petty officers third class faster, the service requirement has been cut from 6 to 3 months.

At the present time it is believed that all sailors passing their third class test will be upped; the same will probably hold true for second class except in 3 or 4 rates. There will probably be about 12 rates that will be kind of cold to men going up for first class, otherwise, it is estimated that all, or at least the majority, of those passing will be advanced. A total of 210,300 promotions to the various PO grades are anticipated.

Admiral Grenfell also mentioned that legislation is now being prepared for future use which will remove the 10-year commission-service in the 20-year span criteria (which has passed as Public Law 318 last session of Congress). He extended for his immediate superior, Vice Adm. James L. Holloway, Chief of Naval Personnel, who is an honorary member of the FRA, his personal greetings and best wishes for a successful 1955 convention.

Sam Rose, long time friend and shipmate of the FRA, attended the convention on behalf of Mr. Harvey V. Higley, Administrator of Veterans' Affairs. Sam Rose, however, is more than just a friend and shipmate to the men of the Fleet Reserve Association and the Navy.

He has personally aided those mentioned previously more than it is possible to say. He informed the delegates that he was often asked "What does the VA do?" "It spends some four billion dollars a year," Mr. Rose continued "but examine its true perspective." Actually, $4 billion compared with the total amount of money Uncle Sam collects from us is not so much.

Out of every tax dollar you give to Uncle Sam, only 6 percent of it is spent in behalf

of veterans. It takes a lot of 6 percents to add up to $4 billion a year.

Where does it go? How does the VA spend it? Taxpayers should be pleased with the answer. Out of every VA dollar, Mr. Rose disclosed, that less than 5 cents of it is used for administrative expenses.

In Sam Rose's words, "The common purpose of VA benefits is the complete and total readjustment for millions of fighting men into the peaceful framework of the productive economy of our country." GI education and training, GI loans and GI insurance are the major benefits from the VA for able-bodied veterans. There are special readjustment programs for our war-disabled. Many of them need things such as artificial appliances, aids for the blind, wheel chairs, etc.

At the present time 1 out of every 8 persons in the United States is a veteran and that is more than 22 million. You will find them anywhere from a housing development to the campuses of our American colleges. They have used their well-earned benefits wisely to better our Nation and make it stronger.

Wilson H. Sandefer, of Jacksonville, Fla., a member of Yukon branch No. 126, was elected national vice president. Charles E. Lofgren, national secretary for the past 22 years, was reelected to office. However, he informed the delegates that this was his last term and would not be up for election after this tour was over. He asked the delegates to provide an understudy to carry on.

Schuyler S. Pyle, the national financial secretary, and Charles A. McCarthy, the editor of Naval Affairs, have not yet completed their present terms, and were not up for election.

National President Hickey appointed John C. Clarke of Philadelphia branch No. 1 as national chaplain, Edward E. Keeley, a past president of the FRA, as national parliamentarian and Christopher C. Sanders as chairman of the national finance committee. J. H. "Doc" Stone, of Spring Valley, Calif., will be the new chairman of the public relations committee. Carl A. Viken of Camden, N. J., was elected national treasurer.

It was anticipated that a good debate would come up over the proposed change of name for the FRA, however, it was comparatively quiet. The fact that 16 of the 19 living past national presidents of the FRA signed a letter to all branches asking for their support in changing the name of the 30-years-plus organization carried little or no weight with the delegates present in Chicago.

The special committee on changing the name appointed Shipmate Leo A. LaBelle, San Francisco branch No. 48, to speak for the change. Shipmate James W. "Pop" Mullins, of Seattle branch No. 18, spoke against. The 2 shipmates each received 20 minutes to present their arguments and 10 more minutes for rebuttal.

They both gave very good talks in presenting their cases and received a standing ovation. Following that the shipmates on the floor were given the opportunity to vote their opinions and after their words a motion was placed before the assembly to change the name of the Fleet Reserve Association.

A rollcall vote resulted in 1,461 nays and 133 ayes. The Fleet Reserve Association was still the Fleet Reserve Association.

In the annual report of Charles E. Lofgren, national secretary, he referred to the past association year as a "remarkable" one, both membership wise and finance wise. Membership statistics showed a 19-percent gain in per capita tax and MAL dues. Eighteen new braches were instituted during tthe year and as of June 30, 1955, there were 177 chartered branches in active commission. Membership increased from 37,748 members (June 30, 1954) to 43,660 (June 30, 1955), for a net increase of 5,912. However, since 9,480 members were dropped from the rolls for one reason or another, actually 15,392 shipmates were recruited as new or reinstated members during the year. New branches accounted for 1,568 and the national circulation brought in 1,475, the remaining new men were the results of hard work by the national membership chairman, Cliff Warren, and cochairman, J. C. Ellison, and the branches.

Branch No. 70 at Guam was awarded the Fleet Reserve Association Trophy for membership promotion. It started the fiscal year with 14 members and ended with 346, a gain of 332. Only three members were actually suspended during the time. Membership committee presented a gold wrist watch to Shipmate Robert H. O'Malley, SKC, USN, of Naples Branch No. 187, for having sponsored the greatest number of new and reinstated members. He signed up more than 300 members.

Schuyler S. Pyle, the national financial secretary, gave the organization answers to the three questions always asked: How much did we take in, how much did we spend, and how much do we have left. We will only mention the last part in our article. The total worth of the Fleet Reserve Association at the time was $114,078.71. Pretty good for a bunch of sailors, don't you agree? However, besides the good news, one major matter of grave importance exists.

Mr. Pyle referred to their present national headquarters as a firetrap and called it time to formulate plans to do something about bringing our ship to anchor. The FRA has outgrown those present quarters. The present lease on Rhode Island Avenue, in Washington, D. C., has less 2 years to run, and it costs the FRA approximately $3,000 in rent yearly. Time is running out and if appropriate steps are to be taken to meet the situation head-on, immediate action must be taken now.

Two steps were recommended by Shipmate Pyle. One was to appoint a special committee with broad powers to delve into the matter of our future housing needs. The second step he suggested was to take steps to devise and formulate plans for a building fund raising campaign, utilizing the services of the branches.

This year the national convention delegates elected 10 shipmates to honorary membership in the Fleet Reserve Association. Those shipmates are listed below:

Rear Adm. Dale Harris, USN.
Capt. J. H. S. Johnson, USN.
Capt. James F. Byrne, USN.
Capt. James H. Flatley, Jr., USN.
Capt. A. G. Dibrell, Jr., USN.
Lt. (jg.) Harold R. Davis (SC), USN.
Congressman HORACE SEELY-BROWN, JR., of Connecticut.
Maj. Gen. John C. McQueen, USMC.
Mr. Leonard Weinstein.
Judge Luis N. de Leon.

Certificates of merit were presented by the delegates to Roy A. Mears, a member of the firm of optical dispensers in Long Beach, Calif., an ex-Navy man, and Shipmate Ambrose H. Redmond, the secretary of branch No. 9 (San Diego), for outstanding contributions to the FRA.

The assembly also took action on several resolutions. A brief synopsis of the action is noted as follows:

1. Support of H. R. 721, which amends the World War Veterans' Act of 1924 to mature United States Government life insurance when the holder reaches age 70.

2. National Service Committee to support best medical care bill possible and when taken up.

3. Request amendment of Public Law 370 (Philippine Rehabilitation Act of 1946) to provide full payment of balance of approved claims for wartime damage.

4. Support H. R. 5395 to provide "in hiding" benefit of $2.50 per day to members of the United States Armed Forces in hiding to evade capture by the enemy during World War II or Korean conflict.

5. Support the survivor benefit bill (H. R. 7089), now pending in the Senate Finance Committee.

6. Cooperate to the fullest extent in recruiting for the Navy and in obtaining reenlistments.

7. Support the Armed Services Uniform Retirement Act, with such amendments as may be deemed necessary to preserve existing retirement benefits and correct apparent injustices.

8. Urge enactment of legislation to forgive checkages for personnel who drew sea pay while attached to vessels in the Great Lakes and the U. S. S. *Sequoia*, and refund checkages already made.

9. Urge enactment of legislation to validate payments of reenlistment allowance made in good faith, on which checkages are pending due to a recent Comptroller General decision.

10. Carefully analyze the report on the President's Commission on Veterans' Pensions when issued.

11. Increase burial expenses from $150 to $250.

12. Vigorously favor enactment of legislation to provide non-service-connected death pensions for widows and children of World War II and Korean veterans on a parity with World War I veterans.

13. Favor increase of annual income limitations for entitlement to widow's pensions from $1,400 to $1,800, and from $2,700 to $3,000 for widows with minor children.

14. Protest any curtailment of contact service in Veterans' Administration agencies.

15. Support enactment of H. R. 6274 to provide no fee be charged veterans for obtaining duplicate discharges or statements of service.

16. Continue to favor establishment of a standing Committee on Veterans' Affairs in the United States Senate.

17. Repeal of 1894 act prohibiting employment of retired officers in Federal civil service under certain restrictions.

18. Exert every effort to obtain preference for enlistment in the Navy of some of fleet reserve and retired personnel in the Philippines.

19. Substitute current rates of subsistence and quarters for enlisted men in the payment of accrued leave, in lieu of lower specified amounts as set forth in the Armed Services Leave Act of 1946.

20. Support revision of the Uniform Code of Military Justice to incorporate provision for reestablishing the responsible chain of command concept.

21. Support the movement of other major veterans organizations to seek abrogation of treaty agreements for trial of United States Armed Forces personnel by foreign courts for civilian offenses incurred while off duty in foreign countries.

22. Explore the possibility of initiating action to effect remedial legislation to correct existing inequities in dollar exchange rate, including use of military pay certificates by United States Armed Forces in foreign countries.

Everything was not all work, though, as the delegates assembled early Saturday morning along with members of the Naval Reserve Association to hear several guest speakers. Headlining them was Under Secretary of the Navy, Thomas S. Gates. On Friday the convention heard speeches by Rear Adm. Elton W. Grenfell, Assistant Chief of Naval Personnel; Sam Rose, of the VA; Rear Adm. Emmet P. Forrestel, Commandant of the 9th Naval District; and Capt. J. B. McLean, commanding officer of the Naval Training Center at Great Lakes. That evening at the Sherman, the association held its convention banquet and dance.

During Admiral Grenfell's remarks, he praised shipmates Bill Stomski, lieutenant (retired), United States Navy, and his wife as the Navy's good-will ambassadors. Upon completion of the admiral's address, Charlie Lofgren presented the admiral with a pen set on behalf of the FRA and said he hoped the admiral would have occasion to use it in signing or initialing many directives benefiting the morale of the enlisted men of the Navy.

The delegates were greeted by many "high-ups" at their opening session both military as well as representatives of the mayor of Chicago and the Governor of Illinois.

Remember the "ole" saying about you can't teach an old dog new tricks? Well, on Saturday morning the old salts took time to listen to a Navy career incentive team. The benefits now received are quite a bit changed from the time when some of the men sitting out front had first joined. Jesse F. Nichols, of Gloucester, Mass., and Alexander Steele, of Washington, D. C., both 82 years young, were sailors when the pay and benefits were not up to the present standards. Shipmate Nichols first joined in 1893 but "boot" Steele didn't sign up until 1898. Both sailed (and we really mean "sailed"), on Monitor-type vessels. Their pay at the time? $14 per month. That $14 per month pay is just a little more than a seaman now makes just on sea pay.

The time and place committee received two bids for the 1957 convention site. The two bids were from Long Beach, Calif., and St. Petersburg, Fla. That committee recommended Long Beach which was approved by the delegates present. The 1956 convention had been O. K.'d last year to be held in Philadelphia. The dates for the 1957 conclave will be October 25, 26, and 27.

One of the most important factors to come out of the Chicago convention is the mandate that national headquarters employ Shipmate Russel A. Langdon, of Branch No. 4 as the understudy of Shipmate Charles E. Lofgren. The Fleet Reserve Association has been blessed with the outstanding work and accomplishments of Shipmate Charlie for the past score of years and more. It is with regret that the FRA must think of a replacement. But the national secretary will not run again for office. And a better man than "Lucky" Langdon will not be found. It is anticipated that Shipmate Langdon will report to 522 Rhode Island Avenue for duty about the first of April, when he retires from the naval service as a lieutenant commander. He has a wonderful knowledge of the workings of this association and has served on national service committees for years. He is just the man for the job.

When the convention was over, the last sea-story told, the last beer drank, and the last shipmate checked out from the Hotel Sherman, it was just another convention gone by. But it was a convention which met several problems which were harmoniously solved in true shipmate spirit. Shipmatism prevailed above all as resolutions were acted upon and the work was taken care of in orderly fashion.

He Deserves It

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. CRETELLA. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Bridgeport (Conn.) Post of June 26 commenting on the renomination of my good friend and colleague AL MORANO for a fourth term as Congressman from the Fourth District of Connecticut.

All those who know AL MORANO, or are familiar with his work in Congress, will share my sentiment that the editorial comment is well deserved.

The editorial follows:

MORANO IS NAMED AGAIN

Representative ALBERT P. MORANO, whose congressional district includes Fairfield County, has been nominated unanimously by the Republicans for his fourth consecutive term.

This sounds very much as though the energetic Congressman from Greenwich had satisfied the party leaders by his past service, just as he has satisfied the bulk of the people in the fourth district.

Sheriff Platt, who had said a couple of harsh words about the Representative last April because it was impossible for him to dash up here from Washington to attend a political dinner, put all that difficulty behind him, and publicly praised Congressman MORANO as a "good worker, a good Congressman, who understands the need of the people in his district, and does what he can to help them."

That, we believe, just about sums up the way the average citizen of Fairfield County feels toward the Representative. He is a hard worker, and his voting record is one that he can be proud of and hold up before any Democratic opponent.

There is one thing that will always mean good will, and therefore votes, for Representative MORANO. No matter what his constituents ask him to do, whether by mail, telephone, or in personal visits, he starts the wheels moving and usually gets results. Having been in Washington so long, first as secretary to Congressman Austin and then as secretary to Ambassador Clare Boothe Luce, when she represented this district in the House—AL MORANO knows his way around and knows how to get things done.

Sheriff Platt said one more thing which seems to be something in the nature of a forecast, "the Democrats can't nominate anybody who can beat him." That is pretty much the way it looks to us. Congressman MORANO will go back to Washington because he has done such a good job for all of us, Democrats as well as Republicans, and he deserves another term.

Resolutions Adopted by the General Federation of Women's Clubs

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including herewith a copy of resolutions adopted by the General Federation of Women's Clubs at their convention in Kansas City, Mo., on May 14–18, 1956.

The General Federation of Women's Clubs is one of the great, unselfish, outstanding, and influential organizations in America. I am sure the Members of Congress will be interested in the proposals they have submitted in the resolutions that are included herewith.

GENERAL FEDERATION OF WOMEN'S CLUBS RESOLUTIONS ADOPTED IN CONVENTION, KANSAS CITY, MO., MAY 14–18, 1956

1. ADVERTISING THROUGH MASS MEDIA

Resolved, That the General Federation of Women's Clubs initiate, sponsor and seek appropriate cooperative action by the Federation, State federations, local clubs, publishers, producers, and distributors of mass media which will eliminate objectionable matter, including covers, titles and contents of paperback books and magazines; and further

Resolved, That the General Federation of Women's Clubs urges the use and passage of effective control measures (that is, education in discrimination by the buying public; self-regulative codes strictly adhered to; and legislative enactment only when absolutely necessary) for all advertising by mass media which, in itself or through the effects of the product advertised, is a threat to the physical, mental, or moral well-being of our people.

Presented by Mrs. Dexter O. Arnold, chairman, communication department; Mrs. Walter V. Magee, chairman, community affairs department.

2. RESEARCH ON EFFECTS OF MASS MEDIA

Whereas the General Federation of Women's Clubs has expressed repeatedly its concern about the effects on children of salacious literature, crime and horror comics, television, radio, and motion picture programs, Therefore

Resolved, That the General Federation of Women's Clubs in convention assembled May 1956, commends and recommends the further development of research projects by private foundations and organizations, educational centers at colleges and universities, and a governmental commission to make scientific studies of the extent and nature of the effects of questionable mass media.

Presented by Mrs. Walter V. Magee, chairman, community affairs department; Mrs. Dexter O. Arnold, chairman, communications department.

3. CONSERVATION OF YOUTH

Whereas the American philosophy of living is to give to every one of its people the opportunity to develop the best of which he is capable; and

Whereas the future of America is dependent on the fullest development of the capabilities of the youth of our nation, including those of superior ability, those of normal gifts and talents, and those who are socially, physically, or mentally handicapped; and

Whereas appropriate education, remedial treatment, and rehabilitation where indicated are the most valuable and most economical methods of developing the capacities of youth with lifelong institutional care and support utilized only when the above methods have failed: Therefore be it

Resolved, That the General Federation of Women's Clubs in convention assembled, May 1956, urges members to initiate, promote, and support programs to—

1. Impress upon parents the fact that the home is irreplaceable in supplying the basic needs for development of well-adjusted children;

2. Develop to the fullest extent the child with special talents and abilities;

3. Educate, treat, and rehabilitate the physically and mentally handicapped and those with behavior problems;

4. Educate the youth in our schools as to their total responsibilities;

5. Accept the migrant child as a part of the community responsibility.

Presented by Mrs. Joseph M. Perkins, chairman, education department; Mrs. Walter V. Magee, chairman community affairs department.

4. RECREATION AREAS IN NATIONAL FORESTS

Whereas the numbers of people using the national forests for recreation increases annually; and

Whereas funds appropriated are presently insufficient to maintain and develop recreational areas in national forests which will meet the demand for their use; and

Whereas the income from the national forests exceeds the cost of their administration: Therefore be it

Resolved, That the General Federation of Women's Clubs urges the Congress of the United States to provide for the return to the Forest Service of sums sufficient for the maintenance and development of recreation areas located in the national forests.

Presented by Mrs. Marion T. Weatherford, chairman, conservation of natural resources department.

5. COMMERCIAL SLAUGHTER OF ANIMALS

Whereas studies reveal instances of cruel methods in the handing and commercial slaughter of animals, although more humane procedures have been developed and are available and practicable: Therefore be it

Resolved, That the General Federation of Women's Clubs endorses the objective of slaughter reform and asks club members to investigate as to conditions in their own communities and to require humane practices where needed.

Presented by Mrs. A. M. Satterlee, chairman, consumer division.

6. PRAYER AT THE UNITED NATIONS

Whereas the permanent representative of the United States to the United Nations has proposed to the representatives at the United Nations of each of the other 75 member nations, that future meetings of the General Assembly be opened with prayer and that God be audibly invoked at the United Nations in accordance with any one of the religious faiths represented there; and

Whereas we have learned through our own early experience as a Nation, the need for divine guidance in all our undertakings: Therefore be it

Resolved, That the General Federation of Women's Clubs in convention assembled in Kansas City, Mo., May 1956, endorses and supports the proposal for opening the General Assembly of the United Nations with prayer; and be it further

Resolved, That a copy of this resolution be forwarded to Ambassador Henry Cabot Lodge, United States Permanent Representative to the United Nations, to Dag Hammerskjold, Secretary-General of the United Nations, to the President of the United States, and to the Secretary of State.

Presented by Mrs. V. B. Ballard, chairman, United Nations and specialized agencies division; Mrs. Norbert J. Klein, chairman, international affairs department.

7. HEMISPHERIC SOLIDARITY

Whereas promotion of Western Hemisphere solidarity long has been an established policy of the General Federation of Women's Clubs; and

Whereas the women of the countries of the Americas have it within their power to further better understanding between the peoples of their respective nations as has been demonstrated by the exchange of ideas and experiences in the Inter-American Conferences: Therefore be it

Resolved, That the General Federation of Women's Clubs in convention assembled, May 1956, calls upon its members to enlist the aid of women of the American nations in urging their several governments and people to increase mutual understanding and cooperative action in order to further common interests in cultural, economic, and political well-being.

Presented by Mrs. Norbert J. Klein, chairman, international affairs department.

8. INTERNATIONAL EXCHANGE PROGRAMS

Whereas the General Federation of Women's Clubs believes that an understanding of the cultural background, history, political aspects, economy, and the everyday pattern of living of the nations of the world is necessary to the maintenance of peace; and

Whereas the General Federation of Women's Clubs has for many years been an active participant in the international exchange of persons programs and believes the programs to be effective means of bringing about world understanding: Therefore

Resolved, That the General Federation of Women's Clubs express its approval of the international exchange programs and urges Congress to:

1. Appropriate adequate funds for the effective continuation of the programs.

2. Provide that exchange students be required to return to their own countries for a period of not less than 2 years, in order that they may interpret to their own people our American life in accordance with the purpose of the program.

3. Provide opportunities whereby the experiences of American exchange persons can be used constructively in the education, understanding, and appreciation of other nations by our people.

4. Create a commission of carefully selected persons, including Congressmen, educators, and community leaders who are especially fitted to study the international exchange of persons programs for the purpose of effecting the best coordinated program for the mutual advantage of the people and countries concerned.

Presented by Mrs. Joseph M. Perkins, chairman, education department; Mrs. Norbert J. Klein, chairman, international affairs department; Mrs. Harry W. Schaal, chairman, fine arts department.

9. TRAINING SCIENTISTS

Whereas it is evident that there exists a critical shortage of scientists and qualified science teachers in the United States and that present facilities will not provide the trained personnel demanded by Government and industry if we are to meet world competition; and

Whereas the inability of many students to meet the requirements of courses in advanced science and mathematics when offered in high schools and colleges demonstrates the need for teaching the fundamentals of mathematics and elementary science at the grade school level: Therefore

Resolved, That the General Federation of Women's Clubs in convention assembled May 1956, advocates, supports and urges member groups to participate in a concerted effort to:

1. Discover special scientific aptitudes at an elementary school age through the use of testing programs.

2. Strengthen the teaching of mathematics and science in the schools of the United States at all scholastic levels;

3. Recruit science teachers and encourage students to major in science through the establishment of scholarships and fellowships and other incentives;

4. Seek auxiliary teachers from the ranks of industry and from among retired scientists;

5. Secure for local schools adequate laboratory and other necessary facilities.

Presented by Mrs. Joseph M. Perkins, chairman, education department; Mrs. W. H. Hasebroock, chairman, national defense division and public affairs department.

10. THE SECOND HOOVER COMMISSION

Whereas the Second Hoover Commission was appointed because of the insistent need of economy in Government without sacrifice of essential services; and

Whereas the General Federation of Women's Clubs has a continuing interest in the objectives and reports of the Second Hoover Commission and in the implementation of certain recommendations contained in the reports: Therefore

Resolved, That the General Federation of Women's Clubs in convention assembled, May 1956, recommends that clubs study carefully the details of the report of the Second Hoover Commission; and further

Resolved, That the General Federation of Women's Clubs support congressional action which would implement those provisions in the report which are in accord with duly established policies of the General Federation.

Presented by Mrs. A. Paul Hartz, chairman, legislation division; Mrs. W. H. Hasebroock, chairman, public affairs department.

11. CORRUPT PRACTICES ACT

Whereas the General Federation of Women's Clubs is an organization engaged in legitimate lobbying activities which we construe to be our constitutional right of petition; has operated always within the letter and spirit of the law; and is concerned deeply and on a volunteer basis with those measures which mean the advancement of the best interests of our country and its people; and

Whereas the General Federation of Women's Clubs has been cognizant of and has deplored violations of the Corrupt Practices Act and the weaknesses contained therein; and

Whereas the General Federation of Women's Clubs has noted the excesses in political campaigning and has proposed measures which might be taken by the two major political parties which would tend to reduce these excesses, notably a shortening of the period devoted to political campaigning and a devotion in campaigning to issues only: Therefore

Resolved, That the General Federation of Women's Clubs in convention assembled, May 1956, records its approval and support of bipartisan efforts to strengthen and improve the Corrupt Practices Act; to curb illegal lobbying; and to raise the standard under which political campaigning shall be conducted.

Presented by Mrs. W. H. Hasebroock, chairman, public affairs department; Mrs. Walter W. Brewer, chairman, citizenship division.

12. UNIFORM MARRIAGE AND DIVORCE LAWS

(NOTE.—It is recommended by the policy committee and Mrs. A. Paul Hartz, Mrs. Gilbert F. Loebs, and Mrs. Walter V. Magee, that the following paragraph 4 be substituted in the existing uniform marriage and divorce laws resolution, which merely recommends an educational campaign to acquaint its members, and the general public, with the extent and nature of the social problems resulting from existing laws and the advantages of uniform legislation pertaining to marriage and divorce.)

Resolved, That the General Federation of Women's Clubs advocate the education for and adoption of uniform concurrent legislation concerning marriage and divorce and urges State federations and local clubs to work toward securing such legislation in their respective States.

Presented by Mrs. A. Paul Hartz, chairman, legislation division; Mrs. Gilbert F. Loebs, chairman, home department; Mrs. Walter F. Magee, chairman, community affairs department.

(This is the complete resolution:)

Whereas the great number of divorces and almost as many remarriages which are taking place in the United States annually are creating alarming social and economic problems; and

Whereas lack of uniform laws often results in illegal divorces, illegal remarriages, and children branded as illegitimate, with a consequent breakdown of moral standards, confusion in property rights, and much unhappiness: Therefore

Resolved, That the General Federation of Women's Clubs approves an amendment to the Constitution of the United States giving Congress power to enact uniform marriage and divorce legislation; and further

Resolved, That the General Federation of Women's Clubs advocate the education for and adoption of uniform concurrent legislation concerning marriage and divorce and wishes State federations and local clubs to work toward selling such legislation in their respective States.

13. CIVIL DEFENSE

(NOTE.—It is recommended by the policy committee and the national-defense chairman that the following resolution be substituted for the existing one on civil defense.)

Whereas the destructive power of nuclear weapons poses the constant threat that they may be used against civilian populations; and

Whereas an effective civil defense is a powerful deterrent to aggressors; and

Whereas civil-defense organizations have demonstrated repeatedly a peacetime usefulness as in times of national disaster and other emergencies; and

Whereas successful civil defense requires interest, acceptance, and participation by individuals, families, and communities, with special need for information and training of women in the home on their responsibilities for home and family survival in any hazard: Therefore

Resolved, That each club member be urged:

1. To heed civil-defense instruction, accept personal responsibility and take positive action toward insuring family survival;

2. To promote public civil-defense education and participation through effective, challenging club programs and projects;

3. To assist in establishing local civil-defense organizations where none exist, and to support community civil defense by personal participation;

4. To dedicate themselves to the cause of civil defense as an indispensable peacetime emergency service, a national defense survival necessity, and a major safeguard and strength of democracy.

Presented by: Mrs. William H. Hasebroock, chairman, public affairs department, national defense division.

EMERGENCY RESOLUTION

Crusade for Freedom

Whereas the captive European peoples behind the Iron Curtain are constantly bombarded by Communist propaganda designed to break their will, to resist and destroy the hope for a better future; and

Whereas in the continuing work of combating false propaganda the crusade for freedom, in the best American tradition, reflects the collective efforts of private citizens dedicated to keeping alive the hope of enslaved peoples that they may regain their rights of freedom, independence nd self-government: Therefore

Resolved, That the General Federation of Women's Clubs urges its member clubs to continue their support of the program of the crusade for freedom.

Presented by the policy committee.

Arab Attacks Continue

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 4, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following item which appeared in the June 1, 1956, edition of the Israel Digest:

TWO ISRAELIS KILLED, THREE WOUNDED IN CONTINUED ARAB ATTACKS

Two Israelis were killed, three wounded and fields were set on fire in a series of Arab attacks from across the borders in the past 2 weeks.

These Arab attacks on Israel life and property further marred the renewed cease fire assurances given U. N. Secretary General Dag Hammarskjold on his recent mission to the Middle East.

Following is a partial list of the incidents:

On May 24, a tractor driver, working in the Lachish area was ambushed and killed. His tractor was pierced by bullets and blood-stained. The driver's body, shot in the head and back was found a few meters away.

The incident took place 10 kilometers from the Jordan border, Israel lodged a complaint with the Israel-Jordan Mixed Armistice Commission.

On May 25, a party of surveyors working in the area east of Beersheba, on the Hebron road near the Israel-Jordan armistice line, was fired upon from the Jordan side. There were no casualties.

For the third night in succession, infiltrators stole irrigation pipes from the settlement of Nir Oz. Traces of five persons wearing rubber soled shoes, led to the Gaza strip.

A 40-duman crop of barley was stolen from Kibbuts Lahay during the week. Settlers saw Arabs fleeing from the fields in the direction of the territory of the el Huzeil tribe.

On June 3, 3, Jordanians opened fire on the Pagi quarter of Jersualem. The gunfire set a field of tinder-dry brush and bramble ablaze. One rabbinical student was killed.

The same day, an Israeli patrol dispersed a group of Syrian fishermen who were fishing at the southern end of Lake Huleh.

On June 4, a number of Arab Legionnaires penetrated into Israel territory east of Kiriat-Auavim. They retreated without incident.

On June 5, a patrol scattered an Arab Legion unit which entered into Israel territory in the Shaar-Hagai sector.

Jordanians opened fire on a group of workers in the vicinity of Yad Hanah. Two Israelis were wounded.

On June 6, a group of some 70 Syrians set fire to the fields of Kibbutz Dan, in the upper Galillee, destroying some 10 acres of crop.

The Syrians attempted unsuccessfully to kidnap one of the settlers who rushed out to extinguish the blaze. Settlers from the kibbutz did manage to save a combine from the ravages of fire by speedily removing it from the area.

Two cases of Jordan troop penetrations into Israel territory, in the area overlooking the Jerusalem-Tel Aviv highway, were reported on the same day. In one case, the Jordanian forces withdrew at the approach of an Israeli patrol; in the other, one watchman from Kibbutz Ofkin was wounded by gunfire opened by infiltrators from aeross the Gaza strip.

International Exchange in the Arts

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable George F. Kennan at a symposium sponsored by the International Council of the Museum of Modern Art in New York City on May 12, 1955:

INTERNATIONAL EXCHANGE IN THE ARTS

(Address by the Honorable George F. Kennan at a symposium sponsored by the International Council of the Museum of Modern Art, May 12, 1955)

Mr. Chairman, members of the International Council, friends and guests of the Museum of Modern Art, all that I can offer to the discussion this evening consists of a few reflections based on about a quarter century of experience in the profession of diplomacy, which bears a somewhat peripheral but always friendly and, I think, sympathetic relation to the arts. I have the feeling that what I am about to say will seem to many of you to fall into the realm of the commonplace and really ought to be said to the audience that is not here rather than to the audience that is. But they are my thoughts, and if they seem to you to be commonplace, I can only say and hope that it will at least be interesting to know that what you believe in also commends itself to those who are long immersed in Foreign Service work.

The first thought to occur to me in this connection is one that may surprise some of you, coming from a person who is commonly supposed to be preoccupied exclusively with the international connotations of all phenomena; but it represents a very deep conviction, and I give it to you for what it's worth. It is the belief that however great the importance of international culture exchange from the standpoint of our relations with other countries, this is not the main reason why we Americans have need for cultural contacts with other peoples at this time. The main reason lies rather in our own need as Americans for just this sort of enrichment of our national spirit.

I am persuaded that any really creative development in the field of art or of literature is intimately connected with international contact and is, in fact, unthinkable without it. To test the proof of that proposition, I think you have only to glance at the roots of our own American culture and see how varied they are, and from how many types of soil, both in time and in space, they spring. No such culture could ever have developed in isolation, and, what is more important for us today, I am sure that no such culture can continue to retain its spiritual vigor if it is kept in isolation.

Now there are people, I am afraid, who think that cultural activity, once it is part of the tradition of a nation and once the educational facilities are there, is something that just proceeds by itself and would go on even though the respective country were entirely walled off from contact with the outside world. I am persuaded that there could be no more shallow nor dangerous assumption than this. When water is taken out of this great stream of international thought and inspiration and channeled into a closed national backwater—I have seen this happen to some extent in the Soviet Union—it quickly becomes stagnant and sterile. This is, of course, because creativeness is so intimately associated with divergence and contradictions. It is only in the reconciling of contrary phenomena that new perceptions arise as new form is created. There cannot be any progress of the spirit without trial; and trial, as Milton once observed, is by what is contrary.

It is particularly important for us Americans to be conscious of this, because in this respect great continental countries like our own are in a particular danger. In the smaller countries (I am thinking here especially of the small maritime countries of Europe), association with other people is something that you can hardly avoid.

Travel becomes absolutely necessary, a knowledge of foreign languages likewise. The use of foreign educational and cultural media is common and known to practically everyone. But in the great interior spaces of our country—and, incidentally, this same thing applies to Russia—conditions are different. Here people can lead their lives with scarcely a single confronta'ion with that which is foreign or different.

The tendency of our own mass media today, involuntary perhaps, but nonetheless compelling, is to eradicate even those divergencies in cultural stimuli and outlook that might otherwise spring from the real variety of tradition and psychology which we have inherited from the past of our own country. These media, as I don't need to point out to you, are centralized today and are becoming more so. Their product is increasingly standardized. They are aimed at passive amusement rather than at creative challenge. They are adjusted to mass needs rather than to the needs of that minority of people (and I think it always must be a minority) who are capable of participating in creative artistic effort and of leading other people to new levels of appreciation and expression.

I think this is a matter of great seriousness for us. I recently completed a trip across the country and back. I come from the Middle West, and I always look at it and the whole interior of this country with particular curiosity. I have no question as to the immense potential creative resources of our people in the world of the spirit. But I cannot help questioning whether those resources are likely to find anything resembling a normal degree of development and expression today, unless we can see some way or other of breaking through, as an educational experience, the monotony and what I might almost call the narcotic effect of the modern commercial cultural product, and finding types of stimuli that are more kindly to the development of the creative spirit. In such a country as ours, faced with these facts of geography and of modern technology, the impact of foreign cultural values is needed just as rain is by the desert. And needed—I would like to reiterate this—for our sakes alone, for our development as individuals and as a Nation, lest we fall into complacency, sterility and emotional decay; lest we lose our sense of the capabilities of the human spirit, and with it much of our sensitivity to the possible meaning and wonder of life itself. For this reason I would be prepared to say: let us by all means have the maximum cultural exchange, even if America had before it no problem whatsoever of outside opinion; even if we had no need of any sort for other people, and all that was concerned was our own development here at home.

Actually, of course, we have at this time the greatest and most urgent need to correct a number of impressions that the outside world entertains of us, impressions that are beginning to affect our international position in very important ways. I think we are gradually becoming aware for the first time of the frightening extent to which negative conceptions about us prevail to one degree or another abroad; but many of us still do not realize how largely these negative feelings are related to cultural rather than to political conditions. Here I, whose training has been in the political field, would say that I believe that many of the feelings about us which other people would think are political have their origins in the impression that we are a Nation of vulgar, materialistic nouveaux riches, lacking in manners and in sensitivity, interested only in making money, contemptuous of every refinement of esthetic feeling. Now, it is true that this impression is in part deliberately fostered by others who wish us no good and would like to make us hated. It is also true that in some parts of the world, and particularly I think in Western Europe, these feelings are due to the fact that we have become identified in the minds of people with things and impulses of the modern age which they hate in themselves—such things as modern technology, standardization and mass culture, which they themselves are rapidly acquiring. And while they abuse us, they follow helplessly in what they believe to be our own path. But there is certainly a large area, and probably the predominant one, in which the prevalence of these negative feelings is the result of our own carelessness and neglect, our own failure to take any adequate measures to see that the impression we create abroad actually does reflect the real values of our civilization.

It seems to me that by and large until quite recently we have been content to leave the external projection of our cultural life almost exclusively to the blind workings of commercial interests, with results that from time to time, I can testify from personal experience, were absolutely frightening. This, of course, really has been the result of our failure to realize what the life of the spirit means to people abroad. I can think of few countries in the world where the artist, the writer, the composer or the thinker is held in such general low esteem as he is here in our country. To the people in many other countries, for whom the prospects for material development are not so favorable as they are here, and who have never been taught to see personal relationships, and particularly the relationship between the sexes, as having the same sort of romantic glorification that distinguishes our folklore and literature—to many of these people, cultural life appears as the highest and the most hopeful form of human activity. And these people are apt to measure other civilization by the degree to which they are considerate of cultural values and cause cultural activities to flourish within their confines.

Beyond this, of course, this world of art and the spirit has a symbolic value in international life which has been the subject of an appalling number of clichés, but is no less significant on that account. It is a fact that in the creation of beauty and in the great monumental works of the intellect, and there alone, human beings have been able to find an unfailing bridge between nations, even in the darkest moments of political bitterness and chauvinism and exclusiveness. In many years of living in totalitarian countries, both Germany and Russia, I have been struck time and time again by the fact that where every other manifestation of human life has been given some sort of a political coloration and planed, so to speak, for the political process, artistic creation and the higher forms of scholarly thought have remained the only areas in which it was conceded, even by the totalitarians, that men of different faith and allegiances might conceivably find a bond. Even at the blackest moments of the cultural isolation forced on the Soviet Union by Stalin—and those moments were black indeed—never was the principle really challenged that there were cultural values, universal in their meaning and their appeal, in the appreciation of which all men, regardless of class or social allegiance, could meet and find a common subject of understanding. Not even the crushing extent to which the Soviet regime tried to force the Soviet intelligentsia into the service of its own political purposes could obviate this underlying reality. In fact, subconsciously it was in a gesture of profound respect and, in a way, humility that the Soviet leaders were forced to come to the artists, to cultivate their favor and to seek their assistance in the propaganda activities of the party, knowing that these intellectuals enjoyed a form of confidence in the minds of men elsewhere which no political ideology could ever rival, and that they were capable of bestowing upon the regime a certain pattern of approval and legitimacy that nothing else could bestow. In this long, tortuous contest between the Soviet leaders and the cultural world of the people under their rule, a contest that has gone on now for some 3 decades, for all the terror and all the brutality, it has really been the politicians who were the supplicants, and the people who wield the pen and brush whose influence was courted. The totalitarians recognized that only if they appeared outwardly to enjoy the confidence and enthusiasm of the artists could they plausibly claim to have created a hopeful and creditable civilization. And I find it sad to think that they should have come to this appreciation so much sooner than many of our own people.

It is for these reasons that I personally attach such high importance to cultural contact as a means of combating the negative impressions about this country that mark so much of world opinion. What we have to do, of course, is to show the outside world both that we have a cultural life and that we care something about it—that we care enough about it, in fact, to give it encouragement and support here at home, and to see that it is enriched by acquaintance with similar activity elsewhere. If these impressions could only be conveyed with enough force and success to countries beyond our borders, I for my part would willingly trade the entire remaining inventory of political propaganda for the results that could be achieved by such means alone.

There are two reservations that I would like to voice about that proposition. One is concerned with what we give to others, the other is concerned with what we take from them. The first is this: We must not make the mistake of thinking that any sort of cultural product will do for interchange, as long as it is American, and that the content of our contribution is a matter of secondary importance. Of course, we can't be perfect in the arts; our things are always going to have deficiencies. A great deal is also going to depend on the modesty, naturalness and humility with which we bring these things to other people. But we can be selective. There are a great many Americans who don't understand this. Fortunately, I think, not many of them are concerned with matters of international cultural interchange, though many of them are concerned with governmental affairs and with diplomacy. There are many who feel that we are such an interesting and glamorous people that any and all manifestations of American culture ought ipso facto to be welcome and helpful anywhere. I have seen American ambassadors, for example, in more than one instance exhibit one silly and inferior American film after the other to invited foreign audiences, in the happy confidence that no product of Hollywood could fail to be impressive and enjoyable to the foreign observer. So when we deliberately enter into this sort of exchange, let us by all means see to it that what we send is the best we can muster, and that it is something that is comprehensible and acceptable elsewhere. Above all, let us not make the common American mistake, so characteristic of the commercial mediums, of thinking that contributions of weak artistic talent or content are going to be acceptable if only they are packaged in pretentious and elaborate frameworks of technical execution.

My second reservation relates, as I said, to what we take from others. It concerns, quite simply, our graciousness as a host to foreign cultural activities in this country. It is not enough to let other people send things here and come here themselves. It is, of course, important to see that any cultural activity sponsored by foreigners that takes place within our borders is surrounded at all times with an atmosphere of hospitality and warmth, friendliness, and perceptive sympathy. Now, artists are peculiar people, sensitive people. They move unceasingly in

a sort of painful half-world between the feeling of the artist and the level of public taste and appreciation. I think they can take a great deal of criticism, as long as they feel that it is honest and disinterested, but what they cannot stand is disrespect for their art itself, and they have not quite the same tolerance that most of the rest of us have for minor frustrations and tactlessness, stupidity, and bureaucracy.

Here, of course, is where our Government could be of help. Perhaps these words will reach it. The experience of foreign artists with American hospitality begins when they first come into contact with American officials abroad with regard to their visas. It is only too evident that this experience today is rarely a happy one, and I would like to raise the question once more whether this is really necessary, whether it is really beyond the resources of a great nation like ourselves to make arrangements whereby such visitors and others, too, would be given their visas in a relatively relaxed and civilized way. I would raise the question whether we have no alternative but to fingerprint them like common criminals. Let's remember that what was offensive to the Soviet student editors (and I think needlessly and undesirably so) is no less offensive to visitors from those countries with which we have long been associated by bonds of friendship. And, of course, these things are only symbolic of the treatment at all stages of their contact with this country. We have already created a situation, or we have had a situation in recent years (I hope it is passing now), in which the holding of scientific and cultural gatherings in this country has been so difficult that many well-meaning people quail at the thought of initiating them and refrain from doing so if they can. It is absolutely essential, to my mind, that we correct these conditions, that we learn as a nation to make distinguished foreign artsists feel, whatever their origin or whatever the merits of their art, that they have come to a country where cultural values are respected for their own sake, where the obligations of hospitality are inviolable, and where they are surrounded at all times by appreciation and tact and good will.

While we are on these unhappy problems of security, let me mention one more thing. In recent years, it seems to me, there has grown up among us a most reprehensible habit, a totalitarian habit, in fact, of judging the suitability of cultural contributions by whatever political coloration we conceive their creators to have acquired. I know of nothing sillier than this. A painting is not more or less valuable because the artist once belonged to this or that party or contributed to this or that group. The value of a symphony concert seems to me to be quite unaffected by the nature of the political regime under which the conductor may once have plied his trade. If we are going to encourage any form of artistic expression, for goodness' sake, let's do precisely that, and let's look, like mature people, to the content of what we are promoting and not to irrelevant personal attributes of those who participate. After all, cultural events are not political livestock exhibits in which we put forward human figures to be admired for the purity of their ideological features. And, no matter how overwhelmingly important or significant those things may seem to some of us, they are not going to seem either interesting or pertinent to peoples abroad. To the extent that we let this sort of childishness enter into our approach to international cultural exchanges, to that extent, it seems to me, we are going to weaken rather than strengthen the effect of what we do.

All this is admittedly going to require something in the nature of a revolution in the attitude of many of us toward cultural activity generally as well as toward our obligations here in the international field—and that is not going to be easy. A country which is an indifferent home to its own cultural life, a country which, for example, can spend millions annually on horse racing or on the slot machines, but cannot have an open opera house in its own National Capital, has a good distance to go, and I think there is no use deceiving ourselves about it. But we can at least begin with the realization that the realm of the spirit has a far higher rating outside of our borders than we have been accustomed to giving it at home; that a larger part of the hopes and enthusiasms of mankind are oriented to this realm than most of us have been inclined to believe; and that we are not going to make our way as we would like to make it, or find that pathway we seek to the feelings and understanding of other people, unless we learn to share something of this appreciation and this hope in the capacity of the human being to create beauty and to reach the higher and more subtle forms of apprehension of this life.

If we can learn to do this, if we can come to attach to this whole field of human endeavor a respect and a significance comparable to what is given to it abroad, then, I think, we will have come a great step on the way to the improvement of our international situation generally. But, as I said at the outset of this discussion, if we do that, it will not be in our external relations, nor in what we mean to other people, that our gain will be the greatest. These things will be important, to be sure. But our most important gain will be the gain for our own sakes, the gain in what we mean to ourselves—and in what, I suspect, life means to all of us.

Essay on Know Your Government by Marcia Frost

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. ADDONIZIO. Mr. Speaker, among the visitors to the House of Representatives today are Miss Marcia Frost and Mrs. H. W. Kiley, of West Orange, N. J. Thirteen-year-old Marcia, a student at Roosevelt Junior High School, in West Orange, won a 3-day trip to Washington for submitting the best essay in a Know Your Government contest sponsored by the Young Democrats of West Orange. Mrs. Kiley was designated to accompany Marcia by Mr. Walter Hoffman, the chairman of the contest committee. A series of weekly contests was held over a number of weeks, and the final award was made on the basis of all the essays submitted. The contest was open to students ranging from 12 to 19 years of age attending schools in West Orange. Marcia, is the daughter of Mr. and Mrs. Louis Frost, of 17 Porter Road, West Orange.

The judges of the contest were the Honorable Walter Quinn, the mayor of West Orange; Mrs. Lucille Mathisen, and Mr. Robert McRoberts.

Mr. Milton Malkin, chairman of the West Orange Young Democrats, Mr. Hoffman, and the members of this fine organization deserve great credit for sponsoring this contest which was designed to stimulate interest in government and to make our young people aware of the obligations and duties of citizenship.

I know all the Members will be interested in reading Marcia's splendid essay which follows:

(By Marcia Frost)

If phillip Nolan, who was a man without a country, could return to the United States he probably would be a perfect citizen.

A perfect citizen is one who takes advantage of his voting privileges, obeys all laws, improves his education, furthers his religious knowledge, helps build a better community, and all in all helps keep the United States the best it can possibly be.

This year, an election year, is a perfect time for people to show how well they understand our great American heritage of the freedom to elect the person we feel best qualified to office. We should listen to as many campaign speeches as possible. These will help by giving the voter a short synopsis of the candidate's feelings toward the foreign policy of the United States, the things he thinks are necessary to require special attention, plus many other pointers that would help you, the voter, decide. When election primaries come in your State everyone should go to the polls and vote. Many people feel that primaries aren't important. Well they are. When there is an election for some small post or local referendum in your town don't pass it by with the "I don't care" attitude. For all voting whether large or small has either a direct or indirect effect on you.

When you vote in elections you usually vote for the people who have your ideas or who you feel are strong, capable, and sincere leaders. If their ideas are similar to yours the laws that they and their admintration pass should be in your favor. All laws, however, which are passed should be obeyed even if you would have enjoyed it a little better if it was worded differently. Most laws are made to better your community, your country, your health, et cetera.

Parents, as well as children, must continue to further their education. This will enable them to better understand the operations of his community's and National Government.

Taking part in religious activities helps mold a person's attitude towards his neighbor, community activities help to better and accomplish the objectives necessary for the improvements of our country. This includes the keeping of a clean and healthy community.

All these things help to round out a perfect United States.

In a bird's eye view Phillip Nolan would now see a United States which is a leader among nations in educational, cultural, economical and diplomatic fields. Its representatives are its people who have gained experience and ability through their interests in good government, the country's laws, and community. All of these factors help to create a perfect citizen in a perfect United States.

Good Will Ambassadors

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 12, 1956

Mr. DODD. Mr. Speaker, the people of Connecticut may well take deep pride in the accomplishments of a group of

New Britain youngsters who have been chosen to entertain our troops overseas and to act as unofficial good-will ambassadors in the Far East. Twenty-eight New Britain boys, selected in competition by the USO and the Armed Forces Service Organization, will leave by plane July 2 on the tour.

These young people are members of the band of the Catholic Youth Organization Music Club, sponsored by Father John B. Malley, of St. Ann's Church, New Britain, Conn, and developed by Father Augustine H. Giusani, Mr. Samuel R. Constanzo, and Mr. Dominic Constanzo.

This fine musical group will be able to make a significant contribution toward easing world tensions and mistrust by showing the people of the Far East both the friendliness and the culture of American youth. Their selection from among competing bands is a tribute to the skill and unstinting generosity of their adult advisors, but laymen and clergymen.

Under leave granted, I include an editorial by Mr. Jim Butler, of the New Britain Herald, as a part of my remarks:

GOOD WILL AMBASSADORS

(By Jim Butler)

A bunch of our New Britain neighbors, mostly teen-agers, are uniforming for overseas service in a mission whose success could operate to save them, and others like them, from being called on to make another crossing in a uniform of different color and purpose.

Few communities have the fortune of having their sons and daughters selected for international chores. A century ago it was Elihu Burritt, New Britain's learned blacksmith who was to bring the people of the world together in commerce, and sentiment, through his universal postage-rate system. Now it's an aggregation made up mostly of the kids who knock the baseballs through our windows or swish by, bobby-soxing their way to school: the 28 musicians, vocalists and other entertainers who will taxi down an airport runway July 2 and head for the Far East with the aspirations of the free world riding their willing shoulders.

JOINT AUSPICES

These are the New Britain CYO music club band members and entourage. They are on their way under joint auspices of USO and their neighbors to bring a part of the home town to service personnel who, it must be, are homesick. And, not at all incidentally, to try to play their way into the friendship and hearts of many people of strange languages, customs, and unfamiliar races.

They'll be on their way, next month, to test the theory that shiny musical instruments and friendly smiles can do more to obtain and preserve peace than can shiny guns and the practiced growls of youth transformed into military machine.

The USO will pick up the tab for the principal items of travel and subsistence. New Britainites and their neighbors will raise the rest. It's about $5,000, to be gathered voluntarily and without the means or organization for full-fledged "drive." It isn't a drive in the truer sense. It's more an opportunity. It is a chance, for a buck or two, or less or more it is a means permit, to buy participation in the biggest mass expression of local civic pride and an assertion of belief in the decency of people everywhere, that has ever been presented to us at home. It will be giving the kids a chance to show that they can do more to bring the message of peaceful intent to people overseas than has been accomplished by the big men with the gray flannel mouths.

PEOPLE, NOT LEADERS

The philosophy of winning the cold war and a permanent peace by associating ourselves in bonds of friendship with the people (not the foolish, fat leaders) of other lands, is a good one. USO, the State Department, and the Department of Defense have tried it out in practice. Entertainers have gone to every corner of the globe where United States servicemen are stationed and they have left favorable impressions on the nationals of those countries who shared the benefits with the men in uniform.

But it seems there is something missing when the show uses the hardened professional with the hackneyed impersonal routines of stage and screen. Washington thinks the answer was found right here in New Britain. What was wanted was something new that spoke for the world of youth. It had to be acceptable to all levels of political and economic thought and it had to surmount language barriers.

That meant music—music of universal appeal, played with skill and versatile touch, and on a professional level one expects of a show window of the United States of America. The needs wrote the specifications for CYO's New Britain facilities and skills and to this city came its government with a commission of good will and diplomacy.

So the kids and their directors and guides are packing their instruments for a job of magnitude and distinction that we just, well, we just never thought anything like it could happen. But that's the story. Meanwhile, the bucks are needed to make the dream a reality. Washington is betting on New Britain and the CYO. They're ready to play their heads off. If you'd like to bet the kids will come back in August to report "Mission accomplished" Father Augustine H. Guisani says he'll handle that kind of wager.

Lost Fellow Travelers

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mrs. KEE. Mr. Speaker, all of us have been deeply interested in the recent developments within the Soviet Union and the attempts of its present leaders to deglorify Stalin. Whatever may be the purpose of the Kremlin leaders of today in their policy of degrading their dead boss, it would appear that their performance has had a profound effect upon Communist and fellow-traveler groups in other countries. A very interesting statement about this effect in Italy is contained in the following editorial from the Washington (D. C.) Evening Star of Monday June 25, 1956. Under leave to extend my remarks in the RECORD, I should like to call the attention of my colleagues to this editorial:

LOST FELLOW TRAVELERS?

Pietro Nenni, leader of the extreme left-wing faction of the Italian Socialist Party, has now cut loose with a long and bitter ideological article that is likely to be read with some sobriety by Russia's "collective leaders." Among other things, it suggests that he and his followers—heretofore communism's most dependable western allies—have been lost by the Kremlin and that they will henceforth travel on their own, or perhaps even throw their considerable parliamentary weight on the side of Premier Segni's anti-Red coalition government.

In its potentials at least, that is a highly significant development from the standpoint of Italy's internal politics. For the Nenni Socialists—who in the recent local and provincial elections gained added strength at the expense of the Communists—have long been close collaborators of the Reds, and if they now cease to be fellow travelers, if instead they begin to vote like the other Socialists and generally lend their support to the middle-of-the-road coalition, Italian governing stability should be appreciably enhanced. And that in turn should benefit the West as a whole.

Moreover, in the free world beyond Italy, the Nenni article should have a marked impact on all extremist political groups that still tend to be ardently pro-Kremlin. In that respect, it should serve to impede Moscow's efforts to promote Red-Socialist "popular fronts" in Western parliaments. And it should intensify the embarrassment of the bewildered and divided Italian, French, British, and other non-Russian Communists whose heads are still reeling from the shock of what Mr. Nenni describes as the profound crisis imposed on international communism by the official Soviet revelations of Stalin's monstrous crimes. For his own part, he does not doubt the truth of those revelations. On the contrary, he accepts them for what they are—unquestionable fact—and he sees in them good reason to brand Nikita Khrushchev and company with a large measure of the awful guilt involved.

Indeed, in effect, Mr. Nenni contends that the post-Stalin Kremlin—if it is to purge itself of that guilt—must do much more than just deglorify the dead tryant; it must overhaul the entire Soviet system by eliminating the last vestiges of terrorism and by permitting genuine individual and group liberty both within Russia and in the satellite lands. Certainly, to have him say this, after all his years of fellow-traveling, is a striking thing that should have wholesome repercussions not only in Italy but far beyond.

Hats Off to Mr. Culp

EXTENSION OF REMARKS

OF

HON. WILLIAM A. DAWSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. DAWSON of Utah. Mr. Speaker, the drive, devotion and capabilities of another Utahan have been recognized by one of America's great civic organizations—Kiwanis International. Kiwanians this month elected Reed C. Culp as their international president. I want to take this opportunity of congratulating the 250,000 members of Kiwanis on their choice. I have known Reed Culp for years and I want to assure the Members that he exemplifies all that Kiwanis stands for. Since so many Members of Congress are Kiwanians, including myself, I am submitting for the RECORD a copy of an editorial on Mr. Culp which appeared recently in the Salt Lake Deseret News and Telegram of June 22, 1956:

HATS OFF TO MR. CULP

Election of Reed C. Culp of Salt Lake to the presidency of Kiwanis International brought special honor to Utah and the Mountain West, but came as no real surprise to the host of friends and coworkers

of the hard-working, devoted Mr. Culp. For more than 20 years, Reed Culp has been active in Kiwanis and has helped materially to build that fine organization, as well as splendidly exemplifying Kiwanis principles.

Mr. Culp is not only the first Utahan, but also the first man in the Mountain West area to be named president of the quarter-million-member organization. It is not, however, Mr. Culp's first major office in the international. After serving as president of the Salt Lake City club and of the Utah-Idaho District, he filled two terms as an international trustee and was treasurer of the international organization last year.

The Deseret News and Telegram joins all Salt Lake City and Utah in congratulating Mr. Culp on his new honor and the honor he has brought to the State. And we congratulate Kiwanis International, too, on selecting a man of Mr. Culp's caliber to lead it during the coming year.

The American of Tomorrow Needs the Boy Scout Movement

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. MACK of Washington. Mr. Speaker, the Boy Scout movement reached an alltime high in America last year. It now has a grand total of 4,175,-134 members—men and boys. There are 104,150 Boy Scout units in the Nation.

Since Boy Scouting first came into being 48 years ago, the number of boys and leaders who have been or are now members of the Boy Scout movement total 24,675,000.

The effect of Scouting on these almost 25 million Americans and their families has been tremendous and, in turn, their influence upon the Nation and its thinking and morals has been enormous.

The American people and the people of the world are better and happier because Boy Scouting has existed.

We Americans live in a constantly changing world and this constant change creates the need for training youth in greater numbers than ever before to go "onward for God and country."

Boy Scouting serves with the home, church, and school to build a greater and a better America.

Nothing finer has been said about the need for the Boy Scout movement than was expressed in a recent message on meeting the needs by Arthur A. Schuck, chief scout executive of the National Council of the Boy Scouts of America.

Mr. Schuck's inspiring message on Scouting follows:

MEETING THE NEEDS

In establishing our Nation, our forefathers embarked on a great experiment in government by the people, for the people. They recognized the supremacy of the individual and that the objective of government was to contribute to the fullness of life, liberty, and happiness of every citizen. This ideology has made us a great Nation.

We must recognize, however, that democracy can never be static. Each generation is called upon to make its contribution not only to the maintenance of democracy but also to its growth and development. This is particularly important in these times when we live in a world of tension because of Communist philosophy that would subjugate the individual to the state and to rule by force. The cold war is a real war—a battle of ideas and ideals.

The program of the Boy Scouts of America involves much more than building youth physically or providing attractive leisure-time activities. Its fundamental purpose is to train the boys of America in qualities of character and citizenship that are essential to maintaining our free way of life and, through these boys, to demonstrate to the world the values of freedom.

The citizen should be developed to be physically strong, mentally awake, and morally straight. Health and education are important in the free world, but to remain free ideals and spiritual convictions are basic. To these principles we are dedicated.

The Boy Scouts of America—as a supplementary program to our Nation's basic institutions, the home, the church, the school—has always sought the cooperation of religious, civic, business, labor, and educational interests. With this cooperation in two campaigns, "Strengthen the arm of liberty" and "Forward on liberty's team," we made great progress.

This report reveals not only our growth in boy membership, but the way in which over 1 million men and women of America have enlisted to serve our country through Scouting and thus to meet the needs of our times. This represents one of our strongest bulwarks against communism and a potent force for strengthening our democracy. This is a heartening realization in consideration of the importance of even greater achievement in our 4-year program. "Onward for God and my country."

Socialism's False Promises

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I would like to insert in the Appendix of the CONGRESSIONAL RECORD the following 2 articles from U. S. News & World Report, 1 entitled "Miners Try Again," and the other an excerpt from the "Business Around the World" section, each from the issue of June 29, 1956.

The purpose of inserting these articles is to call attention to the unreality of the gains that socialism promises. The argument for private enterprise over socialism is not an emotional argument or one based upon tradition. It is based upon the proven fact that the personnel system of private enterprise is superior to a personnel system of a political government. I never have understood why certain top labor leaders are anxious to have Government take over more of private enterprise. Under this setup, the laboring men lose their basic rights. Certainly the situation of the Welsh miners should convince our American labor leaders that the government is the most uncompromising employer to have to deal with.

The articles follow:

MINERS TRY AGAIN

A "reprieve" has been granted a mining town of 4,000 in the coal fields of South Wales. Coal mines at Gwaun-Cae-Gurwin had been closed down for good by Britain's National Coal Board, which runs the nation's coal mines. That ended the jobs of 1,065 miners, and threatened the life of Gwaun-Cae-Gurwin.

A series of strikes and slowdowns—249 of them since 1947—was cited by the Board as the reason for the shutdown. When the miners asked for a second chance, the Board agreed to allow 279 men to go back into the mines for a few weeks to demonstrate that they could produce a proper standard of work.

On June 15, the Board found that production, per man, had doubled in the test period. They agreed to open the mines again. But they warned: "This is not an unconditional reprieve."

Another of Britain's problems is pinpointed in a recent editorial appearing in the Financial Times, a business newspaper published in London:

"The real problem of the nationalized industries is the problem of efficiency. So far as one can tell, managerial standards in these industries are deplorably low. Absenteeism in the coal mines is so much higher than prewar that a return to prewar levels by itself would be worth an extra 40,000 men or about 11 million tons a year. British Overseas Airways Corporation has only managed to obtain considerably less than 10 percent of the North Atlantic passenger traffic, compared with over 50 percent carried by American airlines. British Railways is technically one of the most backward in the world, although in 1939 the British system was one of the most efficient. British Electricity takes between 75 and 100 percent longer to build a power station than do foreign electrical producers, or than did private British companies before the take-over. These are the facts which ought to cause anxiety."

New England Moves in Flood Control: Major General Holle's Address at Ground-Breaking Ceremonies at Barre Falls Dam, Mass.

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 18, 1956

Mr. BOLAND. Mr. Speaker, the ground-breaking for the Barre Falls Dam and Reservoir at Barre, Mass., on June 15, marked the regeneration of the planned flood-control program for the Connecticut River Basin. It is one of the initial units in the comprehensive plan carrying present monetary authorizations of approximately $73 million.

The Barre Falls Dam and Reservoir will give much needed flood protection in the Ware and Chicopee River watershed areas, wherein are situated 30 industrial plants employing some 6,000 persons, many of whom are engaged in defense production. The New England Division of the Corps of Engineers will supervise construction of the Barre Falls Dam and Reservoir, under direction of Brig. Gen. Robert J. Fleming.

Present with me to hear Maj. Gen. Charles G. Holle, Deputy Chief of Engineers for Construction, at the Barre Falls ground breaking, were my colleagues, Congressman Dodd and Sadlak, of Connecticut; Walter G. White, of Concord, N. H., chairman of the Connecticut River Valley Flood Control Commission; Ward Duffy, of Hartford, Conn., president of the Connecticut River Watershed Council; the selectmen from the towns of Barre, Rutland, Oakham, and Hubbardston; members of the Springfield Chapter, Izaak Walton League, and the Westfield River Watershed Association. Col. Francis L. Rimbach, of Boston, represented the Commonwealth of Massachusetts.

Mr. Speaker, I would like to have included with my remarks an editorial that appeared in the Springfield, Mass., Union on last Monday, June 18, entitled "Belated Start," and the remarks of General Holle following the Barre Falls ground-breaking ceremony:

FULFILLING THE PLEDGE

(Remarks by Maj. Gen. Charles G. Holle, Deputy Chief of Engineers for Construction at groundbreaking of Barre Falls Dam, Mass., June 15, 1956)

Ten months ago the Connecticut Valley was being ripped to pieces beneath an avalanche of water. Areas that escaped inundation were caught in the backwash of economic dislocation. State, local, and Federal agencies joined the fight to rescue lives and restore communities. As they worked, they pledged themselves to do everything possible to assure that such a disaster should never happen again. Our presence here today is evidence that those pledges were made in earnest.

Seldom, indeed, has a disaster been so closely followed by physical construction. It is not a simple thing to launch the building of a major Federal dam. Even the selection of the site where a dam can do an effective job requires, first, a study of the entire watershed. The project must be authorized, the detailed designs made, the money appropriated after deliberation by Congress, specifications prepared, and contracts let.

Fortunately a considerable amount of preliminary work had already been done in this area by Federal and regional agencies. But not all of it was up to date. Nevertheless, in order to begin construction today, processes and procedures have had to be telescoped. The Congress, the Corps of Engineers, and the State and local governments all have worked with zeal and urgency to provide this great valley with the project the need for which was demonstrated so tragically last summer.

In the emergency supplemental appropriation bill passed by Congress after the floods, $300,000 was included for advancing the construction of Barre Falls Dam. In the budget for the year 1956–57 the President asked the Congress to appropriate $1,150,000 more, a sum which would provide for carrying the dam about half way to completion by a year from now. This appropriation has been approved by both Houses of Congress and will be available for expenditure as soon as the President signs the appropriation bill.

Barre Falls Dam is but 1 of 6 dams in the Connecticut River Valley for which money to start planning or construction was requested by the President this year. To appreciate the significance of this request—6 projects in this valley being included in a single appropriation bill—we must recall that only 5 Federal dams have been built in this valley in the past 19 years.

We are off to a fast start. Now it is up to all of us to make sure that our momentum does not slacken in years to come, as last summer's floods recede into memory. It is a natural but sometimes unfortunate characteristic of we humans that good times and good things remain in our memories and often seem even better as we look back on them; while bad times and bad things tend to be forgotten. Generally this is a blessing. But sometimes it lets us fall into a sense of false security—to neglect precautions that should be taken. We have an example in the history of this very valley.

Last year's floods were by no means the first to spread havoc in the Connecticut Valley. Looking back some 30 years we find that there was a bad flood in November of 1927 and another in March of 1936.

Immediately after the 1936 flood Congress passed the Flood Control Act of that year, under which for the first time the Federal Government assumed responsibility for flood-control work throughout the Nation. At once the Army engineers set about preparing comprehensive plans for controlling the waters of various rivers, including the Connecticut. The Connecticut Basin plan, published in 1937, called for 20 reservoirs—13 in Vermont, 3 in New Hampshire, and 4 in Massachusetts—plus levees, flood-walls, channel improvements, and similar local protective works in many places. It is important to note that this system of works was planned to operate as a unit. The reservoirs were planned to supplement the local works by holding back floodwater only to the extent that it could be contained by the improved channels and levees downstream.

Hardly had this been announced than the valley was stricken by the flood of 1938, the worst of record up to that time. That flood, too, was followed by a great outcry to get on with the flood-protection plan. Within the next few years additional projects were authorized by Congress for flood protection in the Connecticut Basin—among them this Barre Falls Dam, which was authorized on August 18, 1941.

But then an even worse catastrophe, World War II, came along and flood control was necessarily assigned a lower priority. By the time the war was over the old zeal to get on with the flood-control job had abated. The war had brought enormously increased taxes and other burdens. The Army engineers' plan for the Connecticut Valley called for relatively large expenditures for construction, and people began asking themselves whether it were really needed. Year after year went by without a flood. Vivid recollection of the disaster of 1938 disappeared, along with other unhappy memories of the depression period.

Then, after having stayed her hand for 17 years, nature struck again. In the northeastern area during the August 1955 storm 180 people lost their lives, 161,000 were left homeless, and 6 to 7 hundred million dollars of flood damage was suffered—all within a few hours.

And Barre Falls Dam, which was authorized just after the almost forgotten flood of 1938, is now finally being started while the disaster of 1955 is fresh in our memories.

But the comprehensive Connecticut River Basin plan of which it is a part is no longer the same. Changes in that original plan had been contemplated even before the flood, as a result of the work of the New England-New York Inter-Agency Committee.

Circumstances in the valley have greatly changed since the plan was first formulated in 1937. This very locality is a good example. During the 1938 flood about $6,500,000 worth of damage occurred in the Chicopee River Valley below the Barre Falls damsite. If the same flood were to occur today, the damage would total well over $11 million. That increase reflects the increase in the value of development that has taken place in this area and all through the Connecticut Valley. For example, the damage to industrial plants alone would cost more than the total dollar damage in 1938 if a comparable flood were to occur now. When converted to an annual basis, the yearly value of the damage to be prevented is almost three times as great as the yearly prorated cost of the dam.

Because of the constantly changing pattern of economic development in this or any other valley, all flood control plans, all over the Nation, must be periodically reviewed. The Connecticut Valley is no exception, and, as I say, the long-dormant plant for that valley was in process of alteration when last summer's floods struck, bringing about still further changes.

Despite the eagerness of all concerned to get into construction in this valley, I am sure that all will agree that the construction must be soundly planned. Consequently the Corps of Engineers is now engaged on another review of the entire New England area, restudying existing plans to see whether further modifications may be needed and that all foreseeable contingencies are adequately provided for. The survey in the Connecticut Valley is scheduled to be completed within about 2 years, and in the entire New England region in about 5 or 6 years. The result of the survey will be to make us all as sure as mortals can be that our construction is properly adapted to the present economic development of the region and to the newly revealed destructive potentialities of Nature.

Needless to say, your local and National Governments are not going to stand still while waiting for the survey to be finished. Certain works are known to be needed in any plan, and Barre Falls Dam is one of them. So are the other dams for which money has been requested in this year's budget—Otter Brook Dam in New Hampshire and Ball Mountain, Townsend, and North Springfield Dams in Vermont, all of which will be put into construction as soon as funds are appropriated, and North Hartford Dam in Vermont, for which planning money is requested.

Each of these dams will protect the reaches directly downstream from it. But their work does not stop there. Taken together, they are parts of a system of reservoirs which will reduce the stages of large floods to levels that can be contained by downstream levees and floodwalls. Barre Falls Dam, for example, is in this way an indispensable part of the protection of such major industrial centers as Chicopee, Springfield, West Springfield, Hartford, and East Hartford. For this reason it is important to the national welfare and defense.

For this reason, too, the flood-control effort in this valley must not stop when Barre Falls and the other dams are completed. All the dams in the modified comprehensive plan will be needed to secure the prosperity and welfare of the Connecticut Valley. We learned last year that areas in the valley which escaped inundation nevertheless suffered severely from the dislocations caused by the flood. Unless the entire valley is protected, every part of it is subject to serious losses.

Bad as it was, the flood of 1955 was not the worst flood that possibly could strike this region. Had the rainfall pattern of last August been oriented a mere 70 miles eastward of where it actually occurred, the entire Connecticut Valley would have been devastated. No one can predict just where the next great storm will strike. Completion of the entire plan is needed if the valley is to consider itself reasonably safe.

Hence, the construction job in the Connecticut Valley must be approached not only with resolution and initiative, but with an unshakable determination that this time the effort shall not be allowed to slacken until the job is finished. Barre Falls Dam will not render its full measure of service to this

locality, to the Connecticut Valley, and to the Nation until every part of the revised plan has been built. The task will take many years and will cost large sums of money, but it will cost only a fraction as much as floods that this valley has repeatedly seen. The memories of last year may fade away, but steadfastness of purpose must not. This is a great day in the Connecticut Valley, but it marks only the beginning of the fulfillment of the solemn pledges made last year. In our celebration of this groundbreaking, all of us may well renew our pledges. We must not rest until we have done everything humanly possible to insure that a disaster like last summer's can never occur here again.

[From the Springfield (Mass.) Union of June 18, 1956]

BELATED START

Fifteen years after Congress authorized its construction, work got underway last week on the Barre Falls Reservoir, an important link in the flood-control program for the Connecticut Valley. The dam is designed to help control floodwaters and prevent any repetition of the disasters of 1955—though originally its goal was to prevent repetition of earlier flood disasters.

The project will cost about $2 million. Valley residents are happy that actual construction has started. In the belated start, however, there is a lesson for them, as well as for all the public agencies involved. As disasters fade into the background of the years and their effects become less and less discernible until they disappear, the necessity for protection against their recurrence becomes less evident and so loses its urgency. We are lulled into a sense of false security and by agreement or indifference allow the money to be spent for other purposes without effective protest.

The Barre flood-control dam was only one in a series of control construction projects that Congress approved many years ago. Had they all been completed, we still would have suffered from destructive floodwaters last year because they were not adequate to do the whole job of protection. But it goes without saying that the damage would have been much less, in proportion to the amount of flood protection actually in existence as the result of carrying out the approved construction.

Perhaps this particular situation will not occur again. We hope it does not. But to prevent its recurrence, New England's Members of Congress and New England's people must be vigilant and insistent on complete execution of flood-control projects now on the blueprints and equipped with appropriations to see them through. More than that, we must maintain an active regard for further expansions and improvements of the control system until it reaches its limit of perfectability. Success will crown the region's fight for flood control only after everything that can be done has been done.

Compulsory Inspection of Poultry and Poultry Products

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. DODD. Mr. Speaker, on May 16, 1956, I introduced H. R. 11245, calling for the compulsory inspection of poultry and poultry products by the United States Department of Agriculture. I believe this to be urgent and important legislation.

I would, however, like to emphasize as strongly as possible that my own State of Connecticut has achieved a very high standard in regard to adequate poultry inspection, as have a few other States.

It is unfair to ask these good poultry raisers in Connecticut and elsewhere to compete with poultry raisers in other portions of the country who do not conform to these high standards.

It is important to realize that only a handful of poultry processors are responsible for the unfit products placed upon the market, and are exploiting the present laxity of inspection laws to make a quick dollar.

Since the publication of Upton Sinclair's famous book, The Jungle, in 1906, the public has become increasingly aware of the need for a workable program of inspection to make sure that no unwholesome meat product ever reaches an American table. Sinclair exposed truly shocking conditions then prevalent in the meat-packing industry, and helped to bring about sweeping reforms.

Today, a housewife can buy almost any meat product from her grocer with confidence that she is not risking the health of her family. Unfortunately this is not necessarily true of poultry or poultry products she may select.

Present laws governing the sale of poultry in interstate commerce are completely inadequate. The average family spends an estimated 12 cents out of every food dollar for poultry, but unlike almost every other important food product on the market, it may be processed and sold with almost complete disregard of sanitary standards or wholesomeness. It is by no means an overstatement to say that effective inspection hardly exists on a Federal, State, or local level.

The problem is of direct concern to poultry farmers, workers, and consumers, all of whom have a community of interest in the achievement of a workable solution. The poultry industry has undergone an almost fantastic growth in the last few years. This is especially true in Connecticut where broiler production increased by 177 percent in the decade between 1940 and 1950. These startling figures indicate both the importance of the industry and the growing need for effective inspection laws on a Federal level.

At the present time one agency of the Federal Government does perform a nonregulatory inspection service for poultry, but only on a voluntary basis and for a fee that must be paid by the processor. It seems obvious that the processor who uses these services and pays for them is at an economic disadvantage with competitors who do not.

The gravity of industrial health hazards to the poultry worker cannot be overlooked. The poultry worker is, of course, constantly exposed to danger of serious infection from diseased products.

Almost a half century ago, largely because of the impetus of Sinclair's book, the Federal Government recognized the need for an effective, compulsory program of inspection to protect the public from unsanitary processing of meat products. Excellent legislation was enacted as early as 1906 that curtailed most of the abuses then prevalent in the industry. Through the years the American public has come to have great and deserved confidence in any meat product backed by inspection of the United States Department of Agriculture.

Unfortunately, at the turn of the century poultry was of minor importance to the diet of Americans, and compulsory inspection of poultry was not included in the provisions of the law. In those days there was no poultry industry as we know it today. The housewife usually bought her poultry directly from the farmer, and did most of the dressing of the bird herself. However, with the development of excellent refrigeration facilities, frozen and pre-cooked foods and other innovations, the industry has expanded to its present prominence in the food field.

We can no longer tolerate the shipment in interstate commerce of any food product of a questionable nature. Once again I would like to emphasize that the great majority of individuals in the poultry industry are honest and sincere. As in every other occupation, however, there are always the few whose only interest is in making a fast dollar, regardless of the cost to the consumer, and ultimately to the industry itself. The occasional sharper among their ranks, by deliberately offering defective products to the public, is endangering the livelihood of all.

It is significant that much of the growing demand that Congress do something about this situation originates from within the poultry industry itself. Every ethical businessman is interested in good legislation that will promote public confidence in his product, and tend to eliminate the few individuals whose methods discredit the entire industry.

I have talked at length with a number of poultrymen from Connecticut who have assured me that the voluntary inspection program of the Department of Agriculture is no longer satisfactory. They are convinced that it is the responsibility of the Government to devise and enforce reasonable standards of sanitation to protect both the industry and the consumer. The cost of voluntary inspection is ultimately passed on to the consumer, making it difficult for inspected products to compete for the housewife's poultry dollar.

I am confident that H. R. 11245 provides a workable solution to the problem of poultry inspection. This bill declares it to be the policy of Congress to provide for the inspection of poultry and poultry products by the Inspection Service of the Department of Agriculture so as to prevent the shipment in interstate commerce of poultry that is considered unfit for human consumption. Under the authority provided by the Poultry Products Inspection Act, the Secretary of Agriculture is authorized to ascertain from time to time the cities or areas where poultry or poultry products are consumed in such volume as to affect the movement of inspected poultry products in commerce. Whenever, after public hearings, he finds that the designation of

such a city or area will tend to effectuate the purposes of the act, the Secretary shall by publication in the Federal Register give public notice of such designation and the effective date. After the effective date, all poultry and poultry products processed, sold, received, or delivered in any such designated city or area will be subject to the provisions of this act.

This measure would also authorize the Secretary of Agriculture to make inspections and examinations as he considers necessary, and to destroy poultry found to be unfit for human food purposes. It would also set up a standard of sanitation in the facilities and practices relating to poultry. H. R. 11245 provides for the labeling of poultry products with an official inspection mark giving the name of the product, an accurate statement of the quantity, the weight, measure, and the name of the plant where the product was processed. Further, the sale of uninspected poultry products could be prohibited in areas designated by the Secretary.

The Department of Agriculture has had 27 years of experience in the administration of the present, voluntary system of poultry inspection, and I have no doubt that this branch of the Government is best equipped to undertake the broader program contemplated under H. R. 11245. It would appear highly discriminatory to require the poultry industry to continue to bear the cost of inspection, when the inspection of so-called red meat products is subsidized by the Federal Government. In passing, I must mention the outstanding job done by the Department of Agriculture in the inspection of red meat products. Since the enactment of the Meat Inspection Act of 1906, the public has come to have great confidence in both the integrity and thoroughness of the Department's inspection program.

I am confident that the enactment of H. R. 11245 will be of incalculable value to everyone concerned with the wellbeing of the poultry industry, whether as farmers, processors, or consumers.

Address of Gov. Averell Harriman

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. ANFUSO. Mr. Speaker, I am extremely happy to give my colleagues in both Houses of Congress the opportunity of reading an address on foreign affairs and the importance of the foreign language press in this country by one who has no peers in the field of foreign diplomacy and our relations with other nations. That gentleman, of course, is the Governor of the Empire State, Averell Harriman, of New York.

In his address Governor Harriman mentions, for example, the contribution made by the foreign language press in alerting Americans of Italian extraction concerning the situation during the 1948 elections in Italy. The thousands of letters which poured into Italy at that time from relatives and friends in this country helped turn the tide against the Communists and were responsible for the election of a government friendly toward the United States. I know that story personally well because I participated in that campaign.

I sincerely doubt whether the American people are sufficiently informed and properly alerted to the Communist threat to the free world. This doubt is based on the mistakes we continually make, thus causing us to lose precious time in the cold war struggle.

Governor Harriman, by experience and background, as I have repeatedly stated, is eminently qualified to speak for the American people. I was with him in Paris nearly a year ago in July 1955 on the day after the Big Four Conference at Geneva. To a supposedly well-informed audience who believed in the "Spirit of Geneva" just then enunciated, Governor Harriman spoke fearlessly on the meaning of the Geneva spirit. He bluntly told them that the new Kremlin approach was a "phony" and urged that we should not relax our guard for one single moment. The people who were present were stunned to hear this warning so soon after the Geneva meeting when everything on the surface appeared to be peaceful. It did not take long before the world realized that Governor Harriman's analysis was proven right, as he had been consistently in the past in matters of foreign affairs.

Mr. Speaker, under leave to extend my remarks in the RECORD, I am glad to insert the text of Governor Harriman's address on June 22, 1956, at a luncheon of the editors and publishers of the foreign language press:

TEXT OF ADDRESS BY GOV. AVERELL HARRIMAN AT A LUNCHEON OF THE EDITORS AND PUBLISHERS OF THE FOREIGN LANGUAGE PRESS OF NEW YORK AT THE OVERSEAS PRESS CLUB, NEW YORK CITY, FRIDAY, JUNE 22, 1956

I am glad to meet with the editors and publishers of the Foreign Language Press of New York and to talk with you about our foreign policies and about the role you are playing and can play in helping our country reach wise decisions.

Arthur Hayes Sulzberger, president and publisher of the New York Times, said at a college commencement last week that to meet the challenge of the cold war—which is now being waged in terms of economics and politics—the thing the citizens of this country must have is more information. It is only by having a thoroughly alert and informed electorate that a democracy can survive in the world, and win in the contest against totalitarianism. "A few wrong answers and we flunk out for good," said Mr. Sulzberger, and added "Read a good newspaper—one which specializes in information."

The American foreign language papers are such papers. They are papers that specialize in information. They are read by more individuals per copy than are the English papers. They hold a special place in the lives of the 22 million Americans who read or speak some language other than English—and they influence directly the great community of more than 34 million of our citizens who either were born abroad, or count one parent born abroad.

These papers are edited by you men and women whose ties with other countries are intimate—and whose sources of information are direct and sensitive. The readers of your papers, likewise, have closer and more sensitive sources of information, and more continuing and critical interest, as to many fields of foreign policy than do many of our other citizens. When it comes to our Nation's foreign affairs, the readers of your papers are therefore among our best citizens, because they are among the best informed in these fields.

To a reader of one of the Czech papers, for example, an event taking place today in Prague is not just another sentence from a State Department report or from a wire service dispatch buried in fine print: it is something that he understand in its full meaning, and about which the editor gives him enough details for him to be really intelligent in evaluating the news.

I still have vividly in my mind the 1948 Italian elections. Long before the rest of our people realized that a crisis faced democracy in its struggle with world communism, the editors of the foreign language press had alerted our Italian-speaking citizens. They responded with a great outpouring of letters to relatives abroad, and with other effective actions, so that they became our political shock troops against communism even as far away as Italy. And the election returns there showed their effectiveness..

Long before the OWI, the USIA, the Voice of America, Radio Free Europe, or Radio Liberation, the foreign language press was performing the task of building up specially informed bodies of American citizens, and carrying the news of democracy to multitudes of people abroad. You were doing this sincerely and effectively and often at real sacrifice, financialy and in other ways, on the part of devoted editors.

I wanted to have the pleasure of meeting you personally again and paying tribute to you today for these services. I had the privilege of serving our country abroad under Presidents Roosevelt and Truman, and I can assure you that when I speak to you in this way, I speak on the basis of my own observation and experience. What I have just said about the service of the foreign-language press is a tribute which I am ever glad to pay.

But now I have something else to say. No matter how important these services that your papers have already performed, there are still more urgent jobs before us now.

The worldwide struggle against atheistic Kremlin-led communism has taken on a direction which is very difficult for many Americans to understand. It is the same menace, but with a new face. The so-called spirit of Geneva to which President Eisenhower himself contributed when he credited the Kremlin leaders with a desire for peace no less earnest than our own created a psychological disarmament among free people. Defense efforts were slackened and the ties of NATO were loosened. This, of course, is precisely what the Kremlin wants and has been aiming at. The breakup of NATO is a principal objective of the Kremlin.

We know of the effort of the present leaders of the Kremlin to downgrade and repudiate Stalin and to disassociate themselves from the horrors of the Stalin era. But Stalin is being repudiated and attacked for murdering Bolsheviks, not for his betrayal of Poland, Czechoslovakia, Hungary, and the other countries of Eastern Europe, and the murder of their freedom-loving people. Until the present Kremlin leaders are ready to repudiate those great wrongs, we cannot put any trust in their good intentions.

Today more than ever we need to have the facts go out because of the confusion that reigns in the Eisenhower administration. President Eisenhower says one thing one day, and Dulles says something quite different the next. Much of the information from this administration is clearly false, as when they tell us that the Kremlin is working from

weakness, when everything shows that it is working from strength.

Think of the most recent confusion that was caused by President Eisenhower's statement on neutrality. At a press conference just before his unfortunate illness, the President said:

"If a nation has announced its military association with another power, things could happen to it, difficulties along its borders, and people would say, 'Good enough for it—they asked for it.' "

Those were the President's words. The United States has military alliances with some two score countries which have withstood Communist threats to stand along side of us. The Kremlin has been trying to break up those alliances, and here the President of the United States played right into their hands.

The demand or clarification came immediately from our allies and the White House had to issue a statement saying that the President didn't mean what he said at all. And the next day Dulles made a speech taking quite a different tack. But much damage had been done.

I must say to you it is high time we have a national administration that knows what it is doing and where it is going, an administration that will inspire our country to give leadership for unity of purpose among the free nations. In this way and in this way alone can we effectively deal with the evil purposes of the Kremlin.

Another job that you have is answering the new barrage of propaganda which the Soviets have been releasing in an attempt to persuade refugees from behind the Iron Curtain to return to these enslaved lands. There is no other group in America so qualified to deal effectively with this dangerous line of Soviet propaganda as are you editors of the foreign-language press.

Finally, there is the whole problem of presenting America to the rest of the world in its real spirit. How can we be a land of democracy, as seen from abroad, while we tolerate the vicious and discriminatory McCarran Act on our statute books?

I am proud of the fact that in June 1952, when this bill had passed Congress and was before President Truman for his consideration I sent him a letter, from which I quote: "I personally feel very strongly that it does such violence to the traditions and heritage of this Nation that I am compelled to urge you to veto it."

That is what I said in 1952, and I feel no less strongly today. Among the broken promises of Candidate Eisenhower is that he promised when he became President to eliminate the objectionable features of this act, but nothing has been done. If we are really to convince the rest of the world of the genuineness of our democracy, the discriminatory national origins quota system must be abolished. You are fighting for this, and I am fighting by your side for fair immigration laws which truly reflect our American ideals of fairness and equality.

We have been spending billions of dollars abroad in an attempt to build the mutual security of the free nations. All too often in recent years, this has been done in a way so inept, so bullying, and so regardless of the interests of other peoples that our effort has been self-defeating. Friendship is something that cannot be purchased with dollars, and security cannot be built with armaments alone. The mere indiscriminate handing out of military equipment, indeed, may be in many cases more harmful than helpful.

In short, what we need to export—even more than dollars and guns—is the true spirit of America: dedication to freedom and the dignity of the individual.

In this job, you can be our ambassadors, and your readers can be our information agents, through their letters and in their travels.

From my experience I know that the people of the world want to believe in us. For generations, oppressed peoples have looked for inspiration to our Declaration of Independence—to the principles on which our Nation was founded.

I know that we can reestablish our prestige, regain the confidence of the free peoples, and work together to guard freedom in the world and expand it. It is clear that if we stand together, strong and confident, we can protect and enlarge the areas of freedom and hasten the day when the peoples now imprisoned and enslaved behind the Iron Curtain can again enjoy the blessings of independence and freedom under God. In the achievement of these noble purposes I know that you will continue to play your full part.

Christian Tolerance: Freedom's Finest Flower

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include a very timely and most scholarly address delivered by the Reverend L. J. Twomey, S. J., on May 13, 1956, at a lecture forum in the Worcester (Mass.) Memorial Auditorium under the sponsorship of the Worcester Chapter, National Association for the Advancement of Colored People.

Father Twomey, who is director of the Institute of Industrial Relations at Loyola University in New Orleans, La., emphasized, in his patriotic appeal, that continuing freedom in the world depends almost entirely on America. He pointed out with most convincing clarity that both the remainder of the free world, as well as the Communist leaders, are ceaselessly watching us to determine whether or not we modern Americans have the courage and the character to live in the spirit of our revered Declaration of Independence.

Father Twomey further explained that for our own security and survival we must attract by our living example and hold the allegiance of the vitally important one-third of the earth's population who as yet have pledged themselves to neither communism nor democracy. He declared that his objective was simply to try to awaken Americans to the foundation importance of human relations, not so much as a sectional problem in the United States, which he emphasized it was not, but as a world problem, and the problems of the world will be settled only when the basic race problem is equitably settled.

Summarizing his thesis, Father Twomey stated that the United States and the world are passing through one of the great turning points of history and if Americans unite in practicing the true principles of a democracy under God, we need have no fear of a Communist triumph, as the lights of Divine understanding and brotherly love shining from our shores will rekindle the lamps of liberty all over the world.

The Messrs. George A. Strait and George E. Spencer were cochairmen of the program held for the benefit of the freedom fund of the NAACP. The Rev. Philip M. T. Lenud, minister of John Street Baptist Church, gave the invocation, and Rabbi Abraham P. Kazis gave the benediction.

Father Twomey's address follows:

The route from New Orleans to Worcester and return covers about 3,000 miles. My willingness to travel that distance is in some small way a measure of my esteem for the distinguished Bishop of Worcester, His Excellency, the Most Reverend John Wright. By warmly urging that I accept the invitation of the Worcester Branch of National Association for the Advancement of Colored people, he is principally responsible for my being here this evening. It is further a measure of the importance I attach to the problem of race relations in the United States. I say in the United States advisedly. For not only to southerners but to all Americans in New England and everywhere else, this problem is of acute concern. If we cannot or will not solve it in the tradition of genuine Americanism, then your future and mine is in serious jeopardy.

Whatever inconvenience may be involved, then, in scheduling this affair, is slight indeed, if only from our meeting can come a deeper appreciation of the gravity of the problem and a firmer resolve to make democracy truly operative in this as well as in all other aspects of our individual, community and national lives.

Throughout our history, the matter of human relations has been a challenge to our sincerity in professing the American creed. But in no other particular has the disparity between what we preach and what we practice been as glaring as in our failure to make the equality of man and the dignity of the human person working principles regarding our Negro citizens.

To put this discussion into sharper focus, it will be helpful briefly to survey the setting in which are cast race relations in America. Basic to the problem is undoubtedly the white man's assumption of superiority. Just when the white race made up its mind that it was the master race is lost in the dim historic past. But the assertion, either implicit of explicit, of white supremacy is written all over the record of the western world at least since the age of the great discoveries in the late 15th century and thereafter.

In the Western Hemisphere, notably in the northern half, the white supremacy fallacy got its most vicious expression with the beginning of the slave trade in the early 17th century. By colonial days, slavery had become an established institution especially on southern plantations. And when from the Revolutionary War we emerged as a new Nation, it had been built into the very structure of our political economic, and cultural life. Almost 90 years and the fighting of one of the bloodiest civil wars in history were to elapse before slavery as an accepted American practice would get knocked out.

Then came the tragic era in the South—the reconstruction—from 1865 to 1877. What happened in those crucial years we will not discuss here except to observe that for any adequate understanding of the nature of the current crisis in the South, it is necessary to know something especially of the psychological wounds then inflicted, and which the passage of 79 years since the Reconstruction has only partially healed. This is certainly not to condone, far less to justify the defiance of legitimate authority, ecclesiastical and civil, which lends such ominous undertones to the crisis. But the still vivid recollection of reconstruction days is a principal factor to be reckoned with in any realistic appraisal of Southern intransigence.

In 1877, the last Federal troops were pulled out of the South. This ended the formal stage of reconstruction. The several decades that followed were fateful ones indeed. In reviewing this period I lean heavily on the scholarly work of Arkansas-born C. Vann Woodward, the Strange Career of Jim Crow (Oxford University Press. New York., 1955), a volume which I strongly recommend for your reading. The author proves that prior to 1877, the better classes among white southerners were opposed to isolating and proscribing the Negro. This attitude, however, underwent gradual change because of several factors. First, during the last decade of the 19th century, there was a general surge of racist feeling in the United States. This was "expressed by imperialistic adventures and aggressions against colored peoples in distant lands" (p. 64). "These adventures in the Pacific and Carribean suddenly brought under the jurisdiction of the United States some 8 million people of the colored races, 'a varied assortment of inferior races,' as the nation described them, 'which, of course, should not be allowed to vote.' As Americans shouldered the white man's burden she took up at the same time many Southern attitudes on the subject of race. 'If the stronger and clever race,' said the editor of the Atlantic Monthly, 'is free to impose its will upon "new-caught, sullen peoples" on the other side of the globe, why not in South Carolina and Mississippi?'" (pp. 54–55). "These 'permissions-to-hate,'" observes Professor Woodward, "came from sources that had formerly denied such permission. They came from the Federal courts in numerous opinions, from Northern liberals eager to conciliate the South, from Southern conservatives who had abandoned their race policy of moderation in their struggle against the populists, from the populists in their mood of disillusionment with their former Negro allies" (p. 64).

Actually it was not until the 1890's that disenfranchisement laws were enacted. And it was not until the early part of this century that the segregation pattern became fixed in southern laws and customs. Thus it is historically false to maintain that segregation is rooted in long-standing traditions.

But of all the influences at work during this period none was more effective than the Supreme Court in giving segregation a facade of respectability and a status of permanence in American life. There are many actions of the Court that could be cited to underscore this point. But we confine ourselves to special consideration of only one, namely, the *Plessy* v. *Ferguson* decision of 1896. This decision was concerned with the question of whether a State (in this case, Louisiana) could segregate Negro train passengers from white without violating the constitutional rights of its citizens. The Court said "Yes," provided the service was equal. This decision became one of the most famous ever handed down by the Supreme Court. By it was written into American law the much-praised, much-condemned "separate but equal" doctrine. A precedent was thus set which was intimately to affect practically every aspect of Negro-white relations in the United States from that time on. For this doctrine served as the nucleus around which has been woven an intricate web of law and custom to give American democracy a violent undemocratic twist.

Oddly enough, the lone dissent in *Plessy* v. *Ferguson* of Justice John Marshall Harlan, whose grandson is a Justice on the present Supreme Court, is more widely quoted than the majority opinion. Let us examine this dissent, for it has important lessons for us even today. In part the dissent reads:

"But in view of the Constitution, in the eye of the law, there is in this country no superior, dominant, ruling class of citizens. There is no caste here. Our Constitution is color-blind, and neither knows nor tolerates classes among citizens. In respect of civil rights, all citizens are equal before the law. The humblest is the peer of the most powerful. The law regards man as man, and takes no account of his surroundings or of his color when his civil rights as guaranteed by the supreme law of the land are involved. It is, therefore, to be regretted that this high tribunal, the final expositor of the fundamental law of the land, has reached the conclusion that it is competent for a State to regulate the enjoyment by citizens of their civil rights solely upon the basis of race."

And he continues, "The destinies of the two races in this country are indissolubly linked together, and the interests of both require that the common government of all shall not permit the seeds of race hate to be planted under the sanction of law. What can more certainly arouse hate, what more certainly create and perpetuate a feeling of distrust between these races than the enactments which in fact proceed on the ground that colored citizens are so inferior and degraded that they cannot be allowed to sit in public coaches occupied by white citizens? • • • If evils will result from the commingling of the two races upon public highways established for the benefit of all, they will be infinitely less than those that will surely come from State legislation regulating the enjoyment of civil rights upon the basis of race. • • • "In my opinion," concludes Justice Harlan, "the judgment this day rendered will in time prove to be quite as pernicious as the decision made by this tribunal in the Dred Scott case. • • • The thin disguise of equal accommodations for passengers in railroad coaches will not mislead anyone, nor at one for the wrong this day done."

I believe that this analysis by Justice Harlan is the only valid interpretation that can be placed on the American Constitution. I believe that the hour in which the *Plessy* v. *Ferguson* decision was handed down was a dark hour indeed for America. I believe further that if the dissent of Justice Harlan had been adopted as the majority opinion, the subsequent history of race relations in this country would not have been such as now to imperil the future of democracy in the eyes of the two-thirds of the world population who belong to nonwhite races and who are not interested in "white" democracy. In 1896 had the Court accepted the view of Justice Harlan, in 1956 our eyes would not be flowing with tears over outraged justice, and our hearts would not be aching with frustration over the ever-worsening threat of atheistic communism. Truly what Justice Harlan's dissent so tragically forecast as the course race relations would take in the succeeding 5½ decades has become "America's greatest and most conspicuous scandal."

Through the years since 1896, the harshness of *Plessy* v. *Ferguson* was softened in certain important aspects. As early as 1917 the Supreme Court outlawed zoning laws which enforced segregated housing. Also, in subsequent years, were ruled all forms of segregation in interstate travel. And within the last 10 years, the Court has required many State universities to accept qualified Negro applicants. In none of these cases, however, was the issue joined as to the constitutionality of the "separate but equal" provision of the 1896 decision.

But in the years between 1948 and 1954, the Supreme Court, in a series of important civil-rights cases, gave clear warning that not for much longer would it tolerate separate but equal as a constitutionally acceptable practice.

We have traced in barest outline the sorry picture of race relations up to the eve of one of the great events in American history. As we look back over those centuries, little comfort indeed can the white man find in his dismal record of inhumanity, injustice, and uncharitableness toward the Negro. On this record the white race stands convicted of grave moral guilt. In the South this guilt may be greater in degree, but in kind it must be borne by other sections of the United States and by the nations of Western Europe.

It has been observed that God can and does punish individuals in eternity. But He can punish nations and society only in time. May it not be that the Communist threat to the Western World is, in part at least, a mysterious expression of divine wrath in punishment for the white man's arrogance in subjugating the colored man in order to give specious plausibility to the assumption of racial superiority?

But there have been stirrings in the American conscience. Despite vigorous opposition in certain areas, there can be no doubt about the tremendous progress, especially within the last decade, in applying genuine democratic principles to our race problem. It is equally certain that the Federal judiciary is the agency largely responsible. The several levels of the Federal judicial system have with increasing regularity struck down the legal barriers blocking the Negro's participation in democracy.

But legal cases do not originate in the courts. They are initiated by those seeking redress through the due process of law. And to one man in particular must go the major credit for having prepared and presented most of the now famous civil-rights cases upon which the Federal courts have passed favorable judgment. This man is Thurgood Marshall, the chief counsel, as you know, of the National Association for the Advancement of Colored People. By spectacular victories before the courts he has emphatically demonstrated that American democracy is still a vital force which has within itself the motivation for honest self-appraisement and the courage for sincere self-discipline. It is my conviction that in the light of a calmer day, say, 10 years hence when the history of this period is written, Thurgood Marshall and the NAACP will be duly recognized as having made a vast contribution to the cause of human rights and human decency not alone in America but wherever freedom is still a cherished goal.

A moment ago we referred to one of the great events in American history. That event occurred on May 17, 1954. This truly was a great day for Americans and for freedom-loving people everywhere. For it was on this day that America stood before the world and by way of a unanimous Supreme Court decision repudiated the "separate but equal" doctrine for the travesty on truth and justice which it has always been. Thus did America eloquently affirm that the dictates of the moral law and the ideals of democracy would define its official policy in relationship to its colored citizens. Henceforth Americans with repentant consciences could proclaim truthfully to the shackled millions under communism and to the other millions of as yet free people that the Declaration of Independence and the Constitution of the United States do in fact as in word reflect the spirit of a Government, equal participation in whose democratic liberties is the right of all its citizens, irrespective of creed, race, color, or national origin.

On that memorable May 17, the Supreme Court declared that "separate educational facilities are inherently unequal" and in violation of the equal protection of the laws provision of the 14th amendment and the due process of law provision of the 5th amendment. By so doing the Court did not tell the several States in question how to run their respective school systems. But it did tell them that they could not run their schools so as to do violence to the fundamental law of the land.

Exactly 54 weeks later on May 31, 1955, the Court ordered that its May 17, 1954, decree be put into effect in a manner "consistent with good faith compliance at the earliest practicable date."

These in briefest review are the two Court actions around which has raged a battle of vast and fateful dimensions. The battleground is confirmed almost exclusively to the South. Resistance to these decisions has precipitated our most serious internal crisis since the Civil War. For an unpredictable period it will continue to be fierce and articulate. Unless the as-of-now entirely unforeseen happens, there will be no early end to this crisis. Nor is any easy formula to end it in sight.

The fact is that Governors of States, Members of Congress, and of State legislatures, prominent civic, professional, business, and even labor leaders do not hesitate to attack openly not only the decisions of the Court, but the character and loyalty of the Justices themselves. This is not to speak of the tactics of the White Citizens' Councils and other like-purpose organizations which have large and influential membership throughout the southern States. Through these rebellious groups political, economic, and even physical reprisals have been threatened and in many instances visited upon those who agree with the Court and loyally urge that its mandates be carried out with good faith compliance.

I am not, to be sure, telling a pretty story. It hurts deeply, believe me, to tell it. But I am convinced that only harm can come from concealing the truth. This is an age of harsh realities. And we serve democracy neither at home nor abroad by refusing to face up to the ugly facts of our own failures.

Let us examine some of these facts in greater detail. The typical southern attitude holds that only in a rigidly segregated society can "the southern way of life be preserved." It is the claim of most southerners, then, that in resisting the Supreme Court, they are defending "the sacred traditions of the South." In reply to that claim let me here repeat what I have said on many southern platforms: "I am a southerner. I was born and raised in what is popularly known as the Deep South. I believe I know this region, its problems, its strength, its weaknesses. In the light of that knowledge I yield to no other in my loyalty and devotion to the things that are genuinely southern. But as a southerner I assert with all the emphasis at my command that no traditions of the South are worthy of respect, much less of un-Christian, undemocratic defense, which violate the elementary demands of human decency. Such traditions must not any longer be allowed to defile the fair name of a region that needs no practices of racism and inhumanity to sustain it as one of the most blessed of God's creatures. Yes, I am a southerner, intensely proud of my southern heritage. But I am before all else a Christian and an American, and I will never recognize that any demand of my southern loyalty can come between me and my loyalty to God and to America."

I need not tell you that America, if it is to survive, must gain the allegiance of the 800 million people, one-third of the earth's population, who as of now are uncommitted either to communism or to democracy. In other words these hundreds of millions with their human and material resources constitute the balance of power in the world today. And of this vast number, the overwhelming majority are colored people.

It was with these facts in mind that Secretary of State John Foster Dulles told the American people in December, 1952: "Let our people intensify their determination to respect human rights and fundamental freedom. Our discrimination at home and abroad are not only a moral blot on our so-called Christian civilization, but they are a major international hazard. • • • Throughout the world, there are myriad souls that suffer humiliation and bitterness because of the white man's assumption of racial superiority." And with like purpose, Vice President RICHARD NIXON, in December, 1953, declared in a nationwide radio-television address: "Every act of racial discrimination or prejudice is blown up by the Communists abroad and it hurts America as much as an espionage agent who turns over a weapon to a foreign enemy."

In view of all this how can we explain what is happening in the South? Frankly, I know no satisfying answer to that question. But this I do know. Southerners by and large are good people. They are warmhearted, hospitable, and gracious. They are kind, generous, and God-fearing. On the other hand, most southerners for generations have taken for granted the political, economic, and social patterns which assigned the Negro to a second-class status. Many of them until quite recently did not give a second thought to what were objectively grave violations of human rights. In a true sense they are now victims of uncritical conformism to a system the basic evil of which they never challenged. They have grown up instinctively accepting segregation as an integral part of southern living. By an involved process of rationalization they argue that the injustices and uncharitableness of the present racial system are only accidentally associated with segregation. They do not condone these distortions of right order. But they will not admit that racial segregation as such is immoral. They claim that greater and greater effort must be made to bring equality of educational and economic opportunity to the Negro. But they insist that though this is their objective, it must be realized within the traditional framework of separation, enforced both by law and custom.

But there is another side, the brighter side. It is certainly not my intention to minimize the grim seriousness of the racial crisis in the South. Nevertheless, there is solid ground for hope. Sooner rather than later the wave of emotionalism will spend itself. Then conformity to the dictates of morality and law will become the rule of the times.

What evidence is there for this optimism? In the first place, the southern conscience, despite all appearances, is profoundly disturbed. And the man chiefly responsible is the great archbishop of New Orleans, the Most Reverend Joseph Francis Rummel. For years he had proved himself the champion of justice and charity for the Negro. In the face of certain and spirited opposition, he placed himself and the Catholic Church within his jurisdiction solidly behind the Supreme Court. But his most telling display of courageous leadership came in the form of his now famous pastoral letter of February 11, 1956. In this letter, the archbishop invoked his authority as a successor of the Apostles and solemnly declared: "Racial segregation as such is morally wrong and sinful." This declaration has caused innumerable southerners, Catholic and non-Catholic, to look into their consciences as they have never done before. From such soul-searching is coming a deeper understanding of what justice and charity demand. And this new insight will be the basis upon which a true sense of brotherhood between Negro and white can be fostered.

It is too early adequately to appraise the leadership of Archbishop Rummel. But it may well be that historians of the next generation will hail him as the focal center from which came the direction and inspiration for a new and greater South.

Another sign of happier times to come is the intensive educational process now in progress. It is taking place around cracker barrels in country stores, in the setting of professional organizations and fashionable social clubs, on street corners, at the family dinner table, in formal lectures, from the pulpit, in the classroom, through the newspapers, over the TV and the radio, and even in citizens' council meetings. No other topic so engrosses the attention of high and low, rich and poor, literate and illiterate, segregationist and integrationist, as does the question of race relations. Hitherto if mentioned at all, it was by way of casual reference.

In the process great are the sorrow and suffering, the disillusionment and frustration, the misunderstanding and suspicion, the broken friendships and wounded hearts.

A third and final chapter in the foreshadowing of happier future is now being compiled quietly but ever so effectively on college and university campuses all over the South, and in the thought and action, the minds and hearts of ever growing thousands of true southerners who know that segregation and all it implies is an affront to the God-given dignity of both Negro and white, and a betrayal of the basic truths of democracy. They are thoroughly out of patience with the transparent ruse of striving to construct around the perfectly legitimate principle of State rights a facade behind which to tear down human rights. They are unwilling any longer to profess one set of norms for human behavior and act according to another. Hence they want the South to accept graciously the decision of the Supreme Court and to work earnestly toward transplanting its letter and spirit not only into our educational system but into our religious, political, economic, and cultural institutions as well. They want all this because they love the South and because they long for, with all their being, that the South may measure up to its historic mission of proving to a skeptical world that democracy is what we claim it to be.

In the beginning of my address, I observed that the race problem is not strictly a southern problem, but one of acute concern for all Americans. It is easy enough to be critical of the South, and I readily admit that it is not beyond criticism. But it is also much easier to examine the other fellow's conduct than to look into our own. You should be fully aware that regions outside the South have their own serious problems in human relations. These problems do have different external expressions than in the South, but they stem from the same basic prejudices. In the South we have laws to force the Negro into an underprivileged position. You have more subtle ways of discriminating. If you would know what I mean, go to Washington, Philadelphia, New York, Cleveland, Detroit, Chicago, St. Louis and even Los Angeles—These are cities in which I have fairly wide acquaintance—I can't speak for Worcester. In these areas you will find, not in quantity I grant, but in quality, if I may use that word, as glaring examples of man's inhumanity to man as you will find anywhere in the South. Please believe me, I do not say this in any querulous mood. For I have never believed that it makes the Southern pot any cleaner to call the Northern Kettle black. My whole point is to emphasize the critical importance of human relations not so much as a southern problem or as a northern problem, but as a world problem. Whenever we indulge our prejudices against the Negro or the Catholic, or the Jew, or the Irish, or the Italian or the Hottentot, we are playing the enemy's game. Communism has frightening unity and it is forged on the anvil of hatred. When we hate (and prejudice is a form of hatred) any man or group of men, we delight the hearts of Khrushchev, Bulganin, Mikoyan and their whole wretched crew. The only ultimate answer to the diabolic force which is communism is love, not the sickly, syrupy stuff that flows out of Hollywood, but the love of God above all things and the love of our neighbor, whoever he be, as ourselves. And this not in some ethereal reaches but in the practical day-to-day relationships we form at home, at work and at play.

It is time, therefore, that we took with deadly seriousness those great eternal truths which teach us that there is a God above us, the Creator and Ruler of the world; that man, every man, is made in the image and likeness of God and, consequently, he is not a mere animal, but a rational being with an immortal destiny. They teach us that man, every man, is endowed with the dignity, the supreme value, the sanctity of the human nature born of God, and that he is vested with a pattern of rights which no one can dare violate with impunity. They teach us that man, every man, is a sacred being, more precious than the material world and all the riches thereof, and that he cannot be made a cog in the collective machinery of an all-powerful state, or a prop to support the white man's pride of race. They teach us that political society is the instrument in the hands of a free people not alone to preserve law and order but also to take positive means to insure a reign of justice for all its citizens, regardless of religion, race, or national origin. They teach us that America, for all its serious faults, has given her people the most equitable form of government in world history.

Fellow Americans, we are passing through one of the great turning points of history. Whether men are to be free or slave depends almost entirely on America. It depends upon you and me and all the other men and women in the North, East, South, and West of this marvelous land. Do we have the dedication, the courage to think and to live in the spirit of America's Declaration of Independence that "all men are created equal and endowed by their Creator with certain inalienable rights"? If so, then we will steady the faltering footsteps, we will quicken the fainting hearts of the millions now writhing under Communist despotism and of the even more millions menaced by the same tyranny. We will prove that democracy is not an illusion and that America will spare no sacrifice that the lights of Divine love and human decency may go on again all the world over.

This is freedom in its finest flower. Thank God, whatever the price, this freedom is worth fighting for.

Orderly Scientific Research Approach Necessary in Nuclear Power Program

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1956

Mr. BYRD. Mr. Speaker, I desire to direct to the attention of our colleagues two articles which appeared in the New York Times for June 17, 1956, in regard to the report issued earlier in the month by the National Academy of Sciences on the biological effects of radiation.

The report of the National Academy alerts us to the manifest fact that radiation, unless carefully controlled, presents a grave threat to the generation exposed to it, as well as to future generations. The report gives support to the testimony which the coal industry, in hearings before the Joint Committee on Atomic Energy, presented in opposition to S. 2725 and similar proposals to adopt a crash-program approach to the atomic generation of electricity. In this regard, I also wish to direct the attention of the House to the resolution adopted on November 1, 1955, by the National Coal Association.

The New York Times articles follow:

SCIENCE IN REVIEW—NATIONAL ACADEMY REPORT ON RADIATION POSES PROBLEMS FACED BY HUMANITY

(By Waldemar Kaempffert)

The report of the National Academy of Sciences on the biological effects of radiation is one of the most important public documents that have been issued since the atomic bomb startled mankind into realizing that the world of tomorrow is here. There is no doubt that mankind must make up its mind whether a world movement for the control of atomic energy is to be organized or whether the human race must be slowly extinguished centuries hence.

We have heard and read much about the possibility of destroying civilization in a ruthless atomic war. The National Academy's scientific committees pay proper attention to that dreadful possibility, but much more to the dangers that lurk in the peaceful uses of atomic energy—to X-rays that are mercifully applied in diagnosing and curing disease, to the little X-ray machines that enable a dentist to look inside a painful tooth, to the nuclear reactors that are to produce much of the world's power, to the wastes which must be removed from power reactors and which will ultimately be more dangerous than tons of radium.

GENETIC DANGERS

The dangers that especially alarm the authors of the academy's report are genetic. We are beginning to interfere with the processes of heredity. Nature has always interfered with them. It interferes when it sends cosmic rays through everybody on earth. Even if there were no cosmic rays there would still be interference because the earth's uranium and radium are sending forth rays that affect us. All this is what is called "background radiation." We are adding to it rays from our cyclotrons, our X-ray machines, the radium and radioactive isotopes that we need to deal with disease and to find out more about life processes.

What happens when X-rays, gamma rays and other rays strike the reproductive organs? The genes are jolted. The genes are to life what atoms are to matter. They determine whether we shall be blue-eyed blonds or brown Polynesians, tall and lean or squat and fat, roundheaded or flatheaded. We are what our genes makes us.

When genes are jolted and rearranged mutations are the result—departures from the parental type. The departures breed true generation after generation. A 4-leafed clover is a mutation. So is a 2-headed calf. If they are to survive mutations cannot be too marked. A legless animal has no chance of survival in the wilderness. Every living organism mutates. Without mutation evolution would be impossible.

A great light was thrown on this whole subject by Nobel Laureate Prof. H. J. Muller, who served on the genetics committee of the National Academy of Sciences. Years ago he turned the X-rays on fruit flies and got hundreds of mutations—many of them monstrosities. Since then mutations have been produced by heat, ultraviolet rays and chemicals. What stands out in these experiments is both the stability and the instability of species.

FREAKS DOUBTED

It is pure bosh to believe that unless we control the rays given off by atoms we shall produce human monstrosities and freaks, and the report of the academy says as much. Monstrosities and freaks are sometimes born to apparently normal parents. What the geneticists on the committee of the National Academy predict is a slow, almost imperceptible deterioration of the human race, a deterioration that may take centuries. It is a deterioration marked by a higher death rate, a lower birth rate, a lowered resistance to disease, a proneness to leukemia. Unless this deterioration is halted or controlled the end is just as certain as if atomic bombs were to destroy every community on earth.

There are enormous gaps in our knowledge of radiation and its biological effect. Or, as the report puts it, "man has been dealing with an enormous new force whose potential effects he has only dimly understood." This does not mean that man should cease his efforts to apply atomic energy. Radiation problems are not insoluble. With intelligence and vigilance and the exercise of caution there is no reason why humanity should not exploit the most potent force ever placed in its hands.

It is the effect on the reproductive cells that is most important in this consideration of man's possible fate. The amount of radiation received by the cells is usually infinitesimal. But it adds up in a lifetime, and it is the cumulative effect that is to be feared.

AMOUNT OF RADIATION

How much radiation can the reproductive cells stand? Radiation is measured in roentgens, which are units of radiation. When a dentist makes an X-ray picture of your jaw you get 5 roentgens, a negligible dose. Of these 5 roentgens only five-thousandths of a roentgen reaches the reproductive cells. The report states that the 30-year dose to the reproductive organs received by the average person is about the following:

1. Background radiation: about 4.3 roentgens.

2. X-rays and fluoroscopic examination: about 3 roentgens. At present the average citizen is getting in his sex glands about 3 roentgens in medical and dental examinations that extend over a lifetime or 30 percent of the limit set by the National Academy's report.

(3) Weapons tests: If continued at the rate of the past 5 years there would be a probable 30-year dose or about 0.1 roentgen, with a possible range of 0.02 to 0.5 roentgens.

So far, atomic explosions have not raised worldwide radiation to anything like the danger point. Nor are they likely to do so if continued at the same rate as in the past. What would happen in a war waged with atomic bombs is another matter.

Next to fallout, the chief problem is the disposal of radioactive atomic wastes which must be removed from nuclear reactors from time to time, just as we have to remove ashes from a furnace. The British dump the wastes into the sea, which may be a dangerous method because nothing is known about the way the oceans mix or what happens to fish.

RADIOACTIVE WASTE

The committee of the National Academy estimates that by 1965 reactors in this country will be producing more than 20 pounds of radioactive wastes a day, the equivalent of tens of tons of radium. By 1980 accumulated wastes in solutions may amount to 200 million gallons; by 1990 to 600 million; by 2000 to 2.4 billion. The report points out that when a worldwide power industry is fully developed the accumulated wastes would send out more deadly rays than bombs in an atomic war.

No one can lay down the report or the National Academy without being impressed by the information presented or the conclusions drawn. It is a social document that is bound to make its impression on statesmen. But what has been undertaken with the financial aid of the Rockefeller Foundation is only a beginning.

Other studies are being made in Europe. That of the British Medical Research Council ("The Hazards to Man of Nuclear and Allied Radiations") has just been published. It is more technical than that of the National Academy of Sciences. Its discussion of the genetic aspects is not as sensational as that of the Academy; it paints no alarming pic-

ture of the future of the human race if we do not use X-ray and other machines with more discretion.

In the end the various investigating bodies will have to unite, perhaps under the auspices of the United Nations, to arrive at an understanding which will be acceptable and enforceable by the nations of the world. That understanding will have to embrace the perils that attend the peaceful uses of atomic energy.

MAN AND RADIATION

When a person speaks, energy radiates in sound waves to a listener's ear. When the sun shines, it radiates light and heat waves to the earth. And when atoms are "excited"—artificially through bombardment in an atom bomb or power plant or X-ray machine, or naturally in radioactive substances such as radium—the atoms send off energy in the form of radiations.

Unlike sound or light waves, however, atomic radiations penetrate human tissues and produce biological changes in the human body. For that reason the National Academy of Sciences, with financial help from the Rockefeller Foundation, last year appointed a number of high-ranking scientists to investigate the potential effects of atomic radiation on man.

Last week the National Academy released a report of the scientists' findings. The burden of the report was that radiation, unless carefully controlled, presents a grave threat to the generation exposed to it and to future generations as well. These were some of the scientists' findings:

With regard to the effect of radiation on living persons: "There is considerable evidence * * * that exposure to moderate levels of radiation shortens life expectancy. Radiologists die 5 years earlier on the average than physicians having no known contact with radiation." Continued exposure "at a relatively low level" can cause "cancer and leukemia * * * lowered immunity, damage to connective tissues, or premature aging." Human beings can safely take more radiation than they are now receiving—but the scientists cannot say precisely how much more.

GENETIC EFFECT SERIOUS

With regard to the effect of radiation on future generations: Any radiation dose, however small, is harmful from the viewpoint of genetics. This is because radiations which reach the reproductive cells cause mutations, or harmful changes in the material governing heredity, that are passed on to succeeding generations. "If the whole population of the United States received small doses of extra radiation * * * there is good reason to think that among the next hundred million children to be born, several thousand would be definitely handicapped."

The problem, especially acute in view of the development and use of atomic power in the near future, is how to prevent more and more atomic radiation. The National Academy report recommends the keeping of records for every individual showing his accumulated exposure to radiation including X-rays and fluoroscopy; restraint in the use of X-rays, and continued research and investigation—especially in the fields of atomic fallout, food contamination and disposal of radioactive waste products.

The following is the resolution of the National Coal Association:

Be it resolved by the directors of the National Coal Association, That the following facts and principles should be considered by the executive branch of the Federal Government, the Members of Congress, the Atomic Energy Commission, and the American people, in determining the role of the Federal Government in the development of atomic energy:

I. In the progression of humanity, in furthering world trade, in advancing the cause of peace and in maintaining the world leadership of the United States, there is a need to continue Government sponsorship of the development of nuclear energy. To this end, the National Coal Association recognizes the need for the Government to support the national laboratories and to carry out the basic as well as applied research in the field of atomic energy.

II. Future development of economically feasible nuclear power is necessary to provide power for underdeveloped areas of the world, to assist nations which have power shortages, and to protect the future of the United States in the power field. The National Coal Association therefore recognizes the need for the Government to continue the power demonstration program to optimize the conditions under which atomic power is generated.

III. The public interest requires that atomic energy be utilized principally in whatever ways or processes it will contribute efficiently to the energy requirements of the United States and the world. The conversion of solid fuels to gas and to liquid fuels through the utilization of atomic energy promises great benefits to the people of the United States. The national laboratory effort should be directed toward minimizing atomic-energy fuel-processing costs, increasing the safety of reactor systems against the public hazards, and developing high temperature materials of construction to the end that all sources of energy will receive their fair share of the total effort to achieve progress.

IV. The United States is one of the few nations of the world blessed with sufficient reserves of fossil fuels to meet the Nation's power requirements at low cost for centuries to come. In the United States the most economic source of steam-generated electric power in the foreseeable future will be plants fueled by coal, oil, or natural gas. Under the competitive stimulus of our free-enterprise system, the ingenuity of the American people will bring about the most beneficial results that can be obtained from all energy sources, including coal, oil, natural gas, and atomic energy.

V. The public interest demands dissemination of actual cost information with respect to nuclear fuels to the greatest extent compatible with national security. To the extent that Government subsidies are necessary in the development stages of the nuclear program, the public should be informed as to the magnitude thereof. There can be no reliable forecast of the comparative costs of power generation until nuclear fuel costs, and the cost of the safe disposal of radioactive wastes, are established.

VI. The Nation's best interests are not served by unwarranted optimism about the early availability of low-cost nuclear power.

Address by Former Senator Strom Thurmond Before South Carolina Automobile Dealers' Association

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Friday, June 22, 1956

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding address delivered by former Senator Strom Thurmond, of South Carolina, who is the Democratic nominee for the United States Senate from South Carolina before the South Carolina Automobile Dealers' Association, at Myrtle Beach, S. C., on May 28, 1956.

As we know, Senator Thurmond was a member of the Automobile Marketing Subcommittee of the Senate Committee on Interstate and Foreign Commerce.

Mr. President, I have been informed by the Public Printer that the address will require approximately three pages of the CONGRESSIONAL RECORD, at a cost of $240. Notwithstanding that estimate, I ask unanimous consent that the address be printed in the Appendix of the RECORD, in order that the Senate and the country may have the benefit of the advice of former Senator Thurmond, as a result of his work on our subcommittee.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY STROM THURMOND AT THE ANNUAL CONVENTION OF THE SOUTH CAROLINA AUTOMOBILE DEALERS ASSOCIATION, THE OCEAN FOREST HOTEL, MYRTLE BEACH, S. C., MAY 28, 1956

President Rose, distinguished guests, members of the South Carolina Automobile Dealers Association, and other friends, it is certainly a pleasure to have this opportunity to speak to you. Certainly during the past year I have come into close personal contact with your problems, and I welcome this chance to discuss them with you.

First, however, permit me to commend Mrs. Ella W. Ford, your capable and efficient executive secretary, who has truly done an outstanding job for your organization, and who, I might add, has always been most kind and considerate, and has won many friends for your group. In addition, I would like to say that while in Washington it was my privilege to work with Ambrose Easterby, your able national director for NADA in South Carolina. He, too, has done a fine job on your behalf during this past year in which the auto business has been dragged back and forth across the front pages of the Nation. Your president and all your other officers deserve to be highly commended for their splendid service.

Looking back at 1955, we find it was a year of warning to the automobile business. These warnings were unheeded by the industrialists of Detroit, and 1956 has become a year of decision. This year may go down in automotive history as a turning point in the battle of independent small businessmen—the cornerstone of our American free enterprise economy—for the right to run their own businesses in the manner they see fit. It may mark a turning point in the right of the American automobile dealer to resist the efforts of a few men in Detroit to regiment, standardize, document, and re-educate them, to suit the whim of some factory road man to get a gold star on his monthly report card.

America owes a great debt of gratitude to the men who make, and to the men who sell, automobiles. Julius Caesar, George Washington, Thomas Jefferson, and Teddy Roosevelt all used the same basic mode of transportation—a one- or two-horsepower convertible. Every chief executive in history from before Julius Caesar until 1921 used this type of conveyance in the inaugural parade. The first President to use an automobile to ride up Pennsylvania Avenue in an inaugural parade was Warren G. Harding.

And now in the year of our Lord A. D. 1956 we are driving about in shiny 200-horsepower models with power steering, power brakes, power seats, power windows, power glide, and every other conceivable aid to safety and

comfort. Nearly everybody has a car. The people who make and sell cars have done the most amazing job of effective manufacture and distribution of a product that the world has ever seen.

You will notice that I did not limit the credit for this job to the manufacturers or to the merchants who sell the cars. The job could not have been done without both segments of the automobile industry. They are as inseparable as Siamese twins. If one dies, the other will also. When one goes hungry, even though the other may be temporarily gorging on the food at the same time, both will be anemic before long.

I think perhaps this fact has finally dawned on the men who make the cars in Detroit. With factory sales down as much as 40 percent and dealer sales correspondingly low, and with an 800,000 to a million car backlog of unsold new units, it should be occurring to someone, somewhere, in a responsible position in the automobile business, that the feast which the factories have spread before themselves for the last few years—marked by profits on investment up to 66 percent before taxes and 33 percent after taxes—could not long last if the other half was in a period of famine.

And the amazing thing is this. As close as the connections between these Siamese twins of the industry were, the one couldn't hear the other.

The ivory tower of Detroit, with its fantastic array of research and talent and with its very walls supported by file cases containing dealer reports and reports on dealers—and you know what I mean—was too well insulated and soundproofed to hear the problems of the dealers.

It was natural that if the manufacturers could not hear the problems of the dealers, then Congress could. Senator WARREN MAGNUSON, of Washington, chairman of the Senate Interstate and Foreign Commerce Committee, appointed Senator MIKE MONRONEY of Oklahoma, Senator FREDERICK PAYNE of Maine and myself as a special subcommittee to study these problems. This was in March of 1955.

Because of the magnitude of our assignment, we started out to thoroughly acquaint ourselves with all the information we could get about automobile marketing. One of the most complete and thorough studies of all phases of automobile marketing ever made was undertaken by the members of our committee and by its staff.

I cannot overemphasize how much help the dealer organizations, principally NADA and Admiral Bell, and James C. Moore, NADA's General Counsel, gave us during this period of our study. Without their fine cooperation, I doubt if we could have had tasks so well advanced

It became readily apparent in the course of this background study, that certain danger signs were appearing in the automobile marketing picture. Automobile installment paper was seriously and threateningly being overextended, both in volume and in length of terms. Unsold new cars were backing up in dealer showrooms to the point of nearly 800,000 units. Dealer profits were down to as low as six-tenths of 1 percent. Dealer mortality had increased by more than 200 percent. Frantic advertising was screaming from the back pages of every newspaper. All this was happening while automobile manufacturers were selling cars at a full profit, and at a record rate to dealers, feasting on 6 million units and licking their chops over an 8-million-car year for dessert.

The subcommittee pointed this situation out in a report in July of 1955. But this report was hailed by the manufacturing segment of the industry as so much poppycock. We were advised that amateurs shouldn't attempt to second-guess professionals, and that 1956 production and market would be even better.

Partially because of this conflict of opinion and principally because we wanted to establish direct contact with dealers—who, after all, are the real experts about their own businesses—we prepared questionnaires to go to the 42,000 dealers of America, and to provide for them a sounding board for their views. About 20,000 dealers answered these questionnaires in detail. Thousands with added comment on their business problems. I am told that this is the greatest return on a voluntary questionnaire ever set out by Congress or by any executive agency.

The number of returns which we received proved beyond a reasonable doubt that dissension in the industry was widespread, and that all dealers of all makes felt the destructive effects of the wild race for percentage of price class supremacy.

While these were being tabulated, our committee and staff determined to implement the questionnaire with field checks. I met with dealers in South Carolina and other southern areas. The other members of the committee checked their own and representative areas. In these spot checks, we found mainly the same types of dealer trouble throughout the Nation.

To me, to other members of the subcommittee, and to the staff, the problems we found indicated a dangerous malignancy in America's No. 1 industry.

It appears to me, and I believe to the others, that if the drift continues as it has been going in the past 2 or 3 years, the basic pattern of automobile distribution through independent dealers will undergo a revolutionary change. This change will, I feel, in the long run, destroy the benefits of the most successful distribution system of a high-price consumer product ever known in the world's history. It will wipe out a system of locally owned and locally managed small business—in many cases now in the hands of the third generation of the same family. It will destroy the reliability, the responsibility and the respectability of dealerships, on which the sale of a three or four thousand dollar product must rest, if consumers and the buying public are to buy with confidence. And along with this change, the ethical standards that marked the growth of manufacturing and retailing in past years, will sink to the business mortality of a county fair shell game.

So far, you have only the used-car dealer, or a few ex-franchised dealers, to contend with, but when these leaders of your industry feel compelled, by economic circumstances, to quit the traditional system to protect their investment, then you are going to see supermarket operation with real high-power leadership.

Just one more year like the past several, and I am convinced that the big change will come to supermarket operation by these experienced dealers, unless the entire industry—and I mean dealers and factories—act now.

Supermarkets won't stay. These abortive sales efforts—the cut price, the phony trade-ins, the 4-year terms—finally will exhaust themselves; then salesmanship, service, and responsibility will again be required to sell cars and to maintain factory investments, employment, and reputations. But this will be too late for the experienced dealers, because they will have liquidated, gone bankrupt, or gone out of business. So the third stage will be the chain-store type of merchandising or the factory-owned distributorship. But the consumer, the town, the dealers, and the factories will lose by this transition. Also, of major importance to the public, is that greater economic power will be concentrated in the hands of fewer and fewer financial giants.

Our study has shown that this malignancy, which, in effect, affects our No. 1 industry, has 5 major symptoms in this order: 1, automobile bootlegging; 2, phantom freight; 3, bad factory-dealer relationships and one-sided contracts; 4, unsound credit terms; and 5, irresponsible, phony advertising. Like many ills, the germs of each 1 of the 5 infect and aggravate the other 4. They are interrelated and self-acclerating.

The only note of cheer is that they are so easy to cure by men of good will if they are anxious and willing to find the cure. But these were the things that we saw when we lifted the hood.

The subcommittee's report was published with the compiled answers to the questionnaire showing how dealers felt about these things. Not until we announced our intentions to hold hearings on these matters—then and only then—did the people in the Detroit ivory tower begin to stop, look, and listen. The drawbridge banged down, the advance scouts rushed to Washington to the subcommittee hearing room to find out how the privates in the front ranks—the dealers—felt about them and about these problems. And, believe me, they got an earful. So did the committee.

And let me pay proper tribute to the dealers and ex-dealers who came before our committee to testify under oath. Most of them were men who had been automobile dealers long before World War II. None of them were weaklings or ingrates. They were examples of the fact that in this great democracy of ours, the spirit of '76 still burns brightly in the hearts of American citizens, and cries out against any attempt to dominate or intimidate the American small-business free-enterprise system.

But what did the factories hear regarding bootlegging? They heard sworn testimony of incidents in which factory representatives actually encouraged dealers to bootleg, in their mad race to put their zone first in sales every month. They heard of discrimination against dealers who refused to bootleg or engage in other unfair destructive, unethical, and irresponsible practices. They heard instances of capricious, arbitrary factory treatment of dealers that are almost unbelievable; instances of dealers with 20 and 30 years as loyal, faithful servants of the factory, who once would have fought anyone who said a bad word about their particular company, being canceled by brief, curt, one-paragraph letters, with no explanation except that their performance was considered unsatisfactory. We have sworn dealer testimony in the record showing that dealers were canceled for failure to get price class when they couldn't get delivery of cars to sell. One dealer attributed the death of his brother to the pressure of seeing his life's savings swept down the drain by factory cancellation because of the dealer's refusal to change his location. He wanted to stay in the center of town rather than to build a monument for the factory on the outskirts. The obvious sincerity of this man, as tears welled up in his eyes, wrung the hearts of every member of the subcommittee. The factory scouts and the subcommittee heard the testimony of a dealer from Beaumont, Tex., who was canceled after he failed to get the percentage of price class which his factory thought he should have. By how much did he fail? By one car. This particular dealer has written his factory many, many times regarding bootleg cars being sold in his area. He sent them the serial numbers and all necessary information so that the bootlegger could be identified by the factory. He received no reply. The subcommittee heard testimony that dealers in the low freight rate areas of Chicago and Detroit boasted of the cars they were bootlegging in distant areas, while other dealers in the same areas couldn't get deliveries. We heard of dealers being franchised in towns of 25—I repeat 25—population, so that they could sell in nearby metropolitan

territories. These stimulator dealers sold from superservice gas stations and sheet-iron barns with no service department, leaving the loss on warranty work to be assumed by old-time, conscientious dealers who had spent thousands of dollars in securing equipment to do such work.

What did we hear about phantom freight? We heard freight experts, employed by the National Automobile Dealers Association, estimate that the American public and automobile dealers were being charged more than $200 million a year in excess of freight costs by Ford Motor Co. and General Motors Corp. To be specific, General Motors Corp. admitted a profit of $151 million a year from freight alone. Ford Motor Co. admitted $50 to $60 million a year. Also, they admitted that the freight differential between the Detroit area and outlying sections of the country, which in some cases were just as close as assembly plants, was a factor in bootlegging.

What did the subcommittee hear about the third point of our study—Bad factory relations and bad contracts? Just like bootlegging and phantom freight go hand in hand, so do factory relations and contracts. I've already told you of some of the testimony the subcommittee received regarding cancellation pressure the factory is able to put on the dealer so that the dealer bootlegs cars. But more serious than that perhaps was the testimony about how the dealer was unable to sell his business at a fair price, even if he had bona fide offers from good faith purchasers.

Factories maintained that their dealers are independent businessmen with their own individual investments. The dealers have their own individual investments all right. But what kind of an independent businessman is it that can't sell his own investment on the open market?

Franchises in most towns mean economic life or death to the owner of the business. The constant threat of cancellation or competition from newly enfranchised dealers in the same community, or the humiliation of a once free and independent businessman, is a powerful weapon in the hands of the manufacturer, and fear crept into the hearts of these thousands of free-born American small-business men. The fact that over one-fourth—and I think this is important—of the 20,000 dealers who answered our questionnaires failed to sign their names was sufficient evidence that this fear of economic retaliation existed, even without the testimony which we received confirming the fact.

We heard that dealers were requested to make gifts of diamond rings and palomino ponies to zone and factory personnel—the men on whose whims the economic life of the dealers depended. The striking thing about this testimony was that these were not isolated cases, by any means.

What did the subcommittee hear of the fourth subject—that of finance and credit? We heard that the tremendous skyrocketing of automobile credit—its increase by 40 percent in the year 1955—from 10 billion to 14 billion, came at the same time that the sales race did. We heard that with the highly respectable, responsible General Motors Acceptance Corp. at the lead, finance companies had expanded their terms from 2 to 3 years, and now to 4 years. We have a perfect example of the effect of last year's wild credit jag on which the automobile industry embarked. Right now customers are so heavily in debt with new cars, bought last year, that the car market all over the United States has dropped by 20 to 50 percent. Certainly automobile credit has helped greatly in the matter of distributing cars. Without it we could not reach the market. But the destructive credit practices which have been growing up for the last year or two—with 3- or 4-year terms, and in some cases those are based on phony balloon payments at the end—can ruin the future prosperity of the industry. Crazy credit terms during the year 1955, brought about by the mad race for first place, oversold the market in that year by a million cars, and now dealers are having to pay the piper with nearly a million unsold new cars in inventory. In the credit race the factories have nothing to lose. They have their money before the car is even delivered to the dealer. As a matter of fact, the finance companies have very little to lose. The president of GMAC told us that only on 15 percent of its paper was that company responsible in case of default. Actually, it is your money. If the owner of that car goes to Mexico, you are there with a half a million or more in capital assets to pick up on the tab on whatever is due. Your name is on the back of those notes. They are playing poker with the dealer's money.

This skyrocketing expansion of 40 percent from 10 billion to 14 billion outstanding automobile installment credit in the year 1955, goes hand in hand with the fifth problem which the subcommittee considered, that is, the problem of false advertising. Dealers told us they had to engage in it as a matter of self-protection. You are familiar with the ad giving a thousand dollars for anyone's prewar car; giving three or four hundred dollars cash away with each purchase; trips to Paris; shares of stock, etc. You are familiar with the packing of prices on automobiles. One Pontiac dealer of 25 years' standing told us that his zone manager had insisted that dealers pack the price of new cars by exactly $225. He also told us the factories expected dealers to make their money from finance packs and insurance packs, and all the other antipublic practices which go on with false advertising.

George Romney, President of American Motors, and a real industrial statesman, described these methods as just like taking narcotics. One shot might be sufficient for this year, but next year it will take 2, and so on until the customer and the dealer are fully committed to more and more dope.

These, then, were the things that the factories saw and heard in the subcommittee's hearings. They also heard nearly 50 Members of Congress come forth to testify about the sentiment of dealers in their areas, urging the subcommittee to pass legislation to correct these abuses. We heard many other problems. I wish I had time to discuss them. We heard the problems of accessories, the problems of seat covers, the problems of special tools, the problems of unfinished cars coming from the assembly line in Detroit—incidentally, one dealer called cars nowadays do-it-yourself kits. I wish I had time to discuss them all, but I do not. We did discuss them all, however, in our 6 weeks of hearings, and the factories heard these things, perhaps for the first time. Not only did they hear these things, they promised to do something about them. Now, let's talk for a minute about what the factories have promised to do since our committee began its study.

First of all, all automobile manufacturing corporations have reduced freight charges to areas distant from Detroit. These charges were passed on to the dealer and to the car buyer, put into the finance of the car so that the customer had to pay interest on it and the dealer had to pick up the tab if the note went bad on repossession. Now they said they have cut this freight profit out. Of course, at the same time all factories raised the basic price of their cars. The committee is still interested in finding out whether the revenue gained by the increase in the list prices more than offsets the revenues lost by the freight decreases.

Actually, between the companies this has been of great benefit in the competitive picture. No longer will the smaller manufacturers, who have no outlying assembly plants and thus make no profit on freight, be at a freight profit disadvantage in the competitive market because of freight. So long as Ford and General Motors made an extra $200 million a year on freight to spend on advertising and other things they had a competitive edge over Chrysler, American Motors, and Studebaker-Packard.

Next, all automobile manufacturers have condemned the practice of bootlegging. Ford and General Motors Corp. have publicly announced that they will take positive steps to eliminate bootlegging of their products. Heretofore they have always hidden behind the antitrust laws and said they could not. It is very significant that they now tell us they will take action.

Presidents of both Ford and General Motors have made strong, positive statements condemning false and misleading advertising and the Committee is informed that positive steps have been taken by both companies to monitor advertising which reflects on the goodwill of their product. It is significant that finally, after all these years, they have seen fit to step in.

On the problem of price packing, both Ford and General Motors have condemned its use, as well as the smaller manufacturers. If price packing is controlled and stopped, or even slowed down, this one thing will justify the existence of the subcommittee.

These corporations have also announced that they are opposed to gifts, which might influence the business decisions of the factory representatives.

Perhaps the most significant announcement of all is the formation of top management dealer relations positions. General Motors Corp. has announced its appointment of Ivan Wiles as vice president in charge of dealer relations. Henry Ford II announced that he has appointed a dealer policy board consisting of his brother, Benson Ford, as chairman, Walker Williams and Arthus S. Hatch. In both of these arrangements the assignments will be full-time responsibilities, and I hope that no Ford or General Motors dealer will be reluctant to call upon these men who have been appointed as your representatives at top management. I understand that Chrysler has recently made a similar appointment. Studebaker-Packard and American Motors have also promised to hold meetings between top management and dealers to work out closer liaison.

In the finance area, General Motors has announced its new Release From Liability Plan, under which a dealer may maintain a reserve with the company of 3 percent minimum and 6 percent maximum—of outstandings—and be relieved of any further liability. Any excess is given back to the dealer. Ford Motor Co. has announced its intention to study ways of helping its dealers with finance, both retail and wholesale—this for the first time in nearly 20 years.

False registrations have been condemned by all companies.

A major announcement by the Ford Motor Co. is in its method of billing. Insofar as possible, payment will be due on the day vehicles are scheduled to reach dealerships, rather than on the day of shipment from assembly plants. I hope other manufacturers take this step, too.

Direct mail costs are to be assumed by General Motors, instead of requiring that these costs be borne by the dealer.

General Motors has announced that it will set up no new dealer points this year. We assume that this means that the so-called stimulator dealer, with a gravel lot and a sheet iron building, will not be placed in competition with dealers of long standing and downtown overhead.

General Motors has announced the appointment of an umpire rumored to be an ex-Federal judge, to supersede the dealer-

relations board in cancellation cases, which previously acted as prosecutor, judge, and jury.

Possibly in order to soften the blow of immediate cancellation of franchise upon the death of a dealer, General Motors has instituted a billion-dollar group life insurance plan, which would allow dealers under 65 to be able to obtain $100,000 worth of life insurance without medical examination. Part of the cost of the policy will be shared by General Motors.

Also, General Motors has announced a program under which it may allow the widow to participate in the dealership for a 5-year period.

Ford Motors has also announced that it is studying such a plan, including health and hospitalization and pension plans.

Henry Ford, II, is in the process at the present time of holding meetings with dealers all over the United States. Perhaps some of you have attended one of these meetings. I urge every Ford dealer to speak with all candor and frankness with Mr. Ford and his top assistants in helping to forge a factory-dealer plan which will return the basic element of fair play to the business.

Both Ford and General Motors have announced they are giving dealers a 5-year contract, to be terminated by the company only for cause.

With regard to the new General Motors contract, we are assured that the company is: 1. Assuming the full cost for warranty adjustment. This means that on warranty work done by the dealer, he could charge 100 percent of the flat rate on labor and costs, plus 10 percent on materials. Ford also has adopted such a plan, I understand. 2. Granting of a larger allowance on new cars of the preceding model year, remaining in stock, when a new model is announced. The allowance will now apply to all new cars in stock at that time. Previously, it applied only to a given percentage of cars sold 3. Doubling the allowance under the GM obsolescense plan. Dealers may return 4 percent of the parts ordered in the previous 2 years. 4. Increasing from 30 to 90 days the period within which purchased parts may be returned to the factory. 5. Assistance in protection for the dealer, with respect to disposal of his premises and leasehold, in the event of termination. 6. Extending the policy and the agreement under which a son or son-in-law may succeed the dealership in the event of the death or incapacity of the dealer, to include any qualified person active in the business who is nominated by the dealer to succeed him. 7. Making it possible for a dealer to provide that his widow has a financial interest in the dealership for a period up to 5 years after the death of her husband. 8. Including a detailed provision in the contract for evaluating dealer sales performance, based on all factors, including local conditions affecting his dealership operation, either favorably or adversely. 9. Increasing the factory contribution to cooperative advertising funds used in national media. 10. Incorporating in the contract a clause providing for maintenance of a high standard of ethics in local dealer advertising. 11. Broadening provisions for repurchase of parts and special tools, upon termination of an agreement. 12. Improving the language of the contract in the interest of simplification. 13. Making many other changes in the contract, including the elimination of many clauses, all designed to improve the document as a whole.

Now these are the changes which have come about since the subcommittee instituted its study more than a year ago. These are the changes that have come about since the factories told us that we were seeing ghosts in the dark, that there was really no reason for concern, that the only dealers who were disturbed were those who were unable to brook the free tide of competition.

In all fairness to the factories and in all sincerity, I want to say this: It takes an even bigger man to do something about it, when he sees that he has been mistaken. I fundamentally believe that the lines of communication between the ivory tower in Detroit and the shock troops, the dealers in the field, were in sad need of repair, and that these men had to be convinced that there was even a problem. I think they are big enough men and sincere enough men to do something about it. They have already stated that they would. I believe that they will.

But in closing, I would like to quote the words of the president of the National Automobile Dealers Association in his testimony before the subcommittee. This is what Carl E. Fribley, president of the NADA, told us about the new climate of factory dealer relations:

"If the management of this corporation could decide one Wednesday or Thursday afternoon to operate that way, certainly another management a few years from now on the same Wednesday or Thursday afternoon * * * could turn around and change the course 180 degrees, and that is what I referred to in my football analogy of possibly (passing) ground rules, so that each side will continue to have 4 downs to make 10 yards—so that there will not be a change once it is established."

I must admit that I am tempted to agree with Mr. Fribley. If these companies have, in fact, learned their lesson and decided to play by rules which are fair and square, what can be their objection to allowing a dealer to submit the question of cause to the courts? If they are serious in their promise not to force dealers to take too many cars and not to discriminate against a dealer because he fails in their judgment to take enough cars, what objection can there be to such legislation? If they intend to no longer make morally indefensible profits in the guise of phantom freight charges, what can be their objection to legislation preventing them from making such profits?

These are the problems that I will leave with you. I sincerely hope that you will let the Congress know what you think of them, and what you think the Congress ought to do, and above all, I would urge you to keep solidarity in your ranks, and resist any attempt to divide the dealer organizations among themselves, for this is the principal method by which dealers can lose all. If you disagree on some matters, such as territorial security, I suggest you pass that by and come up with programs on which you can agree. If you do this, I feel sure the Congress will give great weight to the views of you people who represent the cornerstone of the American small business free enterprise system.

Organization for Trade Cooperation

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an analysis of the constitutionality of Organization for Trade Cooperation—OTC, and General Agreement on Tariffs and Trade—GATT, by our former and distinguished colleague, Hon. Samuel B. Pettengill.

The article is as follows:

My objection to GATT is not that I am a Smoot-Hawley high protection man. I am not. I voted for the Reciprocal Trade Act of 1934. In my book, Jefferson, the Forgotten Man, written in 1938, I stated my belief that the higher tariff walls erected during the 1920's were a contributing cause of the worldwide collapse of 1929.

I am against GATT for a larger reason than protection or free trade, high tariffs or low. I am against GATT because it is part and parcel of international socialism, one-worldism, and the slow surrender of American sovereignty to aliens whom we can neither elect nor defeat.

Whether any tariff on foreign goods should be lowered or raised, that decision should be kept in the hands of officials elected by and responsible to the American people. If our industrialists, workmen, or farmers think any tariff is too low, they ought not to be required to argue their case before foreigners in a foreign city. They should need go no farther than to the Capitol of their own country and submit their case to a jury of their peers. If a mistake is made there, it can be corrected there and by officials responsible to those who claim to be hurt. If a mistake is made elsewhere, it may be permanent.

Article 1 of the Bill of Rights guarantees the American people the right to petition their own "Government for the redress of grievances," not a foreign government nor an international governmental body on which our country will have only 1 vote in 35 or more votes.

Ours is a representative form of government in which the representatives are American citizens.

We were once governed from London. We got rid of that government. Are we to be governed again from London, or from Paris, Rome, Geneva, or Moscow? I am for making the Declaration of Independence permanent. Have the results of 2½ world wars proved so beneficial to us as to justify the abandonment of American independence and sovereignty?

Sovereignty is the supreme and independent power or authority to govern a nation. It is the power to decide the policies and execute the laws that govern a people and their affairs. Sovereignty must always be in some hands and the question is whether any part of American sovereignty should be placed in any other than American hands.

Abraham Lincoln spoke to this question in 1854. He said: "I insist that if there is anything which it is the duty of the whole people to never entrust to any hands but their own, that thing is the preservation and perpetuity of their own liberties and institutions."

Has anything happened in our lifetime to warrant our disregarding Lincoln's advice?

The Constitution says that "all legislative powers" which are granted the Federal Government are vested in Congress. Congress can delegate none of its legislative powers. After laying down the policy, and after erecting a clear standard to which the executive must conform, Congress can of course delegate administrative powers. In fact it must of necessity do so, else it would itself be usurping executive power. But Congress can delegate nothing which involves a discretion as to what the law shall be.

Be it noted that a tariff, whether it be prescribed unilaterally by an act of Congress, or is arrived at by an executive reciprocal agreement of the President with the agents of a foreign power, is a law. It is something which people must obey. A tariff is an exercise of legislative power which under the Constitution is vested in Congress alone. Congress alone has power "to regulate commerce with foreign nations." Article 1, section 8 of the Constitution.

The constitutional aspects of tariff making in general and GATT in particular have been

powerfully presented by Mr. Lennox P. McLendon, Esq. in a brief filed before the Ways and Means Committee of the House of Representatives entitled "The Legal Sweep of H. R. 5550." I shall not repeat his arguments nor attempt to enlarge on them. I confine my thought to the historic developments of our free institutions since 1776 and the divergence therefrom of GATT, and of those who favor GATT.

George Washington asked in his Farewell Address, "Why quit our own to stand on foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?" Why, indeed?

GATT embraces not Europe alone, but entangles our peace and prosperity in the ambitions, rivalship, and interests of 34 other nations all over the world, all of whom have their own axes to grind.

The State Department has said that "GATT is the most comprehensive international agreement ever negotiated for the reduction of barriers to and hence for the expansion of world trade." Note that it says "world trade," not our own part of world trade. The old-time philosophy of Washington and Lincoln, stated in the Preamble of the Constitution, was that it is the business of the American Government to promote the interests of the American people. If that rule were still followed, one might view the present question in a different light.

But that is no longer true. The mass hallucination is now dominant in Government circles that the United States is a charitable organization for the benefit of 2½ billion people. This mental derangement is now of epidemic proportions, and its contagion infects leaders of both parties. The State Department is on record that "There is no longer any real distinction between domestic and foreign affairs." That is the tipoff, the warning bell.

It is in this murky and alien atmosphere that we must judge what the proponents of GATT and OTC intend to do, if Congress gives them its blessing.

There is nothing in the above quotations from Lincoln and Washington that derogates from Jefferson's words: "Peace, friendship, and commerce with all nations." Jefferson believed in international commerce. Look at all the stuff he brought over from France. Since 1789, the American people, both with their old-time clipper ships and in many other ways, expanded American commerce with all the world's people, and on a tremendous scale.

But they did so as the Constitution intended and without interweaving our destiny with any form of world government, or surrendering any part of American sovereignty to foreign hands.

No one objects to private enterprisers or public officials negotiating with foreigners about international trade. This we have done for a century and a half, but always subject to the constitutional power of Congress to approve, reject, or modify. Has our Constitution been such a failure as to now excuse the use of devious ways to sidetrack it?

GATT and the OTC, if once legalized, can, however, make rules, binding as law on its members on matters not only directly controlling the flow of world trade, but on domestic matters which affect world trade. Note this well. In short, GATT and OTC can affect the jobs of every worker and farmer in America. Moreover, GATT has the power of self-amendment—that is, it could, if once legalized, enlarge its powers without an action or approval by Congress.

Do we want to get ourselves in this bear-trap?

It is time for the American people to stop, look, and listen. GATT is proposed in a far different prevailing political atmosphere and philosophy of government than the Reciprocal Tariff Act of 1934. That act went to the extreme limit of the power of Congress with respect to its responsibility to act as the governing body of the American people on matters of foreign trade. Its constitutionality has never been passed on judicially. Assuming that it is constitutional, as I thought it was when I voted for it, it has certain advantages over the logrolling procedures under which tariff laws were formerly written on the floor of the House and Senate.

However, in 1934 no one in high office was arguing for the surrender of any part of American sovereignty to foreign governments. The law then passed contemplated bilateral negotiations only, our Nation with one other nation at a time. In such negotiations there was no possibility of being outvoted. The power to say "Yes" or "No" remained securely in American hands.

GATT, however, calls for a vast complex of multilateral negotiations with many nations in a sort of world superlegislature where we have 1 vote in 35 or more votes. This is a horse of a different color, a Trojan horse. Once wrapped up in this spider web, it will be difficult indeed to recapture any independence of action.

But more important is the difference in the political climate now prevailing as against the philosophy that then prevailed. It is necessary to understand how far and how foreign our leaders have gone in their thinking since 1934, I refer, of course, to such men as President Eisenhower, Secretary Dulles, and Mr. Harold Stassen on the Republican side, and Messrs. Stevenson, Kefauver, and Harriman on the Democratic side. Everyone of them is for some sort of world government, limited though it may be. They would all limit American sovereignty to a greater or less extent. The $55 billion of foreign aid since 1945 and the effort to continue it, perhaps forever, shows the sort of thinking that will dominate GATT.

In his book, Crusade for Europe, President Eisenhower, after reviewing the operation of the joint military forces in Europe which he commanded, has this to say on page 477: "A firm agreement (is required) that in disputes between nations a central and joint agency, after examination of the facts, shall decide the justice of the case by majority vote and thereafter shall have the power and the means to enforce its decisions." Note those words "majority vote."

The Reciprocal Trade Act of 1934 was to promote American imports and exports. GATT goes far beyond these objectives. It plans to insure full employment worldwide; insure equal access to resources; develop undeveloped countries; raise standards of living and create effective demand for the world's goods by redistributing the world's wealth.

Contrary to protecting American interests, GATT would consider and decide what share of a country's market of a given product belongs to other countries; which other countries are entitled to supply that share; what is a country's fair share of the world's raw materials or other products in short supply. Under GATT foreigners will ask: "What is our fair share of what you have?"

It is international planning and governing on a grandiose scale, and will be largely at our expense. It calls for the worldwide socialization, in greater or less degree, of all trade, resources, and wealth. If approved, it will be another spike in the coffin, now under construction, of American constitutional government.

April 12: National Health Day

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 8, 1956

Mr. DAVIDSON. Mr. Speaker, I have today introduced a joint resolution calling for the establishment of the 12th day of April of each year as National Health Day. We have witnessed in the past few decades the increasing interest of the Federal Government in the improvement of the health of all of our citizens and in the elimination of disease. The war which is constantly being waged against the destructive diseases which afflict both the mind and the body is, I am sure, the only war, be it hot or cold, which honestly commends itself to the hearts, souls, and minds not only of the people of this Nation but of the peoples of the world. The continual struggle to conquer the many dire illnesses and diseases to which man is still subject is the greatest battle remaining for man against nature.

We have, not only in the United States but elsewhere in the world, vast resources of people skilled and trained in scientific research, investigation and analysis and the utilization of those resources is still required to aid in the conquest of disease. In addition, vast sums of money together with nationwide and worldwide correlation of experimental data and progress are needed to supply the weapons for the successful conquest of disease.

The resolution which I have today introduced, for appropriate reference in the House, would set aside the 12th day of April of each year for the purpose of a public dedication in the never-ending struggle for improvement in our Nation's health. It would invite the medical profession, the press, and all agencies and individuals interested in the national program to unite together in a concerted effort to impress upon the people the necessity and the value of our Federal Government's interest in national health.

The reasons for the designation of the 12th day of April are rather simple. In the first place, that day is the birthdate of our late President, Franklin Delano Roosevelt, who, perhaps more than any other President in our Nation's history, oriented our thinking and our efforts to the need for a national health program. The crippling paralysis from which he suffered was well known to everyone in the world. His personal interest and his efforts to eliminate the dread disease, infantile paralysis, caused him to found the National Foundation for Infantile Paralysis. The annual March of Dimes is not only a yearly drive to aid the foundation, but acts also as a memorial to his memory and to his ability to lead a useful and dedicated public life despite his affliction.

In the second place, the 12th day of April became the day on which the entire world was informed of the results

of a study made on the effect of the use of the Salk vaccine in the reduction, and perhaps eventually the elimination, of paralytic polio. The contribution which Dr. Salk has made to our Nation's health cannot be measured—each of us knows that countless children have been saved from a crippling disease. The discovery of the Salk vaccine is perhaps the outstanding health contribution of our lifetime, and the day upon which the Francis report was issued will serve as a constant reminder of the great strides that can be made by scientific research to eliminate the as yet unconquered illnesses of man.

These two reasons, then, would indicate that the 12th day of April is, indeed, the proper day for the observance of a National Health Day.

I respectfully request the support of each Member of the House for the resolution which I have introduced.

The President's Plan for Medical Insurance for Federal Employees Is a Flagrant Act of Favoritism Toward Big Insurance Companies and Tends Toward Monopoly in the Health Insurance Field

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, on May 29, 1956, I commented on a report of a Federal interagency committee relating to the health services to Federal employees. I said at that time that the report showed that although adequate employee health services are available in many Federal establishments, inadequate services or no service at all are available to a substantial number of employees. It is believed that some heads of agencies neither fully realize the value of such health programs nor realize the extent to which they exist in private employment.

Recently, the administration has recommended to the Congress a very limited proposal to help provide for a part of major medical expenses for the employees as an amendment to the Federal Employees Group Life Insurance Act of 1954. It is my belief that this proposal is entirely inadequate. What is needed, I believe, is legislation which would provide basic protection against routine medical expenses. In such a plan, the costs should be borne equally by the Federal Government and by the employees. Medical, surgical, and hospital care should be provided with a payroll deduction for the employee portion of the cost. In addition, the use of nonprofit medical service plans, where they are available, should be encouraged.

In this connection I would like to take this occasion to point out that the policy resolution adopted at the AFL–CIO merger convention relating to Federal employees called for a—

> Hospital and medical insurance program for Federal employees with employee representation in administration of plan and Federal Government to underwrite at least 50 percent of the total cost, and with administrative principles consistent with those approved by the AFL–CIO for administration of health and welfare funds negotiated with employers in private industry.

I would like to say that my reasons for opposing the administration's medical insurance plan are as follows:

First. The proposal is a flagrant act of favoritism toward private commercial insurance carriers and tends toward monopoly in the health insurance field.

Second. The major medical expense plan proposed by the administration discriminates against the lower paid Federal employees. The great majority of Federal employees receive less than $5,000 per year. Many of these employees have no basic health services and many others have only the very minimum coverage.

Third. Few if any of these low income employees would receive any return from such a major medical insurance plan as the administration proposes because they cannot afford the expense of medical, surgical, and hospital care to the extent of the deductibles proposed: namely, $100 medical, $250 surgical, and $500 hospital for each individual.

Fourth. The medical insurance plan put forward by the present administration does not encourage preventive medical care which is so desirable. Rather, it discourages such care by providing for large deductions of charges as mentioned previously. The provision that benefits start only after other insurance or services are fully met is discriminatory and it discourages comprehensive basic health care and penalizes those who are already providing themselves with comprehensive medical care.

Fifth. The administration plan, even after the large deductibles, provides only partial indemnity for medical and hospital expenses of exceptional or severe illness.

Sixth. The coverage provided in the administration plan for retired employees is even more limited in that they are required to pay the first $200 of medical care and are given no reimbursement for hospitalization.

For these reasons, Mr. Speaker, I believe this proposal for major medical insurance put forward by the administration puts the cart before the horse or, as someone said the other day, it finishes the roof before the foundations have even been laid.

On the other hand, if a program such as I propose is adopted, namely, 50-percent participation by the Federal Government plus payroll deduction for the employee's share of the cost for basic medical, surgical, and hospital care, the cost of a major medical program to supplement the basic program would be drastically reduced.

No layman can estimate the cost of the President's program because it is so entwined with the reserves in the life-insurance program.

Let me make myself perfectly clear. I am not opposed to a major medical-insurance program but it is quite clear that a basic health program of the type I propose should come first.

I believe that my position parallels that of the representatives of the Blue Cross hospital service plan, the Blue Shield medical service plan, Group Health Association, the International Association of Machinists AFL–CIO, and perhaps other organizations.

For these reasons, I am introducing a bill to provide the kind of basic program which I feel should be enacted into law before the administration program is adopted by the Congress.

This legislation, I might add, was largely developed by the International Association of Machinists AFL–CIO and I want to commend William H. Ryan, president and legislative representative of district No. 44, International Association of Machinists AFL–CIO, for his leadership in this matter.

United Nations Failure in Korea

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial from the New York Times under date of June 25 entitled "Six Years in Korea." It points out that it was just 6 years ago on last Monday that the Communist invasion of South Korea began. Since that time the United States has poured American life and treasure into a venture that is still greatly in doubt.

After 6 years while the United Nations carries the responsibility to establish a free and unified Korea, it has failed to move in that direction. Its incompetency under present conditions is cause for great regret among those people who feel that the United Nations is a force for peace in the world.

The editorial follows:

> SIX YEARS IN KOREA
>
> On June 25, 1950, 6 years ago today, the Communists from the north struck at the Republic of Korea. It was a powerful invasion in force designed to put an end, once and for all, to Korean liberty and to the young Government that had been set up under the sponsorship of the United Nations.
>
> Led by the United States, the United Nations took prompt action and rallied to meet the assault. In that connection it is worth noting that the official history of the Soviet Union no longer charges that the United States launched the Korean attack, but states merely that the United States intervened in a Korean civil war. The fact was that the Republic's forces were little more than a constabulary and that the United Nations forces were largely an improvisation to meet an assault that had been long planned and skillfully prepared.
>
> At that stage, however, the most important single factor was moral rather than military. The United Nations had actually taken a forceful action to resist an aggression. All of us felt that we had gained something in self-respect and the United Nations gained a new lease on life.
>
> Fighting in the field went on for about 3 years. The Communist attack was repelled, but because of a variety of factors, most of them political within the United Nations it-

self, the eventual result was a stalemate. In July of 1953 an armistice was signed.

Three years of frustration have followed. The armistice terms have been consistently violated by the Communists. Indeed, the United States Congress has had testimony that the violations began on the very day the armistice was signed. The machinery for supposedly neutral inspection of the north and south to assure the carrying out of the truce terms has now broken down and the United Nations has been obliged to insist that spurious neutrals, such as Poles and Czechs, withdraw from the free Republic.

Meanwhile, the attempt to unify the peninsula by peaceful means has also failed. A conference was held in Geneva 2 years ago, which was supposed to explore this possibility. There was not the slightest indication that the Communists had any intention of permitting a free election in Korea, and the conference reached no conclusion.

After 6 such years the United Nations is still committed to the establishment of a free, unified, and democratic Korea. There can be no compromise with such a commitment. Free government exists in the Republic in the south. The north is still the puppet of the Soviet Union—Stalin's death did not change that—and of the Red Chinese. It is inconceivable that members of the United Nations can forsake their ideals to the extent that they would permit the free nation to disappear, or that they can make a mockery of their own protestation by abandoning the idea that Korea must be united and that Korea must be free.

Address of Hon. John J. Rooney, Member of Congress, at Commencement Exercises of Bay Ridge High School Held at Brooklyn Technical High School Auditorium, Brooklyn, N. Y., June 25, 1956

EXTENSION OF REMARKS
OF

HON. EUGENE J. KEOGH

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. KEOGH. Mr. Speaker, last night at the 84th commencement exercises of Bay Ridge High School, held at the auditorium of Brooklyn Technical High School, Brooklyn, N. Y., our distinguished colleague, the gentleman from New York [Mr. ROONEY], had the great privilege of delivering the address to the graduates.

Under the permission heretofore granted me by unanimous consent of the House, I include Mr. ROONEY's address on this occasion as well as the program of the ceremonies, the names of the graduating class of June 1956, and the names of those who received highest scholastic honors, scholarships, and awards:

ADDRESS BY HON. JOHN J. ROONEY, OF NEW YORK

Miss Fitzpatrick, Reverend Mouland, distinguished guests, members of the faculty, the class of June 1956, ladies and gentlemen, it is always a pleasant occasion for a Member of Congress to be asked to give a speech, but I feel particularly good when I am asked in behalf of a high-school group. It proves that the virtue of courage is still one of the prime qualities of youth. It has ever been to the discredt of men that as they grow older, they tend to lose some of that youthful courage, enthusiasm, and optimism, for it is then, more than ever, that they need those very qualities. But youth, too, has a lack of some of the things that are of importance in adult society—experience, self-discipline, and a sense of dedication. These can only be acquired with the passage of time. You can be sure, though, that you will gain these attributes if you will keep the goal ever in sight.

Now, we are not all endowed with the same potentialities. It has always been so. Some of you are destined to become professional women and professional men; others, statesmen or states women; more of you, housewives; and still others, businesswomen and artisans. It is not important into what field you turn your endeavors as long as you exert yourselves to do the best possible in the job that you have chosen. It's similar to the story of the judge who was hearing the case against an elderly man who had been convicted of robbery for the seventh or eighth time. The judge, knowing that the man was an habitual criminal, and as such would be a threat to society, sentenced him to a total of 20 years in State's prison.

"But, judge," said the thief, "I'm 65 years old. I can't possibly serve out a sentence of 20 years."

"That may be true," said the judge, understandingly, "but do the best you can."

Those are sound words for all of us to heed. Do the best you can. Our great country is made up of people from all walks of life, from all income levels, from all intelligence levels. The tremendous advantage we have over many other countries of the world is that each one of us has equal power at the polls and equal justice before the law. You may think it a little early to start thinking about the responsibilities of citizenship, but the best time to prepare for any future job is now. It takes practice and perseverance to gain the experience needed to do any task well. In fact, the only job I can think of offhand where you must be perfect from the very first try is parachute jumping. Preserving democratic principles, fortunately, is not quite this demanding, but the results of not learning how to keep them can be just as fatal. We, all of us Americans, have a tremendous responsibility not only to ourselves and our families, but to the rest of the world that still lingers in chains, and to future generations yet unborn. We have received the inheritance of freedom from our forefathers who fought and died to preserve it for us. It is only right that we pass it on intact.

What then can you do to fulfill your role as good citizens? You can do much. You can start right now. As you go out the doors of this auditorium tonight, you will be leaving one phase of your life behind you forever. The next will have already begun, and it is up to you whether it shall lead to the peaceful world that man has not known to this time, or whether it shall stagger blindly along in the well-worn paths of the past. There is not one good reason, in this world under God, for believeing that wars are inevitable; that depressions will visit us periodically; or that crime is a necessary evil. True, throughout history there have been periods of two or three hundreds of years when the world seemed to stagnate, or seemed bent on self-destruction. However, there have also been times when mankind seemed kildled with the spirit of enlightenment; the Golden Age of Greece, the Renaissance, the Elizabethan Age, and the period of the American Revolution are but a few examples. These are the eras that make use take pride in our membership in the human race, sweeping aside with the grandeur of their purpose the shameful memories of other ages. Shall we pessimistically say that their likes will never be seen again? Better we should turn in our membership cards and take our places with the dumb, unthinking beasts, for progress of civilization can only come with optimism born of hope for better things.

You have probably heard it said that the frontiers have all been conquered; that there is no longer room for the pioneering spirit; that opportunities have lessened in scope since your grandfathers were young. Don't you believe it. Your ancestors and mine had only to conquer natural obstacles. No one will deny that that takes courage, nor will anyone deny them the fame they justly deserve. At the present time, even though the frontiers have no longer a geographic location, the challenge is all the more exciting. These new wastelands that must be conquered so that they will be productive are the wastlands of men's and women's minds. The cudgels must be taken up in the fight against intolerance, against bigotry, against those who would pervert our democracy to their own selfish ends. Although men have been exploring the fringe areas of these frontiers for hundreds of years, they are far from conquered. Here is where you can do much. Examine your own thoughts and attitudes. Keep those that you now have that are fine and noble. Keep those which you know are right for you and for others as well. This is a matter between you and your conscience—and I will not attempt to tell you what should be weeded out. This I will say. Examine all things in the clear light of reason, knowledge and morality. Don't be swept into following emotionally each new ism or belief that people will try to force on you. Think for yourselves.

Once you have determined the values that are worth fighting for, stick with them unswervingly, just as long as they represent truth. This does not mean that you should close your ears to arguments that present the other side, for without knowing the opposition's claims, you can never be sure that you are right * * * and not just being stubborn. You probably will not grow rich by following such a course; you very possibly will not be popular with everyone; you undoubtedly will be very heartily disliked by some. Taking the long-term view, these things simply do not matter. The reward of a clear conscience is beyond price. Just remember this: when your conscience starts bothering you because of the beliefs that you hold, then it is time to start reexamining—for we are only human beings, and, as such, are not infallible. It is keeping this in mind that will make us tolerant of those who hold opinions that differ from ours. Only if we ourselves are understanding can we expect to guide others toward this virtue.

The paths that lead to the attainment of the better qualities of man are not easy. They are not for those who believe that the world owes them a living merely because they didn't ask to be born into it. They are not for those who become discouraged when presented with failure. They are, however, for the group that has ever become the leaders; those who have determination, who have the courage to see things through to the end, and those who have become mature through the exercise of self-discipline.

Discipline, perhaps one of the most important learned qualities, has more to do with the molding of our character than any other factor. It can be said that more thoughtless, unethical, and criminal acts are committed because of lack of discipline than through lack of any other single quality. Discipline is not the imposition of one's will on another just because he or she can get away with it. Rather, it develops one so that he can take his proper place among his fellowmen. I know that many of you have balked at some of the disciplines imposed on you during your school career. I know this because we all have done so. This is a natural reaction among men whose animal instincts encourage freedom of action. It has resulted, at time, from a misinterpretation of the word "democracy." We must recognize, though, that even in a

democracy, all must give up something of their natural inclinations in order to give the whole of society a deeper feeling of security. When we are young and inexperienced, discipline must of necessity be imposed upon us, but as soon as we learn to have mastery of ourselves, it becomes self-discipline. At that point, an imposed discipline is no longer necessary. This is what we all hope and feel you have received at Bay Ridge High School.

I have no fears about your knowledge of the subject matter that has been presented to you. It is to the credit of faculty members everywhere, who have been working under the handicaps of crowded classrooms that include a wider range of intelligence levels than at any time in the past, who in many areas have been working under the added handicap of inadequate pay schedules—it is to their credit that high school students graduating today have a much wider background in world affairs, and place higher on achievement tests than the same groups who graduated a generation ago.

I mentioned earlier three of the qualities that you yourselves will have to develop now that you are going into the world as adults: experience, self-discipline, and a sense of dedication. Experience you will gain as you join the ranks of working men and women, the armed services, or the institutions of higher learning. Self-discipline should be the natural result of the restrictions that have been imposed on you through your school career. What of dedication? Does this mean that you must choose one phase of life that you think needs changing, and fight forevermore to see that it is changed? Not at all. A sense of dedication can be merely a belief in something bigger than yourself, something to which you are willing to devote time and effort without thought of monetary gains. It can be in the field of religion, or in opposing communism and ideas which you believe to be evil, or it can be in striving to raise the conditions of your fellow man all over the world. It can be found in your parents who raised you with love, although at times you were anything but lovable; it can be found in your teachers who taught you in spite of your occasional unwillingness to learn; and it can be found, in its early stages, in each one of you tonight who harbors the hope for a better world to come.

When you receive your diplomas tonight, your quest for knowledge has not ended. This is your commencement. Your search is just beginning. Keep looking for truth until, when you're sure in your own mind that you have it, you can look anyone in the eye and say, "On these principles will I stake my life." And though I fervently pray that no one here will be called upon to sacrifice his or her life, it is better to die nobly free than live a slave to the whims of dictators or tyrants.

God bless you all, and may you and He working together bring this world to its rightful heritage of peace and prosperity.

PROGRAM

Music: Bay Ridge High School Orchestra, Miss Marie G. Petrullo, director.

Processional: America—Our Heritage, Steele.

Salute to the flag: Led by Theresa A. DePompa, president of grade; Marion Masefield, president of GO; Barbara A. Olesak, grade service leader.

Invocation. Rev. Cyril Mouland, pastor, Christian Soldiers Church.

The Lord's Prayer, Malotte: Senior chorus.

Greetings from the principal: Miss Elizabeth T. Fitzpatrick.

Hymn of Praise, Mozart: Senior class, Miss Lilian Chianta, director.

Salutatorian: Marion Masefield.

Young and Foolish (Plain and Fancy), Hague-Horwitt: Senior class, Miss Marie Petrullo, director.

Address to the graduates: Hon. JOHN J. ROONEY, Member of the House of Representatives, 14th Congressional District.

Valedictorian: Katherine Sgouros.

It's a Grand Night for Singing (State Fair), Rodgers and Hammerstein: Vocal solo, Harriet Rosenblum; accompanist, Dorothy Pellechia.

Presentation of honors and awards: Miss Rose R. Restaino, administrative assistant; Mr. Charles E. O'Neill, administrative assistant.

Parent-Teachers Association, Mr. William Kostecki, president: Scholarship awarded to Rita Hagman.

Class of June 1956, Bay Ridge High School: Mrs. Ethel N. Sarafian, dean of senior class.

Conferring of diplomas: Miss Elizabeth T. Fitzpatrick, Hon. John J. Rooney.

Presentation of Arista Keys: Mary A. Uravic.

Presentation of class gift: Theresa A. DePompa.

Valedictorian of Bay Ridge Evening High School: William H. Truax.

Presentation of honors and awards: Mr. William P. Mannix, dean of senior class, evening session.

Class of June 1956, Bay Ridge Evening High School: Mr. Leopold J. DeMaio, teacher in charge of evening session.

Conferring of diplomas: Miss Elizabeth T. Fitzpatrick.

Recessional—School Song: Morris.

GRADUATING CLASS OF JUNE 1956

Rae Acquiviva, Joan D. Adeeb, Carmela Aiello, Carol Aievoli, Phyllis Alamia, Isolina Alicea, Carole Alioto, Rosemarie T. Allegretta, Eleanor C. Aloi, Annarose M. Alvaro, Marie T. Amante, Louise Amendola, Doris Andersen, Elizabeth Andersen, Esther Andersen, Anita Andresen, Anne Angelo, Frances Antino, Christine Apreda, Nina Arcuri, Molly Arizzo, Carmen Arrieta, Benedetta Arrigo, Rosemarie Ascrizzi, Mary Auletta, Marie Auteri, Arleen Avena, Barbara Babich, Lorraine Baloy, Laura Bandiera, Mary Ann Barletta, Anna Barone, Marilyn Barra, Jennie Barraco, Mary E. Barry, Frances Basile, Anna Bassolino, Dolores Batanjany, Phyllis Battiloro, Dorothy Battista, Gloria Bayard, Patricia Becker, Joan Beinert, Lucretia Beltrone, Rosanne Bencivenga, Alba Beneforte, Shirley Bensen, Mary Ann Bentivegna, Catherine Bergersen, Gladys Bernius, Greta Berntson, Linnea Berntson, Christina Beshara, Penelope Biriidis, Geraldine Bitetto, Michelina Biunno, Virginia Biwer, Lucy Bianco, Rosalie Biasko, Rena Bloom, Louise Bocchicchio, Irene Bogdan, Frances Bonilla, Phyllis Botte, Ramona Bowen, Beryl Boyle, Carol Bredal, Anna Brett, Caroline Brockway, Nancy Brunner, Rosemarie Bruzzese, Elizabeth Buononato, Veronica Burulcich, Angela Burzi, Norma M. Byrne.

Annamae Cacace, Alice Caccavo, Florence L. Cafaro, Johanna Calacanis, Joyce Calderone, Helen Calla, Rose Marie Calvanico, Diane H. Campbell, Theresa Capalbo, Helen Cappadona, Irene Caputo, Joan K. Carey, Nancy Carlsen, Edith Carlson, Janet Carlson, Joan Carroll, Agnes Carrozza, Frances Carta, Patricia Caruso, Madeline Casanova, Marlene Cascio, Rosemarie Casciola, Antoinette Cassata, Sophie Castagna, Cynthia Castellano, Angelina Castelli, Josephine Castore, Dolores Cataffo, Caroline Cavalli, Elizabeth L. Cavallo, Phyllis Celifarco, Josephine Cervasio, Rae Cervino, Caroline Cherdron, Rachel Chierchio, Janet Christensen, Helen Christopher, Louise Ciccone, Gloria Ciminieri, Barbara Cioffi, Josephine Cioffi, Gertrude Clark, Joan Clauberg, Geraldine Colabella, Helen Connolly, Barbara Conte, Mary Conti, Barbara A. Corbett, Mary Ann Corliss, Anna R. Cotolo, Catherine Coughlan, Gertrude Crane, Geraldine Crecco, Catherine Crisera, Camille Cristiano, Georgia N. Cuomo, Jeannette Cuomo, Ann Curry, Kathleen Cusack, Dorothy E. Cushing.

Mary D'Agostino, Helen Dalessio, Rosalie D'Ambra, Joan D'Amico, Marlene D'Andrea, Marilyn J. Dangelo, Carole D'Antonio, Angela D'Antuono, Rosemary Davis, Jeanette DeCarlo, Grace DeCaro, Joan DeCaro, Wanda DeJesus, Rita Del Gatto, Rosalie Dello Russo, Dolores Delmonico, Rose Delosa, Norma Del Rosso, Alice del Valle, Catherine DeMarco, Katherine DeMarco, Rosanne DeMichele, Louise DeOliveira, Theresa DePompa, Martha DeSantis, Joan C. Dethlefs, Loretta Devino, Marilyn DeVita, Theresa Diano, Frances DiBitetto, Gloria DiDonato, Jennie DeGiacomo, Clara Dilorenzo, Pauline DeMartino, Rita DiMauro, Frances Diomede, Valerie R. Dorman, Lillian Driller, Dorothy Dudeck, Patricia Dunne, Mona Ecks, Rose Elia, Margo Ellis, Arlita Ericksen, Helen Ericksen, Marie Etrasco, Marietta Facchino, Barbara Fager, Evelyn Fannin, Florence Fauci, Rita Ferraiulo, Concetta Ferrante, Joy Ferranto, Louise Ferraro, Rasalie Ferraro, Rose Fioriello, Patricia Louise Fioto, Barbara Fischer, Marion Forte, Emily Fortunato, Fina Frangella, Joan Frasca, Frances J. Freddoso, Shiela Freund, Eleanor Frias, Nina Friscia, Margherita Fusco.

Barbara Gabrielsen, Antoinette Gagliardi, Marilyn Gagliardo, Aldona Galas, Josephine Galdieri, Mary Jane Gambale, Joan Ganim, Blanche M. Garcia, Elizabeth Garcia, Lucretia Gatto, Concetta Genovese, Margaret Gentile, Rose Gentile, Barbara Gerrity, Roberta P. Giacalone, Lillian Giacone, Rosalie Giammanco, Phyllis Gigante, Barbara Sue Ginn, Patricia Giordano, Joan Giovannone, Patricia Giuliano, Loretta Gobeil, Mary Jane Goebel, Constance Gold, Anna Gonzalez, Olympia Gonzalez, Rita Governale, Hilda Graff, Pauline Graffeo, Rosalie Graziano, Carmela Griffo, Lucile Guarnaccio, Ann Guggino, Angela M. Guido, Mary Guinan, Rita Hagman, Diane Hansen, Barbara A. Hanson, Jeanette Hanson, Carol Harrington, Linda Hartford, Dorothy Hayes, May Helen Hedland, Ruth B. Hernandez, Juliana Hild, Elaine Hoffman, Evelyn Holt, Ann Hom, Linda Fay Hom, Signy Hoyvik, Joan Hunter, Marie Iacobelli, Antoinette Iacovano, Bridget D. Imperato, Rosemarie Inganamorte, Alice Isaksen, Irene C. Ischia, Rose Marie Janicke, Barbara Jerembinsky, Edith Jensen, Katherine Johannesen, Elaine John, Antoinette Kanakry, Linda Karpa, Joan Kasold, Noreen Kearns, Margaret Kelly, Mary Kenny, Elizabeth Kerr, Margaret Kolz, Barbara Kostecki, Corinne Koster, Mary Kriskiewicz, Barbara Krooss, Gladys Kvinge.

Julia Quagliano, Dorothy Quina, Frances Quinn, Gladys Quintana, Dorothy Radolinski, Patricia T. Raffaele, Juanita Ramos, Judith Ann Randazzo, Catherine Raucci, Caroline Reese, Jean Reffelt, Eileen Regan, Sallie A. Rhyne, Dolores J. Ribertelli, Carol Ricci, Dulcie A. Ridd, Aida Rivera, Carmen A. Rivera, Maddalen Rivera, Norma Rivera, Matilda Robusto, Rose Rojnikoff, Eva Romagnano, Rose Marie Romano, Sylvia Rosanelli, Rita Rosen, Harriett Rosenblum, Norma Rubinich, Rosalie Rubino, Irene Russo, Carole Rutkowski, Lillian M. Ryan, Patricia Ryan, Catherine Sabo, Angela Sacco, Irene Saier, Lynn Sandstrom, Valerie Sandstrom, Rachel San Flice, Reina Santiago, Josephine T. Santore, Josephine E. Santoro, Roseann Santulli, Diana Santus, Pauline Saraceno, Josephine Sarnicola, Lucy Savastano, Carole Savettiere, Angela Scalogna, Phyllis A. Schaudel, Ann Schifferdecker, Rosemary Schulz, Rose Sciusco, Theresa Scognamillo, Annette Scotto, Isidora Scotto, Joan Scotto, Barbara Seigle, Laura L. Senatore, Eleanor Sgarlato, Katherine Sgouros, Mary Shannon, Rosanne Silvestri, Helen Simonsen, Marie Siriletti, Helen Skiba, Ronda Skoblow, Barbara Small, Joan Smigel, Marion F. Snyder, Christine Somma, Mary Anne Sorrentino, Carmela Spada, Iva Spallino, Anita Spatola, Florence Spinelli, Virginia Spinello, Dorothy E. Stafford, Arlene Steinbuch, Jean Stene, Patricia Stevens, Dolores Stigle, Viola Stucchio, Marie Sturiale, Joan Sylvester.

Anne Talluto, Barbara Tamer, Marian Terranova, Violet Terzano, Iris Tessitore, Mildred Testa, Lorrain Thorgersen, Emily I. Thorson, Jennie Todisco, Elaine Tomasetti, Carmen Torres, Rosann Trumbull, Frances Tufano, Barbara Tuffy, Joan Twigg, Mary Uravic, Ann Valente, Yvonne Van Oppre, Marie Vele, Marie Vetere, Anita Vina, Grace Vindigni, Josephine Visconti, Yolanda Vitale, Renate Volkhardt, Sonia Marie Wahl, Dorothy C. Ward, Faith Warrington, Margaret Watson, Ellen Weidmyer, Elfriede E. Weinreich, Joan Weller, Sarah Ann Wilson, Mary Jane Wink, Janet Wojcison, Carol Ann Woodman, Irene Woods, Marilyn Yarzab, Josephine Yodice, Joan Zablocki, Josephine Zach, Anna Zapulla, Rosina Zavaglia, Mary Zervoudakes, Marie Zosimo.

Evening session: William J. Anderson, Barbara A. Belmont, William H. Blake, Donald J. Byrnes, Carlo Campagnuolo, Arlene T. Caravella, Josephine B. Corso, John C. Cunningham, Richard M. Carrique, Chris Demetriades, Joanne Garry, David J. Gilmartin, John R. Ginty, Arne H. Hansen, Helen A. Iwaniuk, Helen Kenan, Kennedy A. Kilroy, Richard D. Lalor, Marion C. Lawrence, Norah M. Lonne, Margaret M. McDonnell, Idalia Merced, William J. Morton, Salvatore A. Petrolino, Patsy D. Rizzo, Racel Roman, William H. Truax, Herbert L. White.

Highest scholastic honors: English, Norah M. Lonne; mathematics, Christos Demetriades; social studies, Richard M. Carrique.

Awards: Elizabeth T. Fitzpatrick award, William H. Truax; Theodore Roosevelt medal, Joanne Garry; Bausch & Lomb award in science, Christos Demetriades.

Highest scholastic honors: Accounting, Katherine Sgouros; art, Barbara A. Kostecki; biology, Rita Ferraiulo; chemistry, Sallie A. Rhyne; economics, Louise R. DeOliveira; english, Louise R. DeOliveira; French, Rita Hagman; health education, Katherine Johannesen; history, Rita Ferraiulo; home economics, foods, Ellen Weidmyer; home economics, clothing, Caroline Cherdron; Italian, Alba Beneforti; Latin, Sylvia Rosanelli; mathematics, Louise Magnussen; music, vocal, Harriet Rosenblum; music, instrumental, Ann Marie Mancini; Norwegian, Margaret Larsen; physics, Victoria Pappas; secretarial studies, Alice Malinowski; Spanish, Katherine Sgouros; stenography, Angela Mastrianni.

SCHOLARSHIPS

Admission to Cooper Union for the Advancement of Art and Science: Mona H. Ecks.

Eastern School for Physicians' Aides, Inc.: Jean H. Pekara.

Fashion Institute of Technology scholarships: Irene A. Bogdan, Helen D. Connolly, Mona H. Ecks, Iris C. Tessitore.

Generoso Pope memorial scholarship: Theresa A. DePompa.

Grand Street Boys' Foundation scholarship: Ingrid M. Lindfors.

New York State regents college scholarships: Mona H. Ecks, Rita L. Ferraiuolo, Anna Stavrand (January class).

New York State regents science scholarship: Ingrid M. Lindfors.

New York regents scholarships for nursing education: Linda Hartford, Joan Hunter, Nora J. LaCorte, Dorothy C. Ward.

School Art League scholarships: Mona H. Ecks, Carmela F. Lembo.

AWARDS

Alexander Medal for Merit in Art: Carmela F. Lembo.

Youth's Friends Association medal for outstanding contributions in art: Mona Ecks.

Belding memorial award for excellence in accounting: Katherine Sgouros.

Belding memorial award for excellence in secretarial studies: Katherine Sgouros.

St. Gaudens medal for fine draughtsmanship: Marilyn Barra.

New York Classical Club medal for excellence in Latin, Victoria Pappas.

Alliance Francaise membership award for interest in French culture: Rose Rojnikoff.

American Association of Teachers of French, Spiers memorial medal for excellence in French: Marie Iacobelli.

Pan American medal for creative work in Spanish: Barbara Mullio.

Italian Teachers' Association medal for excellence in Italian: Marion Niceforo.

American Association of Teachers of Spanish medal for excellence in Spanish: Angela D'Antuono.

Steuben Society of America—Gen. Theodore Schwann, Unit No. 316, award for interest shown in American history: Ingrid M. Lindfors.

Louise Wingate Underhill memorial certificate: Rosemarie B. Mokarry.

Public School Athletic League medals: Patricia Louise Fioto, Mary Jane Goebel, Diane Hansen, Louise Majka.

Bausch & Lomb medal for exceptional progress in science: Victoria Pappas.

Cooperation in Government medal award: Theresa A. DePompa.

Cooperation in Government diplomas: Christine Apreda, Marilyn Barra, Alba N. Beneforti, Louise R. DeOliveira, Rita Hagman, Barbara Kostecki, Carmela F. Lembo, Eleanor J. Leschier, Ingrd M. Lindfors, Marion Masefield, Barbara A. Oleksak, Sallie A. Rhyne, Mary A. Uravic.

Medals awarded by the mayor's committee on scholastic achievement: Theresa A. DePompa, Ingrid M. Lindfors, Rita Hagman, Marion Masefield, Mary A. Uravic, Dorothy C. Ward.

Perfect attendance pins: Carmela Aiello, Phyllis Alamia, Marie Auteri, Marilyn Barra, Mary E. Barry, Greta Berntson, Michelina Biunno, Elizabeth Buononato, Joan Carey, Edith Carlson, Madeline Casanova, Elizabeth Cavallo, Angela D'Antuono, Louise DeOliveira, Theresa DePompa, Rita Hagman, Ann Hom, Marie Iacobelli, Antoinette Iacovano, Barbara Jarembinsky, Barbara Kostecki, Louise Majka, Adele V. Manni, Anna Moa, Carolyn O'Keefe, Barbara A. Oleksak, Mary O'Mahoney, Vivian Palmeri, Victoria Pappas, Angela Pasqualicchio, Marie Patti, Carmen Perez, Sylvia Rosanelli, Carole Rutkowski, Irene Saier, Joan Smigel, Christine Somma, Dorothy Stafford, Joan Twigg, Mary Uravic, Margaret Watson, Ellen Weidmyer, Mary Jane Wink, Janet Wojcison.

Publications awards: Senior book editor in chief, Louise R. DeOliveira; senior publication art editor, Eleanor J. Leschief; assistant editor, Elizabeth Pearce; Literary art publication, Marilyn Barra, Carmela F. Lembo.

Ridge Echo: Coeditors, Barbara Kostecki, Barbara A. Oleksak.

Gold medal for highest average for 4 years, Katherine Sgouros.

The AMA and FDA: A Story of Cooperation

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 27, 1956

Mr. HILL. Mr. President, this morning I attended a historic national meeting to commemorate the 50th anniversary of basic national pure food, drug, cosmetic, and meat inspection laws in the United States. Dr. Dwight H. Murray addressed the meeting, and his address was most interesting and most enlightening. I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMA AND FDA: A STORY OF COOPERATION

(By Dwight H. Murray)

The American Medical Association is proud to have had a hand in the great progress made for wholesome and pure foods, drugs, and cosmetics in this Nation.

It is proud to have cooperated with the backers of the 1906 Food and Drug Act and the Meat Inspection Act. It is proud to have worked with the supporters of the 1938 Federal Food, Drug, and Cosmetic Act which strengthened the 1906 law. It is proud to

have had a close working arrangement with the FDA these past 50 years, and it certainly hopes to continue this association.

Because the medical profession has the responsibility of seeking the best medical care for every man, woman, and child in the United States, and because the FDA has the responsibility of protecting every man, woman, and child from impure, injurious, adulterated, or misbranded foods, drugs, and cosmetics, the two should, and must, cooperate.

A review of AMA history shows that doctors were interested in, and fought for, Federal laws governing the production and marketing of foods and drugs long before 1906.

As many as 25 years before the signing of the 1906 Pure Food and Drug Act, Dr. F. E. Stewart urged the AMA to recommend the establishment of a national bureau of medicines and foods. And in 1892 the AMA made its first proposals for food and drug legislation to prevent adulteration.

The AMA Journal in that same year also recommended the establishment of a Department of Health and the placement of a Food and Drug Administration under it. As you know, this is now the existing setup, with the FDA under the Department of Health, Education, and Welfare.

The agitation for the establishment of a national department of health continued within the AMA, and in 1893 AMA president, Dr. Hunter McGuire, concluded his address in Milwaukee by urging again a national setup.

Just after the turn of the century a California physician, Dr. Ellis, proposed that a national organization be formed with representatives of the AMA and the American Pharmaceutical Association examining and analyzing new remedies and making certain that labels were truthful and claims warranted.

A committee was formed and reported at the next annual meeting of the AMA. Although the establishment of a national bureau failed after extended discussion in the AMA's house of delegates, the effects of the pressure—brought about by the discussion—were sufficient to cause the AMA's board of trustees to take action later which resulted in the establishment of the AMA's own council on pharmacy and chemistry.

In February of 1905, 1 year before the signing of the Pure Food and Drug Act, the council on pharmacy and chemistry of the AMA held its first meeting. Dr. Harvey Wiley, the individual primarily responsible for the enactment of the Pure Food and Drug Act, was a charter member. He was a doctor of medicine as well as a chemist.

In the spring of 1905 Secretary of Agriculture James Wilson told the AMA that he had established a laboratory in his Department's Bureau of Chemistry for the investigation of adulteration of drugs and medicines. He went on to say:

"It seems to me that the collaboration with the great body of American physicians who form the AMA affords a splendid opportunity to carry out the work which Congress intended to be done.

"It gives me pleasure, therefore, to inform you that I have authorized the Chief of the Bureau of Chemistry to cooperate with the council on pharmacy and chemistry of the AMA."

So began the close cooperation between the American Medical Association and the FDA. That cooperation has continued through the last 50 years. It continues today.

The bureau of investigation of the AMA also has worked in harmony with the FDA for half a century. Also set up in 1906, the bureau was among the first organized groups in this country to investigate quackery. And for 50 years now its primary object has been the collection and dissemination of information on nostrums, quacks, medical fads, and various other phases of pseudomedicine.

Long before the Pure Food and Drug Act was changed requiring that labels must list the active ingredients and also carry warnings against misuse, the AMA bureau of investigation was exposing the nostrums, or phony cure-alls.

The bureau continues to provide information on over-the-counter medicines and such related matters as devices, food faddists, cultists, and quacks.

A third scientific AMA group cooperating with the FDA is the council on foods and nutrition organized in 1929 to evaluate nutritional claims of food processors and to discourage unwarranted, incorrect, and false promotional claims.

As FDA activities increased after the 1938 law, the AMA council on foods and nutrition swung into a more positive phrase—encouraging good practices in food advertising and labeling and improving the nutritional aspects of food.

The AMA council on medical physics is concerned with the evaluation of medical devices and the publication of authoritative reports on the established uses and limitations of such machines and equipment.

Finally, a fifth and relatively new AMA group, the committee on cosmetics, established in 1948, promotes a better understanding of the usefulness, limitations, and health problems of cosmetic preparations.

So today the AMA has five groups—the council on pharmacy and chemistry, the bureau of investigation, the council on foods and nutrition, the council on medical physics, and the committee on cosmetics—working for the profession and the public to supplement the activities of the FDA in the vital matters of foods, drugs, cosmetics, and medical devices.

In addition to these functions of the AMA, I am happy to say that the AMA has been among the first ones to advocate and support needed changes in food and drug legislation.

For example, in 1933—5 years before the new Federal Food, Drug, and Cosmetics Act became law—the board of trustees of the AMA adopted a resolution again protesting against the inadequacy of the National Food and Drugs Act of 1906, and stated:

"That the AMA pledges its support toward procuring the formulation and enactment of effective national food and drug legislation adequate for the protection of the people."

After this resolution the AMA worked diligently with those sponsoring the new Federal Food, Drug, and Cosmetic Act to obtain the bill as written, adopted, and signed.

And so the medical profession is happy to be counted among the many groups in the Nation helping the FDA to protect the Nation's health by safeguarding food and drug supplies.

As responsible doctor-citizens, we are happy to cooperate with the FDA, with the thousands of commercial establishments distributing products and with other citizen groups in keeping the standards of America's foods, medicines, and cosmetics as high as possible—today, tomorrow, and always.

Missile Progress Exceeds Estimate

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the San Diego Evening Tribune of June 22, 1956:

SPEED ON ATLAS JOB GAINING, SAYS "CZAR"—MISSILE PROGRESS EXCEEDS ESTIMATE

(By Frank Macomber)

WASHINGTON.—The Government's missile chief said today Convair's Atlas program in San Diego is moving "considerably faster" than predicted in previous estimates.

Eger V. Murphree, special assistant for missiles to Defense Secretary Charles E. Wilson, chose his words carefully in an interview with the Evening Tribune's Washington Bureau.

He did not refer to any particular previous estimate of the Atlas timetable.

The Atlas is an intercontinental ballistic missile sometimes described as "the ultimate weapon"—a giant rocket which is capable of spanning oceans in 30 minutes and which is virtually unstoppable by present air defenses.

PROCEEDS RAPIDLY

Murphree did not refer specifically to the previous estimate of Air Secretary Donald Quarles, who told Congress in February, and reaffirmed the statement in April, that the piloted bomber would continue to be the preferred means of bomb delivery for at least 5 years.

This left the inference that the intercontinental ballistic missile might become the preferred means after that time.

Murphree said the Atlas "development program is proceeding rapidly and substantial progress is being made."

FIRE OFF FLORIDA

He added:

"I would be disappointed if we really haven't gotten very far along in the development in less than a 5-year period."

Murphree said security would prevent him from disclosing how soon Convair would put to use its launching equipment for the first Atlas test firing off the coast of Florida.

Murphree, often nicknamed "Mister Missile" of the Defense Department, answered a series of questions submitted by the Washington bureau.

Participating in the half-hour questioning was Rear Adm. John H. Sides, USN, a missile expert and Murphree's assistant.

Convair and the Air Force are to build a $40 million plant on a Montgomery airport site at San Diego for production of the Atlas. The plant is to open late next year.

The missile czar was asked if the big Atlas test stand at Convair will be moved to the plant when it is completed.

Admiral Sides expressed doubt the towering stand, now a sort of landmark for motorists and pedestrians on Pacific Highway, would be shifted to Montgomery Field. He pointed out the new plant would have its own test facilities and that such a move likely would be very costly.

Murphree was asked if work is progressing on launching equipment for the Atlas at the Air Force's Cape Canaveral, Fla., missile test range which extends 5,000 miles into the South Atlantic.

"Facilities to test fire the Atlas either are in being or will be in time to meet test needs," he replied.

The Air Force already has awarded a series of contracts to erect Atlas test firing facilities at Cape Canaveral, near Patrick Air Force Base. Some have been published in the Commerce Department's synopsis of Government contract awards.

Murphree said some missile test firing equipment already is operational at Cape Canaveral, but he was not speaking of Atlas facilities.

Asked if he believes sufficient funds have been appropriated to push the Atlas program at the greatest possible speed, Murphree replied:

"I have questioned every contractor on the project to see if any are limited by lack

of funds. All said no. I am convinced money in no sense is limiting progress on the project."

Congressional critics of the missile program have charged a lack of funds is hampering the program.

Questioned about the Navy's Convair-built surface-to-air missile, the Terrier, Murphee said "an improved" version of the weapon is on the way but he would not say when it would become operational with the fleet.

EVALUATE MISSILES

The earlier Terrier already is operating in the fleet and has been fired at public demonstrations to show how its electronic guidance system or "brain" will seek out a maneuvering aerial target and destroy it. The Terrier is produced at Convair's Pomona plant.

Murphree observed in connection with the improved Terrier that "all our missiles constantly are being improved."

Asked if he subscribed to congressional demands for a "duel" or competitive "shoot" between the Army's antiaircraft missile Nike and the Air Force's Navy-developed missile Talos, Murphree had this to say:

AVOID FIRE

"Studies are going forward to evaluate the Nike and Talos missiles. Certainly any additional test data required will be obtained."

Mut Murphree indicated the suggestion of a "shoot" between competing missiles was oversimplifying the problem.

The Nike which must be compared to the Talos, the missile chief emphasized, is an improved and more efficient version of the earlier antiaircraft weapon being used to protect many American cities against the threat of any enemy attack.

The Navy's air-to-surface or subsurface missile, the Petrel, is operational now, Murphree said and the Air Force's version of the same type of weapon, the Rascal soon will be ready, he added.

These missiles delivered on sea or land targets, have ranges sufficient to allow bombers to fire them from a position many miles short of the immediate target area, thus allowing the bombers to avoid enemy antiaircraft fire in the target vicinity, Murphree pointed out.

Three More Seats at the Table

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. BLATNIK. Mr. Speaker, under leave to extend remarks, I would like to insert an article by Capt. Stephen E. Jones, United States Naval Reserve, entitled "Three More Seats at the Table." In this article Captain Jones, who is a graduate of the University of Michigan and the University of Michigan Law School, and who currently is Assistant Director of Naval Intelligence (Security) in the Office of the Chief of Naval Operations, discusses the very serious problem of the recent decline in service reenlistment. The situation with respect to the number of high grade men leaving the Armed Forces for civilian pursuits after many thousands of dollars and a great deal of time has been spent in their training is rapidly becoming critical. The problem and its solution deserves the immediate attention of all concerned with the strength and well-being of this Nation.

The article follows:

THREE MORE SEATS AT THE TABLE

(By Capt. Stephen E. Jones, U. S. Naval Reserve)

In reporting on the then prospective military pay raise, the editors of U. S. News & World Report noted that Navy reenlistments had fallen off from 46 percent to 8.1 percent. In so doing they echoed the concern expressed by Secretary of the Navy Charles Thomas in an address to the Navy League at Detroit, in which he had produced the shocking figures that even among career people the reenlistment figure had dropped in 1 year from 90 percent to 48 percent. In the most optimistic terminology of the marketplace, this might be classified as an unhealthy recession. As to noncareer people, there is no concealing the "crash": here less than 3 percent are signing up for another tour.

"That is really too bad." I can hear you saying—"If they don't want to reenlist in this most exclusive of services, then let's get some others who do."

That, too, is quite a problem, and as Secretary Thomas pointed out, on a monthly 1954 input requirement of 12,500, the Navy recruiters fell short by 1,700 in September, and by 4,000 in October of that year.

The really critical part of this situation is the cost of training replacements. When we say, in effect, "O. K., son, if you don't like the way we play, pick up your battleship and go on home." That's a fine independent spirit—but it costs money—and time.

We can't very well order Reserves to active duty in peacetime, and space limitations afloat create versatility requirements of a standard seldom found except among volunteers or enlistees. What then are we to do?

It seems that every effort is being made on the material side to make more attractive the lot of service personnel. Some of the so-called fringe benefits are being retained against opposition—or are even being recaptured.

Certainly the new military pay raise is a nice fresh carrot to have dangling around.

But man does not live by carrots alone. Nor does a sailor respond to such a lure by itself, even given the benefit of however many pretty trimmings about the fringes. This all helps. But, as the Secretary pointed out, something of the spirit must be added. There has to be the ingredient of individual motivation of service to the country, and there has to be recognition by the public.

Mr. Thomas, in his address at Detroit, put it in the form of a challenge to the Navy League members all over the country—that they strive to create an atmosphere of renewed public pride in peacetime military service. He suggested that, if there were more appreciation and esteem by the American public for military service, more of our young people would understand our country's need of their services and would choose it as a cereer. In such a light, the Secretary feels, the virtues of service and devotion to country may be seen in clearer definition, and may be expected to result in enabling us to keep—and to keep up—a first-class Navy.

Anyone who has at heart the interests of the Navy can voice an unqualified "Amen" to these sentiments. But now comes the cold clear light of the next day and, with it, the practical problem of translating these aspirations into eager, alert, trained, responsive, live young American bodies who are willing and proud members of the Naval Establishment.

To speak of individual motivation for, and public recognition of, the service is to talk of the two sides of the coin. Indeed, the first follows the second. If something is highly thought of, people want to belong to it. If the services in general and the Navy in particular enjoy their proper place in popular esteem, the size and shape of the carrot, while interesting, won't be controlling. How can this popular esteem be created or induced?

I come now to the delicate part of this little treatise, and I had better be careful what I say and how I say it. The line at this point becomes very fine between helpful suggestions, which I intend, and implied criticism, which I do not.

It seems to me that the answer, in reality and inescapably, is tied up with the word "prestige"—the prestige of the Armed Forces—the prestige of the Navy. From the figures referred to above and cited by the Secretary of the Navy, no Gallup poll is required to point up the conclusion that this is at or near an all-time low.

For the Navy League—or for any of us for that matter—to say to the body politic, "Tarry a moment, think ye well of the Navy" is essentially a bootstrap operation. The impetus must come from outside and higher up. If a bank is wobbly, the tide may be turned and a disastrous run averted by nothing more complicated than some courageous citizen coming up publicly with a big cash deposit. By this one act of faith, confidence is restored. The idea that one well-known leaders thinks an institution is good—and sound—and important—and gives public demonstration of this conclusion, touches off a chain reaction of renewed faith. It is the sign for which the people scan the skies.

What I am about to suggest may not perform the miracle, but I believe it can. I believe it can because it will be a symbol of the reversal of a trend which has been nearly disastrous to the prestige of the Armed Forces. This trend—or movement—has been going on now for several years. It operates in the name of economy, elimination of duplication, and civilian control. It has resulted in subjugation of career military men to a new and expensive hierarchy of civilians, the dissipation of their energies and experience in endless and often needless, or wastefully duplicatory, conferences called to reach coordinated positions. It has resulted in the effective infiltration of the Armed Forces at all levels—and in the invasion of their planning chambers and innermost secret places by a great number of well-meaners with authority to make continuing demands for information, but with no responsibility for the time and effort wasted, nor for work left undone, that their queries may be answered within the usual deadlines. By this insistent and continuing cancerous process, the Armed Forces have been, in effect, infiltrated and their security jeopardized, a sense of futility engendered, and in the language of the Pennsylvania divorce statute, they have arrived at a posture in which "their condition has become intolerable and life a burden." Is it any wonder, then, that many of the Navy's finest have preferred quietly to bow out? And that those who remain are confronted with a growing crisis? Or that they lift up their eyes to the hills and look for a sign of hope or relief?

In this situation the suggestion is respectfully tendered that the first sign must come from the First Citizen. The first thing that is needed in the restoration of the prestige of the Armed Forces is three more seats at the table. The Armed Forces deserve to be represented personally—by their respective service secretaries—in the President's official family. To state the matter more bluntly—if our Commander in Chief—the President of the United States, does not believe that his people in the Army, Navy, and Air Force need—and rate—the prestige of having their respective secretaries at his right hand in his councils, why should the good people of the Navy League concern

themselves with the matter? or more broadly, why should the good people?

It does not do to say, "Oh—they are all represented by the Secretary of Defense." The secretary of Defense is in effect assistant president for defense. He is too far removed from the grassroots of the services for the purposes of which I speak. He represents rather a ponderous, impersonal, monolith—without tradition and without a soul—actual or potential. We need in addition, a personal, service representative at the President's table, one who can say, "Mr. President, I'm sorry, but I don't think my man-o-warsmen would go for this," or, "My people would certainly like that," or "Mr. President, my people and their dependents have to have enough doctors—and we've got to keep good doctors!"

The current status of the service secretaries is not one calculated to inspire prestige, service-wise. They fit in somewhere in the defense hierarchy along with some 10 or 30 deputy or assistant secretaries of defense.

There are no legal obstacles to the President's appointing to his official family whomsoever he will. In fact a new one—the Secretary of Peace—may soon be added. A consideration of the interests being served by this appointment is not within the scope of this paper. It provides a basis, however, for a fortiori reasoning. Many considerations support this proposed rerecognition of the Armed Forces. Budgetwise, each is responsible for the proper and efficient administration of a sum which far exceeds that subject to the control of other nondefense Departments or agencies of the Government combined. It is not intended to suggest that a large money bag—by itself—should qualify any department for Cabinet representation. The size of the fund, however, supplies some measure of the area of interest, or, more properly, the segment of the American public which has to do—in one way or another—with the department concerned. When the Secretary of the Navy once again sits and speaks at the President's Cabinet meetings, he will be representing the young lieutenant standing the mid watch on his destroyer in the faraway Pescadores, the wet-nosed seaman in boot school at Great Lakes, an antisubmarine lookout in the North Atlantic, or the marine sergeant on maneuvers in South Korea; in addition to those on active duty, he will also be representing the host of Reserve and retired naval officers and men throughout the country, the bookkeeper in the naval supply depot at Bayonne, the electronic engineer of Grumman Aircraft Co. at Bethpage—all of whom, and to varying degrees, love the Navy they have served so well over the years. It seems to me that these are all entitled to participate—through the Secretary of the Navy—with their Commander in Chief as he takes his council with the elders.

This is one of the few really fine things that can be accomplished at no expense to the taxpayer. From such a simple sign, people beyond counting will take heart. It will lead the way in reestablishing and revitalizing the interest and popular esteem in which the services are held throughout the land. And it can be accomplished with so little discomfort—just three more seats at the table.

Western Hospitality and Enthusiasm

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 27, 1956

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Bennett County Booster, Martin, S. Dak., the issue of June 14, 1956, entitled "Let's Invite Them Again." Here the editors, Mr. and Mrs. Wendell Long, reflect on how members of the United States Army Field Band marveled at the hospitality and enthusiastic treatment they received while recently playing a concert at Martin.

I believe the editorial does a good job of pointing up briskly that South Dakota hospitality is unequaled and also tells of the pleasure and enjoyment experienced by the more than 4,000 persons who heard the concert.

I should like to add my comments to those of the editors, that anyone who visits South Dakota, and more particularly Martin, S. Dak., can always be assured of an enthusiastic and warm western welcome. As has been stated, more than 4,000 persons attended the concert. This number is 4 times more than the population of Martin according to the 1950 census.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S INVITE THEM AGAIN

The tremendous "hit" made here by the United States Army Field band with more than 4,000 people that attended both concerts, gives the programs the unquestionable title of the best entertainment feature ever brought to Martin.

Although there were a few vacant seats still available at each performance, the directors and band members alike were a little astonished at the tremendous crowds that began filling the Legion Auditorium as much as 1½ hours before starting time of each program.

"Where do all these people come from," was one of the first questions asked by Maj. Chester E. Whiting, commanding officer and conductor, at the conclusion of the evening concert.

Detected in conversation with some of the Army's traveling salesmen earlier in the day were skepticisms about how many people would be available to hear the programs.

Before the day was over, however, band members and officers alike, were high in their praise of the wonderful reception the people of this community had given them and that when they next made a tour through the midwest States, Martin would most definitely be on the list for another scheduled appearance.

This, of course, cannot be expected for at least 2 years because the band's itinerary already is tentatively made out for more than a year in advance. Next summer at this time the musical group will be traveling in Europe.

Individual band members also were quick to point out that treatment of the band members when off stage was most enjoyable at Martin. They said they were not accustomed to the friendly, homey hospitality shown them here. Most of their engagements are played in larger cities, the soldiers said, where individual hospitality is apparently a forgotten attribute.

But the most important thing for everyone to remember who heard and enjoyed the concert here, is that the purpose of these concerts is to build good will for the Army. And the officers in charge of scheduling these tours feel that the purpose is served if the band is well received.

And if the band is well received, the chances are extremely good that more concerts will be scheduled.

A dozen editorials in this column saying how wonderful the band was and how much it was enjoyed by everyone would not be nearly as effective as a few letters spontaneously written from individuals who attended the concerts, expressing the same thoughts.

Red Capitals Retain Oppressive Atmosphere

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. JUDD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

RED CAPITALS RETAIN OPPRESSIVE ATMOSPHERE

(By Edgar Ansel Mowrer)

What is life really like under communism's New Look? Many foreigners are now being permitted to peep behind the Iron Curtain, some of them for the first time. The latter obviously have no standard of comparison.

In my view, the best brief descriptions I have read are those of an experienced businessman, Norris McWhirter, which I take the liberty of republishing with slight omissions:

"'Interesting but not enjoyable' would be my verdict on my recent business visit to Moscow and Prague. These two countries are the 30th and 31st I have visited so I have some grounds for making comparisons.

"Moscow—my first sight of Moscow, having arrived from the airport, was of three drunken men (vodka?) lurching past the hotel entrance holding one another up. The hotel seemed like a 1928 film set, and the wait for food in the restaurant seemed interminable by western standards. My first real shock was the extraordinary fact that Moscow has no current telephone directory, and that street maps are not merely unobtainable, but do not exist. Whether this crazy state of affairs is part of oriental mysticism or whether there is some deeper significance I was unable to divine.

"CONDUCTED TOURS

"For the western visitor with only a few words of the language, life consists of conducted tours of the five show places: (1) the university, (2) the wide streets, (3) the G. U. M. Stores, (4) the Metro, and (5) the outside of the Kremlin. The university is an impressive monstrosity with 40,000 rooms and compulsory lectures, and it is stuffed with Chinese and Indians. The streets are up to 120 meters wide, but without pedestrian refuges. Some basic statistics are not published, but then Muscovites do not know the population of their own city—it's secret.

"The GUM stores, claimed to be the biggest in the world, are very much smaller than Macy's in New York. At the farcical exchange rate of 11.20 roubles to the pound sterling, an orange costs 5 shillings, and a medium bar of rather ordinary chocolate 32 shillings. The Metro ,which does not serve the suburbs as does London's network, is lavishly tunneled but seems very stark, without advertisements. The center of attraction, of course, is the squat, ugly mausoleum in Red Square where Lenin and Stalin (irreverently known to the United States Embassy as the gruesome twosome) lie preserved.

"Russian claims that their airline Aeroflot is the largest in the world are comical, since the departure board at Moscow aerodrome showed only 42 departures in the day. This compares with a daily average of over 100 a day at London Airport and over 400 a day at Chicago's Midway Airport.

"ONE ACCIDENT

"Owing to the absence of deicing equipment, the Aeroflot planes fly very low. Some people less generously attribute this to the absence of navigational aids. In a rough-and-ready way these rather crude planes move all the mass of delegations and missions around the vast country, though there is a saying among English-speaking people, 'fly Aeroflot and you've had your lot.' By the simple expedient of admitting only one accident since the war, U. S. S. R. can point to its unrivaled safety record. The accident which was admitted was the wiping out of a Norwegian delegation, which could hardly be explained in any other way.

"Prague—what a contrast there is between Moscow and Prague. It is the switch from a brash oriental city to an ancient western capital. Prague is the capital of a country which is Communist by imposition. Correspondingly, one felt less oppressed, but far more depressed. There were abundant signs of the long arm of occupation—the screaming dullness of the bookshops full of shoddy Marx-Engels-Lenin-Stalin paperbacks, the tawdy slogans about the advance of socialism, a vast statue of Stalin which cost the man-hours for 40,000 flats, the men in raincoats who loiter outside the United States Embassy on a sunny day. Worse than the outward and visible is the inward and spiritual—the lack of gaiety and passports, and the fear.

"The situation in Czechoslovakia is intolerable, but how little the free countries understand it. Free elections would be useless, since the totalitarian Communists are so deeply embedded that they would still win in an election of fear. It would require a nonpolitical caretaker government of at least 18 months' duration before sufficient confidence could be restored to enable an unfettered expression of the peoples desires. Every month the present oppression lasts so will the transition period have to be lengthened."

Last Month It Was a Greek Ship—Will It Be an American Ship This Month?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 7, 1956

Mr. MULTER. Mr. Speaker, the following item from the June 1, 1956, edition of the Israel Digest sounds an ominous warning. As I have previously pointed out, Egypt and its Prime Minister, Mr. Nasser, have no respect for treaty obligations. The Suez Canal is supposed to be open to ships of all nations. The United Nations and our own country have sat idly by while Egypt has prohibited Israeli ships from moving through the canal. As pointed out in this item, in May 1956, Egypt prohibited passage to a Greek ship. Will American ships be barred next?

The item follows:

SUEZ CANAL BLOCKADE SCORED—GREEK SHIP DETAINED IN PORT SAID

UNITED NATIONS, N. Y.—The detention in Port Said of a Greek vessel, carrying a cargo of cement from Haifa to Elath, was protested in a letter submitted to the President of the Security Council by Mr. Mordecai R. Kildron, Deputy Permanent Representative of Israel to the United Nations, this week. The letter stressed the special gravity of the incident at a time when the Security Council has just reaffirmed, once again, the need for the reestablishment of full compliance with the General Armistice Agreement.

Following is the full text of the letter:

"I have the honor to request that the following information relating to the General Armistice Agreement between Egypt and Israel be brought to the notice of the members of the Security Council.

"The Greek vessel *Panngia* which arrived at Port Said from Haifa on May 25, 1956, with a cargo of cement for discharge at Elath, is still being held up at Port Said. It is unable to continue passage through the Suez Canal because Egyptian authorities have prevented and continue to prevent the local shipping agents from making the necessary arrangements for the continuation of the voyage. At the same time, these authorities refuse to allow the ship's master to leave the vessel and to make these arrangements ashore. It is evident that these obstructive measures are designed to harass the owners of the vessel and to cause them financial losses by inducing the master to discontinue the voyage and to return to Haifa, without, however, being able to claim that his ship was denied the right of passage through the Suez Canal.

"Similar delaying tactics have been exercised in several past instances by Egyptian authorities, as in the case of the Greek vessel *Konitsa* in February of this year; the Greek vessel *Parnon* in September 1953; and the Italian vessel *Francamari* in December 1953. Two of these incidents were the subject of communications to the Security Council (S/3093 and S/3153).

"The interference with the steamship *Panngia* constitutes a violation of article I, paragraph 2 of the General Armistice Agreement between Egypt and Israel. The action of the Egyptian authorities also constitutes a further flagrant breach by Egypt of other international obligations and in particular of the resolution of the Security Council of September 1, 1951 (S/2322).

"The Government of Israel, in registering its protest against the Egyptian action in respect of steamship *Panngia*, wishes to draw attention to the increase of tension to which such a policy must inevitably give rise. This appears to be of especial gravity at a time when the Security Council has just reaffirmed once again the need for the reestablishment of full compliance with the General Armistice Agreement."

If Anyone Should Ask if There Is a Difference in the Republican and Democratic Parties, the Answer Is "Yes; and in Many Very Important Ways"

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. HOLTZMAN. Mr. Speaker, the April issue of the Democratic Digest contains an excellent and scholarly summation of the fundamental differences which exist between the Democratic and Republican Parties. In order that we have no doubt in this poltical year about these differences, I include this summation in the Appendix of the RECORD:

THE DIFFERENCE BETWEEN THE DEMOCRATIC PARTY AND THE REPUBLICAN PARTY

Is there any real difference between the Democratic and Republican Parties? Many people ask this question, and the answer is "Yes." They differ on how to achieve prosperity for all the people. They differ on how to achieve and maintain peace. They differ on providing for and improving the welfare of the people. They differ on the role of Government.

WHERE THE PARTIES DIFFER ON HOW TO SECURE PROSPERITY FOR EVERYBODY

The Democratic Party believes that the key to prosperity is to increase mass purchasing power by keeping the farmer, laborer, small-business man, and consumer prosperous, and protecting the people against the evils of unfair taxation and monopoly, through:

The Republican Party believes that prosperity can be secured by increasing big business profits, which will eventually trickle down to the people, and that this program can best be put into effect through:

Tax cuts for everybody

Eighty-eight percent of House Democrats voted to raise the personal exemption by $200, thereby exempting 10 million low-income taxpayers from taxation February 2, 1948).

Seventy-seven percent of Senate Democrats voted to kill a special tax cut for corporation shareholders and for a $20 tax cut for everybody (July 1, 1954).

Ninety-six percent of House Democrats voted to kill the special cut for corporation shareholders and raise the personal exemption by $100 (March 18, 1954).

Tax cuts for the rich

One hundred percent of House Republicans voted against increasing the personal exemption (February 2, 1948), and 99 percent of House Republicans voted for GOP tax-reduction bill which gave 37 percent of the tax relief to the wealthiest 4 percent of the taxpayers (March 2, 1948).

Ninety-five percent of Senate Republicans voted against killing the special tax cut for shareholders and against the $20 tax cut for all (July 1, 1954).

Ninety-five percent of House Republicans voted against killing the special tax cut for corporation shareholders and against raising the personal exemption by $100 (March 18, 1954).

Full employment

Ninety percent of House Democrats voted for the Full Employment Act when it passed the House (December 14, 1945).

Opposing jobs for all

Sixty-four percent of House Republicans voted against the Full Employment Act on House passage (December 14, 1945).

Assuring good wages

In 1935, President Roosevelt recommended and a Democratic Congress enacted the Wagner Act, which made it a matter of right for working men to organize into trade unions and to bargain collectively.

In 1938, President Roosevelt recommended and a Democratic Congress enacted the Fair Labor Standards Act, establishing minimum wages and maximum hours to be observed by all interstate manufacturers.

86 percent of House Democrats voted for the minimum wage law when it passed the House (May 24, 1938).

In 1949, as soon as the Democrats regained control of Congress, they raised the minimum wage from 40 cents to 75 cents an hour.

In 1955, as soon as the Democrats regained control of Congress a second time, they raised the minimum wage to $1 per hour.

Opposing good wages

"It (the Wagner Act) is a bad bill and a serious menace to the 76 percent of labor that does not belong to unions." (Representative JOHN TABER, Republican, of New York, June 19, 1935.)

"You are paving the way for the absolute enslavement of labor by the fixing of the

wages of labor from the top of the Government." (Representative JOHN TABER, Republican, of New York, December 14, 1937.)

Sixty-one percent of House Republicans voted against the minimum wage law on House passage (May 24, 1938).

During their first 2 years in power (1953 and 1954), the GOP did nothing about raising the minimum wage.

In 1955, the Eisenhower administration recommended raising the minimum wage to only 90 cents an hour, 10 cents less than the Democrats favored.

Providing social security

Under the leadership of Franklin D. Roosevelt, the first social security law was enacted in 1935.

Eighty-six percent of House Democrats voted against a Republican effort to kill the social security bill by sending it back to committee (April 19, 1935).

The Democratic 81st Congress increased social security benefits and brought 10 million more Americans under the social security system.

"We want to advance, to improve, to carry forward our efforts to provide * * * better security. These are not 'vestiges' of the New Deal that we mark for destruction. They are part of the fabric of our life." (Adlai E. Stevenson, October 3, 1952.)

Opposing social security

"To call it 'social security' is a fraud on the workingman. * * * The saving it forces on our workers is a cruel hoax." (Gov. Alf M. Landon, G. O. P. nominee for President, September 26, 1936.)

Ninety-nine percent of House Republicans voted to kill the social security bill by sending it back to committee (April 19, 1935).

The Republican 80th Congress not only failed to expand social security, it actually denied social security coverage of 500,000 workers.

"If all that Americans want is security, they can go to prison. They'll have enough to eat, a bed, and a roof over their heads." (Dwight D. Eisenhower, December 8, 1949.)

Helping farmers

Under Franklin Roosevelt and a Democratic Congress, the first major legislation designed to assure farm prosperity was passed, in the belief that (a) the farmer's prosperity is vital to the Nation's prosperity; and (b) the farmer, unlike others, is totally at the mercy of the free market, hence needs some help if he is to stay prosperous.

Eighty-two percent of the House Democrats and 76 percent of Senate Democrats voted for the Agricultural Adjustment Act of 1938, which established our farm-price support system (February 9 to 14, 1938).

Democrats have supported the REA program. For example, during the GOP 80th Congress, 79 percent of House Democrats voted to provide $300 million for REA loans (February 24, 1948).

Democrats have favored soil conservation. For example, on July 18, 1947, 97 percent of House Democrats voted to continue the soil-conservation program and to defeat a GOP attempt to kill the program.

Democrats favor adequate farm-price supports; 78 percent of House Democrats and 77 percent of Senate Democrats voted for 90-percent price supports, instead of GOP sliding-scale price supports (July 2, 1954 and August 9, 1954).

Opposing help to farmers

The Republican philosophy of the 1920's was best expressed by President Coolidge when he said: "Farmers have never made money. I don't believe we can do much about it."

Result (in 1932): 30-cent wheat; 3-cent hogs; 15-cent corn; farm prices 42 percent below parity; over 65,000 farm foreclosures in 1932.

Eight-four percent of House Republicans and 85 percent of Senate Republicans voted against the Agricultural Adjustment Act of 1938 (February 9, 1938, and February 14, 1938).

Republicans have opposed the REA program. For example, during the GOP 80th Congress, 79 percent of House Republicans voted against providing $300 million for REA loans and favored providing no REA loan funds at all.

Republicans have opposed soil conservation. For example, on July 18, 1947, 88 percent of House Republicans voted to kill the soil-conservation program by denying funds to carry out the program.

Republicans oppose adequate farm price supports; 89 percent of House Republicans and 80 percent of Senate Republicans voted for "sliding scale" supports, despite falling farm income (July 2, 1954, and August 9, 1954).

Results of Democratic farm policies

	1932	1952
Parity ratio	58 percent	100 percent.
Net farm income	$1.9 billion	$14.1 billion.
Farm mortgage debt	$9.1 billion	$6.6 billion.

Results of Republican farm policies

	1952	1955
Parity ratio	100 percent	80 percent (decrease).
Net farm income	$14.1 billion	$10.6 billion.
Farm mortgage debt	$6.6 billion	$9.0 billion.

Aiding small business

From 1948 to 1952 (the last 4 years under the Democrats) the number of businesses grew at the rate of 52,000 a year.

During the last 10 years under the Democrats, the rate of small-business failures was only 20 per 10,000 businesses.

Examples of Democratic efforts to give special attention to the problems of small business during wartime were the establishment of the Smaller War Plants Corporation during World War II and the Small Defense Plants Administration during the Korean emergency to help small businesses get defense contracts.

Injuring small business

From 1953 through 1955 (the first 3 years under the Republicans) the number of business grew at the rate of only 6,500 a year.

During 1955, under the Republicans, the rate of small-business failures was 42 per 10,000 businesses—twice what it was under the Democrats.

Moreover, between 1952 and 1955 small-business profits went down 66 percent; small-business investors' returns went down 57 percent.

Although the Republicans in 1953 continued the Small Business Administration, they put in charge of it a man (William Mitchell) who said, "Let's face it. Big business is going to get bigger and small business is going to get smaller, and there is nothing we can do about it. Why get excited?"

Curbing monopoly

Three of the cornerstones of the antitrust laws designed to help small business against the encroachments of monopoly were passed under Democrats: The Federal Trade Commission Act (1914), and Clayton Antitrust Act (1914), and the Robinson-Patman Act (1936).

In 33 months under the Democrats, the Federal Trade Commission brought actions against companies whose assets totaled $256,200,000.

Fostering monopoly

When the Republicans came to power in 1953, they put the Federal Trade Commission under the chairmanship of Edward Howrey, a lawyer who had defended antitrust violators against charges brought by the Federal Trade Commission.

In 33 months under the Republicans, the FTC brought actions against companies whose assets totaled only $32,500,000.

Youth's Plans for the Future

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. JUDD. Mr. Speaker, Orin Lee Dahl, a senior at Washburn High School, in Minneapolis, has won the first-place scholarship in the national Thom McAn Success Awards program, in competition with selected students from high schools across the country. He is receiving a $1,000 scholarship to the college of his choice and a trip to Washington and New York.

Young Dahl was nominated by his high-school faculty as the school's candidate. He wrote a paper on My Plans for the Future, which was submitted with a record of his widely varied school activities and his excellent scholastic grades, to the sponsors, Thom McAn Shoe Co. and Scholastic Roto, a high-school paper supplement.

Field judging of the entries was done by a distinguished board of judges representing the fields of education, business, religion, government, and youth activities.

The scholarship winner plans to follow in the footsteps of his parents who have been college teachers. His father, Dr. Orville Dahl, is at present executive director of higher education for the Evangelical Lutheran Church, whose national headquarters is in Minneapolis.

Naturally we are proud of Orin Dahl's fine record and are happy to have him visiting with us in the Congress today. I am sure he will have a most successful and useful career in his chosen field of service.

Mr. Speaker, under leave to extend my remarks, I include the winning essay:

MY PLANS FOR THE FUTURE
(By Orin Lee Dahl)

The past and the present are a part of my plans for the future. The future is a hope, a hope that I may someday be on the faculty of a good college or university. The past is a challenge, a challenge because history, literature, art, religion, and philosophy are the areas of knowledge that I seek to understand. The present is a problem, a problem because it brings me face to face with the question of how to accomplish my objectives.

I believe that I have reached a carefully evaluated solution to this problem. Both my father and my mother have been college teachers. I have increasingly admired their profession because I have seen the contributions they have made to the lives of students. I have listened to endless discus-

sions on great social, political, and religious issues of the past and present. I would like to discuss, in my turn, the great issues of the future. In short, I desire to help young people get, as I have been given, a sense of meaning, purpose, and direction in life. Such help can come from many sources, but this is the objective of higher education, and I would like to share in it.

American education has a great obligation. It must help preserve our free society by teaching its meaning to our citizens. It must help our Nation fulfill its responsibility for world leadership by educating responsible leaders. It must help mankind by making available the benefits of scientific advancement. These are but some of the responsibilities of the profession I have chosen. As I am able, they will someday be met in the classroom where I hope to teach.

If I can train and educate myself to achieve these objectives, I will serve the future, and my future will serve others.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Rev. Dominic J. Del Monte Selected Outstanding Catholic of the Year

EXTENSION OF REMARKS
OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 28, 1956

Mr. SIEMINSKI. Mr. Speaker, a lovable, kindly man was again singularly honored by our people in the 13th Congressional District of New Jersey:

The Star of the Sea Assembly, Fourth Degree, Knights of Columbus, Bayonne, whose faithful navigator is Eddie Ruggirello, has for the fifth consecutive time selected the outstanding Catholic of the year. Our pastor, Father Dominic Del Monte, is this year's choice. The committee which makes the selection is made up of 9 members, representing the 9 Catholic parishes of Bayonne. At least 6 of the 9 must agree on 1 man for him to be designated "Outstanding Catholic of the Year." From this we clearly see the nature of the honor which has come to Father Del Monte, and the entire parish rejoices with him.

Michael J. O'Brien, the general chairman of the committee, expressed the sentiments of his group in this wise: "We are proud (to pay tribute to the Assumption pastor) because we believe that the achievements of Father Del Monte stand as splendid monuments of faith, as a noble inspiration in the progress of our community life." Then Mr. O'Brien outlined in his citation the accomplishments of Father Del Monte. "The burning of the $95,000 church mortgage. The improvement of the church property. The renovation of the various buildings. The addition to the parochial school now under construction. A superb record in itself which would be sufficient to earn for him a place of honor among the people."

In particular the Knights of Columbus citer Father Del Monte for something vastly more important. These accomplishments could have been done by any good layman, but the work of Jesus the Priest only Father Del Monte the priest could do. Mr. O'Brien summed it up well enough for mere words when he wrote: "His interest on behalf of the youth, his warm personality, his humble ways, his sacrifices, and his sincere interest in people and an inspiration toward a more tolerant way of life."

Human honors are pleasant in their place; they lighten somewhat the burden of responsibility, and lift a bit the drooping shoulders of a man bent under his work, but the real honors for the year, and indeed for all his priestly years still await our Father Del Monte. They are stored up in his heavenly mother's treasure house for safe keeping, and in the day he steps into eternity God will do the honors. It is for them Father works; they alone are sufficient for him.

I include an article that appeared in the Bayonne Times, Bayonne, N. J., on Monday, April 23, 1956, regarding Father Del Monte.

CITED AS CATHOLIC OF THE YEAR IN CEREMONIES UNDER AUSPICIES OF LOCAL KNIGHTS OF COLUMBUS

For service to his parish, community and the United States, for outstanding success as a priest, citizen, and administrator, the Reverend Dominic J. Del Monte last night was acclaimed as the outstanding Catholic of 1955.

Church bells tolled 10 times every hour as the Fourth Degree, Star of Sea Assembly, K. of C., honored the Assumption Church pastor with a banquet and testimonial that attracted a capacity crowd headed by Gov. Robert B. Meyner, church dignitaries, international figures, educational and civic leaders, and persons from every parish and every part of Bayonne.

CHAPLIN CHEERED

Governor Meyner set the pace for a battery of speakers when he described Father Del Monte's devotion to the welfare of his fellow man. The Governor noted that the Bayonne Knights were the largest in the State, and he congratulated the K. of C. for its choice of Father Del Monte.

From the Reverend David James Pathe, chaplain of the Villa Marie Claire, who shared speaking honors with the Governor, came highest praise. Said Father Pathe:

"When the great army of men, women and children someday gather in the halls of Heaven and learn again of Jesus Christ, they will turn to each other with simple truthfulness and say, "Why, He's just like Father Del Monte'."

About 600 persons, the capacity of the Victory Memorial Auditorium, applauded with enthusiasm.

Earlier, Charles F. Fiumefreddo, the toastmaster, outlined some of the reasons why Father Del Monte was selected for the honors. "He is not only my pastor," said Fiumefreddo, "but my friend. He is a humble priest with a warm personality who has the love and respect of the entire community regardless of color, creed, or religion. He is Father Del Monte."

WORD FROM ARCHBISHOP

Fiumefreddo was deluged with telegrams from a host of well wishers who sounded like a who's who. The telegrams were topped by warm notes from President Eisenhower and Archbishop Thomas A. Boland. The archbishop, noting that a heavy schedule prevented him from attending last night's event, wrote:

"My cordial congratulations on this evidence of the deep esteem and affection Father Del Monte enjoys in the community he serves. I am particularly happy, because the citation details with praise Father Del Monte's accomplishments as an administrator of his parish and emphasis is placed on his Christlike pastoral solicitude, which has made him a real shepherd of the flock committed to his care."

Among those present to hear the tributes was Miss Elvira Del Monte, a sister of the pastor, who sang two numbers, Bless This House, and You Alone. Miss Del Monte formerly appeared with the Boston Opera Co.

She was presented with a large bouquet of roses by faithful Capt. John Rudnicki.

The main presentation, the award itself, symbolized by a gold plaque, was made by faithful navigator Edward J. Ruggirello. It left Father Del Monte visibly touched.

This was no time to make prepared speeches, even if he remembered it, said the priest. Referring to the expansion of his church and the school addition now under construction, Father Del Monte said, "We must look to the future. We're going to do it. With God's help, God willing, we're going to get there."

Modestly the priest drew from the fount of St. Paul to minimize the long list of accomplishments cited by the speakers. "In the words of St. Paul, I can do all things from Him who strengthens me," said the honor guest.

A presentation on behalf of the Hudson County Press Club was made by its vice president, Barry Factor, of the Bayonne Times. He gave the priest a cope and biretta as the personal contribution of all the press club members. The club itself donated $50 to Father Del Monte's education fund.

Another presentation was by Mrs. William Migliaccio, representing St. Ann's Society and the United Societies of the Assumption Church.

Superior court Judge Peter P. Artaserse opened the speechmaking portion of the program and underlined Father Del Monte's life of hard work for the church and the community. Other speakers were Michael J. O'Brien, general chairman; Dr. Luigi Vittorio Ferraris, Italian Vice Consul of Newark; and Philip O'Donnell, grand knight of Star of Sea Council, K. of C.

Congratulatory wires were read from the Sisters of the Assumption; Bishop Fulton Sheen; NBC president Robert Sarnoff; Rabbi Rubin Bendelstein; Faithful Friar Msgr. Joseph F. Dolan; Auxiliary Bishop Justin McCarthy; Judge Vincent R. Impellitteri; Amvets Bayonne Post 32; Jewish War Veterans Bayonne Post 18; Alberico Casardi, Italian ambassador to the U. N.; Jersey City Mayor Bernard J. Berry; Newark Mayor Leo P. Carlin; Bayonne Section, National Council of Jewish Women; County Clerk Edward Barrone; Clare Booth Luce, Ambassador to Italy; Representative T. James Tumulty; Judge Alexander Ormsby, State commander of the Catholic War Veterans; Harrison Knights of Columbus; former Supreme Court Chief Justice Thomas J. Brogan; and Civil Air Patrol of New Jersey, of which Father Del Monte is State chaplain.

Mayor Thomas Domenico and Commissioner Edward F. Clark, both present, also sent telegrams.

I also include an article written by an outstanding newspaperman in our area, Mr. Alfred Ciaburri, a reporter for the Jersey Journal of Jersey City, N. J. Mr. Ciaburri writes an excellent article which describes the great feeling and honor that was done to this wonderful man.

BAYONNE'S OUTSTANDING CATHOLIC—BELLS CHIME AS TRIBUTE IS PAID FATHER DEL MONTE

(By Al Ciaburri)

The sound of church bells echoed its joyous call through the crowded auditorium.

It was like a benediction.

It was like a tremendous chorus blending toward a final hymn of praise in tribute to a humble parish priest.

The Reverend Dominic J. Del Monte, the kind of a priest whom we all love and admire, acknowledged the award of "Outstanding

Catholic of 1955 in Bayonne" with "the deepest gratitude and thanks."

The bells—for him—held a personal magic, special significance, as they chimed from his church of Our Lady of the Assumption for 3 hours—as the testimonial dinner in his honor took place, last night.

It seemed to "this faithful servant of God" that they tolled the various events in a "life dedicated to the service of God."

They tolled in remembrance:

Immigrant parents. Childhood days in a modest Newark home. High school. Seminary studies. Ordination to the priesthood in 1932. Curate. Chaplain. Pastor of the Assumption, August 1, 1946.

They tolled in glory:

The spiritual awakening in the parish. The work on behalf of the youth. The forming of new church societies. The burning of the mortgage. The addition to the school building.

They tolled in hope:

"We must continue to grow—the work is not finished. The dream of a new "more beautiful church, a more splendid edifice for the glory of our Lord."

Tfiey tolled in honor:

The Fourth Degree Assembly, the Star of the Sea Council 371, Knights of Columbus, Bayonne, selected "this wonderful priest" as the top Catholic of the year—and the entire community was quick to join in tribute.

This tribute came also from many parts of the State and the country.

It was in the message of Gov. Robert B. Meyner, who presented Father Del Monte with a copy of a resolution introduced in Trenton by Assemblyman Thomas Hughes and Senator James Murray.

The Governor said the work of men like Father Del Monte makes it possible for each of us to enjoy equal opportunities through existing institutions such as the schools, the churches and civic and fraternal organizations.

I know of Father Del Monte's personal work on behalf of his parishioners in Bayonne and his friends throughout Hudson County. He is a man of compassion and great understanding. When he calls upon me or writes to me, it is always in the interest of some person who has a difficult problem and he asks for assistance—always helping others. I hope that God will bless him in his many fruitful years ahead in the service of his parishioners.

Safety Devices for Household Refrigerators

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the letter which I received from the Admiral Corp. indicating their willingness to license their Admiral lifeguard release for other manufacturers' use to help save children's lives, a news clipping from Electric Appliance Service News regarding the House committee hearing on my bill requiring safety devices on all refrigerators manufactured for shipment in interstate commerce, and a numerical list of the children and their ages, who have become trapped in refrigerators:

ADMIRAL CORP.,
Chicago, June 18, 1956.

Hon. KENNETH A. ROBERTS,
House Office Building,
Washington, D. C.

DEAR MR. ROBERTS: We wish to thank you on behalf of Admiral Corp., for the recent opportunity to appear before your subcommittee to testify in connection with the refrigeration industry's efforts to develop a mechanism which will permit the door of a refrigerator to be easily opened by a child from the inside.

You, of course, are aware of the mechanism introduced by our company—the Admiral lifeguard release—an exclusive feature developed by Admiral engineers to protect children from unnecessary loss of life. While in this highly competitive industry we normally seek to retain exclusive features, human life, particularly that of defenseless children, is more important than any competitive advantage. Therefore Admiral Corp. is prepared and willing to license the industry to utilize its patents or those patents which may be issued covering its lifeguard release.

Admiral engineers are also continuing to offer their full cooperation to the Bureau of Standards personnel in connection with their studies of this problem. In fact, our Mr. William R. Moll was in Washington last week with Dr. McPherson, of the Bureau of Standards on this very question.

Very sincerely yours,

JAMES R. OBERLY.

[From the Electric Appliance Service News of June 1956]

HOUSE GROUP WARNS INDUSTRY TO SOLVE ICEBOX DEATHTRAPS

(By Stanley Cohen)

WASHINGTON.—Members of a House subcommittee concerned with safety devices for household refrigerators displayed impatience with industry members for delays in agreeing on safeguards to deal with the deathtrap problem.

Pointing out that almost a full year has passed since the industry agreed to try to develop a solution to the problem, Representative KENNETH A. ROBERTS, Democrat, of Alabama warned that the public is not impressed with the explanations the industry has been offering.

"If the public feels you have been dragging your feet," he told industry members, "we will be under pressure to pass legislation dealing with the problem; and there will be a lot more support for this legislation than you may think."

Representative ROBERTS presided at a 1-day hearing of the subcommittee held May 28 for a progress report on the efforts of the National Bureau of Standards and the industry to agree on safety mechanisms.

DISAGREEMENT ON FORCE

Spokesmen for the Bureau of Standards and the National Electrical Manufacturers Association said efforts to adopt safety mechanisms have bogged down because of disagreement over the amount of force which children of various ages may exert to open a door from inside, as against the minimum force which is required to produce and retain the essential refrigeration efficiency to preserve food.

Dr. A. T. McPherson, associate director of the National Bureau of Standards praised cooperation he has received from NEMA, pointing out that industry members went all-out in arranging conferences, and even included manufacturers of gas refrigerators, who are not members of the association.

He said conferences have led to agreement on most criteria. But in considering the effectiveness of criteria, "both NEMA and the Bureau have been increasingly impressed with the importance of taking child behavior into consideration in designing and testing safety mechanisms."

TELLS OF TESTS

He said tests conducted last December indictated that small children under certain circumstances did not exert forces in excess of 10 pounds. The manufacturers, however, regard a force of at least 22 pounds as the minimum required to secure the closure of a refrigerator door necessary to prevent food spoilage.

Marian Faegre of the Children's Bureau, Department of Health, Education, and Welfare reported tests showed that some small children make no effort to escape when trapped. She said her agency expects to conduct tests this summer in an effort to provide the Bureau of Standards and NEMA with useful information about the way a child behaves in a "deathtrap."

EFFORTS PRAISED

Committee members praised GE and Admiral for their efforts to install safety devices in refrigerators, but Roy Buchanan, manager of advanced engineering, for refrigerators and freezers of Westinghouse, cautioned that pomotion of safety devices at this time might "provide a false sense of security" and lead children to engage in experimentation in refrigerators which lack escape mechanisms.

"There are a great many mechanical things that could be done for escape mechanisms if you or I were trapped," he told committee members. "But we have to wonder what can be done for a child."

Leslie D. Price, manager, Engineering and Safety Regulations Department of NEMA said the problem has two stages. One stage is the abandoned box.

He expressed a belief that escape mechanisms could be developed to eliminate the hazard caused by boxes still in use. But he expressed doubt that any reliable mechanisms could be developed which would be useful 10 or 15 years, and would provide escape from abandoned boxes. The best remedy for the danger caused by abandoned boxes is to remove the door or latch, he said.

Price said NEMA is prepared to finance research programs planned by the children's bureau. In the meanwhile it is vigorously promoting and financing a program of the National Safety Council to make the public aware of the problem.

"It is obvious," he said, "that while a solution to the problem has not yet been reached, definite progress has been made. Individual manufacturers have placed on the market, refrigerators designed to meet a reasonable solution. Others are sure to follow. NEMA, therefore, still believes that this problem will be solved by industry-Government cooperation, and that no Federal legislation is needed."

TELLS OF PROGRESS

Marshal Bartlet, manager of product planning for the refrigerator and freezer division of General Electric said GE's "Child Safe" magnetic door is engineered to require only a 10 to 20 pound force. He said this is achieved by using a specially developed "soft gasket," to provide a seal. The magnet is 4" x ½" x ½" and the entire installation costs GE only $1.

The committee also saw a demonstration of Admiral's Lifeguard release by James R. Oberly, Admiral veep, and William R. Moll, chief of the applications section of Admiral's refrigerating engineering staff.

Silas A. Morehouse, president of SiLok, Inc., charged that "a sense or urgency seems to be lacking" in the industry, and that legislation is needed to assure that safety locks are used.

He said his company has magnetic and mechanical devices which are opened easily from the inside, and will provide safety at low cost.

The committee also heard Col. G. B. Kidwell who proposes "a device to provide ventilation in refrigerators temporarily or permanently out of use."

Children suffocated in household refrigerators, January 1954–June 1956, 33 incidents, involving 54 children, of whom 39 died and 15 survived

President Eisenhower Backs and Fills Despite Campaign Promise of Consistency

EXTENSION OF REMARKS
OF
HON. DON HAYWORTH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. HAYWORTH. Mr. Speaker, when a candidate for political office makes a pledge, voters expect that he will stand up to that pledge and not hedge. During his campaign of 1952, Candidate Eisenhower promised many things, one of which was the promise to be consistent and not to back and fill.

I desire that a record of some of Mr. Eisenhower's inconsistencies—or backing and filling, as he would call it—be included in the Appendix of the RECORD. This compilation is from the April issue of the Democratic Digest:

BACKING AND FILLING WITH IKE AND EZRA

I add another pledge: We shall be consistent. Having made and worked out with the farmers a program that seems best to fit the situation, we will not back and fill. (Candidate Eisenhower, Albert Lea, Minn., September 16, 1952.)

SUPPORTS FOR PERISHABLE COMMODITIES

We must find methods of obtaining greater protection for our diversified farms, our producers of perishable foods * * * We can and will find a sound way to do the job. (Candidate Eisenhower, Kasson, Minn. (July 6, 1952.)

Question. I wonder if you could give us your viewpoint on the use of price supports on hogs during the present farm emergency?

Answer. I would believe that to go in this whole perishable field and begin the business of price supports would be dangerous. I would want to study it more. (Eisenhower press conference, January 19, 1956.)

KEEP POLITICS OUT OF AGRICULTURE

All of our broad farm programs should be lifted out of politics. (Eisenhower, Brookings, S. D.)

Our national farm policy * * * must not become a field for political warfare. (Eisenhower, state of the Union message, January 5, 1956.)

GOP promoting its farm policy. Hires public relations firm to sell program with eye on next year's election. (New York Times, December 13, 1955.)

Eisenhower makes bid for farm vote; blames low income on rivals. (Baltimore Sun, October 16, 1954.)

ASSISTANT SECRETARY BUTZ AND THE SOIL BANK

Dr. Earl Butz * * * was critical of the soil-bank program which has been advanced as a solution to the farm problem. (Washington Star, December 4, 1955.)

Earl L. Butz * * * praised President Eisenhower's exceptional courage in proposing the soil-bank farm program in an election year. (United Press, January 13, 1956.)

THE PLOW THAT BROKE THE PROMISE

We will not plow under every third row of cotton or sentence the little pigs to execution. (Secretary Benson, New Orleans, September 20, 1955.)

It should be practical to include in the soil bank wheat already seeded if it is incorporated in the soil, i. e. plowed under, as green manure or by other accepted practices. (Eisenhower, January 9, 1956.)

IT WON'T WORK, SO LET'S TRY IT

The Agriculture Department recommends against the enactment of this soil bank bill sponsored by Senator HUMPHREY (Democrat, of Minnesota). (Agriculture Department letter to Senator ELLENDER, September 30, 1955.)

I shall urge authorization of a soil bank program. (Eisenhower, State of the Union Message, January 5, 1956.) Ike, Benson speed plan to establish soil bank. (Washington Post & Times Herald, January 7, 1956.)

FREEDOM FROM HANDOUTS

All I know of farmers convinces me that they would rather earn their fair share than to have it as a Government handout. (Eisenhower, Kasson, Minn., September 6, 1952.)

It is doubtful if any man can be politically free who depends upon the state for sustenance. (Secretary Benson, February 5, 1953.)

Eisenhower asks soil-bank to pay for cut in crops. President Eisenhower called today for a $1 billion soil-bank to pay farmers for growing smaller crops and improving soil fertility. (New York Times, January 10, 1956.)

TAKING THE EMPHASIS OFF WASHINGTON

The first thing we intend to do is to take the emphasis off of Washington. * * * Our goal will be sound, farmer-run programs that safeguard agriculture—but do not regiment you, do not put the Federal Government in charge of your farms. (Eisenhower, Kasson, Minn., September 6, 1952.)

The administration presented to Congress today a bill that would make the Secretary of Agriculture the absolute boss of the farm aid soil bank. (New York Times, January 18, 1956.)

Neighborly Act

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. OSTERTAG. Mr. Speaker, the spirit of neighborliness still abides and abounds in our country, as witness the

following incident described in the Buffalo Evening News:

FARMERS WORK FAR INTO NIGHT TO HELP OUT SICK NEIGHBOR

WARSAW, June 18.—Fourteen men with tractors have solved a serious situation for Edward Sheehan, 43, of Dale Road, Warsaw.

Mr. Sheehan has taken ill with pneumonia a week ago. None of his crops were planted on his farm, a few miles northwest of Warsaw. He was taken to Wyoming Community Hospital in Warsaw Friday. On Saturday, however, the picture turned brighter for Mr. and Mrs. Sheehan and their seven children, ranging in age from 10 years to 3 months.

The 14 neighbors of the family devoted Saturday to preparing and planting the Sheehan fields with corn and oats. They had rushed their own work during the week to enable them to aid their friend and neighbor.

The cold, wet spring delayed planting until about 10 days ago. Mr. Sheehan missed out on the good weather and the lateness of the season made the problem acute. At best his day in the field is short because he drives a school bus for Warsaw Central School.

The helpful neighbors worked far into the night on Saturday, using lights on their tractors to complete work on the Sheehan farm. Mrs. Sheehan served noon dinner to the men with the aid of two women friends.

The neighbors who helped are Ernest Cousins, Charles Thompson and Charles Thompson Jr., Robert Christ, Donald Newhland, Paul and Richard Kaczmarek, Clifford Cofield, Wesley Bathrick, John Keough, Gerald and Michael Coveny, Burdette Galton and Norman Raupp.

Mr. Sheehan was reported by a hospital spokesman as "much better" today.

My War With the Mob

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 28, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include the second in a series of articles by Victor Riesel which appeared in the Washington Evening Star of June 27, 1956, entitled "My War With the Mob":

MY WAR WITH THE MOB—HOODLUMS USE UNION POWER TO FORCE WAY INTO BUSINESS, SHAKE DOWN CONTRACTORS

(By Victor Riesel)

You can fight today's manicured mob better with a sharp accountant than with sharpshooting police.

The crime cartel inside labor stretches from lush wall-to-wall carpeted offices in midtown Manhattan to ultramodern, neonlit executive suites on the west coast.

To unpeel a series of Mr. Bigs, it has taken some Federal agents years to go through as many as 80 fronts—for just a handful of polished mobsters worth millions of dollars.

These men have infiltrated some of the best clubs. They have purchased country clubs of their own. They control skyscrapers, construction and insurance companies, restaurants, nightclubs, banks, textile and steel mills, garment firms, trucking companies, transit lines, construction-supplies distributors, hotels, jukebox companies, stevedoring outfits—even barbershops and luncheonettes. All this the local and Federal police have recorded in intricate records.

THEY LOVE RESPECTABILITY

But little can be unraveled in the courts—because, unlike the old Capone muscle days and the bloody gun and icepick wars of Lepke and Gurrah, all this is legal. It may be unethical, immoral, and contrary to the quasipublic trust a labor official should pledge himself to when he goes to work for the proletariat, but it is legal—and the boys do love the aura of respectability with which it cloaks them.

The key word among today's mobsters is "respectability"—the standing they've gained in their communities while they operate their criminal cartel behind the scenes. Their dominating fear is neither the police nor the Federal investigators nor even the Internal Revenue Service.

They fear most the spotlight of exposure in the press which goes into their communities, their homes and among their families and neighbors.

FORCED PARTNERSHIPS

To amass their fortunes in cash, real estate, and other investments, they've used the power of the unions they've seized—often in the same business fields in which they operate. They have become businessmen's partners by simply threatening to withhold workers from employers whose projects were racing for deadlines set by contracts with the Federal Government, big cities and private concerns.

Let's step past the men whose notoriety has hit the press so regularly. They're as familiar to the public as Marilyn Monroe's curves.

Let's look at some current incidents cut from the same old pattern.

Let's consider the gimmick used by George J. Walters, former president of the Pittsburgh Building Trades Council and an official of a bricklayers local there. So prominent a citizen was Walters that he served as chairman of the Pittsburgh Housing Authority and as a member of the city's board of education.

FAILED TO REPORT $35,000

Walters, who went to jail, had connections with pipe and building supply firms. If you wanted skilled bricklayers for your construction job, you had to buy blocks from the company which paid him part of its profits. During his trial, it was shown that in 2 instances he picked up $13,000 and later $14,000. Walters was jailed for 15 months and fined $5,000 for failure to report $35,099 in income which he got on the side from building contractors over a 5-year period.

Just a few weeks ago, two bricklayer officials in Pennsylvania were indicted by a Scranton grand jury on charges of demanding $4,200 before they unloaded bricks for a contractor building a Signal Corps depot.

I report these two incidents out of many others because they are typical of the disrespect for decency displayed by this crowd. Walters, trusted by his neighbors, gave all labor a black eye by forcing money out of businessmen although he was labor's representative on important municipal bodies. The Scranton men are penny-ante operators, but this case shows that no even vital Government projects are immune from shakedowns.

MILLION DOLLAR SHAKEDOWN

The pressure by some union officials on contractors building swiftly needed Federal projects doesn't always come from the penny-ante crowd. There is a hulking fellow now slimming down in the Federal pen for another decade or so because he tried, among other inspirations, to extort a million dollars from the Ebasco Corp., then building tremendous power projects for our atomic and thermonuclear defense program. This shakedown artist is Evan Dale, chief of the Hodcarriers and Common Laborers in East St. Louis.

Not quite as imaginative as the pirate in the atomic fields was a set of crooks who were lifted out of the St. Louis construction trades unions by a Federal grand jury. There it was shown that businessmen who wanted to bid on Government contracts first consulted certain union officials. The contractors had to find out exactly how much the union men's shakedown would be before the bid was put in—otherwise that cost could run as much as $200,000 on a project. This could easily be the difference between profit and bankruptcy.

In fact it was the margin for one heating contractor who dared to bid on Government work without the union bosses' permission. This contractor was forced out of business and another firm, in which the labor leaders had a financial interest, was able to get choice contracts without difficulty.

$50,000 OR ELSE

In St. Louis, there were such specialists in extortion as Larry Callahan and Paul Hulahan. The first was the boss of the steamters local and he wielded terrific political power. The latter was known as the heavy-fisted business agent of a hod carriers local. Their price was a mere $50,000 each to permit two projects to get underway.

The judge, in sentencing Hulahan to 12 years for violation of the Federal anti-racketeering laws, summed it up for all areas plagued by rasketeers and extortionists when he said: "You are a menance to this community and the people will sleep better with you away."

These are but a few of hundreds of such cases. Attorney General Brownell's Justice Department reports that since it began prosecution, right after the inauguration in 1953, on to March 31, 1956, a total of 102 convictions on racket charges were secured. All were labor people.

Scores more were indicted but were able to slip through the loopholes of the law. A corny phrase indeed, but through these loopholes pass some of the toughest officials, right across the threshold to "respectability."

MASS PROJECTS LUCRATIVE

There is a belief across the land that racketeers are restricted solely to the trucking and garment industries and the waterfront. The time has come to go further inland where a handful of goons have simply worded union charters into immense personal fortunes because those charters gave them the right to assign workers to mass projects.

Once the mobsters, such as Evan Dale, have the power to hand out jobs, they control the lives of tens of thousands of men who swarm in on such construction projects as the Joppa power works. Control of so many workers gives the Evan Dales the influence needed to set up bars, bawdy houses, and gambling joints—and the power to order men to patronize their joints. The muscle men see to it that no one gets out of line and patronizes competitors.

The take is enormous.

When you travel inland, away from the much biographed eastern rackets, you run into such brazen techniques as union officials charging a nickel a foot to provide labor for digging trenches and laying pipes. There is another group of goons which forced contractors to pay 5 cents a square foot for permission to excavate land.

BASEMENT TRIBUTE

An operating engineers union leader forced building contractors to pay $8 each time they dug a cellar under a new home—and there were some 40,000 homes put up in this particular area.

Contractors in Missouri were forced to pay rent for nonexistent equipment supposedly furnished by certain union leaders or companies controlled by them. In some cases the companies were as nonexistent as the equipment. If a contractor wanted a receipt for his payoff, the union leaders obliged with fictitious invoices.

In one case, a legitimate concern was forced by a union official to set up a company for the labor leader to use as a coverup for his extortion racket. The legitimate firm was threatened with financial loss if it didn't go along.

Not even food escapes the rackets. Other extortionists operating as union officials charged businessmen in the poultry field 2 cents a pound for the right to buy and sell chickens.

CASH FOR CANDIDATES

In a score of communities, these union officials are powerful in the local political organizations. Why not? They always have cash ready for quick donations to needy candidates. So they buy political protection. They move among mayors, police officials, judges, prosecutors, playboys seeking thrills, and others who think them fascinating.

It becomes tougher to find and expose the mob. And still tougher to elude their respectable friends who are always saying: "Why pick on those poor persecuted labor men?"—some of whom are their own suburban neighbors by night and move with the toughest criminals by day.

The Responsibility of a Citizen in a Democracy

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, over the past few weeks I have been conducting a contest among students in the 11th grade of all the high schools in my district. The winner of the contest is to be my guest in Washington for 4 weeks. Among other requirements in that contest was one which required all entrants to submit an essay under the general title of "My Responsibility as a Citizen in a Democracy."

The results of that contest were most encouraging to me as they indicated what a splendid job the schools are doing to teach our students both the rights and the duties which are theirs because they are American citizens. Much is said currently about the failure of our educational system. The essays I received from students in the Fourth Congressional District of New Jersey point to a different conclusion. As an example of what I feel to be a real understanding of democracy, I should like to submit for the consideration of my colleagues the following essay which was written by the winner of this contest, David C. Guy, of Moorestown, N. J. The essay follows:

MY RESPONSIBILITY AS A CITIZEN IN OUR DEMOCRACY

(By David C. Guy)

Living in America entitles us to many rights and privileges not enjoyed by others in the world. Some of these rights are most precious to me. As an American citizen I have the right to worship as I please, to attend a church of my own choice and to receive the benefit of religious training. It is my right to think and believe as I please, to have my own opinion and to make known my thoughts whenever I desire. It is my privilege to participate in the Government by voting whatever way I please and by serving in public office. I have the right to justice in the courts, to a trial by jury of my peers, to state my case expecting fairness. The right to a free education is mine, to learn as much as I can and to make use of the knowledge gained. It is my right to live my own life, to make of it what I choose.

I have the right to—but wait a minute. Can I exercise these cherished rights, and the many more not mentioned and receive the benefits they bestow, and not return anything for them? Are there not certain responsibilities I have to this democracy which gives me these rights? Or can I say, "These rights are given to me, no one can take them away, so why should I have to do anything for them?" The answer is: For every right or freedom we receive in this country, there is a corresponding responsibility or obligation. What, then, are some of my responsibilities as a citizen of this country?

First, I must be well informed. This means making use of the privilege of free education, a privilege unknown to millions, by attending school and conscientiously putting forth my best effort in my studies. Then, if at all possible, I should obtain higher education, so that I can have as much knowledge as possible at hand. In addition, I must keep posted on current events by habitually reading newspapers, magazines, periodicals, etc. Another part of being well informed is to know as much as possible about the candidates, issues, and questions at hand when I go to the polls, so that I can vote wisely with full confidence in my choice.

It is my duty to make use of the privilege of participating in the government. In many places today the government is in the hands of a very few, with the people having little or no say in the government, where voting, if there is any, is a farce. We in America have a government of, by, and for the people. Being one of the people, I must make my part in the government active and useful. I can do this by voting in every election, not just haphazardly, but, as stated before, after careful consideration of the issues involved. I must be ready at all times to accept the responsibility of public office and to remember that "a public office is a public trust."

Being an active citizen of America, enjoying our way of life, I must be ready at all times to bear arms in the defense of our precious heritage even as many have done before. Peacetime also offers opportunities to defend our country. When others criticize it, I can quickly come to the fore and speak out for it. In addition, I must see that those who criticize our way of life are not provided with added ammunition in the form of any injudicious acts on the part of America or her inhabitants. This means, among other things, that I recognize the worth of each individual and the equality of all men under God, their Creator. Keeping this in mind, I will try to stamp out bigotry and prejudice wherever and whenever I find them, and to see that in this land of equality all have equal opportunities to live according to their own desires.

Another responsibility I have is that of recognizing that our society and our government are built around law. Thus, I will obey and respect the law and its enforcement agencies, report any suspicion or knowledge of unlawful acts to the proper agency, and uphold the court system by testifying, when I am called to do so, honestly and clearly, by willingly performing jury service, and by abiding by the decisions of the court.

An additional responsibility deals with my personal life. That is, in my home I will do my best to make my family a responsible and cooperative unit of democracy. I will see that my family has a complete understanding of the principles of democracy and its responsibilities. I will also see that religion plays a vital part in the life of my family as I realize its importance in our democracy. In other words, I will be a responsible family man. In addition, I will do my part in maintaining the best standards in my community by an interest in civic and community affairs.

I have the responsibility also to make any contribution I can to the scientific knowledge or the cultural storehouse of America, to aid, if I can, the advancement of American "know-how" in all fields.

How fortunate I am to live in America where I have so many rights and privileges unknown to millions in the world today, millions who have never known what it is to be free, free as we are, or who have had but a taste of freedom, only to have it taken away from them. What, then, must I do in return for this blessing of the greatest freedom the world has ever known? It can all be summed up by saying, "I must exercise these rights and make use of these privileges, rights and privileges won with blood, sweat, and tears, rights and privileges which others today do not have, rights and privileges which we must keep at all costs." This is my responsibility as a citizen of our democracy, and as long as this responsibility is shared by every citizen, the United States of America will continue to be a shining example of freedom in today's world.

Replies to Questionnaire From 15th District on Major Issues

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 7, 1956

Mr. McDONOUGH. Mr. Speaker, I have requested the people of my district once again to share with me their opinions on some of the most vital and important issues before Congress. This questionnaire was circulated throughout the entire 15th District to assure that all who were interested would have an opportunity to express their views on these issues.

The replies which I have received reflects the keen interest of the people on these issues and the thoughtful consideration given in stating their opinions. In many instances the replies included observations and comments not only on the issues which I had included in the questionnaire, but on other important problems of government.

The following is a summary of the replies I received to my questionnaire:

1. Should the Constitution be amended to provide direct election by the people of the President and Vice President? Yes, 79.5 percent; no, 20.5 percent.

2. Should the United States withdraw from the United Nations if Red China is admitted over our objections? Yes, 51.6 percent; no, 48.4 percent.

3. Should the death penalty be applied to convicted narcotics peddlers? Yes, 72.3 percent; no, 27.7 percent.

4. Should postal rates be increased to balance the Post Office Department deficit of $350 million? Yes, 55.2 percent; no 44.8 percent.

5. Should the Constitution be amended to prevent treaties and international agreements with foreign nations from becoming the supreme law of the land? Yes, 73.6 percent; no, 26.4 percent.

6. Should the price of natural gas be controlled by Federal Government or by State governments? Federal, 39 percent; State, 61 percent.

I am confident that this review of the results from my latest questionnaire will be of great interest to the Members of the House of Representatives.

Foreign Aid Needs More Study

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, June 28, 1956

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Foreign Aid Needs More Study," published in the Birmingham News of June 7, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN AID NEEDS MORE STUDY

President Eisenhower in a press conference yesterday strongly emphasized his desire for the Congress to pass a foreign-aid bill without any substantial cut. He correctly said that it is cheaper to maintain an aid program than to fight wars, but the question is not that simple—it is not a case of aid or war. The issue involves how much aid, what kind, and which countries truly need it. These are matters of increasing concern to close students who think that we are in a period of transition, that our overseas program needs careful study.

All thoughtful persons will agree with the President that help is still needed abroad. To have reservations about parts of the projected mutual-security program should not be equated with general opposition to foreign aid, or excessive zealousness in behalf of saving dollars today, whatever may come tomorrow. We would therefore submit that, with due respect for the presidential concern, a critical survey of the projected program is in order and should be pressed.

When the issue is pinpointed there is room for debate. The administration has asked for a total of $4,860,000,000 for its mutual-security program. This is broken down into $3 billion for military aid, $1,131,000,000 for defense support, and the rest for a scattering of different types of assistance—technical help, packaging and shipping of materials, training programs, funds for Asian and African development, and so on.

Now tables showing this breakdown readily show why some Members of the House, including Democrats and Republicans—men not customarily antiforeign aid, either—are of the opinion that this overall program can be trimmed. The administration says it cannot without crippling the program. The paramount interest right now is in direct military aid—supply of arms and military equipment. This takes, alone, $1,999,000,000, or almost half the total requested. That aid goes to NATO countries, to Indochina, to Korea, Formosa, Turkey, Denmark, Netherlands, Spain, and a lot of other countries. But a mutual-security program brochure does not show the amounts contemplated for each country. This information, it is said, is in process of classification, and by this we may assume that some of the facts will be termed "secret," and cannot be given out.

Yet it is precisely at that point that questions arise. Exactly what is the correlation of, say, $5 million in rifles or cannon or aircraft to Formosa, or to Iraq, or Iran, to western or Asian freedom's defense? Do all these many countries need our support for divisions and squadrons? Such questions, in our view, necessarily lead to an examination of the degree of danger in each of internal subversion, of attack from an agressor who might turn the country over to communism, and so on. But they cannot be considered publicly without the actual figures. Presumably in closed sessions, House committee members can get such figures. We are led to conclude that statistics have indicated to some of them that trimming is feasible, without endangering western defense.

Of course, everything gets back, ultimately, to the question, What kind of attack on the West is likely? When this question is raised, then, the number of divisions for Indochina or Iraq, for example, may be seen in a different light. Further, the Soviet Union is offering countries principally economic aid, as against military supplies and guidance—though there is, of course, some of this, too. But the bulk of our program is for armies, planes, and in the form of commodity shipments which in turn are sold in the respective countries, the money being used largely for financial support of military arms. In this general bracket, supplies and support, are to be spent some $3,131,000,000.

We do not question the need of funds to help build strong economies abroad. But with almost three-fourths of projected aid to go to military support, it seems to us the nature of western freedom's defense must be reconsidered and evaluated, particularly in the light of the current directions of Soviet policy in dealing with other countries. It has accurately been said that NATO today is in need of reevaluaiton. This may be said about our total mutual-security program.

In Memoriam: To a Great Man, and a Great Patriot, Ignace Jan Paderewski

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. SIEMINSKI. Mr. Speaker, June 30, 1956, marks the 15th anniversary of the death of Ignace Jan Paderewski, world renowned composer and pianist, who became the first Premier of the Polish Republic in 1919 after the people of Poland asserted their independence according to the principle of national self-determination embodied in the famous 14 points of President Woodrow Wilson.

The inspiration Paderewski gave the Polish people is still nurtured in their hearts.

At home and abroad, on both sides of the Iron Curtain, Paderewski left a sublime understanding of freedom with a humility that strove to walk in the footsteps of God.

The anniversary today of the passing of this great man, of this great patriot, more fully serves to remind me that freedom is indeed worth living for and, if need be, worth dying for. May God ever bless and keep green the memory of Ignace Jan Paderewski. He lives in the hearts of all who love freedom and its thrilling song.

Brainwashed Soldiers Need Scientific Aid

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 28, 1956

Mr. NEUBERGER. Mr. President, in an age when we talk of a war for the minds of men, and when homefront no longer means a noncombatant area, we search for new answers to new problems.

A few months ago, we heard a great deal about brainwashing and the treatment administered to GI's in Red prison camps. For a few months, the subject was forgotten. Recently, in newspapers and on the air, it has again been a subject of serious consideration. Editorial writers, commentators, and columnists render considered opinions on all phases of the subject. An editorial written by a professional psychologist should be of major interest at this time. Such an article appeared in the August 11, 1955, issue of the Portland, Oreg., Journal, when Dr. Harold S. Tuttle, professor of psychology at Lewis and Clarke College, discussed these problems in an informative guest editorial. Mr. President, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRAINWASHED SOLDIERS NEED SCIENTIFIC AID

(By Harold S. Tuttle)

Only a few centuries ago our ancestors treated their emotionally disturbed fellow citizens as witches, condemning them to the stake or the gallows. A little later they abandoned the witch epithet, but still seeing in them dangerous creatures, they chained them in prison cells. More recently (if the cause of their emotion came within certain categories), we began sending them to hospitals, treating them as patients, and providing the services of mental specialists. If they could be cured and restored to society, good. If not, after the best efforts of science to effect a cure, they were given care under as humane conditions as possible.

Meanwhile we began to learn a lot more about the causes of emotion. The word "conditioning" emerged in our vocabulary; and we began to explain the abnormal, disruptive "learning" which confused the mind and sapped the will, not as magic, but as the operation of certain laws of mental life.

Once we recognized emotional learning as an intelligible process we began to apply the laws of science to its treatment. Being humane, civilized people, we preferred to help the victim rather than to burn him at the stake or chain him in a prison cell. And so we now "treat" victims of emotional "conditioning" with a view to their cure, or at least their relief—provided their illness springs from, say, lack of parental affection in childhood, or alcoholism, or one of a score of other "approved" causes.

But now we have in our social order a few individuals whose "conditioning" came about through an unusual channel. We sent them

as boys, half educated, to fight and, if need be, give their lives for the protection of democracy. We sent them to fight a foe not only highly skilled in military combat, but still more highly versed in the art of "conditioning" emotional complexes.

It is significant that our knowledge of conditioning, and from that, our effectiveness in reconditioning, came from Russia. Pavlov made it his life study, and gave it as a highly developed science to his country. How easily we overlook the fact that Russia and her satellites are masters of the art of conditioning emotions. We have attached a name to it: Brainwashing we have come to call it.

Let us face an imaginary situation, in a different environment from that of our brainwashed prisoners of war. If, in their training camps, some of our boys were abducted by sadists who found glee in mental tourture, and were brainwashed into repudiation of all their cultural standards, and if these boys were then freed from their captors, we would make haste to get them to psychiatric clinics and give them the best treatment science knows in order to restore them to normal appreciation of the values which we count dear in our culture.

Few Americans today are aware of the devastating effects of brainwashing, thanks to popular accounts by highly educated men who survived the torture. When we better understand conditioning we shall recognize that the less firmly one is conditioned to a wholesome set of ideals the more easily he can be reconditioned to conflicting standards. Once reconditioned, his will simply does not function.

Before many years the psychologists of the country will rise in force and demand that we move out of the Dark Ages in the treatment of our boys who have been victims of brainwashing, and provide professional care and reconditioning, rather than punishment for being made tragically ill through the tortures of our enemies.

It ought not to be necessary to await so tardy a reform. Few Presidential acts would prove more epochal in the course of history than the suspension of all punitive sentences of our pitiable victims of brainwashing, with a directive that they be given every care and the best treatment science can provide to restore them to a normal love of democracy.

Congress Makes Money Talk

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, June 28, 1956

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Congress Makes Money Talk," written by David Lawrence, and published in the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS MAKES MONEY TALK—DRIVE TO CUT AID AND BOOST AIR FUNDS VIEWED AS SIGN UNITED STATES HASN'T GONE SOFT

(By David Lawrence)

Whether it to be the will of the people or the confused thinking of their conscientious Representatives here in trying to determine what to do in a distraught world, the Congress of the United States is saying some pertinent things these days which ought not to escape the notice of foreign offices everywhere, domestic and foreign propagandists, and prominent Americans returning from their travels abroad.

For the Congress is striving to cut down foreign aid by a billion dollars and at the same time is increasing appropriations for airpower by a billion.

"Money talks," and, in this instance, it says a great deal. It tells the folks who have been shouting loudly that America is putting too much emphasis on "military alliances" that the Congress of the United States hasn't gone soft despite the criticisms from the socalled liberal sources and from those Democrats who have beeen carping about how this country is throwing its weight around in a military sense.

It tells the folks who have been transparently seeking to drive a wedge between President Eisenhower and Secretary of State Dulles that their troubles in getting more money out of America do not happen to be concentrated in the executive branch of the United States Government, but in the Congress.

It tells the wobbling and wavering countries abroad, including certain allies and also certain so-called neutral countries, that maybe they have persuaded the Congress that it is unwise to rely on overseas bases. Whatever propaganda victories Communist Russia gets out of the "Yankee go home" slogans in Iceland's election campaign or in Egypt or in Tunisia or elsewhere, the Congress of the United States is beginning to believe that the best way to protect this country is by intercontinental bombers, a strong naval air force with carriers fully equipped to carry all kinds of bombs, and a mobile force of ground troops.

Members of Congress cannot in the very nature of things become military experts, but they are swayed by events in the world that take on special significance to them. For weeks a few Democrats, with some traces of partisan motivation, have been regularly picking flaws in the foreign policy of the United States with a series of speeches. Whenever the Kremlin makes an effective move of infiltration somewhere, it is promptly blamed on Dulles, or on Eisenhower's illness or on his lack of pressure on Congress. It is immediately urged, moreover, that there be a re-examination of our policies.

Unless, of course, the Democrats who are articulate on this subject really want the United States to get into a war in order to force the Communists to behave, there isn't much point in blaming the State Department for the aggressive acts of the Kremlin.

But the critics who must really be disappointed over the attitude of Congress this week are those who have been extolling Nehru and praising his virtues as a "neutralist." They have been arguing that America should give more and more money to "win men's minds" in the "neutralist" countries. They have been complaining that the Southeast Asia treaties are actually sinister—as they do no doubt look to Nehru and the Communists—but they forget that these pacts were meant to be a warning against further aggression when the Indochina truce was signed and a means of discouraging any more Korean wars.

It is remarkable how soon those Americans who are thinking so much about the objectives of foreign countries can so readily forget the objectives of their own country. It seems to be fashionable to find fault with the American policies—the foreigners are pictured as always right.

But the Congress, irrespective of party, has spoken this week—somewhat awkwardly, to be sure, and without a clear-cut explanation of what's back of it all, yet plainly on one point. For the legislators here in Washington are beginning to think a little more about the interests of the American people and not so much about the numerous petitioners abroad who have been demanding more and more money as the price of their cooperation with us.

It's not an encouraging thing to see dissension in the ranks here on foreign policy, but it's in Congress and not in the executive branch where the "isolationism" has cropped up. And, of all things, it has emerged in the Democratic Party, whose votes have gone to big money for defense of America instead of for defense of American military alliances abroad.

Letter Carrier Finds He's Public Relations Man for Post Office

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an article from the Minneapolis Star-Tribune by Peg Johnson, a staff writer, entitled "Letter Carrier Finds He's Public Relations Man for Post Office."

The article follows:

LETTER CARRIER FINDS HE'S PUBLIC RELATIONS MAN FOR POST OFFICE

(EDITOR'S NOTE.—Reporter Peg Johnson looked into opportunities and problems of a dozen possible careers, seeking information to guide June graduates and others hunting a new job. This is the seventh of her 12 articles.)

(By Peg Johnson)

Letter Carrier Archie Mohn enjoys delivering mail that he knows someone is waiting for.

It's a good thing he does, for giving service—and giving it cheerfully and well—is what Uncle Sam's 2,400,000 civil servants are paid to do.

Of the total number of Federal employees, more than half a million are in the Post Office Department (nearly 1,100 in Minneapolis), as letter carriers, clerks, mail handlers, or in other jobs.

To get a Federal job, you must pass a civil-service examination. Applicants must be between 18 and 45, although the age limit is waived if you're a veteran.

Veterans also get 10 points extra when test scores are computed, giving them a big advantage in landing jobs.

Women may apply for clerks and other jobs, but may not be mail carriers.

After applicant's test scores are determined, the person to get the job is picked from among the top three qualifiers. Almost invariably the No. 1 man gets it, according to Mohn, a letter carrier more than 20 years.

Even after being selected, however, you don't start right out as a full-fledged mailman. First you have to put in time, often as much as several years, as a substitute, which often is a "rugged life to begin with," Mohn said.

New employees are given orientation and training classes, then make rounds with regular employees. They must report for work each day just as the regulars do, but there may or may not be a job for them.

Substitutes are paid $1.82 an hour and in busy seasons often make more than the regulars do by working 10 or 12 hours a day.

Once you become a regular, your chances to get better jobs improve with seniority.

When a man retires or leaves, bids are opened for his run. The employee with the

most seniority among those bidding gets it.

Mohn, who lives at 2322 Northeast Taft Street, got his present run that way. It includes the main post office and Federal Office Building, and is better than most runs, Mohn says, because it does not involve the long route and long exposure to inclement weather.

These two factors are two of the biggest disadvantages of a mailman's job. Mohn believes. Another one, the picture of the mailman fending off vicious dogs every day, is not often applicable; residents are required to keep unfriendly dogs away from mailmen or have their mail deliveries stopped.

Advantages? You've a chance to give service, Mohn said, and you're protected by civil service job security provisions, which prohibit dismissal without just cause.

Letter carriers start their 8-hour days between 6 and 7:30 a. m., while mail collectors may come at 1 p. m.

Mohn starts at 6, spends the first 2 hours sorting mail for his route into pigeonholes—one for each stop.

Since his is a short-business route, he makes these three trips a day, and can come back to the post office for lunch, unlike some residential carriers.

Around the route Mohn takes time to greet his customers, pick up letters for mailing, and perform any other services he can.

"After all," he said, "letter carriers are, so to speak, the public relations men of the post office. We're the ones who meet the public, so it's important to be courteous and agreeable, for to them we represent the United States Government."

Carriers are inspected on their routes and their efficiency rated annually, but outside of that "there's no one hanging over you every day," Mohn said.

Regular post office employees are paid about $70 for a 40-hour week to start, with raises periodically until the maximum of $4,710 is reached after 22 years.

On retirement at the age of 60 and after 30 years' service, you draw a pension of about $2,170 a year, toward which each employee contributes a set percentage of his income each year.

Low-cost Government insurance also is available (about $2.50 per $5,000 worth), and mailmen get $100 uniform allowances each year. Mailmen in cold climates use all of it or more, Mohn said.

Vacations are figured at 13 working days a year the first 3 years; 20 days after 3 years, and 26 days after 15 years.

Employees are allowed 13 days' sick leave each year, and the time is cumulative. Mohn thus has 1,300 hours coming should he ever need it.

All these provisions are decided by Congress, Mohn pointed out, so Government employees take special interest in what each session does. They are subject to the Hatch Act, which prohibits Federal employees from taking part in political activities, but are permitted to write or talk to Congressmen individually or through their National Association of Letter Carriers.

Mrs. Cleo Maletis, of Oregon, Mrs. America of 1956

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 28, 1956

Mr. NEUBERGER. Mr. President, I speak both for my distinguished senior colleague [Mr. MORSE] and myself when I announce that all the people of the State of Oregon are proud of Cleo Maletis, of Portland, who is the 1956 selection as Mrs. America. Mrs. Maletis, now attending the American Home Economics Association meeting in Washington, is an outstanding homemaker, wife, and mother.

I think it is happily symbolic of this great land of ours that Mrs. Maletis, born in the Canadian Province of Saskatchewan, north of the international border, is a naturalized citizen of the United States whose citizenship followed marriage to her college sweetheart, Chris Maletis, of Portland.

As one of the Senators from the State of Oregon, I congratulate Mrs. Maletis and her entire family for the great honor which she has attained. I ask unanimous consent that an excellent interview with Mrs. Maletis, which was published in the Washington Post and Times Herald of June 28, 1956, be printed in the Appendix of the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

THIS CONTEST WINNER COOKS IT—MRS. AMERICA IS CHEESECAKE SPECIALIST

(By Millicent Benner)

When New York photographers asked Cleo Maletis, this year's Mrs. America, to strike a cheesecake pose, she snapped back, "I don't pose for it, but I make it."

Truer words were never spoken. In fact, they best sum up this sweet brown-eyed brunette contest winner, who is first and foremost a homemaker for a wonderful husband and their three healthy sons.

She is presently in Washington to attend the American Home Economics Association, of which she is a member and undeniably one of the most outstanding.

Although she's happy to be here, today is Cleo's ninth wedding anniversary and the first one she has missed celebrating with her husband, Chris.

But she'll be back in Portland, Oreg., Sunday, and she's not letting the family forget it. One of the first things she did after boarding the plane for her Washington flight was write her hubby and children a postcard filled with plans for a family picnic to take place the day she returns.

A vivacious 31 years' young, Mrs. Maletis was the first Mrs. America in the contest's 18-year history to win five homemaking events in a row. The winner, incidentally, is selected for her homemaking talents, not the way she fills a bathing suit. However, attractiveness is a deciding factor.

In her clean sweep of homemaking honors, Cleo won awards for her lamb rice pilaff dish, meal-planning ability, an original fruit cocktail pie, outstanding civil-defense work (an award "which pleased me"), and a black-walnut chiffon cake.

Cleo says she entered the contest at the suggestion of some Home Economic Club friends that was enthusiastically endorsed by her husband. "He feels as strongly about the importance of homemakers as I do," Cleo explains.

A graduate of the University of Washington, with a degree in home economics, Cleo was born in Saskatchewan, Canada, and became a citizen of the United States after marrying her college sweetheart.

Cleo says she's a great believer in maintaining a loving home, because everything begins in the home.

Her children, she says, are no emotional problem. They're just good normal, healthy children. Chris and I spend all our spare time with them. It's more fun for us that way, too.

They had each of the boys in swimming trunks and in the water by the time he was one. Now Chris and Cleo are teaching them to ski. "This way they learn to take things in their stride," she says of her son's early training.

Here is one of Cleo's favorite cooling recipes, that also won over the Mrs. America judges. "It only costs 17 or 18 cents to make," she says.

MRS. AMERICA'S REFRIGERATED DESSERT

¾ cup crushed graham crackers
2 eggs
5 tablespoons lemon juice
2 tablespoons lemon rind
¼ tablespoon salt
⅓ cup sugar
½ cup cold water
½ cup instant nonfat dry milk solids

Put one-half cup crushed graham crackers in bottom of refrigerator tray. Beat egg yolks in top of double boiler; add lemon juice (3 tablespoons), lemon rind, salt, and sugar. Mix well and cook over hot water until it thickens. Stir constantly—about 7 to 10 minutes. Remove from heat and cool thoroughly. Beat the egg whites. Pour water into mixing bowl and add instant nonfat dry milk solids and whip until soft peaks form (for 2 or 3 minutes). Add 2 tablespoons lemon juice and whip very stiff (about 2 minutes). Fold the beaten egg whites and whipped topping into lemon mixture. Put into refrigerator tray and top with remaining crumbs. Freeze until firm (2 to 3 hours). Cut in wedges.

Guidhim Rath Mor Ort

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. BOYLE. Mr. Speaker, under leave to extend my remarks, I herewith include an editorial appearing on June 28, 1956, in the Chicago Sun-Times, of Chicago:

GUIDHIM RATH MOR ORT

The new lord mayor of Dublin is a Jew. And why not?

The Irish and the Jews have much in common. What Ireland is to the Irish, Israel is to the Jews. Their struggles and their tribulations have run parallel in time and in circumstance. They are loyal to their traditions and their institutions, constant in their causes, and determined in their battles. They make good American citizens. An Irishman would make a good citizen of Israel, and a Jew has obviously made a good citizen of Ireland.

The parallels are admirably summarized by the career of Lord Mayor Robert Briscoe; he has been both an ardent Sinn Feiner and an ardent Zionist.

As part of the Irish struggle for independence, he made several secret missions to the United States to raise money and arms for the rebels. As a Zionist he headed a delegation which in 1939 sought international support for the settlement of Jews in Palestine.

And obviously it was the Catholic vote that put him into the several offices he has held. Ninety-five percent of his constituency is Catholic, and in all of Dublin there are only 5,000 Jews.

We join Mayor Daley in his expression of good wishes to the new lord mayor of Dublin. As the Chicago mayor messaged in both Irish and Hebrew, "Guidhim rath mor ort, and mahzel tov."

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. ALGER. Mr. Speaker, concerning my views on Federal aid to education generally, and the Kelly bill specifically, I feel that Federal aid to education is entirely unnecessary. Do we need the schools? Yes; of course, we do, and we're building them locally at a rate that will solve this so-called national crisis we face in shortage of classroom facilities. Further, the money that goes into school construction comes out of the pockets of our citizens whether this is done under the jurisdiction of the local and State agencies or whether the Federal Government masterminds the operation.

Therefore, let us not be deluded into thinking that through Federal aid we are securing somebody else's money to do the job. Nobody else is paying for our schools, but rather the local citizens, and in sending our money to Washington before returning it to local school construction a sizable deduction must be made by the Federal bureaucracy which is a total unproductive loss of money and certainly does not go into school construction.

In sober reflection no one can deny that Federal money put into construction of schools means Federal control since the Government must be careful in the expenditure of taxpayers' money.

As to the Kelly bill in particular, briefly let us examine it. On page 1 we find this under section 2:

> The Congress finds that despite sustained and vigorous efforts by the States and local communities, which have increased current school construction to an unprecedented level, there is still a serious national shortage of classrooms requiring emergency action on the part of the Federal Government.

Is this an emergency? If it is, why cannot we meet this in the time-honored American way by putting our shoulders to the wheel locally rather than appealing to the far distant Federal Government? How many times in the name of emergency we Americans have called on Uncle Sam for help and the emergency apparently never passed but rather more and more Government control was imposed and the original cause for Government help was forgotten. The end is always bureaucrat control. Quoting again from page 2:

> The limited financial resources available to a number of communities are not adequate to support construction programs of sufficient size to eliminate their classroom shortages. Other communities, in their efforts to apply their potential resources to their needs, are confronted with restrictive debt and tax limits, an inability to borrow the necessary funds at reasonable rates, and other obstacles.

Why are there limited financial resources at the community level? The reasons best known to local residents probably stem from some very sound financial considerations and should not be overrun roughshod by the Federal Government offering Federal aid without regard to the cost, which perhaps was the motivating factor in the community's hesitancy to incur additional debt.

Further on page 2, the first provisos are mentioned for payment to the State on a current basis. Thereafter, for 29 pages there are rules and regulations spelling out the Federal controls imposed on the States in return for Federal money. These bureaucratic tactics only point out that the end result will be another American bureaucracy contrary to the founding principles of our Government. Twenty-nine pages of rules and regulations culminate in labor standards to be imposed in construction known as the Davis-Bacon Act. This act prescribes working conditions and wages to be dictated by the Secretary of Labor rather than by State and local custom and usage, commensurate with local economy. And we should not forget that in case of error and dispute during construction the Secretary of Labor is prosecutor, judge, and jury. In fact, there is no recourse from his decision—no right for an American to have his day in court.

This bureaucratic labor dictation is but another of the provisions specified in the Kelly bill for Federal aid to education. In the Davis-Bacon Act or any one of the 29 other pages of regulations there is further ample proof to the fact that Federal aid to education means Federal control. We American citizens do not want Government dictating when it comes to the education of our children and this danger is certainly now upon us.

Dispersal of Industrial Facilities

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. WOLVERTON. Mr. Speaker, the conference report on extension of Defense Production Act of 1950, accompanying H. R. 9852, contains an amendment to the House bill that is a new provision. It declares that it is the policy of Congress to encourage geographical dispersal of industrial facilities and to provide that the Government in certain instances shall give recognition to this new principle. While I am of the opinion that there may be instances where such a principle could properly operate, yet, it is doubtful whether in the administration of the act there can always be assurance that the location of new industries will be entirely controlled alone by the best interest of national defense. I have too often seen other considerations of a political character enter into such decisions. Furthermore, there has been no hearings held in the House Committee on the subject and no real opportunity, other than by the limited means of this report, to consider the subject with the care that there should be prior to the adoption of such a far reaching amendment. For the reasons I have expressed, I am opposed to the adoption of the conference report with such an amendment to the basic law contained in it.

Textile Imports

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following letter addressed to Gov. Sherman Adams, Assistant to the President, written by Mr. Donald Comer, chairman of the executive committee of Avondale Mills, Inc. Mr. Comer, in his letter, points out the economic deprivation being suffered in the textile industry caused by the heavy, uncontrolled import of textiles from Japan. To further injure our own textile industry, the United States sells cotton abroad for a much cheaper price than charged American mills. This is a very serious situation, yet the administration has refused to invoke any of the statutory provisions and act in behalf of the American textile industry. As a Member of Congress I do not intend to stand by idly and watch the State Department and the Tariff Commission sacrifice the American textile industry upon the altar of internationalism. If action is not taken to erect some floodgates against the tremendous influx of foreign textiles, I intend to ask Congress to enact a reasonable import quota for textiles, applicable to all countries.

APRIL 24, 1956.

GOV. SHERMAN ADAMS,
White House,
Washington, D. C.

DEAR GOVERNOR ADAMS: The President's reference to the value of Japanese trade in his speech of Saturday night is responsible for this letter. This reference, I construe as an unresponsive attitude on his part to the increasing threat to the American textile industry from Asian looms, from Japan at the moment, but with the uncounted millions of Chinese, Indian, and other Asians.

My sister, Mrs. H. C. Ryding, wrote to the President in April 1955 because the Comers are cotton textile people and what hurts textile hurts us. Mr. Hague replied to her letter on April 23, 1955, and comforted her by enclosing a copy of a letter which the President wrote Congress JOE MARTIN on February 17, 1955. I quote a paragraph of this letter:

"This program, therefore, must be and will be administered to the benefit of the Nation's economic strength and not to its detriment. No American industry will be placed in jeopardy by the administration of this measure. Were we to do so, we would undermine the ideal for which we have made so many sacrifices and are doing so much throughout the world to preserve. This plain truth has dictated the retention of existing peril point and escape clause safeguards in the legislation."

This guaranteed protection promised by the President has been left in the hands of Secretary Dulles. I am quoting from a copy

of a letter that the State Department wrote to Mr. Marion Heiss, of Cone Mills Co., on April 5, 1956. In this letter Mr. Prochnow said:

"With reference to your concern regarding the trend of Japanese imports, existing legislation provides means by which the United States may take action to prevent excessive imports due to trade agreement concessions from threatening serious injury to a domestic industry. * * * The escape clause procedure prescribed by the Congress provides an equitable way by which to determine whether or not there is need for such action. It involves a thorough investigation and public hearings by the Tariff Commission, an independent agency.

"It is hoped the foregoing comments will explain why this Department has concluded that the negotiation of a quota agreement is not a desirable course of action."

I am giving you some figures to show the tremendous percentage of increase of shipments of textiles from Japan. In 1955 Japan shipped 5,754,000 square yards of velveteens against a total United States production of 7,308,000 yards. The velveteen industry, now practically closed down, took their case before the Tariff Commission in January; the hearing is set for June.

In 1954 Japan shipped 1,322,000 units of pillow cases and in 1955, 11,725,953 units were shipped. They applied to the Tariff Commission for a hearing in March and the date for hearing has been set for September.

During 1954, Japan shipped blouses and shirts, 189,000 dozen, and in 1955, 4,234,000 dozen, which is over one-third of our domestic production. Application to the Tariff Commission was made in February; hearing set for August.

In 1955 Japan shipped 46,699,000 square yards of gingham and during December alone she shipped 10,767,000 square yards; that was 20 percent of our home production. Our company makes ginghams, and one-third of our looms are today shut down and considerable of the balance of our production is going into the warehouse. The gingham industry, to date, has made no requests for a hearing.

A news item from the Daily News Record dated April 19, 1956, quotes Mr. Sidney S. Korzenik, executive director and counsel of the National Knitted Outerwear Association: "Japanese sweater imports, which whizzed up 450 percent in 1955, are the most 'ominous' problem facing the knitted outerwear industry here." He asserted that Japanese competition menaces the knit goods industry of every other country in the world. To prove his point, he asserted that British sweater manufacturers, "who can undersell American," are being squeezed out of the American market by Japanese competition.

The president of the American Cotton Manufacturers Institute, in discussing this procedure and these delays, said that by the time the hearing dates arrived, instead of it being a hearing it will be an inquest. Recently Alabama, South Carolina, and Mississippi Legislatures passed laws requiring merchants to post notices that would identify Japanese goods in their stores. These actions, according to newspaper reports, "alarm Mr. Dulles."

Another store of the Belk chain didn't wait for such a law but posted notices that Japanese goods were not sold in their store because they considered it not to the best interest of the community or the area. Whether such laws are wise or not is not the primary concern. My first concern is that Mr. Dulles quickly shows a concern for Japanese workers while continuing over the months to refuse an equal concern for American textile workers or investments. This action by the several States is just a natural act in self-defense of local workers and local industry, that, for the time being, are denied protection by the Federal Government.

Let me quote a few headlines in our local papers: From the Cotton Trade Journal—"Alabama Millmen Ask Stores To Boycott Japanese Textiles" under date of April 20, 1955. In a resolution adopted at the closing session of the Alabama Cotton Manufacturers Association Convention, the industry said it urgently requested "of all retail and wholesale establishments in Alabama that would normally handle textile fibers, fabrics, and garments, that they refrain from adding to this type of competition that cannot be met under the American standard of living, that is undermining operations in United States textiles and promises to become depressing and disastrous unless checked in time."

From the April 21, 1956, Southern Textile News, under heading of "Jap Import Flood Gets Ervin Ire," Senator SAM ERVIN, Democrat, North Carolina, said: "The reciprocal trade agreement concept was based on the proposition that the United States would export to foreign countries things which we produce in surplus quantities and would import from foreign countries things not available in our own country."

Also, on the same date the Southern Textile News carried an editorial headed "Tut, Tut, Mr. Dulles." The South Carolina and Alabama laws might be termed "pressure" legislation, but failing to obtain protective relief from Washington, this was a logical and sound move on the part of solons in the two States. Groups which have attacked the advisability of the legislation, including the United States State Department, leave little doubt as to their interest in the American textile industry.

In the New York World Telegram dated April 18, 1956, Mr. Roger Milliken's statement is headlined: "Textile Imports Held Menace."

Mr. John M. Ward, executive president of the State, Chamber of Commerce of Alabama, is quoted from Daily News Record of April 17, 1956: "The State Chamber recognizes the increased import of Japanese textiles could hold a serious economic threat to the American textile business, a vital part of Alabama economy."

Another headline from Daily News Record of the same date: "Japan-United States Talks on Exports Urged." This letter from American Farm Bureau Federation to the Department of Agriculture in which Mr. Lynn stated "this would be the best approach toward solving the conflict of interest involved in Japanese competition with the United States textile industry." Mr. Lynn said there is "every reason to believe" that the increased exports of textiles from Japan within the last 12 months will continue "at a very much accelerated rate" if not action is taken.

From the Daily News Record of April 9, 1956: "Two-Party House Group Sends Ike Quota Plea."

A statement, by Mr. A. K. Winget, president, American Cotton Manufacturers Institute, on April 6, 1956 headlined "Warns Inertia by Government May Destroy United States Mills." Failure to act on imports may see Japan capture textile industry, with consequent widespread havoc here. Mr. Winget then referred to the fact that the Quartermaster General of the United States Army once said that the textile industry was second only to steel for defense needs.

Cotton Trade Journal of April 13, 1956 quotes Mr. L. G. Hardman, Jr. of Georgia: "Imports held as threat to entire cotton economy."

The New York Times, Friday, April 20, 1956 said if the whole problem is approached with cool-headedness on both sides an equitable agreement can be reached. There can be other "gentlemen's agreements" and there can be additional safeguards to see that they are carried out in good faith.

From a letter written by Mr. Lawton S. Brayton, President, Northern Textile Association, April 10, 1956: "I talked with Ellison McKissek in Hollywood and he remarked to me that it was very peculiar that an industry as large as the textile industry is, especially on the employment end of it, and also because it is a vital industry for the welfare of the country, that we do not have more friends * * * in the administrative side of the Government."

Southern Textile News of April 21, 1956, there is a news item headed "North Carolina's Textile Industry said endangered by Jap Imports." The report further said "This danger and the importance of the textile industry to the overall economy of North Carolina are spotlighted in a report released by Governor Hodges."

To all of this evidence of growing concern and resentment, the only friendly word that our industry has had from Washington is in the Daily News Record, April 17, 1956, under an article headlined "United States Seeks To Tactfully Halt Cheap Japan Imports: Weeks."

Governor, when Asiatics had their hands and we had the machines we were safe, but today they have the same machines we have and there is no way in the world that home markets can be safe to their home manufacturers except by some restriction. We haven't asked for the entire American market. We have expressed a willingness to shut down some of our looms in order to take some Japanese goods. We don't need a single yard of these goods. They have nothing to offer to our market except low prices just because of their low wages. Japan itself has been realistic about this, and I think in a friendly attitude have offered a restricted quota. All we are asking Washington to do is to make this a bilateral agreement, otherwise the uncertainly in the case would continue. It is the unknown that is destructive to our production schedule and to our price structure.

My only approach to the President is through you, and I am writing you because it is going to take the President to tell Mr. Dulles to accept this friendly hand that Japan is holding out and give our industry the protection that we are going to have to have.

I am closing this letter with a listing of earnings of a dozen American industries. These figures are quoted from the Cotton Trade Journal, an article by Harry Defore titled "Textile Mills Lag Behind Other United States Industries." Figures quoted are for the first three quarters of 1955:

	Percent
Petroleum refining	10.7
Stone, clay, glass	8.97
Chemical and allied products	8.10
Nonferrous industries	8.07
Primary iron and steel	6.93
Motor vehicles and parts	6.87
Paper and allied products	6.23
Lumber and wood products	5.97
Photographic, watches, and instruments other than clocks	5.07
Textiles	2.50

You can see from this list that textile is at the bottom and even with these continuing low earnings our industry has continued to keep itself up to date and modern. There are over 1,000 separate units. We are sharply competitive. There are 2½ million employed and at this very moment we feel that our interests are very much neglected by our Government.

Yours very truly,

DONALD COMER,

Member of Murchison Committee to Japan in 1937; Member of the MacArthur Committee to Japan in 1948; Chairman, Executive Committee, Avondale Mills, Inc.

Domestic Politics and Foreign Policy

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. REECE of Tennessee. Mr. Speaker, all the Members of this House on both sides of the aisle wish to further a system of free competitive enterprise. None of us advocates monopoly. We attempt to use the powers of Government to create a climate where anyone can establish a new business. The success of such a business should be limited only by the ability of those associated with it. Regardless of party, we are opposed to any artificial restraints on the freedom of enterprise.

Let me remind the House that the Sherman Act was passed in 1890 when Benjamin Harrison, a Republican, was sitting in the White House. It has been supported by both parties ever since. Our fundamental anti-monopoly law is now 66 years old.

I have been personally concerned with the problem of preserving our competitive economy for many years. It was my privilege to serve on the Temporary National Economic Committee. The distinguished junior Senator from Wyoming [JOSEPH C. O'MAHONEY], and myself are the only Members of the Present Congress who served on that committee.

My colleagues know my interest in this problem is not a new one. While I am determined to do everything in my power to prevent monopolies, I am equally concerned when the term is used loosely to merely attack bigness and success.

Mr. Speaker, just about a year ago on Wednesday, June 29, 1955, I brought to the attention of the House some statements which had been made within the United Nations Economic and Social Council by supporters of the Russians to embarrass this Government. The statements in each case were based on material originating within the United States. I cited specifically remarks by Elinor Kahn, who represents the World Federation of Trade Unions, an organization which has been repudiated by the American Federation of Labor-Congress of Industrial Organizations as a Communist-dominated group. Miss Kahn addressed the United Nations Economic and Social Council at length on the evils of big business. She implied that our economy was controlled by monopolies.

I also showed how the Democratic Digest, which is distributed all over the world, has continually attacked large corporations and attempted to give the impression that they were in some way alined with the Republican Party.

Mr. Speaker, I am as fearful today as I was a year ago that unless we exercise great care and self-discipline in the forthcoming political campaign, loose statements and campaign oratory will be used by our enemies in the United Nations to embarrass us in the future as they have in the past.

Let me cite the most recent example which has come to my attention. The Washington Post and Times Herald on Sunday, June 17, carried a story on its front page with this heading: "Shepilov Opens Cairo Visit With Attack on United States, Britain as Oil Monopolists." The article said:

CAIRO, June 16.—New Soviet Foreign Minister Dmitri Shepilov arrived in Egypt today for a second wooing of the Arab States and promptly took a slap at the United States and Britain as oil monopolists.

In a speech to Egyptian and other officials who welcomed him at Cairo Airport Shepilov described the Soviet Union as "a country whose economic structure has no place for oil monopolies or any kind of imperialistic monopolies which suck the vitality of less-developed nations."

He said Russia bases its relations with other states, large or small, on mutual respect for sovereignty and noninterference in their internal affairs.

This was an obvious blast at the Western allies, particularly Britain, which have vast oil holdings in Saudi Arabia, Iraq, and other Arab States.

Mr. Speaker, it is incumbent upon us to conduct our debates so that Mr. Shepilov and his allies cannot twist anything which we say into something which will benefit the devious foreign policy of the Soviet Union.

Raymond Moley, the distinguished columnist, in the Newsweek issues of June 11 and June 18 discusses the political and foreign relations aspects arising from the confusion of bigness with monopoly. Mr. Speaker, I ask unanimous consent that these two articles may be included as an extension of my remarks. They are a further development of the theme which I discussed a year ago:

[From Newsweek of June 11, 1956]

PERSPECTIVE

(By Raymond Moley)

In a recent speech, Senator JOSEPH C. O'MAHONEY, perennial scourge of big business and exponent of Federal incorporation, made a surprising confession. His testimony to the efficiency of the villain in his tale, General Motors, was, he said, expressed in his personal ownership of a Cadillac. Since Senator MORSE and others have contemptuously called this a Cadillac administration, this might seem to be a dangerous admission by a Democrat. But in politics there is often advantage in giving evidence of some unusual attainment. Perhaps the Senator had been reading Edwin O'Connor's wonderful story of the Senator's native State, Massachusetts. In that novel, The Last Hurrah, Frank Skeffington, like the Senator, a passionate friend of the common man, had a habit of reading and quoting poetry. That trait Skeffington's humble followers regarded "as an awesome and barely attainable ideal, like celibacy or telling the truth."

Nevertheless, this seems to be a poor time for a Fair Dealer to reveal any taint of affluence. Chairman Butler says that his party is broke. The Reuther war chest is probably down to its last few millions. Moreover, according to the Senator, his ranchers and small-business men are in a mire of distress. Perhaps, indeed, the Senator's Cadillac is 5 or 6 years old and is cherished as a reminder to his perishing constituents of pre-Eisenhower prosperity.

Even so, a liberal who can afford such a symbol is revealing something that his political discourse denies. He is admitting that if a toiler in the barren vineyard of politics can enjoy such a standard of living, there must be something of magic in the economic system which he deplores.

INTERLOCKING

But the Senator's purpose in rising was not to praise GM but to dismember it. His approach was an old one dating back at least as far as Frank Walsh's monopoly investigation 40 years ago. His proof of GM's monopoly power was an inventory of the 81 outside directorships of 16 GM directors. The companies represented have aggregate assets of $44,111 million. This, concluded the Senator, "means such a concentration that neither the cities nor the States can stand up against it." The nostrum would be Federal incorporation plus dismemberment.

If this logic be true, the Senator should look to some of our higher institutions of learning. Twelve members of the Harvard Board of Overseers hold directorships in corporations with assets of $32,018,000,000. Eight members of Yale Corp. "interlock" to the extent of $36,616 million. Fourteen Columbia trustees "control" $40,883,000,000, while the Massachusetts Institute of Technology has directors whose outside affiliations are $102,098,000,000.

But trustees are there mostly to raise money, and to vote for things (like the Senator's honorary degrees) that are recommended by the president and the faculty. They toil little and neither do they spin—an effective web of control over their immense institutions.

ABSURD PROOF

The real facts show the absurdity of the Senator's method of "proving" monopoly power. Company directors have certain functions which really come down to giving advice out of their experience in the business world generally. To a large degree they only approve the actions and recommendations of management. Only in a crisis do they make management changes. Management, on the other hand, is at the mercy of customers demanding lower prices, workers wanting higher pay, and stockholders asking for some return on investment.

I have often wished that some professional director would set down in writing just how much influence he could exercise if he tried. The picture would be far from the sinister vision of domination which is conjured up by critics like the Senator.

But since politics is governed not by what is true, but by what politicians can make people believe, the Senator's twice-told tale will be broadcast from countless forums this year. His statistics may even make the Democratic platform.

The people who listen meanwhile, like the Senator, will feed the behemoth by buying its cars.

[From Newsweek of June 18, 1956]

PERSPECTIVE

(By Raymond Moley)

BIG-BUSINESS MYTHS

Since big business will once more be an issue this year, let us note the ripe—perhaps overripe—reflections on the subject by a major Democratic seer. For JOSEPH C. O'MAHONEY has made a career of two ideas—the evils of bigness and the need for Federal incorporation. As cochairman of the Temporary National Economic Committee 17 years ago, he toiled prodigiously and gave birth to a set of Government volumes which have been the happy hunting ground of professors in search of antibusiness data. In anticipation of the campaign, the Senator

and a staff have toiled again, with General Motors as a case study.

THE GAME

The Senator's discourses on his favorite subject suggest what someone said of a fugue: A composition in which a theme keeps coming in and the audience keeps going out. His most notable recent speech reported on his General Motors researches. He found that 70 corporations have total assets of $201 billion. "If every man, woman, and child each had assets of $1,100 they would not have assets equal to those of the 70 corporations." Since the game here is to pull your own multiplier out of the air, let us suppose that every Senator has assets of $200,000 (including the O'Mahoney Cadillac). The corporations would then seem to own more than 10,000 times the assets of the Senators: This is no more true than the Senator's statement, because Senators, like some millions of other Americans, must own some of the stock of the 70 corporations. Thus the use of the multiplication table, even on the Senate floor, does not necessarily make a statement true.

The influence of these corporations, according to the Senator, is bad. They have caused the farm income to go down. How this happened, the Senator neglects to explain.

The Senator deplores the fact that GM and Ford can go abroad and charter subsidiaries under the laws of other countries. The Senator would have them get permits from Congress for that purpose. Thus Congress would sit in judgment on company policies, and considering the wisdom with which Congress has dealt with its Washington streetcar and bus affairs, the result would be deplorable. Moreover, to license or permit companies operating abroad would certainly embroil our Government as well as the companies in endless entanglements with foreign governments.

At this point in the Senator's speech the omniscient Senator MORSE broke in: "We must get away from the policy of the flag following the dollar, to one in which the dollar follows the flag. That means that we must exercise Federal jurisdiction over international commerce so far as American corporations are concerned." This is strange stuff from an exponent of free trade.

Among the other evils of American corporations abroad, O'MAHONEY finds a lag in enlistments in our Armed Forces. This is because "our people do not want to go to war to sustain business enterprises which are operating under European law."

At this point the Senator's wrath moved on to American oil companies operating in the Middle East. "Why," he said, "are we so concerned about the tensions there, and why is it that very little, if anything, is done? It is because the great oil companies * * * are more interested in holding onto the oil they have secured by their negotiations with the governments of foreign nations than in anything else."

At this point Senator MORSE expressed his fear "that the politics of oil has become bigger than American foreign policy."

NONSENSE

This is more nonsense. The United States is interested in the oil of the Middle East because it does not want to have that strategic treasure fall into Communist hands and thus mortally endanger the Western nations who are dependent upon it.

This reviling of American corporations and the collateral attack on the integrity of our Government provide wonderful ammunition for our enemies abroad. In the discussions of the U. N. and its subsidiary councils there is plenty of evidence of irresponsible and untrue statements by Americans about American business, out of the mouths of our Communist critics.

The Senator has provided them with new material.

Housing for the Elderly

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 28, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include the speech I delivered in Worcester, Mass., on June 22, 1956, on the occasion of the public dedication of the George F. Booth Memorial Apartments for the Elderly.

This housing project is the first of its kind in the Worcester County area and, indeed, one of the first in the Nation.

The project name honors the memory of the late George F. Booth, former publisher and editor of the Worcester (Mass.) Telegram and Evening Gazette newspapers, and is intended as a lasting indication of the genuine interest and concern in the problems of the elderly Mr. Booth consistently expressed and perseveringly worked to solve.

The memory of Mr. Booth is revered for multitudinous public benefactions, but this housing project is a particularly fitting memorial as a prime example of the Christian humaneness which characterized his whole life.

The address follows:

It is a high honor and deep pleasure for me to take part in the public dedication of this most attractive housing project as the George F. Booth Memorial Apartments for the Elderly.

It is doubly gratifying to be present with you today because of the vital importance of the problem to which the erection of these buildings gives recognition—Christian concern for our older citizens—and because of the genuine tribute this project bestows upon one of the greatest men and benefactors with whom any community was ever blessed.

No person of any religious training, and particularly no American legislator, can help being more and more concerned about the proper solution of the many and varied problems plaguing the increasing numbers of our older people in the sunset of their fruitful lives.

According to authorities, our ancestors of 2,000 years ago had a life expectancy of only 20 to 30 years, as compared with an average life span of nearly 70 years in the United States today. Realizing the great modern strides in preventive medicine and disease control resulting from medical research in all fields, we can appreciate vividly that the life expectancy of every American will become longer and longer, which means, of course, that we will continuously have greater and greater numbers of older citizens who must be reasonably assisted in their later years.

Let us realize that our American economy is largely industrial. Its frightening materiality is geared to maximum production of the unit and the individual, with exaggerated emphasis upon the robust energy of youth to the unhappy neglect of the wisdom and prudence of the aged. Too many competent American workers over 45 are being too often denied suitable employment opportunities by more and more industries, thereby visiting financial catastrophe upon increasing numbers of our people in the upper age brackets.

It is a startling story to hear that among the some 14 millions of people in this country over 65 years of age today, the average income for a man and his wife is about $1,500 and their average savings are less than $1,000. The unfortunate significance of these figures is that in spite of our great economic gains over the past quarter of a century, old age in America still remains for the majority a time of insecurity, fear, and dependence upon charity. In other words, in the richest and most blessed land in the world, those who have worked the longest and given the most can look forward only to the least.

I don't think that anyone here or any other decent person in the country is willing to accept the continuation of this un-American picture of abandonment of and distress for our older people.

Rather, I think you will agree that all segments of our society at the local, State, and Federal levels should humanely cooperate in sensibly doing whatever is necessary to make old age in America a dignified period of usefulness and satisfaction that can be approached without discouragement and fear.

That is why a great many of us who are charged with national legislative responsibility have consistently urged over the past several years that the executive agencies of our Government devote greater attention to the complex problems of the aged before it becomes a disgrace to our American principles and traditions.

Our Federal Government includes about 2 million persons with a budget of some $65 billion a year. Among that vast personnel, there are perhaps less than 50 people, with a budget less than $100,000, engaged in seeking ways to help our elders comfortably through their threshold years. Such a situation certainly is not wholesome.

Through the great resources of our Government departments, we have the duty of expanding our efforts to discover opportunities for our senior citizens to continue to be active, useful, and satisfied. We must, for instance, find ways to encourage our older persons to work, if they can and if they want to. We must try to convince industry that there are substantial advantages in the employment of older people. We ought to attempt to develop a program for training our older people to learn to do other things when they have retired from their regular work.

On the legislative level, we must constantly and conscientiously investigate the need for new laws and the proper revision of existing laws, to adequately meet the desperate needs of our old folks in the critical fields of social security, housing, medical care, and gainful employment.

Assisting the aged is a truly American action, and as in all nationwide problems, much can and should be done on the initiative of communities themselves. That is why I am, as you are, today so proud of my own city where the problem has been recognized and as a result, these clean, healthy, livable housing accommodations have been provided. Viewing these beautiful structures, we should be mindful of the substantial civic merit they reflect upon all our city officials, and we are impelled to recognize the unselfish sacrifices of so many private citizens like Raymond Harold and Samuel Donnelly, their staffs and associates. The unity in action of all their good hearts and their good wills in bringing this project to reality is an inspiring example for the people of other communities and cities to follow.

To perpetuate the memory of beloved citizens, it is often customary and appropriate to erect personal images of stone or steel. It has frequently seemed to me that while such monuments are acceptable, too often they fall short of the real objective. Somehow they fail to convey any living impression of the nature and the spirit of the person we desire to revere. To my mind, the dedication of these most livable homes for the most needy of our citizens in the memory of George F. Booth happily hits the mark.

To those who had the honor of personally knowing him, nothing is necessary for them to remember him. George Booth was a man

who worked hard and lived fully through his entire life. He worked untiringly to give good example; he was highly ambitious, but strictly ethical; he was stern, as all strong men must be, but he was essentially kind, as all great men are. He was a driving leader in his profession, but a respected and beloved employer. He was a devoted family man with genuine concern for his fellow man. He respected God and he generated respect for himself. The height of his character was integrity of word and action. The genius of his talent was wise prophecy. The courage of his heart was tempered with sympathy. The depth of his mind was illuminated by gentle humor. The self-discipline of his own life was persevering work, and the substance of his nature was unselfish service to his fellow men, to his community, and to his country.

These are some of the things we mean whenever we talk about a man and the way he lived. The outstanding attribute of George Booth was his remarkable and extraordinary vision, recognized by everyone who ever had any contact with him. He could see into the future and advise upon its coming. This unique quality was strikingly placed upon him at the immature age of 30, at which age the affectionate and endearing term of "the old man" was attached to him forever by his friends and associates.

It is, therefore, particularly fitting that the living character and nature of George Booth be carried on by naming this haven for the old folks after him and in his memory. It was he who first saw the need for these homes and who originally recognized the suitability of this area for their development.

George Booth knew better than most men that taking care of the aged is a clear moral obligation upon any Nation claiming to live under God and a duty distinctly placed upon us by His command to "Honor Thy Father and Thy Mother." He also well understood that so long as the American system retains its premium on personal initiative while making reasonable provision for the economic security of the young and the old, we need have no doubt of our triumph over the Communist challenge.

May the memory of George F. Booth ever inspire others to carry on similar humanitarian programs.

Pressure on Emigrés

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include, at the request of a constituent, an interesting editorial in one of the country's leading newspapers, the New York Herald Tribune, dated June 22:

PRESSURE ON EMIGRÉS

The charges brought by Michael Shatov, former Soviet Army captain who fled to this country in 1952, throw a still darker shadow on the current activities of the Soviet United Nations personnel in this country. Mr. Shatov, an archivist at Columbia University, is leader of an emigré group dedicated to the liberation of the peoples of Russia. At a press conference sponsored by the American Committee for Liberation from Bolshevism, he accused two Soviet U. N. officials of exerting improper pressure to persuade him to return to Russia or to enlist as a Red spy in the United States. He indicated his belief that Arkady A. Sobolev, head of the Soviet mission to the U. N., was aware of the pressure and approved it.

These charges, which Mr. Shatov has already brought before the Senate Internal Security subcommittee in executive session, should be thoroughly investigated. The circumstances surrounding the redefection of five Russian sailors in April were sufficiently disturbing to bring a protest from the State Department. Two of Ambassador Sobolev's aids were asked to leave the country, and the Ambassador and his staff were warned "henceforth to adhere to their recognized functions." Meanwhile, the Senate subcommittee continued its study of the case and on May 25 concluded that Ambassador Sobolev and his First Secretary had abused the hospitality of the United States and should be recalled.

The Soviet campaign of cozenage and intimidation against defectors in the United States is proof, no doubt, against the ousting of a few officials here and there. The best defense against it must be the defector's assurance that in this country threats to their personal safety are idle, and this assurance they received in a White House statement on May 24. "The United States," it declared, "has already taken steps which make clear its determination to extend the full protection of American laws to all aliens residing here." Let this be remembered by the objectors of Soviet agents' unwelcome attentions, and they can break the dark web of threats and lies no matter how cunningly woven.

Resolution Commending REA Aid In Congress

EXTENSION OF REMARKS
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 17, 1956

Mr. THOMPSON of Louisiana. Mr. Speaker, I have been pleased to devote much of my time in Congress to matters in behalf of the rural electrification program which is vital to the comfort, progress, and general welfare of so many of our American citizens and I greatly appreciate the following resolution adopted at a meeting of the board of directors of the Southwest Louisiana Electric Membership Corp., the world's largest rural electric association:

Whereas, the board of directors of Southwest Louisiana Electric Membership Corp. recognizes and acknowledges with deep appreciation, the very able work and wonderful support received from Hon. ALLEN J. ELLENDER, Hon. RUSSELL B. LONG, Hon. T. A. THOMPSON, and Hon. EDWIN E. WILLIS, for the rural electrification program which reflected in direct benefits to the rural people of Louisiana; and

Whereas, this board also recognizes and acknowledged the hard work and wonderful support received by our United States congressional delegataion on appropriations for McGee Bend Dam, a multipurpose dam which will be of great benefit to the rural electric systems in stabilizing wholesale power rate in Louisiana: Now, therefore, be is

Resolved, That this board of directors go on record as expressing their heartfelt thanks and appreciation to our Congressional Delegation for their sincere and complete support throughout their service in Congress; be it further

Resolved, That copies of this resolution be forwarded to Senator ELLENDER, Senator LONG, Congressman THOMPSON, and Congressman WILLIS and that copies be spread upon the minutes of this meeting.

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. BOW. Mr. Speaker, under leave to extend my remarks I wish to call to the attention of the House a letter to the editor of the Evening Sun, of Baltimore, Md., which was published on June 22, 1956, as follows:

TREATY QUESTIONS

To the EDITOR OF THE EVENING SUN:

SIR: Your June 14 editorial in defense of the status-of-forces treaties suggests a number of questions.

Suppose, for illustrative example, that two Americans, stationed in a foreign country with which one of these treaties is in force, are on an off-duty basis. Suppose that they drink too much liquor, get into an argument with a native of that foreign country, and kill him in the course of a resulting fight.

Suppose that one of them is in the American diplomatic service and is in that foreign country because he went there of his own free choice and prefers to be stationed there rather than at home. Suppose that the other is in the American military service and was sent to that foreign country against his will as a result of being drafted into the Army. Suppose that he would much prefer to be back in the United States defending his country on his native soil.

Would both these American partners in the same crime have exactly the same status? Would the courts of that foreign country have exactly the same primary jurisdiction over both of them, and have it for exactly the same reasons, and be able to exercise it in exactly the same ways?

Have these status-of-forces agreements been negotiated for the United States by persons in the American diplomatic services? If so, have the agreements conformed to the old Army rule to the effect that the cooks should be required to eat the same food they serve up to the soldiers?

Your June 14 editorial indicates that these status-of-forces agreements have been worked out on some sort of discriminatory basis, whereby the United States gives some foreign countries relatively much more primary jurisdiction over Americans than it gives to others.

Can you tell us who decided upon these discriminations between various countries to which we are bound by agreements? And can you tell us the criteria upon which these discriminations are based?

Any factual information you may choose to give in response to these questions will be appreciated by the undersigned. And possibly also by other Evening Sun readers who, like myself, have not had opportunities to analyze the status-of-forces agreements, and whose information about them has been derived from arguments for or against made by partisan advocates or opponents.

JOHN J. IAGO.

Baltimore, June 15.

(EDITOR'S NOTE.—All our correspondent's questions apparently revolve around two

points: Why shouldn't servicemen be treated in exactly the same manner as members of diplomatic missions? Why shouldn't the various agreements with different countries on jurisdiction over servicemen be uniform?

(The relative handful of diplomatic mission members make their case a highly special one, which has traditionally been dealt with by the device of diplomatic immunity. The hundreds of thousands of servicemen stationed abroad obviously present a wholly different problem. To insist that the two problems should be dealt with in precisely the same fashion seems to us to ignore the quantitative difference as well as the differing functions of the two groups.

(The lack of uniformity in agreements with various countries was designed to provide exactly the protection which the opponents of the arrangements are so worried about. Foreign countries are granted primary jurisdiction over American servicemen only to the extent that we are convinced the foreign legal and penal system will not work an undue hardship on delinquent American servicemen.)

This letter poses several questions to which every Members of the House should give serious thought. Even the State Department could not answer the questions completely without considerable embarassment. It is not surprising that the editor of the Sun failed in his note to justify this discrimination between diplomatic and military personnel.

The different functions exercised by diplomats and the Armed Forces do not extend to either group when off duty. A diplomat can operate a motor vehicle as recklessly as a serviceman. If he should commit a serious crime such as homicide on his own time as it were, his diplomatic connections do not make the crime more palatable to foreign nationals than a like offense by a serviceman.

"Quantitative difference" is a fancy way of saying there are fewer persons in doplomatic service than in military service. Is this a valid reason for relieving the smaller group of any responsibility to foreign courts, but subjecting the larger number to all the vagaries of foreign justice?

There is no great lack of uniformity in our agreements which surrender criminal jurisdiction over our servicemen to foreign countries. The NATO Status of Forces Agreement covers 14 countries, the agreement with Japan is practically identical, other Executive agreements which surrender jurisdiction do so in similar terms. The real lack of uniformity is in the laws of the various countries. This subjects our men to different forms of justice and varying degrees of punishment for the same offense in different countries.

The editor is sadly misinformed if he believes that "Foreign countries are granted primary jurisdiction over American servicemen only to the extent that we are convinced the foreign legal and penal system will not work an undue hardship on delinquent American service men." The facts are that the State Department and the Defense Department had made no effort to inform themsalves concerning foreign laws or penal conditions before these agreements were made. The Defense Department for example did not complete a study of the laws of Japan until 2 years after the agreement went into effect and after 49 or more of our men had been tried and imprisoned there.

Through belated studies of foreign laws, ordered by the Senate, the Judge Advocate General of the Army has found that it is impossible for an accused to receive a fair trial by our standards in any foreign court, if you consider that the accused automatically loses certain rights granted by our Constitution, such as a presumption of innocence, burden of proof on the prosecution to establish guilt beyond a reasonable doubt, protection against self-incrimination and against use of involuntary confessions.

Congress has now provided counsel for the accused because the Defense Departmen admitted that this was necessary in order to try to protect United States personnel against the disadvantages of these agreements . Such counsel however cannot restore to an accused the constitutional rights which he loses through these agreements. Neither can counsel protect the accused who prosecutes an appeal against the tendency of foreign appellate courts to punish him for so doing by increasing the penalty imposed.

It is regrettable that editors who seek to mold public opinion or to advise their readers as to issues of the day do not always secure all the available facts before taking their persuasive pens in hand.

The Republican Press on Ike's Health

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. MULTER. Mr. President, the following is an interesting summary of newspaper comment on the President's health as it appeared in Drew Pearson's column of June 28, 1956:

GOP PRESS ON IKE

This newspaperman's mail has increased as a result of the President's illness. Most of my readers seem to be most sympathetic toward Mr. Eisenhower, but want all the facts about his health. Some of them, Republicans, believe GOP leaders are taking advantage of the President, imposing on him, risking his life further by demanding that he run again. A few editors have criticized my columns on Ike's health.

On the other hand, some of the outstanding Republican publishers in the Nation have been extremely frank, much franker regarding the second illness than regarding the first.

Wrote John S. Knight of the Detroit Free Press, Miami Herald, Akron Beacon-Journal, and associated newspapers:

"The seriousness of the President's illness has been minimized by friendly editorialists who point to Adlai Stevenson's operation for kidney stones; Harry Truman's gall bladder operation; the recent surgery on Gov. Averell Harriman's prostate gland; Senator LYNDON JOHNSON's heart attack; and Senator STUART SYMINGTON's sympathectomy for high-blood pressure in 1947.

"How idle and misleading it is to pretend that the President, a former heart case and chronic sufferer from gastric disturbances, can fully regain his old vigor. But in their anxiety over the future, the Republican strategists and the big guns in the business world are determined to have Ike run, even though he may not last through a second term under the pressures of the job."

MORE FRANKNESS

Here are other quotes from Republican or conservative newspapers showing a much more forthright approach this time to the problem of the President's health:

Toledo Blade: "A great many doctors must have said to themselves that they never before heard a doctor speak with such optimism about a patient right after he had undergone major surgery." Richmond, Va., News Leader, Democratic but strongly pro-Eisenhower: "Surgery is nothing to laugh off. It means a strain on an already weakened heart. Twice within a 9-month period his body has given way. What might happen in the future is anybody's guess." Hal Burton in Newsday: "The complex of the indispensable man is growing up again in Washington. The last time we suffered that complex was when Franklin Roosevelt was President. He was a great man, but not indispensable. Nobody is. The moment we hit this point in the United States we shall have substituted an elected dictator for an elected President."

Pleasure Boating

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. VAN PELT. Mr. Speaker, pleasure boating is rapidly becoming one of the Nation's most popular recreational activities. From this sport stems a substantial boat and motor industry, a number of important units of which are located in the Sixth District of Wisconsin, which I have the honor to represent.

A leader in the industry is Mr. Ralph Klieforth, president of Universal Motors, Inc., located at Oshkosh, Wis. He is also president of the National Association of Engine and Boat Manufacturers, Inc.

This association has pointed up the advisability of adopting new Federal regulations to provide additional safety for the growing pleasure-boating fraternity.

Attesting to his keen interest in all matters pertaining to boating and shipping, our distinguished colleague, Hon. HERBERT C. BONNER, chairman of the House Committee on Merchant Marine and Fisheries, has scheduled hearings starting July 2 to explore the need for such regulations. It will be an extremely interesting hearing.

Mr. Speaker, at this point in my remarks I include in the CONGRESSIONAL RECORD a news release issued by Chairman BONNER describing these hearings.

The item follows:

Representative HERBERT C. BONNER, Democrat, of North Carolina, chairman of the Committee on Merchant Marine and Fish-

eries of the House of Representatives, announced today that his committee would begin public hearings July 2, 1956, to determine the necessity or desirability of additional Federal legislation to regulate pleasure boating in the United States.

This will mark the opening of a study which the committee is undertaking, in advance of any specific legislation being introduced, to examine the problems which have been raised on the navigable waters of the United States by the phenomenal growth of pleasure boating and attempt to arrive at conclusions and recommendations for legislation, if such is found to be necessary.

Mr. BONNER said: "With the wholehearted support of the Coast Guard, the industry involved and the States themselves, where similar problems exist, I feel that constructive results can be achieved which, though regulating, will not restrict the growth and popularity of this healthy recreational sport which today is such a unifying family activity in our country."

Mr. BONNER stated that Vice Adm. Alfred C. Richmond, commandant of the United States Coast Guard, would be the witness on July 2 and that he would outline the problems faced by the Coast Guard in their efforts to keep pleasure boating safe for the approximately 25 million citizens of this country who go afloat each year.

On July 10 to 13 of the following week the committee will hear various industry and yachting groups at further hearings in Washington. Later in the year it is expected that hearings will be held by the committee in boating centers of the United States in order that both the interested State officials and other interested groups and individuals may conveniently be heard.

The Unity Achieved by Coal Producers, the United Mine Workers of America, Exporters, and the Railroads Merits Special Attention of Congress Regarding Government Policy and Its Effect on the Coal Industry of the Nation

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 28, 1956

Mr. VAN ZANDT. Mr. Speaker, among the many interesting sessions incident to the National Coal Association's Convention in Washington on June 12 to 14 was the luncheon of the Coal Exporters Association at which Mr. Walter J. Tuohy, president, Chesapeake & Ohio Railroad, announced formation of a new corporation to be known as American Coal Shipping, Inc. After his announcement of this unprecedented action, Mr. Tuohy concluded his address to the convention with this statement:

This is an historic moment in the coal industry. We stand as a cohesive group—the coal producers, the miners' union, the exporters, and the railroads. Our unity is the assurance to the free nations that coal, America's greatest and most abundant resource, will find its vital role in world prosperity and peace.

Mr. Speaker, I believe that this development in the coal and railroad industries merits the special attention of the Congress. Heretofore coal has been a neglected—yes, an abused—industry as far as Government policies are concerned.

For almost a decade after the conclusion of World War II, foreign oil was encouraged to flow into our great fuel markets of the east coast in ever-increasing volume, thus harassing the coal industry to the point where many mines were forced to close, thousands of mineworkers were thrown out of employment, and selling prices were so depressed as to prevent coal companies from making investments in conformity with anticipated demands of the years ahead. Other Government policies—including TVA's fuel-buying program—were equally reprehensible.

Some adjustments have been made in the past year with the realization of coal's importance to the Nation. We who are more cognizant of the role which coal must assume in the national economy and security will continue to demand further action toward removal of the inequalities inflicted upon the coal industry.

With the announcement of the new shipping corporation, Americans are becoming more aware of the contributions of the United States coal industry toward stabilizing the economies of other countries throughout the free world. I question whether the outstanding job performed by coal industry management and labor in the past 10 years is generally recognized.

Europe's coal industry was hit hard by the long war of 1939–1945. Some mines were knocked out by enemy attack. Transportation facilities were disrupted. Labor forces were depleted by the call to arms, and many experienced miners were never to return.

To assist in the rebuilding of Western Europe and the United Kingdom, American mines sent more than 16 million tons of bituminous coal across the Atlantic in 1946 and in excess of 36 million tons in 1947. As mines abroad were reactivated, the need for our coal gradually decreased until by 1950 Europe required less than a million tons.

The following year, with very short notice, United States mines were called upon to send abroad more than 30 times the tonnage that had been required in the preceding 12 months. The sudden upsurge was the result of an extremely cold winter and of an industrial reactivation resulting from the outbreak of hostilities in Korea. Had adequate shipping facilities been available, there would have been even more than the 28 million tons of bituminous coal leaving our eastern seaboard in 1951.

By 1952, Europe's own mines had made substantial gains in productive capacity, so that only 20½ million tons of American coal were needed that year. In 1953 the figure declined to 8 million tons, with a slight recovery—10½ million tons—for 1954.

Last year it became obvious that American coal would have a permanent place in the energy picture of Western Europe—at least in the foreseeable future. We sent 28½ million tons across the Atlantic in 1955, and present indications are that these exports will reach 38 to 40 million tons this year. In other words, 1956 will mark a record tonnage moving from the United States to Europe. Thus the American coal industry, having been beset by extreme fluctuations in Europe's markets over the past decade, may at last look forward to a stabilized demand. To a mining industry, the violent ups and downs of the European market have a most upsetting impact. Mines cannot be expected to remain open through periods of depressed demand in anticipation of a future change in market conditions, nor can miners be expected to remain out of work in their home communities on the theory that the outlets for their productive efforts will be placing orders a year or two hence. Despite these inconsistencies, however, the United States bituminous-coal industry did not fail to respond to any situation; I believe the present outlook for a sustained demand on the part of European consumers is only a fitting reward to this industry. A stabilization of shipping facilities will also be appreciated, as in the past it has been most difficult for both coal producers and railroads to find necessary shipping bottoms at tidewater when needed.

There is still a lot of coal in the ground in Western Europe, but the difficulty in getting it out is the principal factor involved in the expected rise in demand for American coal. Reserves in Great Britain are estimated at more than 185 billion tons, and the continental territory west of the Iron Curtain is believed to contain more than 150 billion tons. Recoverable reserves in the United States are estimated at approximately three times the combined total of Great Britain and this portion of the continent; what is more, in America they are largely more accessible, and of course our industry is so modernized as to be able to extract this valuable fuel at far less expense than their contemporaries across the sea.

In past years Great Britain always showed a surplus of output over demand. She has been a traditional exporter for centuries. Probably the first instance of coal exportation took place in 1362 when a ship from France brought a cargo of corn to Newcastle and returned with a load of coal. As the importance of this fuel became recognized over the years, the British Isles began to engage more actively in its exportation, most of the coal coming from the mines of Wales.

A monopoly in the coal export trade was eventually established by the British, and at one time—in 1923—the United Kingdom's shipments to other countries amounted to 90 million tons. With Germany also able to produce more coal than was required for her own consumption, Europe never faced a coal shortage except in periods of work stoppages or as a result of the ravages of war.

Under her socialistic mining industry, England has had great difficulty in meeting her own domestic demands, much less being able to continue to serve other countries. Added to this problem is the fact that the most easily recoverable coals have already been taken from the ground and the British have been forced to dig deeper and into less desirable veins.

Germany's coal fields were split by diplomatic and military negotiations after the conclusion of World War II, and now about 20 percent of her potential production is within the Soviet perimeter of influence. Western Germany's mines have indeed made great progress, but neither their production nor that of France, Belgium, The Netherlands, and other coal-producing nations of free Europe are going to be able to meet the energy demands of the foreseeable future. America's coal will consequently be required in great quantities to supplement domestic supply.

I commend the action of Mr. Tuohy, Mr. John L. Lewis, of the Mine Workers, and his vice president, the former Lieutenant Governor of Pennsylvania. I congratulate all the coal producers who have had a hand in forming the new shipping corporation, and I trust that it will lead to a solution of the overseas coal-shipping problems. American coal is needed in South America in ever-increasing quantities ,and it must continue to be shipped wherever else it is needed by friendly peoples.

The National Coal Association's convention was held in an atmosphere of enthusiasm and determination on the part of the coal operators. They have had the foresight and have been willing to invest in mechanization to such an extent as to be far and away the world's leaders from the standpoint of output per man-day. I had the pleasure of talking with a number of the mine owners—large and small—during the NCA convention, and I was pleased to find that they are extremely optimistic about business conditions in the years immediately ahead as well as in the long-range future. It is incumbent upon the United States Government to remove any unfair restraints against this great industry so that it will be able to continue to progress and thus fulfill the energy needs of our Nation as well as those which are depending upon us across the seven seas.

Dulles Indifferent to Indignities Heaped Upon American Citizens

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 12, 1956

Mr. CELLER. Mr. Speaker, the Syrian Consulate at New York, when asked to visa a passport of a United States citizen of Jewish faith, will brazenly state, "I am very sorry, but we have instructions not to grant visas to members of the Hebrew faith."

The Lebanese Consulate is more polite, but just as firm in its refusal.

The Iraq Consulate will say that the Arab League Constitution forbids a visa to any Jew, and Iraq is a member of the League.

Submissively, our passport division of the Dulles State Department warns that American Jews will be denied the right to visit Arabian countries. The American Export Lines warns that not only American citizens of Jewish faith, but anyone with a Jewish name—Jew or gentile—will be excluded from their cruises that touch Arab ports.

Airlines warn that American Jewish passengers will not be allowed to disembark at Beirut and other Arab ports of entry.

Even United States Government civilians and military personnel must suffer indignities and violations of their rights as citizens.

Mr. Dulles accepts with complacency the refusal of Saudi Arabia to allow religious services by Christians and non-Moslems at the Dhahran base. Chaplains cannot display crosses except during services at the base.

Dulles offers lame excuses when complaints are voiced against such assaults upon our citizen rights.

Dulles, with the undoubted approval of the President, on February 24, last, testified before a Senate Committee on Saudi Arabian aid. He was asked whether the terms of our Mutual Security Agreement with Saudi Arabia actually disqualified Jewish servicemen from being stationed at the Dhahran base, replied:

It may be.

Thus he accepts without remonstrance the right of a foreign state—this time Saudi Arabia—to pass upon the religious qualifications of our American citizens abroad.

A New York company advertises for welders to work in foreign parts. Those applying were told that Jewish welders would be barred. This proscription violated New York State law. The company excused its conduct by pointing to prohibitions contained in its contract with the Arabian Government.

Army contractors engaged in defense projects—the cost of which is paid by all of us—Jews and Gentiles alike—has encouraged this ostracism of American Jews. Maj. Gen. G. J. Nold, Deputy Chief of Engineers, stated that Army contractors were warned not to recruit workers for Arab military bases in New York City because many of the applicants were likely to be Jews. He suggests that the Midwest would be a better recruiting point.

Such bland approval of discrimination permeates the Departments of Government having jurisdiction, and Mr. Dulles does not protest.

American firms are boycotted by Arab Governments where they have had any relation with Israeli firms.

We ask Mr. Dulles: "What do you intend to do about these deprivations of the rights of our citizens?"

Is it not time for the great United States to assert itself?

Shall we spinelessly continue to permit our rights to be trampled upon?

Our weakness only begets more flagrant and defiant Arabian truculence.

Even a Secretary of State must at times act with courage—even at the expense of the black gold, called oil.

Russia cannot be offered as an excuse. Through past mistakes Russia is already in the Middle East—knee-deep. Cut off Saudi Arabian aid and diplomatic relations would neither help nor hurt Russia.

But at least our honor as a nation would be served. We would not obsequiously accept insults from an oil-soaked potentate.

More astonishing was the attitude of President Eisenhower. He was questioned at a recent press conference whether we were making any effort to persuade Saudi Arabia to abandon its policy of barring American Jews from military service with American Armed Forces in that country. He astounded his audience by saying he had not heard of the matter, but nevertheless he offered the excuse that a sovereign state has "the right to determine if an American is persona non grata and cannot enter." What a humiliating concession to King Saud. Our President apparently sanctions discrimination against our citizenry on a religious basis. Shades of past Presidents. Washington proclaimed that our Government would "give to bigotry no sanction." Presidents Wilson, Taft, Cleveland, Teddy Roosevelt, demonstrated that the principle of religious liberty was applicable in our foreign relations as well as in our domestic affairs.

Let us have a policy based not on weakness but on strength.

In a comparable situation President Wilson argued that the price—of yielding—was too great. He said that "America is not a mere body of traders; it is a body of freedom" and that the greatness of America "is moral not material" and that we must "square our politics with our principles."

Dulles should do no less.

John W. Foster, grandfather of the present Secretary of State, when American Minister to St. Petersburg, made this point unmistakably clear in writing to the acting Russian Minister of Foreign Affairs:

The Secretary of State instructs me to state to Your Excellency that in the presence of the fact that an American citizen has been ordered to leave Russia on no other ground than that he is the professor of a particular creed or the holder of certain religious views, it becomes the duty of the Government of the United States, which impartially seeks to protect all of its citizens of whatever origin or faith * * * to protest * * * insofar as the regulations for the expulsion of foreign Jews from Russia affects American citizens, it is an unjust reflection upon American Jews as a class and a discrimination which cannot be acquiesced in by my Government.

I suggest Mr. Dulles take a leaf out of his grandpa's book.

It is not difficult to find precedent in American history which upheld the principle of opposition against discrimination based on race or creed. In 1879, when Czarist Russia would not honor passports of Americans of Jewish faith, the House of Representatives passed a resolution, declaring:

Rights of citizens of the United States should not be impaired, at home or abroad, because of religious beliefs; and that if the existing treaties between the United States and Russia be found, as is alleged, to discriminate in this or in any other particular, as to any classes of our citizens, the President be requested to take immediate action to have the treaty so amended as to remove the grievance.

In 1885, Secretary of State Thomas F. Bayard declared that the United States was entitled to "ask and expect that no race or class distinction shall be made as regards American citizens abroad." And in 1911, when Russia continued its discrimination against American Jews, the then Secretary of State, Philander Knox, let it be known that the United States was abrogating the 1832 treaty between the two countries.

Abandonment of principles wins no friends. Self-respect is lost and the respect of other nations for the United States is diminished. No man and no nation can afford to be tagged as a "paper moralist." The refusal of the United States Department of State to assert itself in behalf of the rights of American citizens puts us in the position of beggars and we are only embracing the shabby concept that the end justifies the means.

The Supreme Court Under Fire

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. ABBITT. Mr. Speaker, it is apparent to me that people generally are becoming aroused over the way the present so-called Supreme Court of the United States of America is usurping powers and prerogatives which have never been delegated to them by the people, the States, or the Congress.

There appeared in the Richmond Times-Dispatch of Thursday, June 28, 1956, a very strong editorial which points out very cogently the trend of the Court and the awakening of the people to what is happening to them.

Under leave to extend my remarks, I desire to include herewith the editorial above referred to, which is as follows:

THE SUPREME COURT UNDER FIRE

The United States Supreme Court is "under its heaviest fire in a decade," according to an article in the June 25 issue of Time. The magazine notes that "resentment of southern lawyers and laymen over the desegregation decision" is behind much of the criticism, but that "all the concern is not southern," since—

"Many thoughtful observers who are devoutly on the side of desegregation are nagged by a feeling that the decision, as written by (Chief Justice) Warren smacked more of a sociological treatise than a legal document. They believe they see the same signs in other principal Supreme Court opinions of the last term."

For such statements to be made in Time, which is as integrationist as they come, is truly significant. It indicates that the Supreme Court is weaker in public esteem than it has been in a long time, and that many objective observers in the North are strongly questioning various recent findings of that tribunal, under Chief Justice Warren's increasingly liberal leadership.

Over against Time's desegregationist views of the Court let us place those of John Temple Graves, the prosegregationist conservative southern columnist, writing in the July American Mercury. Under the title "The South Won't Surrender," Mr. Graves says in his arresting article:

"The Court's (desegregation) decision having tortured the Constitution, the South is torturing the decision. If any cry shame, the South says the Court has tortured the Constitution's welfare clause, its interstate commerce clause, its 10th amendment, its forgotten 9th, its separation of Federal powers, its fundamental original promise that sovereignties (like education) not granted to Washington should remain in the sovereigns that form the Union."

All this leads to a lessening of confidence in the courts, and for it the courts are primarily to blame. The process had begun before the Supreme Court handed down its 1954 desegregation decision. For example, the late H. L. Mencken says in his just-published book, Minority Report, written perhaps as much as a decade ago:

"The only guaranty of the Bill of Rights which continues to have any force and effect is the one prohibiting quartering troops on citizens in time of peace. All the rest have been disposed of by judicial interpretation and legislative whittling. Probably the worst thing that has happened in America in my time is the decay of confidence in the courts. No one can be sure any more that in a given case they will uphold the plainest mandate of the Constitution. On the contrary, everyone begins to be more or less convinced in advance that they won't. Judges are chosen not because they know the Constitution and are in favor of it, but precisely because they appear to be against it."

And to sum up these observations concerning our courts, and the constant danger that they will undermine the Constitution, instead of upholding it, let us go back to Woodrow Wilson, who once wrote on this subject:

"Every government is a government of men, not of laws, and, of course, the courts of the United States are no wiser or better than the judges who constitute them. A series of bad appointments might easily make them inferior to every other branch of the government in their comprehension of constitutional principles, their perception of constitutional values. But that would be because the government had fallen into wrong hands, and would not invalidate the principle upon which our courts are constituted and empowered."

Is the time approaching, as Wilson feared it might, when our Federal courts are becoming "inferior to every other branch of the Government in their comprehension of constitutional principles"? Recent trends, especially on the highest bench in the land, make the question by no means an idle one.

Medical Aspects of Automobile Crash Injuries and Deaths

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a speech delivered by Dr. Fletcher D. Woodward, of the University of Virginia Hospital, and chairman of the committee on medical aspects of automobile crash injuries and deaths of the American Medical Association. This statement was presented as part of a symposium on the medical aspects of automobile crash injuries and deaths held by the American Medical Association in Chicago, Ill., June 15, 1956. I would also like to have inserted in the RECORD a copy of the resolution adopted at this symposium calling for the establishment of a national foundation for the prevention of crash injuries and deaths. This resolution is now pending before the board of trustees of the house of delegates of the American Medical Association.

There is much valuable information contained in Dr. Woodward's statement regarding action which can be taken to increase the safety features in the manufacture of automobiles—such as safety belts, padded dashboards, and collapsible steering wheels.

As chairman of the special Subcommittee on Traffic Safety, I was pleased to learn of the excellent work being done by the American Medical Association to help stop the waste of 38,000 lives a year on our Nation's highways.

The speech follows:

THE GENERAL MEDICAL ASPECTS OF AUTOMOBILE CRASH INJURIES AND DEATHS

(By Fletcher D. Woodward, M. D., Charlottsville, Va.)

In 1925 there were 20 million automobiles and a death rate of 19 per 100 million miles. In 1956 there were 60 million automobiles but the death rate had been reduced to 6.4—a most gratifying improvement—for otherwise the deaths last year would have been over 100,000 instead of 38,000. The credit for this result is due to the automobile manufacturers, the police, and the many national, State, and local safety organizations whose indefatigable work over the years made this improvement possible.

However, the fact that concerns the doctors who are called upon to pronounce death or to treat these unfortunate victims night and day is that there is also a slow but steady increase in the total number of deaths and injuries each year. In 1946 there were 34,000 deaths; in 1954, 36,000; in 1955, 38,000. These deaths were associated with a comparable increase in injuries which last year numbered well over 1¼ million. If this trend is continued, the National Safety Council estimates that in 1966 there will be 53,000 deaths from 83 million cars and a corresponding increase in injuries.

In a search for the causes of this tragic toll each year, two factors stand out above all the rest—speed and drunken driving—so our energies should be directed to curb these two outstanding killing factors if we are to halt our barbarous progress.

I first became interested in this problem some 8 years ago because my department in the University of Virginia Hospital was responsible for the care of facio-maxillary and jaw injuries which were increasing at an alarming rate. In questioning several hundred patients who were able to give a reason for their injuries, we found that the great majority of those in the front right seat attributed their injury to the head and face to impact against the windshield and dash, those who had injury to the pelvis and legs to impact against the dash, and among the drivers, the majority of serious injuries were to the chest from impact against the steering wheel and post.

These results were impressive enough for me to choose them as a subject for a chairman's address before the section of Laryngology, Rhinology and Otology of the American Medical Association under the title, "A Medical Criticism of Modern Automotive Engineering."[1] The suggestions made in this address, in an effort to reduce the number of casualties regardless of the cause, were well

[1] Medical Criticism of Modern Automotive Engineering. Journal American Medical Association, October 30, 1948, volume 138, pages 627–631.

received by the public and especially by the doctors. Since this article was reprinted in many other journals in this country, Canada, England, and New Zealand, many favorable letters were received which further convinced me that my criticism was fundamentally sound, and I am happy to say that the continuing careful and extensive research done by Mr. John Moore of Cornell and other agencies corroborates these early observations. The physician's first interest in any medical problem is, of course, prevention, and there is no question but that alteration in design will prevent many injuries and deaths. By study of how, where and why these injuries occurred it soon became apparent that prevention was possible in many instances and that research should be directed to that end. A slow but methodical compilation of statistics by individual psysicians, universities and by public and governmental agencies made it apparent that redesign of the machine itself was important. The use of safety belts and body harnesses would also help to prevent the high percentage of injuries to the head, face and legs of the passenger; also, the use of crash paddings on the dash, collapsible steering wheels, safety locks on doors, the eradication of projecting knobs and buttons, the firm anchorage of seats, perhaps higher backs to prevent whiplash neck injury, and many other simple and sensible suggestions have been offered.

I am happy to report that now many of the manufacturers, led by Ford, are studying this problem and installing safety devices on their cars and if the installation of such safety devices can be made competitive instead of size, horsepower, acceleration, and speed, then the many people and agencies responsible for this happy event can sit back and applaud. Otherwise, a Federal agency will be sought to establish and require all manufacturers to meet certain minimum safety requirements. Two bills to this end have been introduced in this session of Congress and many State legislatures are considering similar legislaton.

At present the automobile remains a lethal and crippling agent and since there appears to be little likelihood of accomplishing radical changes in human nature in general and exuberant youth in particular, it would seem the part of wisdom to work for desirable alterations in the machine itself rather than to place all attempts to bludgeon "old Adam" into safer driving practices.

Among the things which we now can employ to reduce this carnage in addition to safety features in the car itself is the control and punishment of the drinking driver. In the State of Virginia last year he was involved in 25 percent of the fatal accidents. To combat this tragic situation apathy on the part of the public, State legislators and judges must be overcome.

My county medical society and others in our State have appealed to the Governor and our legislature to provide that in any criminal prosecution for driving while under the influence of intoxicating liquor the accused or the Commonwealth shall have the right to a determination of the amount of alcohol in the blood of the accused at the time of the alleged offense as shown by a chemical analysis of blood, breath or other bodily substance. Such determinations shall be admissible in evidence together with any competent evidence bearing upon the question of whether or not the defendant was under the influence of intoxicating liquor.

We also requested that they provide for a mandatory jail sentence of at least 24 hours in all cases of conviction of driving while under the influence of intoxicating liquor. However, I am sorry to say that because of a few little men in responsible positions, we were only partially successful in securing the enactment.

The first duty of the physician in the care of those injured is to see that adequate first aid is rendered and that proper transportation is provided. To this end he, in collaboration with the American Red Cross, has developed through the years manuals for the education and guidance of his fellow physicians as well as the layman and the trained lay worker. This phase of medical care along with definitive treatment of the wounded is probably the only good that came out of our recent wars.

The physician's second duty is in the definitive care of the injured and of these results he is justifiably proud. His results in World War II were much better than those in World War I. There was a further improvement during the Korean conflict. Prompt and efficient first aid, better and prompt transportation, the treatment of shock, more blood transfusions, better anesthesia, the use of antibotics to control infection, along with improved surgical techniques, were responsible for this gratifying improvement.

The medical profession, although not self-satisfied with its present-day accomplishments in the care of the wounded, is highly gratified with its results. But, as previously stated, the physicians must also study the medical aspects of automobile crashes in an effort to prevent them and further reduce these increasing injuries. There are no statistics yet available as to the number of crashes caused by medical conditions—if sleep and fatigue are included, perhaps 8 to 10 percent, otherwise perhaps 2 to 3 percent. Still, even 2 percent of a million is 20,000 injuries.

To this end, the American Medical Association is directing a study of the medical aspects of automobile crashes, driver licensure and for the examination of repeat offenders. This study includes a review of the visual, hearing and physical requirements, the incidence of Meniere's disease, petit and grand mal, as well as other diseases of the nervous, cardiovascular and musculo-skeletal systems, physical conditions, drugs, insulin shock and alcohol.

When 1 car in 12 is involved in a serious crash each year, when speed is a factor in approximately one-third of our fatal accidents, when the drinking driver is involved in approximately one-fourth of our fatal accidents, when the automobile death rate as figured in man-years of life lost ranks next to our main killers of cardiovascular disease and cancer, it is indeed time to answer Cain's query and say, "Yes, I am my brother's keeper."

To fulfill this promise, we must first overcome the apathy of the public, our legislators and traffic court judges by education. Second, adequate and stricter laws must be enacted, laws far more severe than any we now have. The speeding and drinking driver can then be curbed by their prompt and impartial administration. Third, safer automobiles must be provided to protect us in crashes which seem to be inevitable. Fourth, a national automotive safety foundation should be set up to study all phases of automobile crashes. This foundation should be financed by funds from governmental agencies, insurance companies and from the automobile and its many allied companies. Crash injuries and deaths would then be studied from many angles such as education, automobile and highway engineering, enforcement, legal, legislative, judicial, and medical aspects. Necessary research could be ordered and financed and duplication of effort avoided. The foundation would serve as a library or repository for all pertinent information and finally as a result of its studies, safety on the highway would become a reality.

A PROPOSAL: A NATIONAL FOUNDATION FOR THE PREVENTION OF CRASH INJURIES AND DEATHS

The purpose of this nonprofit organization would be to receive money and grants from individuals, charitable foundations, governmental services, automobile and allied companies, insurance companies and others. These funds would be utilized for research. It would serve to prevent duplication of effort to underwrite worthy projects. It would also serve to stimulate and guide research in needed channels.

The foundation would also serve as a central repository and clearinghouse for information of all types.

To administer such an organization, it should have a president and one or more vice presidents. These men should be men of national importance and prominence serving without pay; perhaps retired business executives and service officers could be induced to serve.

The treasurer should be a representative from one of the well-known banking institutions for it may well be that our research found could be considerable.

There should be an executive secretary, on salary, for he would bear the burden of the foundation's work. Of course, paid assistants would be necessary.

A board of directors would necessarily include a rather large list of names of men prominent in both national and international affairs.

I next believe we should have an executive committee made up of the officers and the chairmen of the various subcommittees which I will list tentatively:

1. Education aspects: To consider child and adult driving schools, public and private, along with safety education.

2. Legal aspects: To correlate the many State and national laws, insurance requirements, litigation procedures, etc.

3. Legislative: To correlate and modernize the many State and Federal laws which apply.

4. Law enforcement: For uniform punishment, for the administration of chemical tests to establish drunkenness and acceptance of these determinations as evidence.

5. Medical aspects: The AMA to be responsible for all medical aspects of licensure and renewals.

6. Automotive engineering and design: This committee should include medical men.

7. Highway engineering: To correlate highway markings, paints, reflectors, size and shapes of signs, road surfacing, etc.

8. Commercial aspects: Size and shape and illumination of trucks, piggybacking and motor exhaust fumes as examples.

As a result of the work of these committees, certain basic standards of design could be established and all manufacturers would be required to meet these minimum requirements.

Other committees will come to mind, and the work to be done by these groups is vast.

If these ideas appeal to you then steps could be taken to underwrite the exploratory investigation and, if feasible, an organization meeting could be held in Chicago sometime in the near future.

Antarctic Population Boom Predicted

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. WAINWRIGHT. Mr. Speaker, the enclosed article in a recent issue of the Washington Evening Star concerns the work of the Director of the Brookhaven Laboratory of the Atomic Energy

Commission. This research development center is located in the heart of the First Congressional District of New York on Long Island. Here is an operation, dealing in the field of nuclear physics, which is designed to improve man's status rather than destroy it.

The article follows:

VISTAS IN SCIENCE

(By Thomas R. Henry)

ANTARCTIC POPULATION BOOM PREDICTED

A hitherto uninhabited, and considered uninhabitable, 6 million square miles of the earth's surface will have a population of at least 10,000 during the next 2 years.

This is the prediction of Dr. Lloyd V. Berkner, director of the Brookhaven Laboratory of the Atomic Energy Commission and vice president of the National Research Council's special committee on the International Geophysical Year.

Some of this population of the Antarctic continent probably will be at least semipermanent, forerunning the day when the ice-covered wastes of both polar regions may be rather thickly inhabited.

Up to now the population of the Antarctic never has exceeded more than a few score explorers and scientists at any one time, and these seldom have remained more than a few months. Only 2 or 3 women ever have been there. No child ever has been born there.

The geophysical year settlements in the far South, Dr. Berkner says, will be "the very beginnings of the movement of man into the polar regions on a large scale." Modern engineering and, to some extent medicine, he stressed, have gone far to make possible what would have seemed fantastic a few years ago but many problems remain in the adjustment of man to polar environments.

ASSOCIATE OF BYRD

Dr. Berkner himself is a former Antarctic explorer, an associate of Adm. Richard E. Byrd, who will be in overall charge of the geophysical year program of this country.

"The Antarctic," he recently told the New York Academy of Medicine, "is not nearly as inhospitable as you might suppose. One can live in relative comfort provided preparations are so complete that no accident occurs. But such an environment requires great ingenuity to exist until the land becomes more populous."

Much may be learned from studying the ways of life of the penguin, the only higher animal that has been able to establish itself in the Antarctic wastes. This has involved establishment of a rather highly developed animal society and voluntary personal sacrifice on the part of individuals.

He cited a case when 20 penguins were captured and placed in a wire enclosure to be brought back to the United States. The next morning there was only one penguin in the pen. Others were captured and placed in the enclosure. Again the next morning only one was left—but the wire was much too high for any of the birds to jump over. Again the pen was filled with penguins and watched all night. It was found that one bird was climbing on another's back to escape. But the last one always had to remain—presumably a volunteer.

"Only within our lifetimes," Dr. Berkner said, have the polar regions of the earth had an impact on man's consciousness. Within the next century, under the force of population pressures, both the Arctic and Antarctic most certainly will be populated, probably quite heavily."

The Antarctic population predicted by Dr. Berkner during the next 2 years will be international—American, British, French, Russian, and Norwegian—and will occupy the numerous observation stations. Americans will constitute the majority.

A Commendable Action

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 28, 1956

Mr. HORAN. Mr. Speaker, under the privilege granted me to extend my own remarks in the Appendix of the RECORD, I am pleased to include a release by the Department of Interior. I feel it is commendable.

COMPETITIVE BIDDING BRINGS INDIAN PROPERTY OWNERS FOURFOLD BONUS FOR URANIUM MINING LEASE

Because of competitive interest in their property, two Indians of the Spokane Reservation in Washington have recently been offered a $317,000 bonus for a 15-year mining lease on their 120-acre tract in comparison with an offer of about one-fourth this amount which they wanted to accept several months ago, Commissioner of Indian Affairs Glenn L. Emmons pointed out today.

The case, he added, emphasizes the significance of the trustee role performed by the Bureau of Indian Affairs and the importance of considering the competitive factor before completing lease arrangements on Indian properties.

Commissioner Emmons' comment was prompted by a bid opening made June 11 at the Colville Indian Agency, Nespelem, Wash. The bids were for mining leases on four allotments of the Spokane Reservation owned by various members of the Boyd family of Indians.

Interest in all of these allotments, especially the one drawing the high bonus offer, has been unusually keen since uranium was discovered on nearby property in the fall of 1954.

All four of the allotments were advertised for bids in June 1955, at the request of the Indian owners. At that time the high bid on the outstanding tract, which is identified as allotment No. 156, was $167,850. The Indian owners, however, refused to sign a lease with the high bidder and insisted that they be permitted to negotiate with the second high bidder who had offered a bonus of $87,100. This negotiation proposal was presented to the Bureau last January and was rejected in favor of further advertising.

"Because of the competitive interest in the property," Commissioner Emmons explained, "the Bureau of Indian Affairs did not accede to the wishes of the owners in this case. As administrators of the Federal trusteeship for Indian property of this kind, we had a clear obligation to act in the best interests of the Indian owners regardless of their own feelings in the matter. We believed strongly that competitive bidding would produce the best results for the Indians and our judgment has obviously been borne out by the results of the recent opening."

Since the Bureau refused to approve a negotiated lease, and the Indians refused to sign with the high bidder, all bids received in June 1955, were eventually rejected and the recent offering was made only after the Indian owners had given the local Indian Bureau superintendent powers of attorney to sign a lease on their behalf with the high bidder.

The high bidder on all four allotments was Dawn Mining Co., of Portland, Oreg., which also holds leasing rights on the adjoining tribal property where the Midnite Mine is located. Bonuses offered on two of the other allotments were $2,500 each and on the third $17,500.

In addition to the bonuses, the Indian property owners will receive annual rentals of $1 per acre and royalties on a sliding scale ranging from 10 to 20 percent of the mine value dry ton of the ore received.

The Congress of the United States Has Made a Most Worthy Contribution in Race Relations by Authorizing the Coinage of Booker T. Washington Commemorative Half Dollars—They Received the Greatest Public Acceptance in the History of Commemorative Coins, Therefore Continued Legislation Is Justified

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 26, 1956

Mr. SCOTT. Mr. Speaker, in endorsing the provisions of H. R. 9677 and other identical bills recently introduced to authorize the coinage of 50-cent pieces in connection with the celebration of the centennial anniversary of the birth of Booker T. Washington, as continued legislation, I have in mind the great service rendered by Booker T. Washington to his own people and to the Nation as a whole.

For the past 10 years a group of people devoted to building good will and headed by Sidney J. Phillips, president of the Booker T. Washington Centennial Commission, has worked very effectively to perpetuate the ideals and teachings of Booker T. Washington—particularly those dealing with understanding and harmony among Americans of different races.

Since May 1954 there have been tensions in our land among the peoples, and between the races—tensions that definitely indicate the need for a program or programs, specifically designed to promote greater good will among our people.

I ask unanimous consent to insert in the Appendix of the RECORD a memorandum from Mr. Sidney J. Phillips, president, Booker T. Washington Centennial Commission, telling why a Booker T. Washington centennal half dollar should be reminted by melting down 100,000 Booker T. Washington half dollars, through continued legislation under the authority of the act of August 7, 1946—Sixtieth United States Statutes at Large, page 863, Public Law 610, 69th Congress—and enacted into law by July 4, 1956, the 75th anniversary of commencement of his work, and which would provide funds for carrying out a nationwide good will building program as a part of the 100th anniversary celebration of the birth of Booker T. Washington.

The Congress of the United States has made a most worthy contribution in race relations by authorizing the coinage of Booker T. Washington commemorative

half dollars—they received the greatest public acceptance in the history of commemorative coins; therefore, continued legislation is justified.

WHY A BOOKER T. WASHINGTON CENTENNIAL HALF DOLLAR SHOULD BE REMINTED BY MELTING DOWN 100,000 BOOKER T. WASHINGTON HALF DOLLARS, THROUGH CONTINUED LEGISLATION UNDER THE AUTHORITY OF THE ACT OF AUGUST 7, 1946 (60 STAT. 863, PUBLIC LAW 610, 69TH CONGRESS), AND ENACTED INTO LAW BY JULY 4, 1956, THE 75TH ANNIVERSARY OF COMMENCEMENT OF HIS WORK, AND WHICH WOULD PROVIDE FUNDS FOR CARRYING OUT A NATIONWIDE GOODWILL BUILDING PROGRAM AS A PART OF THE 100TH ANNIVERSARY CELEBRATION OF THE BIRTH OF BOOKER T. WASHINGTON

1. The Federal Government has issued 52 commemorative coins. The last of these under authority of Public Law 610, was issued in tribute to the character of Booker T. Washington and in recognition of his services not only to the people of his race but to the Nation as a whole.

2. In this, the centennial year of his birth, the Government has issued a Booker T. Washington centennial 3-cent postage stamp, and has also authorized the creation of a national monument out of the plantation on which he was born in Virginia, for the inspiration of all American youth and as a symbol of freedom and opportunity for all, of which America is the outstanding example in all the world.

3. Through legislation continuing the provisions of Public Law 610, a redesign of the Booker T. Washington commemorative half dollar was authorized in 1951 to bear the likeness of George Washington Carver, famed Negro scientist and associate of Booker T. Washington, in connection with the creation of a national monument out of the plantation in Missouri on which George Washington Carver was born.

4. These coins by public sale laid the foundation for the program to preserve that site and perpetuate the ideals and teachings of Booker T. Washington, as demonstrated in a life-time of service devoted to the progress of his own people and the building of cooperation and goodwill between the races in all parts of the country.

5. The public distribution of the Booker T. Washington commemorative half dollars made possible the most successful operation of its kind in history of commemorative coins. The 2,885,271 Booker T. Washington coins outsold by nearly 400,000 the sales of the Great Columbian Exposition issue with all of its vast publicity, unparalleled Federal backing, and the added influence of a world fair (2,498,300 Columbian Exposition coins sold). The Booker T. Washington issue surpassed in sales by nearly 50,000 pieces the next 11 highest issues (combined sales, 2,837,006); and doubled by more than 400,000 the combined sales of the other 39 commemorative coin issues. (Total of the 39 issues, 1,293,000.)

6. The net profit to the Treasury Department from issues of the Booker T. Washington commemorative coins has been nearly one million dollars. But more than any financial yield to the Government is the significant service to the American people of all races and to the cause of democracy the world over in thus paying tribute to a humble slave-born American who set in operation a great program of social and economic advancement for underprivileged peoples throughout the world. This result alone justifies whatever departure is involved in administrative or operating policies of the Government.

7. As a capstone to these activities extending now over a period of more than 10 years the Federal Government is now asked to extend the original legislation of 1946 (Public Law 610) to authorize the reminting of 100,000 coins of the Carver-Washington issue now in reserve in the form of a centennial half dollar to mark the 100th anniversary of the birth of Booker T. Washington. This would finance a continuing program throughout the centennial year, sponsored by the Booker T. Washington Centennial Commission that will revive in the minds of all Americans the program, policies, procedures, and philosophies of Booker T. Washington, both for the continued progress of his people, who represent one-tenth of the population of our country, and for advocating his policies and philosophy of race relations at this critical time in the history of our own country and in the history of the nations of the world.

8. At a time when almost incalculable sums are being spent for the maintenance of peace and the promotion of understanding and goodwill among the nations and peoples of the world, it would be wise statesmanship to encourage here in our country a monument which has demonstrated over a period of 75 years its effectiveness in reducing conflicts between the races here at home and its soundness in promoting the advancement of that segment of our population that has had the longest and hardest road to travel toward the goal of American citizenship.

9. For this purpose the Government is not called upon to appropriate any funds, to set up any organization, nor to pass any new legislation. The Congress is requested only to further extend the original law that there may continue a program whose value has been proven and to which the country has given a support unequaled by any similar movement.

10. To authorize the reminting of these 100,000 coins, the premium proceeds from which shall be used in observing the centennial of Booker T. Washington, will bring to a climax a movement which honors a great American and helps to perpetuate through the media of radio, television, press, and informative literature the aims and ideals to which he dedicated his life.

11. July 4, 1956, will mark the 75th year since the commencement of Booker T. Washington's work, for on this date in 1881 he organized the Tuskegee Normal Institute which was to become the center of his activity. The favorable report by the committee and the enactment and approval of the legislation before July 4, therefore, would be an appropriate tribute on this significant anniversary.

As a feature of the year-long celebration in observing the 100th anniversary of the birth of Booker T. Washington, the Booker T. Washington Centennial Commission will sponsor, July 4, a mammoth picnic and celebration on the United States land use project near Tuskegee which more than 10,000 are expected to attend. We should like then to announce the enactment of law providing for this Booker T. Washington centennial half dollar, the premiums from the sale of which will make funds available to carry on a nationwide good will building program to assist in reducing racial tension based on the philosophy of Booker T. Washington.

Plea for Consideration of Cyprus Issue

EXTENSION OF REMARKS
OF
HON. MARGUERITE STITT CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mrs. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the enclosed strong plea for consideration of the Cyprus issue by the United Nations from the recent grand president of the Daughters of Penelope, Miss Adeline J. Geo-Karis. Miss Geo-Karis is a distinguished attorney and outstanding American in the 13th Congressional District of Illinois, which I have the honor to represent.

The letter follows:

JUNE 14, 1956.

MRS. MARGUERITE STITT CHURCH,
Thirteenth District, Illinois,
Congress of the United States,
House of Representatives, Washington, D. C.

DEAR MRS. CHURCH: On March 26, 1955, I went to Europe as commander of the Daughters of Penelope section of the AHEPA (American Hellenic Educational Progressive Association) annual excursion to Greece. At that time I was grand president of the Daughters of Penelope, which is the senior auxiliary of AHEPA, and has had about 15,000 women initiated into its order, with almost 300 chapters in the United States, Alaska, Nassau, Bahamas, Brisbane (Australia), Canada, and Athens (Greece).

One of my purposes on this trip was to visit the Island of Cyprus. Cyprus is an island midway between Greece and Turkey and contains a population of approximately 500,000 people, 80 percent of whom are of Greek descent. The people of Cyprus by great majorities in the past have voted to be permitted self-rule free from the British yoke which has been enforced upon them since 1878. I met with the State Department of America on March 9, 1955, before I sailed for Europe to ascertain the position our State Department wished us to have on this item, inasmuch as I did not feel we should take any further stand on the question without proper guidance from our American State Department. The State Department told me that it appreciated my interest in complying with the desires of our United States in the matter, and further, that the United States had no intention to hurt the people of Cyprus, but unfortunately, conditions at this time were not favorable to an active assertion for or against Cyprus in view of the Atlantic Treaty. I mentioned then that I planned to visit Cyprus and asertain whether or not the people were as well off as British sources had stated to me. I did visit Cyprus and investigated things on my own. In the meantime, Great Britain made a strong statement to the press in May 1955, that Cyprus had desired, but would never be permitted self-rule or union with Grooce, as Cyprus had desired, through the overwhelming majority of its people. I can truthfully say that conditions in Cyprus today, from my observations, are not the type that will permit the people of Cyprus to wait much longer for a chance to be heard for self-rule or union with Greece before the United Nations. I am afraid that if this matter is not heard soon in the United Nations, and if Great Britain is not curbed in her autocratic rule of Cyprus, there will be much bloodshed, which can easily be averted by a proper hearing before the United Nations. Communist Russia is too sympathetic toward the plight of the Cyprians, which might militate against our interest, if America and her allies do not encourage an expeditious and fair hearing on the Cyprus question before the United Nations. I could not help but feel the tremendous undercurrent existing in the minds of the people of Cyprus. As one Cyprian put it to me when I reminded him that if the British were to leave Cyprus, they would be leaving with their capital assets which might be a detriment to Cyprians, he said: "It is better for us to live 10 years

in deprivation with the rule with which we choose to live rather than 1 year with luxury and under a rule which we do not desire." American prestige has been high in Greece, because the United States has long been considered as being the only country to help destitute European countries without ulterior motive. It hurts me to think that this prestige is endangered by the autocratic tactics of the British Government in re Cyprus.

I do feel that Cyprus is entitled to a fair hearing before the United Nations in order to preserve and maintain our high American standards of fair play and democratic action, irrespective of the size or formidability of the nation asking for such a hearing, and your consideration for such a hearing would be greatly appreciated.

Thank you for your attention in this matter.

Sincerely,

A. J. GEO-KARIS.

Rising Parity

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 28, 1956

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial from the New York Times of June 26, 1956, with respect to farm prices. The editorial calls attention to the fact that the decline in farm prices, which began during the Truman administration, and continued, though at a far slower rate, under this administration, has at last been reversed. In the period between last December and mid-May, the price index for farm products rose 20 points. While farm costs have also risen, the income rise has been greater, with the result that the parity ratio stands today at 85, 5 points above last November's ratio.

It is a source of satisfaction to the entire country that this beneficial trend has begun. As the soil bank becomes a reality, we may look forward, I believe, to the progressive reduction of surpluses and the progressive improvement of our farm economy.

The editorial from the Times follows:

RISING FARM PARITY RATIO

When, just about a year ago, anti-Administration forces began to concentrate their attention and their political activity on the plight of American agriculture they placed particular stress on the "price squeeze" to which the farmer was being subjected. The things the farmer had for sale, it was pointed out, had been steadily declining under the present administration, while he was compelled to pay increasingly higher prices for the things he bought.

It was true enough that, at the time this campaign was launched, farm prices were declining. But as persons who took the trouble to consult the figures frequently pointed out, the decline of farm prices wasn't ushered in with the election of Mr. Eisenhower. It had been in progress for nearly 2 years when the latter took office, and in those 2 years (following the inflation that accompanied the fighting in Korea) had been decidedly more severe than anything since that time.

As for the argument that a year ago at this time the farmer was being squeezed between declining prices for his products and mounting prices of nonfarm commodities: It is true that throughout the latter half of 1955 so-called industrial wholesale prices were advancing while wholesale farm prices were declining. But when we turn to the Department of Agriculture's figures designed specifically to show how prices paid by farmers compare with the prices he receives we find that it was not until December that this upturn in wholesale industrial prices was reflected in the farmer's cost of living. But in December farm prices themselves turned up correspondingly. The result was that the parity ratio (that is, the ratio of farm prices to nonfarm prices), which had stood at 80 percent in November, was still 80 percent in December.

Since that time, however, the farmer has not only held his own, as measured in terms of the parity ratio, but has improved his position measurably. The parity index (which is a measure of the prices he pays, weighted for such elements as taxes, interest and wage rates) rose from 278 in mid-December to 286 in mid-May, or by 8 points. But in the same period the index of prices for his own products rose from 222 to 242, or by 20 points, or 9 percent. In consequence, the farmer's parity ratio has now climbed back to 85.

Eighty-five percent of parity is not, of course, 100 percent. But when one considers that this improvement has now been in progress for 6 months, and that May was the first month in almost 4 years when farm prices weren't lower than a year earlier, one would seem to be justified in the belief that the worst of this postinflationary readjustment may at last be behind us.

Sir Oliver Franks Appraises Mr. Truman

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. UDALL. Mr. Speaker, too often we are so close to our national leaders that we cannot view them in true perspective. The mellowing process of time is the most essential adjunct of the historian, but in the short run the best substitute available is detachment. Therefore, when we try to appraise the worth of men in political life, it is particularly valuable to have the views of observers who were aloof from the political currents of the time.

Such an observer is the former British Ambassador, Sir Oliver Franks, who recently wrote an article about former President Harry S. Truman for a British magazine, the Listener.

I think the judgment of history will be that Mr. Truman was a great President of the United States—

Sir Oliver wrote. I commend this article—in which he explains the reasons which informed his judgment—to our colleagues:

[From the Washington Post and Times Herald of June 24, 1956]

SIR OLIVER SALUTES A "GREAT" TRUMAN

What sort of man is Harry S Truman? Mr. Truman was President of the United States for more than 7½ years. Was he a great President, or average, or an indifferent one?

Do you remember when Mr. Truman ceased to be President in January 1953, and went home to Independence, Mo. A reporter asked him what he did on his first day at home. He replied: "I took the suitcases up to the attic." One gets an impression of simplicity of manner, directness of speech, a practical man who when he has finished one thing gets on with the next.

I saw Mr. Truman from time to time while I was in America and I do not think this is a mistaken impression. At first sight he seems an ordinary man, an ordinary American, an ordinary American from the river valley of the Mississippi and Missouri.

I think the judgment of history will be that Mr. Truman was a great President of the United States. When I say this, I am not thinking of Mr. Truman's domestic policies: I am not competent to judge these. As President and Chief Executive of the Nation, he was also the leader of the Democratic Party. And the Americans take their party politics strenuously; many millions of them were strongly for Mr. Truman and many millions were equally strongly against him.

But I am talking about something different—Mr. Truman as the leader of the American people in world affairs.

So there is a puzzle. If I am right, Mr. Truman must be an extraordinary as well as an ordinary man. What are the qualities of character and mind which mark him out from most of us? We get little guidance from the way in which he came to be President. He was suddenly picked, to his own surprise, as vice presidential candidate by Mr. Roosevelt in the 1944 campaign.

The news of it reached Mr. Truman from the national chairman of the Democratic Party, Bob Hannegan. He was shown a note from Mr. Roosevelt on a page torn out of a scribbling pad: "Bob, it's Truman, F. D. R." And no one then considered the candidate for Vice President as a man likely in less than a year to become President of the United States."

In the last few months, Mr. Truman has published two volumes of memoirs covering the years in which he was President. The first volume, called "Year of Decision," deals with 1945, the ending of the war in Europe and Asia, the birth of the United Nations, the dropping of the atomic bomb, and the Potsdam Conference. Volume II takes in the years 1946 to 1952, "The Years of Trial and Hope," Mr. Truman calls them.

It seemed to me as I read this account of his stewardship that I became clearer about the answer to the puzzle; I began to have a fairly definite idea about the qualities Mr. Truman brought to the office of President. I got it more from the second volume than from the first, perhaps because it was only after 1945, with all its thronging problems, that the President had a chance to develop his positive policies about the postwar world.

I feel, too, that the office brought out the man and that the President grew in stature by living with and facing the responsibilities of that solitary position. Perhaps I have a better recollection of the years of my tour of duty in the United States. At all events, the impression I want to convey to you about Mr. Truman derives from the period of volume II.

It is no good approaching the American system of Government with our own traditional ideas of the collective responsibility of the Cabinet or of the position of the Secretary of State for Foreign Affairs. The American Constitution places on one man, the President, the authority and the responsibility for charting the course of the United States in its complex relations with other countries.

The President must lead and decide. No doubt he is limited in the exercise of these

powers. He is the elected Chief Executive of a democracy, and the Constitution provides plenty of checks and balances. He must lead so that he will be followed, if he is to be effective. In many things he must seek and find the support of the Congress. He must command his policies to the American people. But the fact remains: leadership and positive decision rests with the President.

Mr. Truman, as President, had extraordinary powers of decision. This is not a common gift. The capacity to decide is rare.

The temptation is always to fight the difficult decisions, to fight them off. So often all the possible courses seem risky and unpleasant. It is not easy to get the facts clear to foresee what the consequences of particular decisions will be. Making decisions on foreign affairs in times of crisis is hard work for men of great courage. Mr. Truman has this capacity to decide, with all the endowment of moral courage and sheer hard work that it implies.

Think back for one moment to the decision that lay behind General Marshall's speech at Harvard in June, 1947, Ernest Bevin was an early riser: he heard a report of that speech before breakfast in Carlton House Gardens. He was able to give the Foreign Office the news.

As he listened, the first thought that came into his mind was not that this gave a prospect of American economic help for Europe. He saw that, and grasped the chance with both hands: but first came the realization that his chief fear had been banished for good. The Americans were not going to do as they had done after the first World War and retreated into their hemisphere. They had enlarged their horizon and their understanding of the interests of the United States to take in the Atlantic and several hundred millions of Europeans who lived beyond it. The keystone of Bevin's foreign policy had swung into place.

Bevin was right. All this, and more, lay behind the decision: a view about the Soviet Union and the future course of Soviet policy; a political and strategic judgment on the importance of Europe to the United States; a strong practical desire to help friends who had suffered more, and more directly, from the war than the Americans; a judgment on the extent to which the American people would be ready to tax themselves to give reality to this new American foreign policy in times of peace.

But there were other major decisions, some of which included a judgment on the risks of general war. There was the momentous one in the spring of 1947 about Greece and Turkey, called the Truman Doctrine. "It must," said the President, "be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures."

Then there was, jointly with us, the decision on the Berlin airlift. It was Mr. Truman who took the decision on the American side to negotiate and enter into the Atlantic Pact. He also decided, under the authority of the United Nations, to take the lead in meeting aggression in Korea in June 1950. Later on came the decision to relieve Gen. MacArthur of his command.

As we look back, we can see that Mr. Truman led the United States in these years to an entirely new view of its interests and responsibilities in the world. By now we are accustomed to it all and rather take it for granted. In fact, this astonishing change came about in a series of conscious and deliberate decisions on policy. The President made them. They were then debated and often hotly contested. But the American people followed him. Just imagine anyone in the twenties or thirties telling us that American foreign policy would change and develop like this by mid-century. We should have laughed at him.

What other qualities did Mr. Truman possess as President? I will name three.

First, a broad historical sense. Mr. Truman has read and reflected on a great deal of history, foreign and domestic. "Reading history," he says in his memoirs, "to me was far more than a romantic adventure. It was solid instruction and wise teaching which I somehow felt I wanted and needed. * * * It seemed to me that if I could understand the true facts about the growth and development of the United States Government and could know the details of the lives of its Presidents and political leaders, I would be getting for myself a valuable part of the total education which I hoped to have some day." History, I am sure, gave depth and strength to Mr. Truman's decisions.

Next I put his practical knowledge of American public and political life. He knew, far better than most Presidents, what had to be done to win acceptance for a policy, what steps had to be taken to translate a decision on policy into effective action. This knowledge came largely out of his own experience. He administered Jackson County in Missouri for 12 years, for 10 years he was a Senator in Washington. All this came to his aid when he set about changing the course of the United States in foreign affairs.

Lastly, he inspired loyalty and respect among his advisers. During almost the whole of the time of which I am speaking, President Truman had as his principal advisers on foreign policy, as successive Secretaries of State, General Marshall and Dean Acheson. Both are men of great distinction. They have adorned the public life of their country.

General Marshall and Dean Acheson are very different in type, training, and temperament from Mr. Truman. Yet they were glad to give him wholehearted service. The quality of his decisions owes a great deal to their skilled help.

These, I think, are the qualities which enabled Mr. Truman to lead the United States in this revolution in foreign policy which we now take for granted. Because of them he was able, when the call so unexpectedly came, to become a great President. They do not contradict the first impression.

In the memoirs, when he tells how he made his decisions, he remains simple in manner, direct of speech, a man who likes his fellows and is glad to meet them. It is one of the merits of democracy that it can train ordinary men to develop uncommon quality when called upon to rule.

Address by Edward G. Bern, Vice Presiden, Traffic and Sales, of Panagra (Pan American-Grace Airways) to the World Trade Club of Denver on May 22, 1956

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1956

Mr. DODD. Mr. Speaker, inter-American relationships, both cultural and economic, are becoming increasingly important largely because of the expansion of civil aviation after the last world war. The neighboring countries to the south are no longer remote and relatively inaccessible to Americans; Latin America is now only a few short hours from the United States by air, and the growing volume of commerce between the Americas is impressive.

Many of the Latin-American countries are underdeveloped economically and are now entering an era of tremendous growth and development that is important to the United States. American investment capital and technical know-how will be a vital factor in this expansion, and will be offered in a spirit of friendliness and mutual cooperation. In these days of world tension and conflict, our fine relationship with Latin-America stands out in bold relief, and the prospect for the future is bright.

Under leave granted, I insert a recent address by Mr. Edward G. Bern, vice president of Pan American-Grace Airways:

Mr. President, distinguished guests, ladies, and gentlemen, it is always a pleasure to be here in Denver. But tonight it is not only a pleasure but a great honor to be here at the annual dinner of the World Trade Club of Denver and asked to speak to such a distinguished audience. I have been coming to Denver now for as long as I can remember, and I still enjoy the fresh mountain air, the beautiful scenery, and I like the people.

As I look back now, I remember the first time I came to this lovely city back in 1926. It was to pick up an Eagle Rock airplane which was made right here in Denver. Now, 30 years later, I'm back in Denver and still in the flying business. But this time I'm not buying planes. As a matter of fact, I'm not even buying. I'm trying to sell an idea. And the idea which I would like to get across to you tonight is that we've got to look south—to Latin America.

I have just come back from a tour of practically all of the Latin American countries. I make several of these tours each year. And I can tell you in all sincerity that this continent is on the threshold of one of the greatest industrial and economic booms of our time. It is a new frontier for American enterprise, one that holds as much promise for United States businessmen as the Golden West did for our pioneering forefathers.

No other area in the world holds greater promise for economic development and profitable venture than Latin America. It is a continent bursting with opportunities. Everywhere you look there are new buildings going up, roads being built, mines being dug, jungles and forests giving way to farms and industry.

Latin America is the fastest growing continent in the world. Since the end of the last world war its general economic activity has been expanding at the rate of almost 5½ percent a year.

Almost three times larger than the United States in area, Latin America is growing at such a fantastic pace that its population of 174 million is expected to reach 275 million by 1975. In other 50 years it will hit the 500 million mark. Let's have them as friends instead of enemies.

As most of you here know, we buy and sell more to Latin America than to any other area in the world. We do over $7 billion worth of trade with these countries each year and by 1975 this business will be up to $14 billion.

While these statistics are impressive, the growth and development in agriculture and mining in some of these countries has been just as impressive.

Everywhere industry is on the rise. More of our machinery is finding its way to these countries, much of it is being made right here in Colorado—by the Denver Equipment Co., the Gardner-Denver Co., the Mine &

Smelter Supply Co., and others. And more of her young graduates from your mining colleges are finding their way and their future in Latin America. And we hope that more of them will.

Our own experience in Latin America goes back a long time. The Grace Co., which has a 50-percent interest in Panagra, has been doing business there for over 100 years. Pan American Airways, our other half, was the first United States airline to start scheduled continued service to Latin America. So I think we can speak about this area with some measure of authority.

To give you some idea of the development taking place in Latin America today and the part American industry is playing in it, let me cite a few for instances. Last year, Glenn McCarthy brought in a successful oil well in Bolivia, and the Williams Brothers of Tulsa are building a pipeline from the interior of this landlocked country to the Chilean coast several hundreds of miles away. The Gulf Oil Co. has signed a 40-year contract for the exploration, development, and transportation of oil from Bolivia. United States Steel is mining iron ore in Venezuela. Floyd Odlum is planning to develop Argentina's oil and uranium resources. The LeTourneau Corporation of Texas is building an all-weather highway into the interior of Peru that will open up this area to colonization.

Let me give you some idea of the money being invested by United States firms in Latin America. American & Foreign Power plans to spend more than $500 million on new plants in Latin America within the next 5 years and also install 3 atomic powerplants. The Anaconda Copper Co. and the Braden Copper Co. have announced they will invest about $94 million in mining installations in Chile. W. R. Grace & Co. has already invested $24 million and plans to invest another $40 million in the construction of new chemical and industrial plants in Brazil within the next 5 years. Sears Roebuck has already invested over $33 million in new stores throughout Latin America and is showing these countries how to make local products for their stores that are up to United States standards and can be merchandised in their stores.

These are but a few of the ripples in this tremendous wave of industrialization which is now sweeping Latin America. And while it is true that there are only about half as many workers in industry in this vast area as there are in the United States, and that greater capital investment, more machinery, and improved techniques are generally needed to raise the level of production efficiency, I can't help feeling optimistic about the future.

The Latin American market is changing so rapidly that within the next 20 years these countries will be producing their own automobiles and farm machinery as well as other manufactured goods which they now must import.

Today, there are about 2,000 United States companies doing business in Latin America. And thousands of different United States products are being imported by these countries. Yet, for every American manufacturer who is now exporting to Latin America there are hundreds in the same fields who are not.

On the other hand, foreign competition is getting keener all the time. The British, the Germans, the French, the Swiss, and the Japanese—to mention but a few of the more active nations—are now moving into Latin America with cheaper prices, easier credit terms and immediate delivery. Even the Russians are getting into the act. Only last week, low-priced Soviet-made automobiles and trucks were put on display in Buenos Aires.

The Russian move, of course, is in line with the new Soviet policy of trying to win friends and influence people by suspending the cold war in favor of engaging the United States in an economic and political contest on various fronts. Their motive is propaganda instead of profit so we can expect that they will try to extend their campaign throughout Latin America no matter what the cost. But the competition we are now getting from other friendlier nations doing business in Latin America, while not as dangerous, may be just as serious. As their trade missions roam Latin America spreading good will and picking up orders, United States goods are being replaced by products from these countries with distressing consistency. Yet, in spite of it all, Latin Americans are still buying from us because they have come to prefer American products.

Usually when we think of Latin America we think in terms of what is produced there—coffee, cocoa, sugar, tin, bananas—rather than in terms of what this growing hemisphere needs—machinery, manufactured goods, technical advice and know-how and capital.

You begin to get a better idea of the importance of Latin America as a market for our goods when you realize that some of these countries buy more from us than do our traditional European customers. Last year our exports to Colombia were greater than our sales to either France or Italy. So were our exports to Mexico, Cuba, Brazil, and Venezuela. Mexico and the Central American countries together purchased more United States goods than were imported by Great Britain and all the Scandinavian countries.

I believe that within the next quarter century, the Latin American nations will become one of the most prominent and prosperous areas in the world. God gave them everything. All we have to do is show them how to use it.

Looking not too far ahead, I believe that by 1960 a resident of Denver will be able to drive down the Inter-American highway to Panama, Colombia, Chile, Ecuador, Peru, Argentina, Brazil, and the other South American countries on their vacation. Or if he is in a hurry, he will be able to fly in a 120-passenger jet transport that will enable him to have breakfast in Denver, lunch in Lima, and dinner in Buenos Aires that same evening.

Back in 1924 I made a speech in Kansas City, where I said we would soon be flying planes that would carry as many as 50 people at 30,000 feet. The next day the Kansas City Star said it thought the heat had affected Mr. Bern.

If you think that maybe the altitude is affecting me now or that I'm just daydreaming, just think back 25 years ago and compare then and now. Denver then was several days away from New York, and a trip between Colorado and Peru was practically unheard of. Denver is now the hub of an aerial network of routes that places it within short hours of any key city in this country, and a trip to South America is not so out of the ordinary. It used to take us 11 days to fly from the United States to Argentina back in 1928 when Panagra started operations. We make the trip from New York to Buenos Aires today in only 22 hours.

By 1960, when we get our jets, flying time between these two points will be cut in half, and a flight from Denver to the Argentine capital will be less than 12 hours. Imagine what atomic powered supersonic planes or whatever we will be flying in another 10 or 20 years will be able to do to this distance or to this rapidly shrinking world. It's something to think about.

You begin to wonder if the airplane with its disdain for distances and natural boundaries is not really the instrument of peace that it was intended to be. For in a sense the airlines of the free world, flying peoples of all races and creeds to the four corners of the globe, are bringing us closer to that common goal of a world brotherhood of nations living in peace and harmony. Mass air travel may prove more significant to the destiny of the world than all the atomic explosions put together.

In the brief span of half a century since the Wright brothers invented the airplane at Kitty Hawk, we have seen a development without parallel in the transportation history of the world. In this hemisphere, we have the finest air transportation system anywhere. To continue to serve the American people in the coming jet age, the scheduled airlines of the United States have already committed themselves to buy one and a half billion dollars' worth of new aircraft equipment. Our airports are also being rapidly improved and expanded all over the Nation in anticipation of the expected increase in traffic. The new Stapleton airport which you have here is a magnificent example of this, a credit to your city and a tribute to your foresight. It may someday become an important midwest link with Latin America.

The Latin American countries are today surging ahead rapidly to economic prosperity. As far as we Americans are concerned not only are these countries important to us but the truth is that the United States and Latin America have a mutual interdependence, geographically, historically, and economically, which should be clearly obvious to all of us.

We all know that the dollar shortage in some of these countries have made it necessary for them to impose restrictions which curtail our trade with them. And that this shortage exists because Latin America does not sell enough goods for dollars. What can we do about it?

The answer is obvious. We must buy more goods and services from them. We must help them to find new sources of products for which there is today an unsatisfied demand in the United States, and new markets for products that are not now being imported. We must channel new development capital there. And, above all, we must try to increase the volume of our travel to these countries. We must export more tourist dollars.

Tourism could be Latin America's greatest source of dollars which they need to purchase our goods and machinery. It already is a principal industry in Mexico, Cuba, and some of the islands in the Caribbean area. But only a small percentage of the more than two million Americans who will travel abroad this year know of the many attractions in the rest of the Central and South American nations and the ease with which you can travel there. That's why I took the liberty of bringing copies of our booklet How to Get the Most Out of Your Trip to South America, and had them placed at your table.

In all the years I have been in the aviation industry, I have never received a complaint from a tourist expressing a dislike for the people or the countries. Some of my closest acquaintances are people who have traveled to South America on our tours. And I would also like to add that in all my travels in these countries I have never met a man I didn't like. I know that they feel the same way about us. The junior ambassadors that we brought here to Denver on a goodwill tour of the United States about 3 years ago, have become this city's best boosters in their respective countries. I want to thank you for the courtesy that your city and State extended to these boys.

Most people think of South America as a place to go for oddities and Indians if they have the time and money to afford it and usually take off for some more expensive and crowded retreat in Florida or the Caribbean, when actually there are just as good places in South America to spend a restful vacation for a lot less money.

For instance, very few people know that you can ski high in the Andes in the middle of our summer, or that some of the finest fresh-water and deep-sea fishing can be found in the lakes and coastal waters of

Chile and Peru, practically the year around. And, while we're talking about fishing, let me tell you that 20-pound rainbow trout are not uncommon down there. Senator HICKENLOOPER of Iowa landed a 34½-pound rainbow trout in Lake Titicaca a couple of years ago, and there are reports of even bigger ones. As for deep-sea fishing, the biggest fish ever caught on rod and reel, a black marlin weighing 1,560 pounds, was taken off Cabo Blanco, Peru, in 1953, and practically every gamefish record has been broken in these waters off the coast of Chile and Peru.

It is a known fact that living can be less expensive in most of these countries than in the United States. The airplane has shortened distances in this hemisphere to a matter of hours and made possible 2-week vacations. I would even go so far as to say that outstanding tourist attractions, scenic wonders, an ideal climate, fine hotels, good food, and low prices make most of these countries the best travel buy dollar for dollar anywhere in the world.

We recently introduced year-around excursion fares, which reduce by 30 percent the cost of a round-trip airplane ticket to the so-called far-away lands on the southern continent and puts these countries within the reach of a greater number of American tourists. These low fares bring the price of a complete 28-day package tour around South America to less than $900. They make South America competitive with Europe for the lucrative United States travel dollar. A trip from Denver to Lima now costs less than a trip to Paris and a trip to Buenos Aires is less than a trip to Rome, although the distance to the Argentine capital is much farther.

Our company records show that more people travel to South America for business than for pleasure. It seems that a greater number of our businessmen are touring these countries to investigate the possibilities for overseas expansion of their own interests. To accommodate these groups, we recently devised a Panagra trade tour which gives them an opportunity to look into business possibilities and prospects in Latin America and explore new fields for American enterprise. These trade tours are a practical example of what United States businessmen can do to implement our Government's "good partner" trade policy with Latin America and, in most cases, are considered a legitimate tax deduction. Naturally, they are becoming very popular.

So much so that the trend to mix business with pleasure is catching on and trade groups aboard our planes are now as common as schoolteachers and missionaries used to be. Last year, the chambers of commerce of Detroit, Portland, and Fort Worth, as well as the International House of New Orleans conducted business-development tours of the continent. And such groups as the American farmers tour, the Kansas City Chamber of Commerce, the Miami Trade Mission, and the Canadian businessmen's tour have traveled to South America so far this year, and many more are scheduled to go. I hope we may even be able to get a group from Colorado to make such a trip some day—perhaps even the World Trade Club of Denver.

The fact that more American businessmen are at last becoming aware of the many opportunities for growth and profit which exist in Latin America for the man or woman with vision, imagination, and daring is one of the most encouraging signs in the future development of our trade with this area.

I only hope that more Americans will come to realize that our future economic well-being and political security lies in this hemisphere, and that we must work together with the friendly nations of Latin America if we are to seize upon these opportunities and build a strong foundation for mutual progress and understanding between the Americas.

Brooklyn Navy Yard Builds New "Saratoga"

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 28, 1956

Mr. ANFUSO. Mr. Speaker, the workers employed at the New York Naval Shipyard in Brooklyn, located in my congressional district, have once again shown their great skill in building one of the finest fighting ships ever to be added to our Navy. I refer to the huge aircraft carrier *Saratoga*, which was recently completed at the Brooklyn Navy Yard and which is described as "the largest and most powerful fighting ship in the world."

The people employed at the naval shipyard in Brooklyn have every reason to feel proud of this achievement. Theirs is a very proud record of achievements in skill, and this is only the latest example of it. I want to extend my warmest greetings and congratulations to all those in the shipyard who had anything to do with the construction of the *Saratoga*. As usual, it is a job well done.

Mr. Speaker, I wish to insert a brief article on the subject which is published in the July 1956 issue of the AFL–CIO American Federationist. The article is as follows:

SKILLED LABOR BUILDS THE NEW "SARATOGA," LARGEST AND MOST POWERFUL FIGHTING SHIP IN THE WORLD

American labor and the Navy have been partners for the promotion of the Nation's security from the earliest days of our country. Skilled workers have built thousands of vessels of many different kinds for the United States Navy in the 180 years since the proclamation of the Declaration of Independence. These ships have played a vital role in the preservation of our freedom, and in the atomic age America still must have a powerful Navy, equipped with the finest of warships, to keep our land and the free world safe.

The latest contribution of American labor to the strength of the Navy is the new *Saratoga*, the largest and most powerful fighting ship in the world. The giant aircraft carrier has just begun a series of sea trials, after which will come its shakedown cruise.

A great multitude of skills went into the construction of this super-super-carrier. All the trades represented in the AFL–CIO Metal Trades Department made their contributions. The *Saratoga* was built at the New York Naval Shipyard in Brooklyn. In recognition of labor's vital role in the construction of the world's largest fighting ship, the Navy invited AFL–CIO Secretary-Treasurer William F. Schnitzler to the carrier's commissioning. He was present for the colorful ceremonies, as were B. A. Gritta, secretary-treasurer of the metal trades department, and other leaders of trade unionism.

The new *Saratoga*, longest and largest carrier in the world, would reach, if turned end to end, to the 80th story of the Empire State Building. It is 3 feet longer than the *Forrestal*. It has 4 acres on its flight deck. The *Saratoga's* powerplant embraces enough propulsion equipment to drive more than 100 passenger locomotives.

An especially thrilling aspect of the commissioning program witnessed by AFL–CIO Secretary Schnitzler was a fly-past by 46 Navy jets which will be stationed on the *Saratoga*. The new carrier has a 100-plane capacity and the mobility to make it one of the free world's most versatile bastions of security.

This tremendous fighting ship, built by skilled and efficient American workers, is the new pride of the Nation. Once again labor has made a great contribution to the strengthening of our country's defenses.

Exchange Programs

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, June 28, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial that appeared in the Minneapolis Morning Tribune of June 26, 1956. It is a very timely editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THOSE EXCHANGE PROGRAMS

Foreigners often have strange ideas about American institutions, thought, action and people. We, too, have misconceptions about many foreign lands.

One of the very best ways to correct these erroneous impressions is to have more foreigners travel and study in this country, and to have more Americans go abroad for the same purpose.

That is why we applaud the report of Dr. J. L. Morrill, president of the University of Minnesota, who calls for an "upgrading of United States exchange activity in governmental, congressional, American public and foreign consciousness."

He wants to raise cultural and technical exchange to the level of "a major instrument of American influence and assistance in international affairs."

After his study of the problem, he also recommended better coordination between the programs currently sponsored by two agencies of the Federal Government: The International Educational Exchange Service (IES) which is under the State Department, and the International Cooperation Administration (ICA), an independent agency.

The two agencies are responsible for an impressive number of exchanges. This year more than 14,000 persons will be exchanged, while next year's plans call for participation of almost 20,000. It should be noted that more than twice this number, more than 40,000 a year, take part in private exchanges and those financed by foreign governments.

As Dr. Morrill points out, a government can augment private exchanges, provide exchangees that meet the needs of other countries, and give foreign nations the sense of helping the United States.

With all this we agree. Yet we want to issue a word of caution in raising the exchange activity to a new eminence. We must not come to regard it as a method of propagating democracy. The moment we tell students and scholars and technicians we send abroad that they are expected to sell democracy, we will be stooping to the level of the Communists.

Instead, we must put our faith in free men who are interested in the pursuit of knowledge, if only for its own sake. We're confident that democracy has much to gain and nothing to lose from such a policy.

Increasing Rates of, and Liberalizing the Basis for Payment of, Non-Service-Connected Pension and Service-Connected Compensation

SPEECH
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7886) to amend part III of Veterans Regulation No. 1 (a) to liberalize the basis for, and increase the monthly rates of, disability pension awards.

Mr. JUDD. Mr. Chairman, I certainly favor more adequate compensation for disabled veterans, their widows, and dependents. The bill sponsored by the Disabled American Veterans, H. R. 11310, was such a bill and I long ago urged that it be reported out favorably. That bill would have been passed promptly by the House and the Senate, signed by the President, and the benefits made available months ago to those who everyone agrees are the first responsibility of a grateful Nation.

But, unfortunately, action on H. R. 11310 was delayed and its provisions in substance were incorporated into H. R. 7886, a bill which then provided increases in pensions or increased compensation for veterans with total and permanent disability, but which, in addition, introduced a wholly new concept into veterans' legislation, namely, that every veteran upon reaching the age of 65 years shall be deemed to be permanently and totally disabled, and therefore eligible for a pension, provided his annual income is less than $1,400 if he is unmarried, or is less than $2,700 if he is married or has minor children.

All the provisions granting increases in the compensation to veterans with service-connected disability, and their widows, have been stricken from the bill. Remaining before us is only the shell of H. R. 7886 as reported by the House committee. As it now stands, it contains the worst feature of the original bill and none of its best features.

Mr. Chairman, I do not believe it is sound legislation or fair to our neediest veterans to make such a departure from the principles and practices long followed in veterans' legislation, as the remnant of a bill makes.

The assertion in it that every war veteran upon reaching the age of 65 shall be deemed to be totally and permanently disabled is plainly contrary to fact. Furthermore, it is unfair to veterans who actually are disabled. If we believe we ought to give special help to every needy citizen of 65 who is a veteran, let us say so directly and not adopt the fiction that he is totally and permanently disabled.

Mr. Chairman, the only real issue left before us today is whether we are to follow a concept that any person who served 90 days or more during a war, and who sustained no injury or disability as a result of this service, should nevertheless, when he reaches the age of 65 years, even though hale and hearty, be treated differently from other citizens of equal age and equal or greater need.

It has always been my own philosophy that veterans' benefits are a means of trying to equalize, as much as possible, the sacrifices that result from wartime military service. We should always give service-connected disabilities the highest priority among programs for veterans and the rehabilitation of disabled veterans and their reintegration into useful economic and social life should be our primary objective. Successful readjustment generally places the veteran on a postwar footing equal to or better than that of persons who were not in the service. There is then no need to treat him throughout the rest of his life as a citizen with either special handicaps or special privileges.

So, Mr. Chairman, I must vote against this mutilated bill, not because I don't want to provide more suitably for all veterans in need, but because this bill simply will not do what is needed.

It would be a cruel deception if any veteran needing more assistance from his Government, were led to believe passage of this bill today will provide it. The Bureau of the Budget has plainly stated the bill is not in accord with the views of the President. Can anyone believe the President will sign a bill that provides new pensions for veterans not disabled at all, and larger pensions for veterans not disabled in war, and no increase at all in compensation for veterans with disabilities which were sustained in war?

For all these reasons I sincerely believe that the bill should go back to the committee for a re-do and be brought back in a form that can be passed, not only by the House, but also by the Senate and signed by the President. Our veterans who have sacrificed so much for our country's welfare deserve this special effort to give them a fair bill. I am sure the distinguished chairman of this committee, Mr. TEAGUE of Texas, as true a friend as the veterans can ever have, will try again to get his committee to bring out a bill that will be adequate and sensible and can become law. I could not look the veterans in my district in the face if I were to vote for the remnants of H. R. 7886, which helps only those who did not suffer any disabling injury or illness in war.

Top Dairy Scientist

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 28, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial that appeared in the Minneapolis Star of June 1956, paying tribute to Dr. William G. Petersen, a dairy scientist, of the University of Minnesota.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOP DAIRY SCIENTIST

When dairymen the world over want advice about the care, feeding, or understanding of milk cows they usually try to contact Dr. William G. Petersen, University of Minnesota professor of dairy husbandry.

Chances are he visited their country at least once since he joined the Minnesota staff in 1921. And if he did he left behind a lasting impression and a batch of new ideas for them to try. In most cases they either reduced workloads and/or added to profits.

Dr. Petersen is both a colorful teacher and an unorthodox researcher. He once constructed a mechanical cow that gave real milk and helped perfect techniques for transplanting unborn calves to the wombs of foster mothers. Last fall, he and Dr. Berry G. Campbell of the university's medical school announced their principle of "protective milk" which holds that humans may gain immunity to certain diseases by drinking milk from vaccinated cows.

It is not surprising, therefore, to learn that Dr. Petersen has been named the Nation's outstanding dairy science teacher of the year by the Milk Industry Foundation. The designation is richly deserved.

We Cannot Buy Friendship

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. MILLER of Nebraska. Mr. Speaker, I ask permission to revise and extend my remarks in the Appendix of the RECORD and to include an editorial from the Omaha World-Herald dated June 24, 1956. The Omaha World-Herald is one of the leading newspapers in the Midwest and I find this editorial timely and sobering at a time when the Congress is considering the appropriation of approximately $5 billion for foreign aid. I commend it to my colleagues for reading.

The text is as follows:

WHY THEY HATE AMERICA

Ten years ago the United States was the most powerful nation in the world, and also the most admired.

It had shown unparalleled generosity to its conquered enemies as well as to its allies. It had embarked on a program of rehabilitation the like of which the world had never seen.

Insistent upon ending colonialism, America had virtually forced the British out of India, Burma, and Ceylon and blasted the Dutch out of Indonesia.

Great, good, kind Uncle Sam.

He wanted nothing for himself except a peaceful world. For others he wanted freedom, justice, and prosperity.

And he was prepared to give away vast amounts of America's substance to achieve these noble goals.

That was 10 years ago. Now look.

The United States has followed the program faithfully. It has flung its armies and airbases around the world to protect the peace. It has given away upward of $50 billion to the deserving and the undeserving.

And what is the result?

The best-phrased answer we've seen comes from a Frenchman, Raymond Cartier, whose article translated from the magazine, Paris-Match, is making quite a stir in Washington and wherever else its contents have been made known. The title of his piece is, "Why Does the World Hate America?"

Mr. Cartier shows that the hatred is universal and comes from the people.

America is vastly more unpopular in India than is the once-hated Britain, says Mr. Cartier, and he quotes Nasser of Egypt as having told him so personally. When Mr. Cartier asked Mr. Nasser what he thought of Americans, the Egyptian strong man replied with outthrust chin that he liked American movies.

Country by country this Frenchman goes down the list of nations that hate America. Indonesia. Japan. Even South Vietnam, Korea, and Formosa. South Africa, where the whites curse America for its anticolonialism and the blacks blame it for its segregation. The Near East, where the Arabs abominate it and the Jews accuse it of meanness and egotism. Latin America, which has not a single country where the anti-Yankee spirit does not predominate. Even Canada—and, of course, Europe.

"It is hard to say whether anti-American sentiment is stronger in England or in France," says this French writer. "In France it is aggravated by Communist influences and at present overexcited by the events in north Africa; but in England it is fed by the intense frustration of a nation recently supplanted in its world role."

And what do American officials think of this universal anti-Americanism? Publicly they dismiss it, says the French writer. They argue that America's wealth makes unpopularity inevitable. Privately, says he, American officials know that America is despised the world around.

"Three idelible facts," says Mr. Cartier, prejudice America before a majority of the world's people:

"Americans are white. They are rich. They are the richest of the white peoples."

Mr. Cartier lists these results of America's postwar policies:

"The decline of every liberated country into communism or neutralism; the dizzy growth of anti-Americanism in decolonized Asia; the fact that liberated north Africa will join an Arab League that is practically Moscow-oriented; the further fact that the loss of north Africa will push France itself—humiliated and desperate—into the Soviet system."

The writer concludes:

"There would be less anti-Americanism in the world if America abandoned its philanthropic aspirations, its vocation of Santa Claus, its transcendental morality, all its missionary trappings, all its Boy Scout gear, and if, at last, it followed openly and intelligently the policy of its own interest."

Mr. Cartier might be surprised to know how many Americans agree with him.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Clements, Humphrey, Scott, Symington, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Johnson of Texas, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Anderson, Douglas, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Wofford, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Laird, Scott, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Wofford, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Neely, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Lehman, Kennedy, McNamara, ———, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Pastore, Monroney, Hennings, Scott, Neuberger, Laird, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Wofford, ———, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton, Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

The American Dilemma

EXTENSION OF REMARKS
OF
HON. WALTER F. GEORGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, June 29, 1956

Mr. GEORGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Hon. Louis Johnson, prepared for delivery at Clarksburg, W. Va., on Tuesday next. I have asked permission of Mr. Johnson, former Secretary of Defense, to have his address entered in the RECORD at this time, because it is a singularly strong statement, both on our national-defense program and our foreign-aid program. It is an exceedingly able presentation with reference to the Defense Act, as well as the Mutual Security Act.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN DILEMMA

(Speech of Louis Johnson at luncheon meeting of Rotary and Kiwanis Clubs, Clarksburg, W. Va., July 3, 1956)

It is good to be here at this Independence Day celebration speaking in the house of my friends, Rotary and Kiwanis, in my hometown, Clarksburg, W. Va.

One hundred and eighty years ago tomorrow the battle for American freedom and independence began in earnest with the signing of the Declaration of Independence and its adoption that day by the Continental Congress. Based on the Declaration of Independence, our forefathers created "a design for freedom and better living." We have come a long way in this 180 years since July 4, 1776.

I could give you today a wonderful picture of the American economy, but instead I want to talk to you about the most serious dilemma of our time, not the American economy particularly. There are some bad spots in the total picture of our economy. Nevertheless, the outlook for the next 10 years is full of great promise. In the economic picture there are three particular things that disturb me:

1. There is, of course, no excuse for a chronic depression in agriculture.

2. Nobody can justify the fact that several million American families continue to live in conditions of poverty.

3. I am convinced that something must be done to strengthen the economic position of the small private enterpriser—the individual businessman—whose independence and hard work have done so much for the character of our country.

But the overall picture indicates that we ought to be able to handle these three major problems. With a continually growing population, with a continually expanding capital investment, with a continually increasing industrial productivity and a purchasing power that grows greater year by year, our national economic system ought to be and is able to solve these problems.

Our rate of growth is almost bewildering. Last year our total national product was approximately $390 billion. By 1957 we ought to have a gross national product of $600 billion. This means a total output of goods and services 50 percent greater than this booming economy that we have today.

If our economy is able to distribute this great prosperity fairly so that every man, woman and child shares in it, we should have a standard of living in this country beyond anything that man—even here—has ever imagined for himself.

Yet this great vision of the future is overshadowed by an enormous question mark. American business will not decide for itself whether it will go ahead toward its dazzling future. Neither will American labor nor American agriculture. The deciding factor lies not in our economic efforts here at home but in something else—something beyond our borders.

It is the international situation which will determine whether or not the American economy reaches the heights of which it is capable. Our future depends upon what men say and do in London, in the Kremlin, in the sandy wastes of Arabia, and in the rice fields of the Far East.

This is a difficult fact to master.

We are conscious, of course, that international wars in recent years have had their effects on the American economy. We have seen our national production stepped up by the forced draft of the Second World War. We have seen the tremendous effect on our economy of the defense program necessitated by the Korean conflict and the cold war. We have seen our price levels and our production levels changed by these upheavals.

And on the other hand, we have seen the flourishing economies of other countries laid waste by the effects of war. Fortunately, we have been able to escape the devastation of our industrial plants and the disruption of our economic system, but we know that such things are a possibility in the world as it is today.

Obviously, if there should be a war—and this time it would be an atomic war—all projections and predictions about the growth of the American economy would have to be suspended.

Furthermore, we must realize that even if we do not have another war, large or small, the international power struggle can still be a controlling influence on our domestic economy.

I think this is rather difficult for the man in the street to understand. There seems to be a growing opinion that if the Russians do not use the atom bomb we have nothing much to worry about. We have looked so long and with such dread at the prospect of atomic conflict that when this vision fades we begin to think all our troubles are over.

But it is quite possible that our fanatical adversaries could strangle the growth of our economy without dropping a single bomb.

Sir Winston Churchill has pointed out that there may be a kind of security in the balancing of atomic armament. With both sides possessed of weapons capable of total destruction, he argues, neither side will dare to use them. If there were one weapon of atomic destruction and one way of using it, this might be true, but the world of atomic armaments is not a simple one nor a static one. The world of atomic armaments is a terrifying whirlpool of abstract science, advancing technology and mass production. It is continually generating new possibilities of its own. The arms of last year become obsolete before they have been tested—perhaps even before they have been taken off the drawing boards. Under the impact of untried new weapons strategic plans are shuffled and changed, discarded and drawn up afresh. Basic concepts concerning the organization of our Defense Establishment suddenly appear to be outdated. Under the pressure of defense needs scientists develop new weapons, new measures of defense for a counterattack, new ways of delivering explosives to the enemy. What will come out of this turmoil no one can say. But it is safe to predict that we have not seen the end of these developments. It is safe to say that new, more terrible and more totally destructive possibilities still lie within the womb of science.

And from this we can conclude that the nation which reaches these possibilities first may be able to impose its will on other nations which lag behind in the race.

The atomic stalemate is an illusion or at least only a temporary stage of development.

This does not mean that either side will necessarily have to use these weapons. It does mean that the nation which has the newest and most effective of these devices will have a diplomatic, a political, and a psychological advantage over the nation that does not have them.

To descend to a simple metaphor, the modern weapons which a nation possesses are something like a corporate balance sheet. They show the relative standing in the competitive race. If my competitor reveals substantial liquid assets and a generally strong position in his balance sheet, I will be less likely to undertake a price war with him or seek to invade his territory. So it is with nations. If the enemy has weapons that will wipe us out at a moment's notice, we are not likely to undertake a course of policy that will lead us to a showdown with him. Similarly, the smaller nations for whom survival is a prime consideration, will not wish to sign with the side that may lose. The small nations will not wish to be under the protection of a great power which at the moment of armed collision might not be able to protect them successfully.

In short, even if atomic weapons are not used, their existence will influence the diplomatic and political conduct both of the nations which possess them and the nations which do not possess them.

I am convinced that we can look back over the history of the past 10 years and interpret it in the light of the armaments possessed by the United States and the Soviet Union respectively. At the conclusion of World War II when we dissolved our wartime coalition and dismantled our own forces so rapidly and so imprudently, the Russians adopted an attitude of truculence and a policy of diplomatic pressure on all our allies. They had the ground armies then and our side had none. And they used every kind of pressure short of outright aggression. They were restrained from outright conflict by the fear of our supremacy in the atomic field. But at the end of 1949 the Russians set off their first atomic explosion and it was little more than 6 months after that when a Communist nation flung down the gauntlet of aggression. Then began the tremendous new arms race in which we re-

dressed, somewhat, the balance of conventional arms and managed to keep our lead in atomic power. As a result, Russia began to lose in the competitive struggle, and devised a change in tactics. Today Russia is using more conciliatory tactics, but at the same time it has begun to pull ahead in the atomic race, making up rapidly for its inferiority in past years. This combination of conciliatory tactics and new and undeniable atomic power is causing a great change in our diplomatic position today.

If we become manifestly inferior in effective military power to the Soviet Union, our situation will be precarious and our economic future will be in mortal peril. By a combination of coercion and cajolement, the Soviet Union could bring more and more nations into its orbit and impose upon them the anti-American policies which it already imposes on its satellites. We in turn, with inferior power, would be forced to watch helplessly as our friends and allies were drawn away from us. With each defection from the Western alliance the Soviet Union would grow stronger, and it would have more tempting benefits to hold out to our remaining allies. Already, the Soviet Union holds out the trading area of the Communist countries—geographically a sizable market—as bait to bring neutral nations into its trap.

Under such pressure, military, economic and diplomatic, our circle of friends would get small and smaller and eventually, we might be driven into that fortress America, which some of our people, unfortunately, seem to be longing to experience. This would not be a situation which we brought on ourselves by accepting the concepts of isolationism. It would be a situation in which we were isolated—isolated by the skillful maneuvering of the Soviet Union.

I do not say that all these consequences would flow from a change in the balance of arms, but I do say that a marked change in the balance of arms to our disadvantage could set such a train of events in motion.

The economic effects of such isolation could be most serious. We might find many of our exports curtailed or shut off. We would probably find it impossible to carry on the import of those raw materials and strategic items which are essential to our prosperity and our defense. In all probability, if we were driven into such an isolated position, we would be unable to maintain our rate of uninterrupted economic growth.

But worst of all, worse than any economic consequences, would be the shattering impact of such a catastrophe on our moral values. We would stand alone believing in freedom, against a world overcome by communism. The pressures on us to sacrifice our basic values and to go over to the Communist way of thought would be intense. Throughout the world, Communist persecution would be raging, and we would be powerless to step in and stop it. Soon the tentacles or Soviet power and pressure would try to reach into our own society to stifle criticism, corrupt and coerce our political freedoms, and undermine the citadel of freemen.

The prospect is a horrible one, and at the present time it seems so distant as to be almost ludicrous. This is the reason perhaps why it is so difficult to arouse people from their complacency and to make them realize that we are facing a double-barreled danger in the growth of the Soviet atomic power and the success of the new Soviet diplomatic offensive.

If we are to avoid these calamities, we will have to keep on with our own development of atomic weapons and countermeasures, and with the maintenance of multiple-purpose Armed Forces. We will have to keep on—not in a halfhearted way—but at the peak of our energy and resources—pressing scientific possibilities to the utmost.

This will be expensive. It will make it necessary to continue Government spending at a rate of scores of billions of dollars annually. However, this is not all that we will have to spend if we are to keep the Soviet threat from overcoming us. We will have to continue to give technical assistance and economic aid to the undeveloped and uncommitted nations. If we do not do this successfully, the Soviet Union will. And the aid they give may very well draw the millions of Asia and Africa into the Communist orbit.

We need not think that every dollar of our economic aid will bring a corresponding dollar's worth of political advantage to us. Neither can we be sure that it will all be well spent. We can only be sure that if we do not spend it—if we do not add this effort to our military efforts—the Soviets will forestall us here too, and turn these people into our enemies. In all probability over the decade ahead, we will have to increase our foreign nonmilitary spending. I believe we will have to develop a new philosophy for it and new instruments for dispensing it, but I do not think that we can diminish the quantity of it.

Some people I know feel that we cannot sustain the present levels of military spending and foreign-aid spending without grave damage to our national economy. It is true that these items make up the largest part of our national budget. It is true that they are expenditures which we do not like to make. It is true that if we did not have to make them, our taxes would not be so high. Nevertheless, these expenditures are not injuring our national economic system. So long as we keep growing—so long as we keep increasing our national output by 3 to 5 percent a year, we need not fear that the expenditures for armament or for economic aid will injure us.

If, however, we should so mismanage our domestic affairs that we had another depression, then these expenditures might become a serious burden.

I think it is safe to say that for an indefinite time we can continue to keep pace with the Russians in the arms race, and to win new allies for the cause of freedom, without injuring our own national prosperity.

The prospect of an arms race reaching indefinitely into the future is not, however, a happy one. It is in fact most frightening. The world cannot be safe so long as the power to cause instantaneous intercontinental destruction lies at the fingertips of a group of dictators.

We have no reason to assume that the leaders of Russia are the best judges of their own national interests. Hitler was a madman and preferred to destroy his own country rather than surrender. Stalin, by the admission of his own intimates, was a paranoiac, in whose presence no one felt safe. Are Khrushchev and Bulganin likely to prove, over the years, wiser and more reliable? What about the men who replace them? Once such men have the power of push-button destruction, the world is not safe.

How long can this great world civilization of ours exist, if its existence is at the mercy of such men? How long can the welfare of mankind hang by the thin thread of sanity of a few power-hungry tyrants?

Certainly this is the basic question. This is the question human society must answer. There must be disarmament ultimately. There must be international regulation and control of this terrible menace ultimately.

How we can achieve this I do not profess to know. Perhaps it can come about only through the creation, ultimately, of international organizations of a power and effectiveness which we have never beheld before. Time may hold some of the answers. Time with its eroding effects may be able to bring about such changes in the Soviet system that mankind can achieve a lessening of the threat which now overshadows it. But time alone will not accomplish these things. We must have men and policies—we must use our resources and our brains—to achieve freedom from the overshadowing danger of destruction.

If we can bring that about, or perhaps I should say when we bring it about, for I have confidence that this can be achieved—then we shall really be able to see what the American economic system can do. Then our total resources and our total capabilities could be released for the welfare of mankind and for building up of the spiritual and intellectual life of men everywhere. That is a vision so wonderful, so full of possibilities for good, that it stuns the imagination. I will leave its articulation to prophets who are more gifted than I. But it is the great incentive to spur us on. It is the bright picture, more real than any of the Utopias of the past, that can inspire us to shoulder our tasks, and with faith, guided by hope, make our way through the dangers of this troubled present time.

Atomic Power Program

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, June 28, 1956

Mr. ANDERSON. Mr. President, Mr. Robert McKinney, editor and publisher of the Santa Fe New Mexican recently delivered three addresses, the first before the Overseas Press Club, New York City, on May 17, 1956; the second, before the National Conference on Uranium and the Atomic Industry of the Atomic Industrial Forum and Denver Research Institute, on June 25, 1956, in Denver, Colo., and the third, on June 27, 1956, at a roundtable discussion on the civilian use of atomic energy, at the National Governors Conference.

I ask unanimous consent that the first address which I have mentioned be printed in the Appendix of the RECORD.

I am advised by the Public Printer that the manuscript is estimated to make approximately 2⅔ pages of the CONGRESSIONAL RECORD, at a cost of $214. I ask unanimous consent that the text of the address be printed in the Appendix of the RECORD, notwithstanding the fact that it overruns the limit.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PEACEFUL USES OF ATOMIC ENERGY AS AN INSTRUMENT OF INTERNATIONAL RELATIONS

(Address to Overseas Press Club, May 17, 1956, New York City, by Robert McKinney, editor and publisher, Santa Fe New Mexican, chairman, citizens' panel, which reported to the Joint Congressional Committee on Atomic Energy on the impact of the peaceful uses of atomic energy)

When I first sat down to outline what to say to you today, I began by wondering whether I dared stand before a captive audience of hard-bitten newspapermen to say what anyone could read in a 100-page report on sale at the Government Printing Office.

While still wondering, I found myself a few days later also in a captive audience of newspapermen. In Washington, the American Society of Newspaper Editors heard the

President of the United States propose the establishment of a nonpartisan citizens' commission to review our international policies and to recommend additional ways and means of meeting the Soviet threat. The President also made specific point of the fact that any person who sees or believes he sees some of the basic factors in the problems facing the Nation, and who has some little ability or opportunity to explain them to others, has the responsibility to do so.

A few hours earlier on the same day, the editors' convention had an example of some of the confused thinking on the use of atomic energy as an instrument in international relations which the country is getting from men to whom we look for leadership. Adlai E. Stevenson said to us, and I quote, "We should give prompt and earnest consideration to stopping further tests of the hydrogen bomb."

Now, my own newspaper, the Santa Fe New Mexican, supported Governor Stevenson in 1952. I even campaigned for him myself. But I was struck by the fact that proposals such as this are not responsive to our need for new ways and means to meet the Soviet threat. This particular proposal comes from the illogical assumption that, because the testing of nuclear weapons may be related to a warlike use of atomic energy, the cancellation of nuclear weapons tests is a peaceful use of atomic energy and, therefore, a fitting instrument of international policy.

The facts of life are different. Our present narrow margin of nuclear weapon superiority—which shields the free world against Communist world conquest—is entirely due to our vigorous atomic energy research and development program. This program includes, as a necessary ingredient, design and test of weapons. Tests, like all research, do expand the basic body of nuclear knowledge from which flow both peaceful and military applications. Statements like this from Governor Stevenson and others, while well intentioned, are a misuse of atomic energy—a misuse for the manufacture of headlines and the consumption of newsprint.

These two experiences crystalized for me the idea that my purpose here today should not be to tell you the method and findings of our whole study on the impact of the peaceful uses of atomic energy. My purpose should be, I decided, to tell you how some of the conclusions we reached in the international section of our report can help provide important ways and means for dealing with those problems which the President mentioned and with which you overseas reporters are so particularly concerned.

MOST DECISIVE PROBLEM

So for a few moments I am going to discuss atomic energy in the light of what is the most fundamentally decisive problem now facing the United States. Simply stated, the problem is this:

How can we put a stop to deterioration of America's position of leadership abroad? And how can we restore the faith that the rest of the world only recently placed in the United States as a symbol, not only of material but also of moral progress?

I believe that this deterioration can be stopped, this faith restored through the peaceful uses of atomic energy. I firmly believe this for one simple but fundamental reason. The reason is that the peaceful uses of atomic energy have completely captured the imaginations of the peoples of the world.

And this fact leads to two fundamental propositions:

The first proposition is this: That the peaceful development of atomic energy gives the United States an opportunity such as we never had before to win respect, good will, and friendship throughout the world.

The second proposition is: That we must grasp this opportunity now—and by now I mean immediately—because we will never have it again.

These are pretty broad statements. You may feel that they represent an extreme point of view. But to me they are the only conclusions which can logically flow from the demonstrable facts.

For the first of these demonstrable facts, let us look at where the United States stands today in relation to the uncommitted nations of the world.

In Ceylon an election is held and it is assumed that the government earnestly friendly to the United States will be reelected. But this government is soundly beaten by an opposition which says that, because it is anticolonial, it must therefore be anti-American. Coming elections in Iceland, Nepal, and elsewhere seem to be shaping up the same way.

In the Middle East we painfully build a structure of military alliances shored up with conventional economic aid, along the so-called northern tier, feeling sure that the Arab region to the south is safe. Suddenly we find the Arab nations turning against us, and the balance of power in the area tipping toward Russia.

You, here, are reporting other new and unexpected examples every day. We are learning the hard way that the expensively and painfully won good will of governments lasts no longer than the governments themselves last. Only rarely does it carry over to the people.

That is true not only of former colonial countries now going through the growth pains of national political and economic independence. It is true also of many established, industrialized nations.

It is true of countries with which we have formed defensive alliances and to which we have given billions in military aid. It is true of nations to which we have given billions in economic aid. It is a fact which has become increasingly clear in just the last few months since the Russians made a scapegoat instead of a saint out of Stalin, turned the guillotine into a maypole, and put on the market their new tactic of service with a smile.

A NEW ELEMENT

So the first demonstrable fact to which I would like to call your attention is this: We need some other element—something besides defense alliances and military aid, something besides conventional technical and economic assistance. We need it to convince the peoples of the world, as well as their leaders, of what we have been trying for the last decade, but so far have failed to convince them of—that the United States is truly their friend and deserves their respect and trust.

To me, the second demonstrable fact is that the peaceful uses of atomic energy can provide the new element, the new ways and means we need. But the whole subject of atomic energy is one which to most Americans is a kind of hazy, indistinct land of pie in the sky and wishful thinking.

Permit me to tell you why I think the peaceful uses of atomic energy have such a great potential as an instrument in international relations.

A year ago I had a call from my neighbor, Senator CLINTON P. ANDERSON, chairman of the Joint Congressional Committee on Atomic Energy. He asked me to take the chairmanship of a nonpartisan, nine-man citizens' panel which was to look into the progress being made in peaceful atomic uses and was to measure their impact on the Nation and world.

Although I did not realize it at the time, when I took this job I was getting the opportunity for an education so broad, so intense, that it has amounted almost to a revelation.

Now I am not trying to set up as an atomic authority after a 9 months' course. I am only a country newspaper publisher. But the work of the panel brought to bear the cumulative thinking of several hundred authoritative individuals and organizations in close to a hundred special studies.

From our research study group, led by Nobel prize winner, Dr. I. I. Rabi; to our medical study led by the eminent authority on atomic medicine, Dr. Shields Warren; to our agricultural study led by the Under Secretary of Agriculture, True D. Morse; to our power study composed of 40 outstanding authorities in all forms of energy; we tried to bring to bear the collective knowledge of the whole Nation on the probable impact of the peaceful uses of atomic energy at home and abroad.

Here are just a few of the highlights of peaceful atomic uses that these experts brought out:

Atomic electric power is here. But it will not be until the second or third generation of atomic powerplants is built that they will be broadly competitive in the United States.

In agriculture, new plant strains have already been developed through atomic radiation—barley, oats, wheat, corn, and peanuts—to name just a few. These new strains yield more, are better adapted to mechanical harvesting, and better able to resist drought, bad soil, pests, and diseases. One of the most damaging pests to cattle raisers—the screwworm fly—has been eradicated from an entire Caribbean island in a test of a new atomic radiation technique.

QUIET REVOLUTIONS

Hundreds of atomic applications are working quiet revolutions in almost every phase of American industry.

In medicine, 2 radioactive isotopes are now accepted pharmaceuticals—50,000 patients have already been treated with radio isotopes—and half a million others have been given atomic medical diagnosis.

Atomic food preservation has been brought to the point where irradiated foods are being tested on human beings.

Although there are many other examples, these early accomplishments only scratch the surface.

Agricultural researchers foresee the day when we can tailor-make plants for specific growing conditions in specific regions; when we can breed color and taste and shape into our food products to suit consumer preferences; when we may understand the mysterious process of photosynthesis by which plants make proteins and carbohydrates.

Within 1 or 2 decades, a large part of our oceangoing tanker and ore carrier fleets may be running on atomic power.

Within 25 years we may be producing more electricity in this country in atomic powerplants than we produce today from coal, oil, and falling water.

These predictions may sound fantastic but they do not come from Sunday supplement writers. They are conservative forecasts by hardheaded men. And I have been careful in relaying these things to you not to inject into them the coloring of my own enthusiasm.

As the panel's study progressed, I came to recognize a tremendously important facet of this complex subject of atomic energy which so far has received little attention.

This facet is that it is precisely those countries which have the most need for peaceful atomic uses now that have the least chance of getting them by themselves anytime soon.

Let me be specific. Atomic techniques can make farming productive in many areas where today it is either impossible or, at best, marginal. In the United States farm surpluses are serious problems. Atomic techniques which would add to these surpluses are certainly not essential. But in many other countries, in North Africa, Egypt, India, and the Far East—hunger—the stomach instead of the head—is the only influence which motivates hundreds of millions of people.

A NEW HUNGER

There is another kind of hunger—the hunger of nations for fuel and power, the hunger which comes from not having enough energy resources. We in America have never felt that hunger. Even without atomic energy, we will not run out of coal or oil in our lifetimes. In the energy-short economies of the rest of the world, however, atomic energy can make the difference between healthy growth and arrested development.

Right here is the crux of what I want to get across to you today. It is in this imbalance that I see our challenge and our opportunity. We in this country are indifferent, sometimes hostile, to the promise that atomic energy holds. But to the rest of the world, atomic energy is the only real chance for a good life in this generation.

Whenever the United States drops some hint that we are ready to give atomic aid, the world response has surprised even those few Americans who fully appreciate the power and scope of peaceful atomic uses.

There was initially such a response to President Eisenhower's atoms-for-peace plan, announced over 2 years ago. There was such a wave of enthusiasm when the United States pulled back the curtain of atomic secrecy a little bit at last summer's Geneva Atomic Conference. And yet what concrete steps have we taken?

These waves of enthusiasm show a basic fact about atomic energy. It is not just one more medium of economic aid or technical assistance; we can keep on giving conventional aid at the cost of billions, without lasting effect.

Today the United States is the most advanced nation in the development of peaceful atomic uses. But we have learned once before, to our regret, that any lead in the atomic race can be a transient thing. There is no law that the nations of the world must always come to us for atomic knowledge and equipment. On the contrary, there is an inexorable law of human nature that if men want something badly enough, they will go get it wherever they can. And we can be certain, with the new Soviet tactic of service with a smile, that it will not be too long before the whole range of peaceful atomic applications will be made available by Russia, even if not by us.

This leaves us with only one course of intelligent action—we must make a broad atomic-assistance program an integral part of our international relations.

Why, then, when we have been spending billions in economic aid abroad, have we been so backward with the most advanced, the most dramatic, even perhaps the cheapest, form of foreign aid?

The reason is one word, "security." We have been afraid that other nations might misuse the information and the materials we would give them. As a result of this fear, we have tied the hands of our Government and our private businessmen with secrecy restrictions.

We cannot quote abroad the actual prices of atomic fuels. We are afraid that these prices might reveal our rate of weapons material production. Yet, without knowing these prices, no nation can come to its own conclusions as to its own economics of atomic power.

Some reactor technology we can disclose to foreign nations, but we cannot tell them whether it is the latest available. Thus, a foreign nation cannot tell whether atomic equipment it might get from us has been obsolete for years.

Under our secrecy restrictions foreign scientists and engineers, studying in our atomic facilities, can have access only to information which has been thoroughly declassified. Our newspapers are not able to give the real picture of the state of our atomic technology. All down the line, secrecy restrictions prevent us from dealing frankly and openly with foreign nations in peaceful atomic uses.

"SECRECY" AND "SECURITY"

But is "secrecy" reall "security"? To me the only answer is "No." The time has come to stop thinking solely about what atomic energy can do to the world. We must think also about what it can do for the world.

At the present stage of world atomic development, the degree of risk involved is small—particularly because I do not call for any total disclosure in all categories of atomic information. I ask only that atomic electric power technology be share with other nations. Specific military applications of this technology we should continue to keep secret.

Whatever risk we might run by bringing this information to bear for peaceful uses throughout the world would be infinitely smaller than the risk involved in our losing world leadership. On letting down these bars of secrecy, the word is clear for making the peaceful uses of atomic energy an important instrument in our international relations.

The nine members of our citizens' panel all felt that one of our most important conclusions was the need for immediate affirmative action in the field of peaceful atomic developments abroad. We recommended that the United States furnish nuclear fuels, give technological assistance, and permit contracts for the installation of at least 1 million kilowatts of atomic electric generating capacity outside the United States as soon as possible—we hoped by 1960. We called the attention of the world to the fact that such a program would parallel and possibly exceed the atomic power capacity installed at home during this same period.

These recommendations we presented to the Joint Congressional Committee on Atomic Energy January 30. On February 23, President Eisenhower set aside 20,000 kilograms of nuclear fuel for use abroad. My own rough calculations, based on assumptions including material, grade and reactor type, indicate some measure of equivalence between the President's 20,000 kilograms and the panel's 1 million kilowatt goal.

But just making fissionable material available does not build reactors. Two years ago, the United States set aside 200 kilograms of nuclear fuel for research reactors to be built abroad. Yet today only one research reactor fueled with American nuclear fuel is in operation on foreign soil—the one we built for the Geneva Atomic Conference and later sold to Switzerland.

HERE'S HOW

I would like to propose a way for us to go about getting atomic power reactors built abroad. To make my proposal clear, let us first look at how we are doing it at home.

We now have underway in this country what we call a power reactor demonstration program, being financed jointly by business and Government. As part of this program, 7 plants totaling between 800,000 and 1 million kilowatts of electric-power capacity will probably be finished by 1962. The total cost to the Government and participating private business groups—will be in the neighborhood of $300 to $350 million.

Now there are some who say this program is lagging and that a crash program involving heavy Government spending is required lest the United States lose the atomic power race. In fact, hearings on this subject are going on in Washington this week. But I believe that if there is any need for real urgency it does not arise from any present domestic shortage of conventional fuels or electric power, or from any need at home to have a lot of atomic powerplants simply to look at, brag about, and subsidize. If there is any paramount urgency for pressing forward with an enlarged atomic-power demonstration program, it can only stem from the need for the United States to lead in bringing atomic power to the fuel-short, energy-short regions of the world—regions in which the whole issue of our world leadership will be decided.

These regions abroad are the places where atomic power is most likely to pay its own way now, and where atomic plants should be built now.

Specifically, the United States, together with those countries needing atomic power now, should move forward at once with an international atomic-power demonstration program for the construction abroad of one atomic plant of each major type and size to be demonstrated in the United States, as well as other designs particularly adaptable to the needs of specific foreign regions.

THE COST

Let's look at the cost of such an international atomic-power demonstration program.

Our domestic-demonstration program will cost $300 to $350 million. An international program of the same magnitude—that is, close to 1 million kilowatts by 1960—will probably cost about the same. This may sound like a lot of money. But our military and economic credits to Yugoslavia alone in the past 8 years total $1 billion.

The administration has asked for a foreign aid appropriation of $4,900,000,000 for the coming fiscal year. Compared to this, the cost of an International Atomic Power Demonstration program over 5 years would be small—even in the unlikely event that the United States would bear the whole cost. Yet this program could salvage, it would make dynamic and productive our $50 billion investment in foreign aid programs, military, economic, and technical. It could serve as the keystone for a new and effective structure of international policy.

An International Power Demonstration program, as I propose, would give us as useful technical and economic information as we would get from an enlarged demonstration program at home. But, more important, it would prove to the world that we are vigorously moving forward to help those in need; that we are giving them our latest developments, not our cast-off designs; and that worldwide application of peaceful uses of atomic energy are not being held back because our own needs for fuel, energy, and food are not as pressing as in other nations.

This program could dramatically demonstrate that there are more constructive relations possible between neighboring countries than uneasy coexistence or armed truce.

For example, a power demonstration reactor located near where several of the Middle East countries border, would do more good than any number of cease fire agreements. Electric power from this atomic plant, crossing and recrossing frontiers in a regional grid, could harness underground water for irrigation, light homes, and drive machines—all contributing to stability in these troubled countries.

Wherever located, a 10,000 kilowatt atomic powerplant, staffed by local people, would be a far more dramatic focus for local pride, respect, and gratitude than a 100,000 kilowatt conventional powerplant. This is true because atomic energy is not simply a way of selling American store clothes to replace native burnooses. The distinctive garb of the atomic technician can capture the imagination of people abroad out of all proportion to the cost involved. That is a basic point to remember. With atomic energy, cost is not the criterion by which gratitude is measured. The measure is the pride it breeds in the minds of men for the present, and the hope it breeds for the future.

SPECIFIC STEPS

Now, I would like to conclude by suggesting some remaining specific steps to be taken to bring a 1 million kilowatt international atomic power demonstration program into being by 1960.

First, I would recommend that the United States call a series of regional technical meetings, to be held as soon as possible, on the peaceful uses of atomic energy.

These would not be "talk" meetings for the presentation of formal papers. Their agendas should be designed to cut through the fog of generalizations that so often prevents concrete accomplishment. Their purpose would be to get down to the brass tacks of the who, what, when, where and how of applying atomic energy to the specific countries and regions involved.

Secondly, I would recommend that these regional meetings establish definite goals for research, development, and practical application of atomic energy in three fields: electrical generation, medicine and agriculture. Other fields of atomic promise can wait, for the present.

Third, information now classified by the United States—such as, for example, reactor technology and fuel prices—should be made available to participating countries.

Fourth, I would recommend that the entire program be conducted under the auspices of the Atomic Energy Commission, which is best equipped to handle so technical an undertaking.

By giving the job to our engineers and scientists, backed by our industrial strength, we would convince the world that we are not using these humanitarian and economic tools cynically, as poker chips of power diplomacy, as does Russia.

THE GOAL

Our goal should be to bring other nations to the point where they can make sound decisions for themselves on the use of the new resource of atomic energy for social and economic progress. At the same time, we must help them acquire the physical means for carrying out these decisions. We must encourage in every way development of local scientific and technical talent, so that eventually their research reactors, power reactors, hospital, farm and university atomic laboratories will be operated by their own people. The local self-respect and self-sufficiency which will come from harnessing this new resource may end the present state of ferment and unrest in many parts of the world where hopeless poverty and frustration now force national leaders into irresponsible positions against their own and the world's best interests.

It was in the United States that the first controlled nuclear chain reaction was achieved. It is in the United Ctates that the greatest progress has been made toward harnessing this fundamental discovery. After having come so far in our development of the peaceful uses, we cannot now abdicate—and let others bring them to mankind.

The Atomic Energy Commission must be given vigorous support in the steps it is already taking and in the new steps it should take to carry out the augmented program I have outlined here today. Otherwise, all this administration's fine promises since it first used the phrase "Atoms-for-peace," will have gone only to make headlines and consume newsprint.

We must not forget, nor let the world forget, that every kilogram of nuclear fuel we send abroad for peaceful purposes can be one less kilogram available for war. If we move forward immediately on an international atomic power demonstration program, we place before the world our challenge to the Communists to practice, not just preach, atomic disarmament.

Jose DeSoto

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

Friday, June 29, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent and informative article by Gerry Pratt from the Northwest magazine of the Portland Sunday Oregonian for June 24, 1956, describing the great achievement and talent of Jose DeSoto in the Biblical murals he is painting at the famous and historic Sanctuary of our Sorrowful Mother in the city of Portland, Ore.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MAN WHO SEES INSIDE HEAVEN

(By Gerry Pratt)

Quietly, inch by inch and unnoticed by the people of the city, a man working in the calm confines of the chapel in Portland's Sanctuary of Our Sorrowful Mother is busily brushing back the curtain on heaven.

It is the heaven of the dreams of Jose DeSoto, complete with exciting color, drama, and life. It is the coronation of Mary by the Father, the Son, and the Holy Ghost.

This is heaven as it appears in the visions of the stocky Spanish artist. For 23 years he has been trying to capture that vision with his paints on the walls and domes of churches in Chicago, Detroit, St. Louis, Los Angeles, Minneapolis, Boston, and now Portland.

"Always, you can see the vision better in your mind than it appears from your brush," said the little man of his work. "My dreams are much nicer than the reality of my art," he added and laughed.

DeSoto admits he has often painted heaven and the things he imagines to be of heaven. But, he will also admit with a light in his eye: "Never before has it been just like this."

The painting, which is fast covering the vast dome above the altar of the new $750,000 chapel at the Sanctuary of Our Sorrowful Mother, first came to life in a downtown hotel room. That was in the summer of 1954, a matter of days after DeSoto had first been invited to bid for the commission of painting the works that would appear in the church.

The vision which the painting portrays was born many years ago in the mind of DeSoto the art student.

A solemn man who is slow to warm to conversation, DeSoto can be drawn out with the mention of the works in the chapel.

"I was in Portland in the summer of 1954 with the Fox theater people, when I was approached by the architect to submit a drawing for the work," he said in his clipped, Spanish-accented English. "They told me 3 or 4 other men from different parts of the world had also bid and that my proposals would also be welcomed.

"The building was just open beams and piles of cement then," he said indicating the exquisite church with a wave of his hand. "But I came out to see for myself. Then I went back to my hotel and sketched in pencil what I would do in this chapel in this setting.

"Then I waited," he added plunging his hands into his faded blue trousers pockets and shrugging his shoulders to give the impression that he hadn't expected to get the job. But he had. The sketches had strength, life and beauty and they instantly impressed the Servite fathers who operate the sanctuary.

DeSoto was asked to consult with the priests.

His drawings showed the seven sorrows of Mary. These would cover the wall panels. Then, the major work above the altar, would be the coronation, complete with angels and DeSoto's vision of heaven. It was only a matter of short time and the commission was his.

The 59-year-old artist moved to Portland in April 1955 and began work. His square hands, which had first mastered the brushing of pictures in the Royal Academy in Madrid while he was still a boy, worked swiftly. They had the talent and the training of years of study at the Spanish conservatory in Rome. They had the experience of 23 years of doing important work in churches throughout the country. And they had the vision in the artist's mind to guide them.

By mid-summer much had been done. Working day in and day out, 8 hours or more each day, much of the intricate work had been finished. The rought charcoal sketch lines of the wall had been filled out with the rich colors of his paints.

Jose DeSoto, though he is reluctant to admit any admiration for the work, became excited. He moved his bachelor belongings into a priest's cell in a lower section of the chapel to be close to his work. Now he is nearly finished.

"I am not satisfied," he said with a tight-lipped expression of appraisal when asked to judge his work. "There are times up there," he said indicating the 30-foot-high scaffolding which holds him close to his work, "when I would like to erase everything and start over. But then there are times, too, when it isn't so bad," he added and you could see the pride and interest this work has brought out in the man.

"It is lonely sometimes. And when you work so close to a piece so large you can't really tell until you get down and see it. When you move away, things change. I am working without a model, and without a model it is hard. No matter how much you know of anatomy, there is always a shadow or a curve that must be seen in finished form before you can be sure.

"No artist is satisfied," he added as if to explain his attitude toward the work. "To be satisfied is to say you can go no farther."

The man puffed nervously on a cigarette while he talked. "This is now a consecrated church, and I do not smoke while working," he explained again. "You see the work is really very hard and not too good," he added and laughed so that it was easy to see that isn't what he meant.

Perhaps a thousand or two thousands years from now when historians probe into the ruins of our civilization they will find this work of DeSoto's. There is a chance they may look on it as something extraordinary, something precious like an El Greco or a Michelangelo. They may not think it great.

Regardless of who sees this art or how they judge it, few will see it without conceding it is very beautiful.

And if you watch this son of a Spanish music professor at work you realize that in the painting of his dream he may well win a place in the history of art.

Quiet trails of 60-acre Sanctuary of Our Sorrowful Mother are open to the public 8 a. m. to 10:30 p. m. daily during summer months.

A memorial to Mary, hewn from rocks and trees on bluffs at Northeast Sandy Boulevard at 85th Avenue in Portland, the grotto is built around the new chapel and a giant altar set in a cave in the side of the cliff.

On 40-acre upper level resting among trees is collection of sanctuaries and Italian carving in memory of Christ and His works.

American Farm Bureau Federation Statement Regarding Hells Canyon Power Project

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, June 29, 1956

Mr. WATKINS. Mr President, in action yesterday, here in Washington, the board of directors of the American Farm Bureau Federation unequivocally stated that it "favors the development of the power resources of the Hells Canyon reaches of the Snake River as approved by the Federal Power Commission."

We have before us S. 1333, a proposal which would abrogate, by special legislation such development on the Snake River by the Federal Power Commission. That bill would overturn a national water policy developed over a period of decades and embodied for a quarter of a century in the Federal Power Act.

I am heartily pleased to see that a body of men so vitally interested in the development of our water resources as is the American Farm Bureau Federation, has recognized this basic contradiction.

I believe the entire Farm Bureau statement should be placed before the Congress and therefore I request unanimous consent that it may be printed in the appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WASHINGTON, June 28.—The board of directors of the American Farm Bureau Federation in their quarterly session at Chicago, Ill., today issued the following statement on the controversial Hells Canyon power project:

"The American Farm Bureau Federation favors the development of the power resources of the Hells Canyon reaches of the Snake River as approved by the Federal Power Commission.

"We believe that the production and transmission of power should be primarily a function of private enterprise. The entry of the Federal Government into the commercial production and distribution of power should be restricted to those instances where adequate development cannot be had otherwise.

"In the case of Hells Canyon a private company has sought to develop this resource. Their application to do so has, after comprehensive engineering study and long hearings before the Federal Power Commission, been recommended by the staff of the Commission and the hearing officer, and unanimously approved by the five members of the Commission. The Commission concluded that the 'proposed project is best adapted to a comprehensive plan for improving or developing a waterway for the use or benefit of interstate commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreation purposes.'

"The flood control, navigational, and recreational benefits of the proposed private development are not significantly different from those of the proposed Federal project and such public benefits would, in the case of private development of the resource, be provided without cost to the taxpayer.

"The Federal project would result in higher production of firm power than the private development—but the cost of the additional power would be at least equal to and possibly in excess of its value.

"Additional power is needed in the area now. Initial power production will be provided within 2 years under the proposed private development as approved by the Federal Power Commission. To stop this development by the intervention of authorization for a Federal project would delay for an indefinite period the availability of additional power in the area.

"The private development, during the 50-year license period, will return to local and Federal Government tax revenues more than double the total cost of the project. Such tax revenues will not be available in the event of Federal construction.

"It is our conviction that the public interest will be best served in this instance by the proposed private development."

The American Farm Bureau Federation represents 1,623,222 farm families in the 48 States and Puerto Rico. It is the Nation's largest general farm organization.

Members of the board of directors are AFBF President Charles B. Shuman, Sullivan, Ill.; AFBF Vice President Walter L. Randolph, Montgomery, Ala.; Herbert W. Voorhees, Trenton, N. J.; Don J. Wickham, Hector, N. Y.; George C. Dudley, Litchfield, Conn.; Wilson M. Heaps, Street, Md.; Lorenzo D. Lambson, Southwick, Mass.; Hassil E. Schenck, Indianapolis, Ind.; Charles Marshall, Lincoln, Nebr.; W. I. Boone, Manhattan, Kans.; Curtis Hatch, Madison, Wis.; E. Howard Hill, Des Moines, Iowa; George H. Wilson, Clarksburg, Calif.; Delmar Roberts, Anthony, N. Mex.; Reuben V. Anderson, Pine Bluffs, Wyo.; Ray V. Swanson, Pocatello, Idaho; Arthur L. Andersen, Ault, Colo.; R. Flake Shaw, Greensboro, N. C.; Boswell Stevens, Jackson, Miss.; H. L. Wingate, Macon, Ga.; B. S. St. Clair, Falls of Rough, Ky.; J. Walter Hammond, Tye, Tex.; and Mrs. Haven Smith, Chappell, Nebr., chairman of the American Farm Bureau women's committee.

Twentieth Anniversary of the Merchant Marine Act of 1936

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. TOLLEFSON. Mr. Speaker, today marks the 20th anniversary of the passage by Congress of the 1936 Merchant Marine Act. It was enacted only after strenuous debate, but a majority of the Members of Congress were convinced that the act was in the best interests of the Nation from the standpoint of national defense and economy. The succeeding years have proved most convincingly that their views were correct. An excellent article appearing in today's issue of the Journal of Commerce bears out that fact. I insert it herewith in the RECORD:

[From the Journal of Commerce and Commercial of June 29, 1956]

SHIPPING OUTLOOK

(By Edward P. Tastrom)

MERCHANT MARINE ACT ANNIVERSARY

Today marks the 20th anniversary of the enactment by Congress of the Merchant Marine Act of 1936, a piece of legislation that has come to be regarded as the Magna Carta of the shipping industry.

This law is particularly noteworthy for having set for the first time a long-range formula for the development of our overseas commercial shipping. It did this by establishing the parity formula for both construction and operation, required the lines which proposed to benefit by this arrangement to build up and earmark for new construction certain reserves and to confine their operating activities to certain specific trade routes which were designed to promote the commerce of the United States.

It recognized the need of an adequate merchant fleet, but it also made certain that its development would be along the lines which would most adequately serve the common good both in time of crisis and in development of trade.

How has the act worked? A look at some statistics shows that the lines holding subsidy contracts have virtually doubled the size of their fleets. Today this fleet consists of 294 vessels of 3.2 million tons deadweight. compared with the prewar fleet of 171 ships aggregating 1.7 million tons.

More striking is the threefold increase in yearly carrying capacity of this fleet due to the creation of larger and faster ships. Today, estimated cargo capacity lift is placed at more than 14 million tons deadweight, compared with 4.6 million 20 years earlier.

Capital reserves of these lines also have been built up to high levels and are estimated to aggregate about $500 million. This has permitted several of the contract lines to announce new long-range construction plans recently ranging from $175 million to over $300 million.

Thus, this legislation can be said to have achieved its purpose and, according to the Committee of American Steamship Lines which represents the subsidized group, at a modest cost to the taxpayer. The committee estimates that the net operating subsidy cost from 1947 through 1954 (payments were discontinued during the war period) totaled $68.3 million, or an average of $8.5 million a year. This is after Federal income taxes and repayments under subsidy contracts as called for by law.

The 1936 act has been amended several times to meet changing economic and political conditions so that it continues today as the living instrument of our national maritime policy.

Looking into the future it is evident that still further changes will be in order over the years ahead if this law is to continue as a dynamic force.

New problems are constantly arising and new trends having a vital influence on business continue to come to light. Shipping, with its heavy capital investment, is a long-range planning proposition so that, while the securing of cargo is always an immediate concern, the steamship executive, like the master on the bridge of one of his ships, must always look to the horizon.

If one were to peer into the crystal ball today and try to divine what might be in store for us during the next 20 years it is possible to engage in some intriguing speculation, assuming of course, that we are spared a third world war.

Some interesting trends are developing and they all will affect shipping and our maritime policy.

There is, for example, the utilization of atomic power by the merchant marine. This is coming without question, and on a commercially practical scale. The submarine *Nautilus* can be likened to the *Clermont* which first successfully and profitably utilized steam propulsion. During the decade following that initial 1807 trip to Albany, tremendous strides were made and we have never stopped expanding in this direction, as the performance of the superliner *United*

States demonstrates. Look or the same thing to happen with atomic power.

With this will come new problems in ship design, cost and handling; the need for new types of safeguards afloat and in port; revisions in cost and capital accounting, to mention a few possibilities.

We shall continue to import more and more of our raw materials to feed the giant industrial machine that we call these United States. It may be necessary to insure this flow of products by extending the benefits of our maritime laws to specific types of bulk carriers.

We are engaged in what promises to be a great struggle with the Communist bloc for adoption by the backward countries of Africa, the Middle East, and the Orient of our basic philosophy as opposed to that of the Reds. Its origins must be in economic aid to lift living standards and prove visually that our way of emerging from the dark ages is the more preferable.

This struggle is just beginning, if we read correctly the new change in Russian attitude to one of apparent friendliness.

Actually, the new Moscow attitude is more dangerous than the old truculence because it is more insidious and may lull us into a false sense of security.

Again the steamship industry is in the position of playing a major role. Our flag penetrates every major port of the world and with it brings a segment of our national attitude and way of life. It can be utilized forcefully and effectively in this great struggle which is shaping up for the loyalty of key areas of the world.

We are fortunate in having a strong merchant fleet today. We must be ever alert to keep it strong and to expand it with the needs of our economy and our position as the world's leading trading nation.

The States and Atomic Power

EXTENSION OF REMARKS
OF
HON. CLINTON P. ANDERSON
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Thursday, June 28, 1956

Mr. ANDERSON. Mr. President, in connection with the two addresses on the subject of the atomic power program, delivered by Mr. Robert McKinney, editor and publisher of the Santa Fe New Mexican, which I have had printed in the Appendix of the RECORD, I also ask unanimous consent to have printed in the Appendix the last two paragraphs of a third address which was delivered by him at a round table discussion on the civilian use of atomic energy at the National Governors' Conference.

There being no objection, the two paragraphs were ordered to be printed in the RECORD, as follows:

THE STATES AND ATOMIC POWER

Under the system which America has evolved, State governors have two roles: Primarily, you are the chief executives of your States. But you are also traditionally the heads of your particular political parties in your individual States. In the latter role, you play important parts in shaping the policies and platforms of our two great political parties. Twenty-eight of you will go to one national convention this summer, 20 to the other. But whether you go to Chicago or San Francisco, you can do much toward raising our national foreign policy into the bipartisan realm on which all Americans can and should agree. Therefore, I hope you would not consider it presumptuous if I were to outline a possible bipartisan national atomic policy for you to think about in the next 2 months. In one paragraph, the outline is this:

The speed with which the United States acts to bring benefits of the peaceful uses of atomic energy to all peoples will hasten the achievement of lasting peace through helping to eliminate some of the causes of war. Therefore, we must move forward, on a priority second only to our national defense, in applying atomic techniques to the problems that face the free world, especially in the fields of medicine, agriculture, and electric power. We must embark forthwith on a program generally directed toward these objectives, and particularly toward demonstrating by specific types of plants in specific places the present economic feasibility of atomic power in energy-short and underdeveloped regions of the world. We must hasten to apply the experience thus gained to bringing down the cost of power to levels on which the United States and other free nations can build economic strength, prosperity, and security.

University of Americas Proposed to Offset Reds in Latin America

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD I would like to include an editorial by Ray Kay of the Dallas Times Herald Washington Bureau.

President Dwight D. Eisenhower delivered a powerful appeal for worldwide education and understanding on the occasion of addressing the graduating class of Baylor University at Waco. His remarks were most provocative, and I would like to call my colleagues' attention to this article of Ray Kay's for their further consideration.

The article follows:

UNIVERSITY OF AMERICAS PROPOSED TO OFFSET REDS IN LATIN AMERICA

(By Ray Kay)

Establishment of a University of the Americas at some focal point such as Puerto Rico is seriously being considered here as a logical step to counteract Communist smiles toward Latin America.

Such a university, operating under the Organization of American States, and supported by OAS members, would offer values far beyond that of throwing an economic monkey wrench into Soviet attempts to expand in this hemisphere, supporters feel.

They say it could translate the Eisenhower administration's good partner policy into increased cultural exchanges in the field of art, literature, and the sciences, and further result in shared technical knowledge and mutual understanding of hemispheric problems.

IKE'S PROPOSAL

In a commencement address at Baylor University, Waco, May 25, President Eisenhower proposed that American universities, with the support of private foundations, establish schools around the globe in a new person-to-person partnership. The partnership, he said, would be designed to enhance "the prospects for a peaceful and prosperous world."

Though he used a different approach, Democratic Senator MIKE MANSFIELD, of Montana, a member of the Senate Foreign Relations Committee, had beaten the President to the punch, with the idea of using universities as creators of good will.

MANSFIELD PLAN

On May 16 the western Senator introduced a joint resolution in the Senate which would provide for a study of the possibility and desirability of establishing a University of the Americas.

Existence of such a university, according to MANSFIELD, would "afford superior opportunities for students and professors to expand the interchange of ideas, skills, and culture."

MANSFIELD called attention of the Senate to "the dissatisfaction which has been spreading throughout our neighbors to the south, both with respect to the policies followed toward them and with the degree of interest we have manifested toward the pressing problems which they have."

He added that an alarming drift toward disunity and misunderstanding has, seemingly, acquired impetus in the past 3 or 4 years.

OFFSET TO REDS

Earlier, the Senator had pointed to "the shift in attitudes toward the Soviet Union, in the Latin-American countries," and warned the Senate. A few years ago a Russian diplomatic and economic offensive directed at Latin America might have been dismissed with ridicule. Today, it is no longer a laughing matter."

Senator MANSFIELD said the proposed university could provide "a focal point for deepening understanding of the shared values of the civilizations of the Americas and for enlarging the interchange of ideas, skills, knowledge and achievements among the American Republics."

The Mansfield resolution would provide for the establishment of an eight-member commission to study the idea. Four would come from Congress and four would be appointed by the President, from university presidents representing this country's principal geographical areas.

Other Members of Congress have evidenced interest in the idea.

Representative JOE L. EVINS (Democrat) of Tennessee, who represents the congressional district once represented by the late Secretary of State Cordell Hull, father of the good-neighbor policy, is one. He plans to take the matter up with the President of Puerto Rico and with officials of International House in New Orleans, which has fostered the Cordell Hull Foundation.

OAS VIEW

Dr. Jose Mora, former Uruguayan Ambassador to this country, who is now secretary-general of the OAS, termed the idea a good item for discussion by an inter-American conference. He said the OAS, under its present charter, does not have authority to set up a university. Its function, he added, is to promote, to encourage and cooperate in the cultural exchange.

He pointed out that one of the problems faced by such a school would be the setting up of some method of academic credit equivalence.

Although finding the idea of a University of the Americas interesting, the secretary-general said he does not want to discourage the universities in this country already doing a wonderful job for Latin-American students. These, he said, include Tulane University in New Orleans, the University of Houston, and the University of Florida.

Atomic Power Program

EXTENSION OF REMARKS
OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, June 28, 1956

Mr. ANDERSON. Mr. President, with further reference to the addresses delivered by Mr. Robert McKinney, editor and publisher of the Santa Fe New Mexican, on the subject of the atomic power program, I ask unanimous consent that the address delivered by him before the National Conference on Uranium and the Atomic Industry of the Atomic Industrial Forum and Denver Research Institute, on June 25, 1956, in Denver, Colo., be printed in the Appendix of the RECORD, as follows:

I have been advised by the Public Printer that the manuscript is estimated to make approximately 3⅓ pages of the CONGRESSIONAL RECORD, at a cost of $267. I ask unanimous consent that the address be printed in the Appendix of the RECORD regardless of the fact that it overruns the limit.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICAN INDUSTRY'S STAKE IN AN INTERNATIONAL ATOMIC POWER PROGRAM

(Address to National Conference on Uranium and the atomic industry of the Atomic Industrial Forum and Denver Research Institute, June 25, 1956, Denver, Colo., by Robert McKinney, editor and publisher, Santa Fe New Mexican, chairman, Citizens' Panel which reported to the Joint Congressional Committee on Atomic Energy on the impact of the peaceful uses of atomic energy)

This is an era of departmentalization. In my particular business most well-run newspapers have special editors-in-charge-of-being-horsewhipped. Publishers used to throw letters from irate readers in the wastebasket. These readers, receiving no reply, usually canceled their subscriptions. An editor-in-charge-of-being-horsewhipped bridges the gap. After the readers have taken out their wrath on him, fewer subscriptions are canceled.

My experience as my own editor-in-charge-of-being-horsewhipped has been priceless to me in other fields. On looking over the distinguished titles—each different—listed after the names of you all attending this meeting, I am convinced that the atomic energy industry has grown up enough to become fully departmentalized. So I am going to suggest a new atomic job title—Vice president-in-charge-of-being-horse-whipped.

My own qualifications are for a less distinguished title, atomic-observer-in-charge-of-being-horsewhipped. During the past 14 months, as many of you know, my activities have taken me close to the heart of some of the problems of the atomic industry. With eight other laymen, I served on the Citizens Panel which reported to Congress on the impact of the peaceful uses of atomic energy.

Principally, we studied the effect of atomic developments on our economy, industry, natural resources, and employment here in the United States. Within the terms of reference established by the Congressional Joint Committee, our study of international aspects of the peaceful uses of atomic energy was directed mainly to the effect which atomic developments abroad might have on the United States.

The other side of the coin—that is, the effect peaceful atomic developments in the United States might have on other countries—was not specifically included in our terms of reference, because of our limited time and resources. In our studies, however, our panel was struck by the fact that it is precisely this other side of the coin which is of paramount importance. We therefore felt ourselves bound to report that—

"Atomic power may be the most tangible symbol of America's will to peace through the peaceful atom. Our domestic needs cannot be our only motivation. Otherwise, we leave without effective rebuttal the argument that America is so rich, so prosperous, that a revolutionary new energy resource can emerge without any urgent need on our part to put it to man's use. This must seem a strange position indeed to peoples possessing neither conventional fuels nor technical capabilities to put the atom to work.

"If we fail to act to bring atomic power to the free world, other countries will do so ahead of us, or progress will proceed at a slower pace.

"Peaceful uses of atomic energy will inevitably be developed throughout the world. The United States must lead."

In the few months that have passed since our panel report was published, I have given much thought to another phrase we used, "the challenge to the United States world leadership." I felt that, in looking at the shape of things to come, the international aspect must be considered, not only in evaluating the atomic industrial potential for America; I felt also that we must examine the international aspects of atomic energy for clues to the solution of the problems of world leadership—even survival—which face us.

Having thought about this reverse side of the coin, I ventured to put some of my preliminary conclusions up for public view, and so qualified as atomic-observer-in-charge-of-being-horse-whipped. In a talk before the Overseas Press Club in New York last month, I took as my subject "Peaceful Uses of Atomic Energy as an Instrument in International Relations." I tried to tell why the international aspects of atomic energy seemed to me of crucial importance, and suggested a few concrete steps which I believe we should take. I mentioned several countries as possible places for demonstration of atomic power reactors, among them Liberia.

My efforts of that day inspired some to take the old horsewhip down from the harness locker. The Augusta (Ga.) Chronicle—which by Georgia measurement is located 12,500 miles from Liberia and which, accordingly, may have forgotten that Liberia was founded by settlers from Georgia—had this to say:

"There just seem to be no limitations on the unrealistically generous impulses of certain people when it comes to spending American taxpayers' money in foreign countries. Now a Santa Fe publisher, Robert McKinney who is described as an authority on atomic energy, has suggested that the United States help to build at least seven atomic-power plants in countries where fuel is scarce. Well, he may be an authority on atomic energy, although the rank and file of the American people have no knowledge of him and his accomplishments, but he is certainly no authority on what is best for the American people and the American Nation."

America's largest newspaper, the New York Daily News, asked this trenchant question:

"Is anybody sure, for instance, that the natives of West Slobovia really want an atomic reactor? Even if we American taxpayers gave them shiploads of electric toasters, too, how about if Slobovians turn out to be toast-haters? And so on * * *. Any way, no matter what the side-arguments, a challenging atom age is with us, and the United States had better develop and use this new wonder-power to the best of its technological ability."

In spite of the horsewhippings, my morale continued high, because there were many who agreed with my premises and my conclusions, and who took time to write. They said that I had provoked them into thinking about the specific action proposed, and put to me the questions to which their own thinking had given rise.

Some of these questions really go to the heart of the problem of what an atomic power demonstration program abroad can mean in our international relations. But more important to you here in this audience, these same questions go to the heart of what such a program can mean to American industry.

Before looking at some of the specific questions, let me make a brief observation which I think might help the Augusta Chronicle and its readers understand the issues.

We are engaged with the Russians in a battle of ideas. Our victory in this battle—our world leadership—can only be achieved, if all Americans are sure of the principles for which they stand. We are not in an international footrace of statistics. Our leadership cannot stand on the number of kilowatts of atomic-power capacity we might install at home by any given date. It cannot be based on the number of papers our scientists might read before learned societies. In this battle of ideas we need a new weapon.

We need a new element in our foreign policy to convince the peoples of the world of what we have been trying for the last decade, but so far have failed to convince them of—that the United States is truly their friend and deserves their respect and trust.

An international atomic power demonstration program can provide this new element. It can prove to the world that we are vigorously moving forward to help those in need; that we are giving them our latest developments, not our castoff designs. Atomic powerplants built abroad can, for many countries, spell new hope for economic growth.

But we must also remember that construction of atomic powerplants abroad can mean much more. It can mean new markets to help bridge the gap which might otherwise exist in the volume of business of reactor designers, fabricators, and contractors of uranium miners and processors, of fuel element manufacturers.

Against this background, let us look at some of the questions thoughtful people are asking.

ARE WE LAGGING?

Precedent to the question of whether we should expand our present atomic program is the question of whether this program is lagging. This question has two facets:

First, are we moving ahead fast enough in our present atomic power activities and are we moving in the right direction? The Atomic Energy Commission has powerful capabilities of its own in manpower and facilities; it is able to draw by contract on all American industry. Has the Commission made the wisest use of these capabilities?

The second facet of any inquiry as to whether our present program is lagging is this: Can private enterprise play a greater part than it is now playing in the development of civilian atomic power?

In a nutshell, are Government and industry each moving with the right momentum in the right direction, to serve the best interests of the Nation?

In the course of our panel study we looked into these questions. In recent hearings before the joint congressional committee, the pros and cons were again examined. Our panel report clearly recognized that the growth of atomic power can come only from sound technological knowledge and thorough engineering and operating experience. That

these all can be brought about only in an orderly, time-consuming way we are learning from the well-rounded atomic power demonstration program for large-size plants now being pressed by the Atomic Energy Commission.

We stated, however, that the importance of small- and medium-sized atomic powerplants on the international scene, and the opportunity which they afford for a bold demonstration of United States technological leadership, give their development a high sense of urgency.

We concluded, therefore, that the present program is deficient to the extent that appropriate demonstrations of small- and medium-size plants are not now underway.

Although the recent congressional hearings did not seem to be conclusive as to whether our present program was lagging, they did bring out several specific types of reactors which were considered promising so-called second choices for power demonstration purposes. It was interesting to me that these second choices are types which have advantages of the first order, in the context of construction and operation abroad.

It is easy to criticize. It is easy to dismiss criticism as Monday-morning quarterbacking. But I know we meant the remarks of our panel to be constructive in setting the basis for a reappraisal which we felt was needed. I know, too, that what was brought out at the recent hearings—by such objective expert witnesses as Zinn, McCune, Smyth, Fairman, Sporn, LeClair, and others—was intended in the most constructive way. Those of us who have lived closely with the Atomic Energy Commission—some in studying its activities, some in negotiating power demonstrations or similar projects—are keenly aware of the difficult and complex problems the Commission faces in bringing to reality the dream of civilian atomic power. We know that the Commission has given great thought and effort to establishing an evaluating process. Through this process, its scientific and technical programs must pass muster before some of the best minds in the country. Many other minds of the same high caliber are available in our atomic industry, and I am confident that the Commission must draw upon their evaluating skill on an ever-increasing scale.

In this light then, answers begin to emerge.

The Atomic Energy Commission's power demonstration program represents a direct frontal attack on the problem of low-cost atomic power in the context of the American economy. Presently proposed investments by American industry, while not large, are at least earnest money. Efforts of American industry to sell atomic power reactors abroad would also be serious, if existing barriers can be removed. All this does not look like lagging.

But I must hasten to point out that no mere recapitulation of programs intended approved or sought, no listing of treaties and compacts desired can be considered as real evidence for any sound judgment as to whether our efforts are equal to the urgency, or whether our efforts are lagging.

There must be concrete action. Reactors must be solid, funds committed, materials fabricated, ground broken, construction started.

If our atomic power development program is to be dynamic, there must be continuing examination and reexamination of all promising reactor concepts—studies in the context of where each type and size is most likely to be economically competitive. Such a reappraisal at the present time can only lead to the conclusion that demonstrations should be undertaken abroad, where even present concepts can be economically competitive.

Let me say that, while the need for the construction of atomic power plants abroad is urgent, I do not believe that we should undertake reactor construction—either at home or abroad—on a crash basis. We cannot, as a nation, be diverted by economic or a political expediency from the path of orderly atomic development. We cannot waste our capabilities or throw scientific and economic caution to the winds.

A GIVEAWAY?

And this leads us to the next question: Is what I propose a give-away program? As I understand the colloquial term "give-away," it means a gift with no hope of any return. I have already mentioned the intangible returns which we can expect to receive from the construction of atomic power demonstration plants abroad. In addition to these intangible returns, I believe there can be tangible returns on the investment.

Organizations represented in this audience will be among those called upon to sell and build these reactors in foreign countries. Part of the job of selling is the job of finding where the money will come from. American manufacturers may not think enough of the credit standing of some foreign countries to undertake the sales, without financial guarantees. Yet there are clearly several financing sources: Local investment capital, normal international financing channels and, lastly, the United States foreign-aid program.

It would be my recommendation that the first two of these sources support the required capital outlay, or at least a very substantial part of it. I would consider the use of foreign-aid funds a last resort and use it only to cover those cases in which the intangible benefits are considered to be of surpassing importance.

Even if foreign-aid funds are used, I see no reason why these funds should be gifts—repayment should be required. The plants which would be built should, as I have said, preferably be located where they can be economically competitive; therefore they should yield a return on the investment.

Furthermore, I think it is important to recognize that the formula used at the Shippingport, Pa., atomic power demonstration plant can be as useful and realistic abroad as at home. Under this formula, the unconventional—the atomic—portion of the plant is charged off against development expense. This should be done in all cases, wherever demonstration plants are built. By such an approach only the cost of research and development of benefit to the United States remains in the realm of the giveaway. This approach converts the program into a practical way to bring down the cost of nuclear power wherever generated, in Augusta, Ga. or in Monrovia, Liberia.

The giveaway charge can be answered in another way particularly interesting to American industry. This answer has both tangible and intangible values. The American atomic energy industy needs dynamic impetus now. Yet even doubling the present domestic demonstration program cannot provide that impetus—it only would double the amount of present and continuing subsidy.

It is important, however, to recognize that, because of high power costs abroad, the growth of atomic generating capacity there can begin immediately since atomic power can now be competitive in some areas. This growth could reach or exceed 100 million kilowatts of atomic power capacity by 1980.

Significant growth of nuclear power in the United States is not likely to start before 1960—probably not until after 1965—reaching by 1980 possibly as much as approximately 140 million kilowatts of atomic power capacity. As I see it then, the construction by American firms of 1 million or more kilowatts of atomic power capacity abroad, during the next 5 years, would give our manufacturers a market in these near term years which otherwise could be very lean.

POWER IN INDUSTRIALIZATION

Before passing from the subject of the economics of atomic power abroad, we should consider questions raised by those who are concerned lest we delude ourselves into believing that atomic power, by itself, can mean healthy economic growth for underdeveloped areas. This concern, although sincere, is, I feel, misplaced.

If underdeveloped regions are to become industrialized, two things are needed: electric power and industrial facilities to use that power. Large investments in industrial facilities are required, whether the electricity which drives the machine tools is generated by fossil fuels or atomic reactors. If they are to move toward industrialization everyone must recognize that the needs of these foreign areas will not be limited to power generation, to power distribution or consumption, or even to the manufacturing segment of the economy.

DEPENDABLE POWER

Another economic question is raised by those who ask whether, in the present state of the art, atomic powerplants are dependable enough to be useful in meeting the needs of power-short countries.

I see achievement of economic nuclear power as a stepwise process. One step is to establish technical feasibility through experiment. In this step the main interest is whether the reactor will even operate. The second step—the demonstration phase—cannot take place until after determination of technical feasibility. The goal of this later phase is to give a concrete example of the economics of operation of a particular sign, under particular conditions, in a particular place.

Based upon this distinction, when I use the term "demonstration" as applied to an atomic powerplant, I mean a plant which is capable of proving economic where it is located by bearing its required portion of the load. Abroad, the load factor for such a demonstration plan may be 80 percent or better. In the United States, in the midst of integrated power systems, the load factors for such plants can be materially lower. Thus, while in the United States we may be inclined to carry over some of the activities of the experimental phase into the demonstration phase, practices which result in low, firm power capabilities cannot be tolerated abroad.

I think for such a well-posted audience I need only note that designs for plants which can provide firm power, with load factors of 80 percent or better, exist. One example is the *Nautilus* powerplant. It has operated safely and for long periods under continuous loads and under extremely difficult conditions—conditions far more exacting than encountered in land-based plants.

SAFE POWER

And this raises another concern which is usually expressed in the form of this question. What would be the effect on United States world leadership, in case an accident occurred during operation of an atomic powerplant constructed abroad under United States auspices? Such an incident, some people say, would have disastrous international complications, on which Russian propagandists would capitalize. The best reply is another question: Would the Russians fail to make as much or more propaganda capital out of an accident involving an atomic powerplant here in the United States?

I do not believe that we must limit our reactor exports only to obsolete designs having a long history of accident-free operation. We must not lose sight of the fact that decisions to build atomic powerplants abroad must be made, in the first instance, by the countries involved. The safety of a particular design should be a matter of frank and open disclosure. We are not forcing these

countries to build reactors. We are giving them the opportunity, if they want it, to build their choice of the reactors we are willing to operate at home. Perhaps the concern thus expressed is more indicative of a desire to keep atomic energy information buttoned up in our secret files than a real concern with possible accidents abroad.

SCIENTISTS, ENGINEERS, TECHNICIANS

I have been asked whether the construction of atomic powerplants abroad would not constitute an added, perhaps unbearable, drain on our already critically short manpower capabilities. This question seems to come from the premise that, here in the United States, all available scientific, engineering, and technical manpower, capable of working on atomic programs, is already fully employed on projects now underway; and that the ever-growing American atomic industry can continue to use fully all of its scientific, engineering, and technical capabilities, whether or not a foreign market ever develops.

Let me say at the outset that I have no intention of minimizing our Nation's problems in all fields of trained manpower. Shortages are serious in all professional skills. Urgent remedial action must be taken, or the situation will soon become critical. The hunt for scientific and engineering manpower, with special experience and training in atomic energy, has become almost frantic. Perhaps competition for atomic personnel, however, may be a necessary prelude to competition in selling atomic products.

Yet, even the number of people with professional skills, required for such a large program as that now being carried out by the Atomic Energy Commission, are actually not in themselves alarming. For example, the AEC estimates that it is currently employing through contractors about 3,600 scientists and 2,500 engineers, primarily or partly engaged in peaceful applications of atomic energy. These numbers are small, when compared to the scientific and engineering manpower reservoirs of the Nation. And certainly these numbers are not alarming, when one finds that only 1,200 of these scientists and 450 of these engineers spend the greater part of their time on peaceful uses.

To understand the true dimensions of the manpower problem, let us look at some figures on manpower demand which may be created by an international atomic power demonstration program having a total capacity of 1 million kilowatts by 1960. Here an estimate prepared by the Atomic Energy Commission for a domestic program twice this size might be useful. For 2 million kilowatts of power capacity, generated in 150,000-kilowatt plants, each operated on a 4-shift basis, the Commission estimated that a total of 500 people would be needed to operate the nuclear portion of the 13 or 14 plants involved. This sum includes reactor operators, supervisors, radiation technicians, monitors, instrument technicians, maintenance and service personnel, and engineers. This total of 500 people for a 2 million kilowatt program by 1960 can be broken down. It is made up of 4 reactor operators per shift per plant, 1 supervisor per shift per plant, 2 engineers per plant, 3 radiation technicians on each shift, and a few maintenance personnel. These figures I have just given dealt with operating personnel.

Another interesting estimate by the Atomic Energy Commission, dealing with manufacturing personnel, indicates that—for the same total capacity of 2 million kilowatts installed by 1960—development, design, and construction of reactor systems would require a total of 8,000 people employed at one time or another during the period 1956–60. This includes 6,000 laborers, mechanics, technicians, draftsmen, fabricators, etc. It includes another 2,000 scientific and engineering personnel. These too, are not large or alarming numbers and if anything, are probably conservatively computed. These figures, I repeat are for a 2-million kilowatt domestic program; 1 million kilowatts—even abroad—would certainly require less.

If the premise is true that all personnel in the American atomic industry are now fully and profitably employed, I can only ask why many, if not all of you here today are aggressively hunting new business.

The Atomic Industrial Forum Memo last month noted that the Babcock and Wilcox Co.—with support from Union Carbide Nuclear Co.—was selected to design, fabricate, and operate the first liquid metal fueled reactor, expected to begin operation in about 3 years. The forum memo goes on to say: "The Babcock and Wilcox proposal won out over nine others. These were submitted by: ACF Industries, Inc.; American Radiator & Standard Sanitary Corp.; Dow Chemical Co.; Koppers Co.; Glenn L. Martin Co.; Mine Safety Appliances Co.; Nuclear Development Corp.; Nuclear Science & Engineering Corp.; and Robershaw Fulton Controls Co. in combination with the Consolidated Western Steel Division of the United States Steel Corp."

The Atomic Energy Commission could accept only one of the 10 bids for this one plant. Would not several of the nine unsuccessful bidders be ready, able, and willing to undertake, now, the design and construction of atomic power plants abroad—drawing only on their own present manpower? And remember these 10 bidders represent only a small part of the atomic industry.

I grant that we may need all of the people employed by these other manufacturers for some future—some still undefined—reactor projects. But we have already noted that, if there is any urgency in moving forward with atomic power in this country, it does not stem from any present or near term shortage of conventional fuels; but that the real urgency can only stem from the need to make atomic power available now to other nations which desperately need it. The critical problem that faces us is the international problem—not any present domestic deficit of electric energy, either civilian or military.

Obviously, we could not fully man and operate all of the atomic power reactors which could conceivably be constructed abroad. Yet you will recall the numbers of people needed per reactor. They are so small they are worth repeating: 4 reactor operators per shift; 3 radiation technicians per shift; 1 operations supervisor per shift, a few maintenance people, and 2 engineers per plant. These numbers—which you will note do not call for mathematicians, physicists, chemists, metallurgists, or other categories of scientific manpower—are surely within the manpower capabilities of all but the most underdeveloped nations. In the 3- or 4-year period required for plant construction, specialized training for all but the 2 engineers required per plant, could be carried out under the training programs conceived with great foresight and now being conducted by the Atomic Energy Commission.

Surely what I have done here today cannot be considered to be a rigorous analysis of the manpower problems which could arise from an international atomic power demonstration program. I think we have, however, a reasonable first approximation, and I cannot find the results disturbing. The job looks feasible. I do not think we can afford to lightly dismiss a program of such importance by merely mentioning the words, manpower shortage, any more than I believe that we should support such a program merely because someone says that we have to keep ahead of the Russians.

NATIONAL SECURITY

The last group of questions, which we need to touch on only briefly, stems from defense considerations. They relate to protection of our national security through secrecy controls on information, and through assuring that nuclear materials, involved in atomic powerplants abroad, do not turn up in weapons which might be used against us.

Since President Eisenhower proposed his atoms for peace plan 3 years ago, the world has had still greater evidence that the Russions have no intention whatsover of playing ball. Their bullheaded attitude was not unexpected. It has characterized all Russion dealings, both within and outside the United Nations, on the whole subject of atomic control since the end of World War II. Yet our representatives have patiently, sometimes brilliantly, tried to bring about the necessary first steps for international controls on a multilateral basis. But these efforts on our side have met barrier after barrier built by the Russians. The United States has, therefore, taken the route of bilateral agreements with friendly nations. Thus far, with only few exceptions, these bilateral agreements are limited to research reactors and to scientific information in nonsensitive categories. Haltingly we have moved toward bilateral agreements concerning exchange of information on civilian atomic power.

True, bilaterals for research reactors are necessary first steps. True also, that those countries with which we have bilateral agreements for research reactors should indeed be grateful. Yet, unfortunately, these measures can be made to appear to many only crumbs from America's bountiful table.

Questions naturally arise in the minds of people abroad who have neither conventional energy sources, nor any real chance to develop atomic power on their own. Why, they ask, is the United States—with all its reserves of conventional fuels—so niggardly in making atomic power available to the rest of the world? Such questions undermine the concept we are so painfully trying to build of the United States as a helping friend. Perhaps the problem of controlling nuclear fuels on a multilateral basis is an impossible task, so long as the Soviet Union must be party to the agreement. When handled on a bilaterial basis, however, the material control problem can be shrunk to dimensions which are within our capacity to handle expeditiously.

Turning from material control to secrecy, we find another seemingly large problem which can be reduced to workable dimensions. I think we are agreed that if atomic energy is to be an effective instrument in international relations, people in other countries must decide for themselves whether they want civilian atomic power and, if so, what installations would best fit their needs. Such decisions require specific, factual information, some parts of which continue to be held secret under our present classification concepts.

I am not preaching disclosures of how we apply atomic energy for military purposes, but because of the present advanced state of development of atomic energy throughout the world, particularly in Russia, any feeling of national security based upon secrecy is false. The costs to atomic progress on peaceful uses in dollars, in speed of development, and in manpower as a result of overemphasis on secrecy is probably enormous. And these costs may be overshadowed by the incalculably greater costs arising from the conversion or neutralization of important areas of the world by communism.

BREAKING THE LOGJAM

To some your presence here today may seem a complete answer to many of the questions I have placed before you. This crowded room could be offered as evidence of the prosperous state of the American atomic industry.

But, at this point, I would like to ask some questions.

Is what we have represented here today really industry in the American tradition?

Is it private, is it enterprise?

If so, what concrete steps can you point to?

The commitment of 20,000 kilograms of nuclear fuel for atomic power stations abroad was made by Government, not by industry. Even this can be termed only a diplomatic gesture, if not followed soon by steps to bring about the constuction of reactors in which to burn the earmarked fuel.

Our atomic equipment manufacturers may well feel the pressure of hard times, if left to exploit only the domestic atomic power program which cannot start real growth until around 1965. Our uranium miners and processors may suddenly find themselves with a depressed market, should military requirements be curtailed.

An international atomic power demonstration program involving construction of 1 million kilowatts of plant capacity abroad by 1960 can be an important instrument in international relations—yet still only partially relieve the hardships of slow times in our atomic industry.

An international program can, however, bring about those legislative and policy changes by Government which would permit our domestic atomic industry to develop the maximum market potential abroad—far above this very modest goal of 1 million kilowatts.

Atomic power will inevitably take its place in the front ranks of the economic forces of the world. It will take this place much sooner, if our American atomic industry tackles the job vigorously and without restraint. To instill vigor, to minimize restraint by Government, we must avoid subsidy.

The questions that have been put to me are indeed questions for you here, and the whole atomic industry, to answer.

And remember that neither the American public nor the world at large will tolerate superficial answers which have no basis in fact or action.

Increasing Rates of, and Liberalizing the Basis for Payment of, Non-Service-Connected Pension and Service-Connected Compensation

SPEECH

OF

HON. WINFIELD K. DENTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7886) to amend part III of Veterans Regulation No. 1 (a) to liberalize the basis for, and increase the monthly rates of, disability pension awards.

Mr. DENTON. Mr. Chairman, I hope that no points of order will be raised against H. R. 7886 or any of its provisions, for I would like to see adequate benefits provided for both non-service-disabled veterans and service-disabled veterans. After lengthy deliberation, the Veterans' Affairs Committee has seen fit to report to the House a single bill carrying both types of benefits. If we are now obliged to put aside the provisions for compensation of service-disabled veterans and wait for a new bill containing those provisions, we will be risking delay at a critical stage of this session. But, if that should be the case, I hope that a second bill can be brought to the House with all possible speed. I think that practically all are agreed that an increase in compensation benefits is warranted, and I certainly hope that we can take timely action and be sure of getting such an increase this year.

However, as to title I of the bill, providing for non-service-connected pensions, I think that is the place and this is the time to begin to make some distinction between veterans of World War I and those of later wars in considering such benefits. So long as that distinction is not made, we are going to continue to hear argument against these pensions in terms of cost and national policy and many other factors which might be debated endlessly.

These arguments against such pensions tend more and more to be based on estimates as to what effect the coverage of World War II and Korea veterans will have on the pension program. But I say there will be time and opportunity enough in another Congress to go into that matter. Let us not cloud the issue of World War I veterans pensions any longer. Their case is urgent. Time will not wait for them.

I believe that pensions to veterans of World War I are long overdue, and it was for that reason I introduced H. R. 656, which provides for the same pensions to be granted to World War I veterans as are granted to the veterans of the Spanish-American War. Nearly 40 years have passed since the close of World War I and no general pension legislation has been passed for veterans of World War I. No veteran of four previous wars in our history had to wait as much as 40 years to see Congress enact a pension for him.

Pensions were granted to the Revolutionary War veterans 35 years after the close of that war; to the Mexican War veterans 39 years after the close of that war; to the Civil War veterans 24 years after the close of that war, and to the Spanish-American War veterans 18 years after that war.

I am a veteran of both World Wars I and II, but I cannot help contrasting the differences in the way the veterans of the two wars were treated, after the close of each conflict. Those who enter military service in wartime must give up their positions or jobs, and when that service ends there generally follws a period of hardship during which they must find employment and readjust to civilian life. The Government did very little to help the veterans of World War I tide themselves over this period of adjustment.

When they were discharged they were given only $60 mustering-out pay. After a long struggle, an attempt was made to adjust this injustice by giving the veterans so-called "adjusted service certificates." The Government ascertained the amount of mustering-out pay that should have been paid to the veterans at the time of their discharge. An increment was added to make up for delay in payment, and it was determined how much paid-up insurance, due in 20 years, could be bought with each veteran's "adjusted service credit." Each veteran was given a certificate for that amount of paid-up insurance. The total amount paid under these certificates was $3.8 billion, but the expenditure would only have been about $1.5 billion if the veterans of World War I had been paid this money due them 18 years before when they were mustered out of service, as were the veterans of World War II.

Contrast the difference in the benefits given the veterans of World War II. They were given mustering-out pay, without question, of from $200 to $300 to each veteran, which cost the Government $4 billion. In addition, they were given terminal-leave pay, which cost the Government $3.1 billion, and unemployment compensation which cost the Government $3.8 billion. They were also given social security credits for the time they spent in service. Complete figures for the cost of this are not available, but it will amount to something over $600 million.

The veterans of World War II were also given the GI bill of rights. Under this program, they were given education benefits which have cost the Government to date $15 billion, and these veterans were also given guaranteed loans to purchase homes or to go into business or start farming. Such loans totaling $30 billion have already been made, and $16 billion of this sum is guaranteed by the Government. Similar benefits have been granted to Korean war veterans, although in some cases they are not as great as those granted to the veterans of World War II.

Excluding disability compensation, which is available to the veterans of all wars, and aside from the home-loan program which so far has cost comparatively little, the benefits paid to the veterans of World War II and the Korean war now total $26.5 billion, and this figure will certainly exceed $30 billion within 10 years from now. This sum is 20 times the amount paid to veterans of World War I, and per person, the benefits paid to the veterans of World War II and Korea are 4 times those paid to the veterans of World War I. The benefits were paid World War II and Korea veterans when they left the service, and so were much more beneficial to them than if paid to them years later.

It seems that when it is proposed to do anything for the veterans of World War I, someone always says the cost will be prohibitive. I do not know why there is this feeling about World War I veterans, and why people feel that these veterans should be treated so differently from the veterans of any other war.

I have made a rather intensive study of the financial and budget aspects of this question, and tried to get to the real essentials of it without reference to the elaborate presentations which the Veterans' Administration makes in its usual line of opposition. My conclusions were given in detail to the Veterans' Affairs Committee in my testimony there on February 27. I will mention the substance of it briefly here.

Forty-five years after the close of the Civil War, when pension costs of that conflict probably were at their peak, Civil War veterans' pensions took up 15.2 percent of the total budget of the

Federal Government. But if every veteran of World War I living today were paid a pension of $101 a month at age 62—as I proposed in H. R. 656—the cost would be less than 3 percent of the Federal budget. The Civil War pension of 15 percent of the budget did not break up the Treasury then, and I hardly see how a World War I pension of 3 percent of the budget could bankrupt us now.

Those Civil War pensions at peak cost amounted to one-half of 1 percent of the national income. And the World War I pensions which I proposed would amount to less than one-half of 1 percent of the current national income.

We were paying those Civil War pensions in 1910 at the same time as pensions to veterans of three other conflicts. Veterans benefits of all types then took 23 percent of the Federal budget. Today, we use only 7.4 percent of the budget to pay for veterans' benefits of every description.

All these figures I have presented are based on granting World War I pensions of $101 a month at age 62, without a means test of any kind. But, if we follow the idea of H. R. 7886, and set the eligible age at 65, and continue the limitation on outside income so that fewer would qualify, the cost of such a program would be much lower than the one of which I spoke. And, certainly, if any pension less than $101 a month were provided, the program's cost would be far lower than my figures—and I think I have shown the cost of my own proposal to be reasonable. In short, as to World War I pensions, the cost argument is no argument at all when we look at budget history.

There can be no question about the sacrifice that World War I veterans gave in their service. More of the population remained at home in their civilian pursuits during that war than in any of the five other major conflicts in which this country has fought. During the Revolutionary War, 14.2 percent of the population saw military service; 7.4 percent served in the War of 1812; 9.7 percent of the available population performed Federal service during the Civil War; 11 percent served in World War II; 4.4 percent served in the Korean conflict. But only 4 percent of the population was called up for service in World War I. Those who served in World War I were but a few selected from among the many.

For the veterans of World War I, the sands in the hourglass of time are running low. Today, their average life expectancy is only 15 years. Of the 4.6 million who came home when the fighting in France was done, barely 3 million remain. "Taps" has already sounded for more than one third of the "Doughboys" of 1918. Every passing day, 235 of them die. Tomorrow, 235 of them whom we could have pensioned today will be dead. A year from now, 90,000 more of the boys who faced shot, shell and gas in the trenches will have gone to Eternity—unpensioned and very nearly forgotten.

I think the arguments of those who oppose pensions for World War I veterans dwindle down to admitting that these pensions would be only just and proper, "but for the cost."

Surely no one would want to say that, while these veterans in all fairness are deserving of these benefits, we had better wait until death has thinned their numbers still more, and start paying them pensions when it can be done more cheaply. Surely no one would want to play such a cold-blooded waiting game as that.

I prefer to believe that all of us will recognize now the justice in the proposal to pension those veterans, and that we will take steps now to do now what ought to be done.

Let the veterans of World War I be treated with the same consideration as those of the other wars in which our Nation has fought. Let there be no generation of forgotten men among America's veterans.

Senator John F. Kennedy for Vice President

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, may I call to the attention of my colleagues an editorial from the Springfield Daily News on June 27 headlined "KENNEDY Boom Grows," which points up several of the recent compliments paid to our esteemed junior Senator from the Commonwealth of Massachusetts, as the possible Democratic nominee for the Vice Presidency.

One of the tributes came from the Republican Governor of Massachusetts, the Honorable Christian Herter, who, while at the annual Governors' Conference at Atlantic City, said that Senator KENNEDY might carry the State for the Democratic ticket in November if he were the vice presidential candidate.

The editorial follows:

KENNEDY BOOM GROWS

Gov. Abraham Ribicoff of Connecticut, who told the Democratic State convention in Worcester earlier this month that the party should nominate Senator JOHN F. KENNEDY of this State for Vice President, disclosed yesterday that he is still working for that objective.

At the annual governors' conference in Atlantic City, Governor Ribicoff said that he had written to Adlai Stevenson, leading Democratic presidential candidate, on the subject, and had discussed it with James A. Finnegan, campaign manager for Mr. Stevenson.

Gov. Dennis J. Roberts of Rhode Island gave his endorsement to the Connecticut governor's proposal, and also said that he considered Mr. Stevenson as "the best qualified man in either party for the presidency."

Many newspapers have commented favorably on this proposal to put Senator KENNEDY on the Democratic ticket, and the Chicago Daily Sun-Times this week joined that group by presenting a strong, favorable case for the Massachusetts Senator. Representative EDWARD P. BOLAND, Democrat, of Springfield, remarked that the editorial reflects the feelings of the majority of the citizens of Massachusetts, regardless of political part, and he had it reprinted in the CONGRESSIONAL RECORD.

However, the highest compliment paid this week to Senator KENNEDY came from the Republican governor of his State, Christian A. Herter. He told an Associated Press representative at the governors' conference yesterday that Senator KENNEDY "might possibly carry the State" for the Democratic ticket if he were the vice presidential candidate.

Governor Herter has made it clear that he assumes that President Eisenhower will run for reelection, and that the President's popularity in this State is as great as it was in 1952. At that time, the Republican national ticket received 1,292,325 votes to carry the State by a margin of more than 200,000. At the same time, Senator KENNEDY was defeating Mr. Eisenhower's right-hand man, Senator Henry Cabot Lodge, by 70,000 votes.

However, Mr. Eisenhower received 80,000 more votes than did Mr. KENNEDY. Mr. Herter now believes that Mr. KENNEDY might be able to draw enough votes as a vice presidential candidate to swing the State. To do that Seantor KENNEDY would have to switch tents of thousands of votes from the popular President to the Democratic presidential candidate.

There are many in this State who believe that the confidence which the people of Massachusetts showed in Mr. KENNEDY 4 years ago has been increased by the service he has given in the Senate. Governor Herter apparently shares that belief, for he now says that Senator KENNEDY "might possibly carry the State" for the Democratic ticket in 1956. The governor also believes that Senator KENNEDY's candidacy would strengthen the ticket in Rhode Island, where voters gave Eisenhower a slim 8,000-vote edge in 1952. The governor says that Senator KENNEDY "would not have the same strength" in other New England States.

Two Democratic governors in New England have strongly endorsed Senator KENNEDY, and one Republican governor concedes that the Senator's name on the ticket might possibly switch the tens of thousands of Massachusetts votes necessary to carry the ticket in this State.

Where he is best known, Senator KENNEDY is most strongly supported. As his reputation grows throughout the Nation, he becomes the man who would bring strength to the ticket, dignity to the office, and service to the country.

Amend Section 165 (b) of the Internal Revenue Code

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. MOSS. Mr. Speaker, I am today introducing legislation to amend section 165 (b) of the Internal Revenue Code relating to the amount deductible for income tax purposes in the case of losses of commercial fruit and nut trees in a major disaster.

As a direct result of widespread floods in December 1955 and January 1956 in northern California and elsewhere in the Nation, hundreds of commercial fruit and nut growers were virtually rendered destitute by the destruction of their fruit and nut trees.

The problem of the orchardist who suffers a loss to his trees is more serious than that of the farmer losing a crop as a result of flood. The orchardist who loses his trees must wait a minimum of 4 or 5 years in order to grow new ones during which time his source of income is destroyed; the farmer may produce a bumper crop in the next growing season.

The method of planting orchards, and growing and cultivating the trees does not lend itself to a practical solution of capitalizing costs, as the Bureau of Internal Revenue terms it. Most nut or fruit growers are single operators. Orchards are planted periodically in small blocks, with the grower doing his own work, and naturally there are very few costs to capitalize even if it were practical to do so. For this simple but cogent reason, it is far more equitable and sound to measure the grower's loss by fair market values, rather than by the Bureau of Internal Revenue's "cost approach" method.

In other words, the fair market approach measures the real loss suffered. Current provisions of the Revenue Code are such that with this real loss provided, the grower could get some relief of his taxes when it is most sorely needed.

As things are today, we have the paradoxical situation of growers being completely wiped out of homes, and livelihoods, although still faced with a staggering tax burden. This situation cries out for remedy in major flood disaster areas of the Nation.

Foreign Aid Does Not Pay Off

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. KRUEGER. Mr. Speaker, while the Senate Foreign Affairs Committee proceeds to restore the foreign aid funds cut by the House, there is a growing feeling over the Nation that we should tighten up on this aid to the whole world. If this sentiment thrives there may be trouble when the appropriation bill for this so-called mutual security comes up.

It is likely that the Senate will follow the recommendation of the committee and restore $715 million of the $1.1 billion cut that the House made when that body considered the mutual security authorization. The Senate has always been rather generous where the State Department was concerned.

There has been no change in the foreign aid situation. It looks like the same silly business that we have indulged in for years, this attempt to buy friends. We look ridiculous when we have to be so careful how we beg some of these nations to accept our cash. They will take our money and then tell us that we should drop all barriers against Red China and recognize the international outlaws that still hold our citizens as prisoners.

This is the type of cooperation that our billions have bought. The American taxpayer is asked to dig up more billions to continue the deal. In the House last week, before passing it, we debated and argued on a pension bill for our veterans. The costs of the measure were brought up time and again, and there were some touching words about the expense that the country would have to face.

We should spend what is proper to care for those veterans who suffer from service-connected disability, or those veterans who are past their productive years. If we have so much money that we can spend it overseas, I would like to cut that out and put some of it into circulation here at home. Certainly our veterans should merit as much consideration as Tito or Nehru.

These spending plans, once they are started, never seem to end. Back in 1945 we were to have the Marshall plan in operation for 4½ years and it was to cost only $11 billion. We still have the foreign aid going in 1956, and the authorizations from July 1, 1945 to June 30, 1957, if the Senate committee figures are retained, will amount to $72,154,816,750.

We are told that this is smart spending; that it has halted the spread of communism. From 1945, when this program began, Soviet Russia has brought 5 million square miles of territory under its control, and more than 700 million free people suffer oppression and slavery that come with the red flag. I would say that such a program has failed dismally. The idea sounded good, but it did not make friends. You have to earn their respect and cooperation.

We know that these billions have not checked communism. Congress cannot find out how the money is being spent. We are told much of it goes for military purposes and that is a secret. The General Accounting Office is supposed to be the watchdog, but it makes little progress in running down the way the money goes. GAO says that the foreign-aid program suffers from "poor planning, lack of accountability, poor coordination, overestimating the capabilities of recipient countries, and overambitious programing."

If it should come to pass that Congress would refuse to appropriate the money which has been authorized for this year, the foreign aid could go rolling right along for quite a while with the money still on hand. The request was for $4.9 billion for this year. During the recent debate on the bill, Congress did find out that there was $6.8 billion still on hand. This was money that had been appropriated and was not spent. The spenders got the money faster than the countries could spend it.

Many people seem concerned about the growing idea that our Government can provide money for all of us in any circumstance or any condition; that all we have to do is ask for it. When we review the billions that have been spent abroad on these questionable programs, then I cannot see how anyone can take issue with Government spending here at home.

Jan Paderewski

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. DODD. Mr. Speaker, today, June 29, is the 15th anniversary of the death of one of the world's truly great figures—Jan Paderewski, statesman, musician, and patriot. It is also the centennial year of the birth of Woodrow Wilson, who did so much to further the cause of a free Poland. The lives of these two leaders touched at many points; both were passionate advocates of the principle of national self-determination, and both dedicated their lives to their respective countries.

It is ironic to read in today's headlines of the revolt against Red troops in the Polish city of Poznam. For it was in this historic city that Jan Paderewski dedicated a statute to Woodrow Wilson after the end of World War I. Paderewski wished to commemorate America's friendship to the new Polish Republic by honoring our wartime President. Perhaps this one incident illustrates the difference between the United States and the Soviet Union. The Poles honor a statute of one of America's greatest leaders in Poznam, while for Communist Russia they have nothing but hatred and armed resistance to her troops.

It has been said that all humanity pays tribute to genius, and the genius of Jan Paderewski brought esthetic pleasure to millions. But his career has an even greater significance. He was an outstanding leader in world affairs, and an articulate spokesman for his homeland.

Paderewski was born in the Province of Podolia, then a part of Czarist Russia, in 1860. From relatively obscure origin, he rose to become the Premier of Poland and an almost legendary figure in the world of music. Paderewski's father played an important role in the uprising against Russia in 1863. For his struggle against Russian tyranny the elder Paderewski was banished to Siberia when his son was less than 3 years old. The great musician probably inherited his life-long hatred of oppression from his father, who was an active leader in the cause of liberty.

Jan Paderewski was a man of deep and sincere humility. On his 75th birthday, in 1935, he asked the people of Poland not to be "bothered" to commerate the occasion, but nevertheless hundreds of thousands of people throughout the world sent their grateful thoughts to him, even if they were not always recorded. For this man had contributed not only his talent, but his fortune, to the cause of freedom. It was his lifelong wish to see a free and happy Poland before he died.

The signing of the armistice after the first World War gave Paderewski the opportunity to return to his homeland. Czarist Russia had fallen, Germany defeated, and all Europe was in a state of chaos. The time had come to press

Poland's claim to freedom from foreign domination. On June 26, 1919, Paderewski accepted the task of forming a coalition government, in which he held the dual posts of Premier and Foreign Minister. His genius as a statesman became apparent when, with freedom in sight, Poland was torn with internal strife. There were numerous factions, each fighting for political control of Poland, and it was his duty to bring a measure of peace to his homeland.

Paderewski became a world figure at the Versailles Peace Conference, where he ably represented his country. He argued for Polish territorial claims on the basis of the principles set forth in President Wilson's 14 points. The result of his negotiations was the establishment of the Polish Corridor, with Danzig as a free city of Europe. Paderewski obtained German and Austrian recognition of the new Poland and achieved a friendly relationship with Czechoslovakia, Latvia, and other European nations born of the war. Paderewski eventually resigned as Premier of Poland and came to the United States, where he began a series of concerts that added to his world fame.

Paderewski's generosity, almost to the point of folly, has become well known throughout the world. He gave vast sums of money to help relieve the suffering of the people of Europe during World War I, and turned over his great estate on Lake Geneva, in Switzerland, to victims of the war. It has been said that before leaving Europe for the United States in 1930, he had given away most of his fortune. The true extent of his generosity, both in spirit and money, will never be known.

Americans, and indeed all the people of the free world, will never forget the contribution to the cause of freedom made by this musician, patriot and statesman. The prayers of millions for world peace will someday be realized, largely because of the groundwork laid by such giants as an Paderewski.

Polish Workers' Courage

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 25, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, the spontaneous uprising of Polish workers in the city of Poznan on the eve of the 15th anniversary of the death of the great Polish patriot, Ignace Jan Paderewski. is an inspiring example of the courage and determination of the Polish people to regain their birthright of freedom.

Eyewitness reports from western observers attending the industrial fair in Poznan confirmed the heroic demonstrations protesting working conditions, lack of food, and poor living standards. The revolting Polish workers attacked Communist headquarters and government buildings and clashed with tanks and troops, according to these reports.

The Polish uprising comes 3 years after the revolt of German workers in East Berlin and again shows the willingness of these patriots to lay down their lives for freedom. It is dramatic proof that the people behind the Iron Curtain have not succumbed to the evil forces of totalitarianism and tyranny.

Mr. Speaker, by their courage and daring, these Polish patriots have again shown the world that the spirit of freedom never dies in the hearts and minds of the Polish people. As so many times in their history, the Poles have once more proved that the spark of human freedom can never be extinguished. They have given hope to the world that the day will come when that spark will burst into a flame and Poland will again take its place in the front ranks of the free nations of the world.

Do We Trade or Do We Stop Trade?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. MULTER. Mr. Speaker, there have been many words spoken and written on the subject of our foreign trade policy. The issue of protection versus growing trade has occupied the attention of Congress and the public since the founding of the Republic. We do not approach the subject today with much that is new or original. But old truths are durable ones and, what is more, they are constantly illuminated by events. One such truism, as the New York Journal of Commerce points out, is that "protectionism generates protectionism." In an editorial on June 13 entitled "Home To Roost," the Journal of Commerce addresses itself to the administration's negative policy on watch imports from Switzerland. Pointing out that the July 1954 decision to raise the tariff on Swiss watch movements by 50 percent has only served to complicate an already complicated situation, the editorial notes that the pressures for protection against imports have only increased. "We stand by our earlier prediction that the troubles the administration set for itself in raising the watch tariff 2 years ago have only just begun," the editorial observes. This is undoubtedly the case and the better course—in the interest of our national trade policy, our foreign relations, and the American consumer—would be to recognize the 1954 decision as a mistake and rescind that action. Fortunately, the 1954 decision is now under review by the Tariff Commission and the Office of Defense Mobilization. These agencies will, in due course, make their recommendations to the President. We can only hope that the wisdom of the Journal of Commerce editorial will be compelling to the policymakers and that they will have the courage to recognize the mistake made in 1954 and will urge that the watch duties be restored to their previous level. The complete editorial is as follows:

HOME TO ROOST

Although the administration is preparing to institute a new round of tariff cuts, following the negotiations in Geneva, it is still faced with difficulties in holding the line on cuts already made, especially where protectionists have succeeded in making a break in that line via the issue of defense essentiality.

This was made plain last week by Albert L. Reeves, general counsel of the Clock and Watch Manufacturers Association of America. Mr. Reeves told the Congressional Joint Economic Committee a plea for higher tariff rates on nonjeweled watches is imminent.

He says it has been made inevitable by a heavy increase in imports "in the O–1 jewel clasification," an increase which, in turn, is in good part the product of President Eisenhower's decision to raise tariffs on the more expensive jeweled watches by 50 percent in July 1954. By making it more difficult to market multiple-jeweled watches in the United States of America, this action naturally encouraged overseas producers to concentrate on types against which the higher tariff rates were not applicable. The makers of pin-lever watches are now feeling the squeeze and want help. The chickens are coming home to roost.

This is a perfectly logical development. As we have pointed out repeatedly in these columns, there is only one way in which protection can be given to domestic producers via higher tariffs and import quotas. It can only be given at the expense of other groups of producers.

The watch case illustrates plainly enough that United States manufacturers of pin-lever watches have had to pay some of the cost of the protection given jeweled watch manufacturers 2 years ago. But that is only a small part of the story. What is equally true, but more difficult to demonstrate in specific cases, is that the cost falls most heavily on other groups of United States producers who are alert enough and efficient enough to compete not only in their home markets without excessive protection, but in foreign markets where they must slug it out toe to toe with their overseas competitors.

Every time the Government sets up artificial trade barriers to "protect" a group of domestic producers unable to meet foreign competition in their home markets, these efficient producers are obliged to foot the bill. Because their overseas markets cannot sell as much here, they cannot buy as much. The efficient are thus penalized to protect those who are less so.

How is the Government to handle the new turn the watch case is taking? It is facing something of a dilemma.

Like the complainants in the United States jeweled watch industry (consisting mainly of four companies), the manufacturers of pin-lever watches appear to be paving the way for an appeal for protection based not so much on the Tariff Act's escape clause as on the issue of defense essentiality, which is what turned the trick for the jeweled watch industry in 1954, after all else had failed.

The jeweled watch industry's claim to defense essentiality was a debatable claim at best, and we do not know whether the Clock and Watch Manufacturers Association will be able to come up with anything more convincing. But suppose it does. What then?

A higher tariff on O–1 jewel watches and/or clocks can be made to sound reasonable, inasmuch as it is something the jeweled watch industry already enjoys. Perhaps it is not altogether fair that one section of the industry should have it and another should not.

But, all other things being equal, is it not highly probable that the effect of a sharp tariff increase on the less expensive time-

pieces would be to reverse the trend of the past 2 years and tend to shift the main import pressure back on the jeweled watch industry? Will not this, in turn, spur more demands for protection in that sector?

Interestingly enough, the jeweled watch industry has already indicated that it is far from satisfied with the protection it is now accorded, despite the big tariff increase of 1954. It wants more protection, and a good deal more.

So there is still another point to be considered. If both the jeweled and nonjeweled sectors of the watch and clock industry are given more protection, the reverberations will merely spread further. If the protection is great enough to block imports of timepieces in large measure, foreign manufacturers will have two choices. Either they will have to spread out into other fields—in which case other groups of United States producers will want more protection—or failing to earn dollars here, they will cut their United States buying proportionately, throwing the whole burden back on the efficient producers of this country.

There is a moral to all this. It is that protectionism generates protectionism. It is something more easily started than controlled, once it gets underway.

This was the real danger in the President's decision to raise the watch tariff, not the size of the increase in the going rate. And this was, and is, the real danger in the resort to the doctrine of defense essentiality as an excuse for a tariff increase in circumstances in which the pertinent facts were something less than convincing.

But having granted the increase to the jeweled watch industry, the administration may not find it easy to deny the same right to the nonjeweled sector. If this is the case, where, then, will it be able to stop at all? We stand by our earlier prediction that the troubles the administration set for itself in raising the watch tariff 2 years ago have only just begun.

The 15th Anniversary of the Death of Ignace Jan Paderewski

EXTENSION OF REMARKS
OF
HON. HERMAN P. EBERHARTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. EBERHARTER. Mr. Speaker, tomorrow, June 30, will mark the 15th anniversary of the death of Ignace Jan Paderewski, Polish composer and pianist, statesman and a foremost champion of freedom and democratic ideals. This is a most appropriate occasion to remember not only the profound works of the immortal Paderewski, but also to extend our sympathy to the millions of Polish Americans in the United States and the Poles throughout the world who have been persecuted for their belief in the same ideals for which Paderewski fought so hard.

Paderewski was born in Poland in the year 1860, and at a very early age made manifest his great talents in music. As he continued his career as an artist and composer, he received increasing acclaim throughout the world, and in 1891 made his first American appearance at a recital in New York City. This, of course, was only the beginning of a career in this country that was to bring him closer to the heart of every American.

But Paderewski's contributions in the field of music were not his only ones—not by any means. He received innumerable honors for his statesmanship and to thousands of people he is still a symbol of liberty. It is significant to note in this centennial year of the birth of Woodrow Wilson, that it was largely due to Paderewski that the 13th of Wilson's 14 points was devoted to the restoration of a free and independent Poland. After the people of Poland asserted their independence according to the principle of national self-determination, Paderewski was the first Premier of the Polish Republic in 1919.

We all remember with sadness that the freedom gained by Poland after the First World War was short lived and the land of Poland was again take over by a totalitarian aggressor. But the independent spirit of the Poles still prevails today and I am sure that none of the Polish people will ever forget the last words of Paderewski, which were "Poland will rise again."

This could not be manifest more clearly than by the protest of the Polish workers yesterday against the dominating rule of the Communist when thousands of Polish workers revolted against their undemocratic rulers.

Effects of United States Foreign Aid

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article from the June 27 edition of the Washington Evening Star by Dorothy Thompson entitled "Effects of United States Foreign Aid":

EFFECTS OF UNITED STATES FOREIGN AID—MONETARY GIFTS SEEN SOCIALIZING EARNINGS OF PRIVATE ENTERPRISE

(By Dorothy Thompson)

The forthcoming election would be more interesting if any issues of substance were involved. If there were a real opposition party, for instance, it would attack the program of foreign aid, both in theory and practice. But although the Democrats are denouncing obvious failures in the foreign field, they never get to grips with what is fundamentally wrong with policies that, in fact, they initiated.

Governor Harriman recently accused the Eisenhower administration's foreign-aid program of being "inept, bullying, and regardless of the interests of other countries." But he did not analyze the reasons, nor advocate retrenchment, nor suggest that it might be well for the American Government to consider the interests of the American people.

On the contrary, under a Democratic administration they can expect more of the same thing.

In the past 10 years the American people have put up $55 billion for aid to all and sundry, while our own national debt still equals the combined national debts of all the other nations of the world. Spruille Braden, in the last human events, estimated that $55 billion is equal to the total assessed valuation of all the property of America's 13 largest cities.

Today the biggest single item in nearly every family's budget is for direct and indirect taxes. In addition to the Federal debt, every American, it has been estimated, is personally indebted for some $3,000. He can't pay his private debts because the Government takes a minimum of 20 percent of every net dollar.

This program of universal giveaway is accomplishing the following things:

It is socializing on an international scale a large proportion of American earnings from private enterprise, and thus promoting world socialism.

By encouraging the idea of getting something for nothing, it is undermining the voluntary export of private American capital for long-range investment in expectation of fair earnings.

Since the Russians have begun competing, it is argued that we must outbid them, thus issuing a universal invitation to blackmail.

Premier Nasser of Egypt, having received a rather vague offer to build the Aswan Dam from Russian Foreign Minister Shepilov on his recent visit to Cairo, promptly approaches the International Bank for Reconstruction and Development for the total capital. If we are out to top every Soviet bid, we offer the Soviets a means of promoting American bankruptcy.

The foreign-aid program with no strings attached violates every principle of contract and, therefore, of mutual honor and respect.

It binds us to foreign personalities and parties in power and alienates those who seek to succeed them. That is the real background of our troubles in Iceland; and sometimes we have put money into the pockets of knaves—Peron, of Argentina, for example.

By speeding up the industrial revolution in backward countries, we are creating new social strains for the Communists to exploit.

The underlying theory is contrary to all experience.

It is that one can buy friendship and respect. These are never for sale by the self-respecting, and nations, like individuals, don't stay bought. They continuously raise the price.

Another false theory is that communism is "the result of misery, hunger, and disease," and that if living standards are raised, people become good "democrats," and affectionate to their beneficiaries. What nonsense.

Among primitive peoples, radical movements result from exaggerated hopes insufficiently fulfilled. If improved living standards were the criterion, the Indonesians should adore the Dutch, and the north Africans the French. Instead the revolts against the imperialists are usually led by the men educated by the imperialists.

The example of America herself is what has hitherto attracted the world, not the huge bureaucracy of experts who now have a vested interest in billion-dollar giveaways.

Nothing is pleasanter, of course, than to spend other people's money.

Let Us Keep Up the Crusade for Freedom

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. MULTER. Mr. Speaker, wherever American citizens are in peril through no

fault of their own it is the duty of our Government to rescue them.

I ask, what has our Secretary of State done to cause the release by Red China of the 13 Americans held prisoner these many years?

Their release was promised by Red China last September 1955. They are businessmen and Protestant and Catholic missionaries. It is high time our Government did something about them.

The "Victory" of Dulles

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of June 28, 1956:

THE "VICTORY" OF DULLES—A CRITIQUE ON HIS VIEW THAT WEST SPURRED REDS' WOES AND HIS GLOATING OVER DISCORD

(By James Reston)

WASHINGTON, June 27.—Secretary of State Dulles came into his news conference today full of bounce and confidence. The State Department theatre was wired for sound; TV cameras and lights, Voice of America microphones and wire recorders were all over the place, and it was clear something special was going on.

The Secretary of State was, in effect, celebrating a victory. He had taken a chance on making public the text of the anti-Stalin speech by Nikita E. Khrushchev. The gamble had paid off in howls of protest against Mr. Khrushchev by Communist Party leaders all over the world, and Mr. Dulles was now clearly "seizing the initiative."

The Secretary was like a military commander suddenly perceiving a crack in the enemy's line. He identified it with a whoop and ordered a general offensive.

On the field of battle, this would have been standard practice, but whether it was good diplomacy, propaganda, and psychological warfare is another matter. And by this evening it was being widely debated in the capital.

Mr. Dulles' objective was perfectly clear. He saw Palmiro Togliatti and Pietro Nenni, the Moscow stooges in Italy, criticizing Mr. Khrushchev and identifying the Soviet Communist leader with Stalin's crimes. He saw the same thing going on among the Communist parties in France, Britain, East Germany, and New York, and he wished to encourage these centrifugal forces within the Communist world.

DULLES SEEKS COMMUNIST RIFT

His aim was to get the Communist parties outside the Soviet Union to break away, to demand more and more freedom of expression and action. And he wants these same things to happen in the Communist satellites and in the Soviet Union itself.

Whether Mr. Dulles encourages these developments by gloating over them, however, is the point at issue. And he was visibly gloating today. He announced, in a formal statement, that "international communism is in a state of perplexity." He called the anti-Khrushchev criticisms of Signor Togliatti, M. Thorez, and the other Communists a "revolt." He taunted the Communists for not having had any "recent victories," and he contended that this was due to the "unity and combined strength" of the free world.

PART PLAYED BY DULLES

All this is fairly true. The Communists are clearly in a state of disarray over the inner relationships of the national Communist parties to Moscow. It also is true that Mr. Dulles personally helped spark this present Communist controversy by taking the unusual action of releasing the private speech of the political head of another government.

Nevertheless, it is difficult for well-informed Soviet experts here to see how Mr. Dulles expects to deepen and widen the breach in the Communist world by proclaiming publicly that these divisions jeopardize the unity and success of the whole Communist movement.

He is opposed to "the iron discipline and brutal terrorism Stalin employed," but said today communism had great difficulty in being an effective instrument of cold war without such discipline.

He wants Signor Togliatti, M. Thorez, and the other national Communist leaders to go on defying Mr. Khrushchev, but advertised these gestures of defiance as a victory for the West.

Thus, there was strong feeling here tonight that the Secretary of State was unconsciously discouraging the very objectives he sought, and inadvertently handling Mr. Khrushchev a powerful argument for restoring discipline among the Communist leaders in Rome, London, Paris, and New York.

Mr. Dulles was more adroit today in his handling of Marshal Tito of Yugoslavia. He didn't say that Marshal Tito's defiance of Stalin had weakened the Communist structure, nor did he condemn the Yugoslav President for going to Moscow and making up with Mr. Khrushchev. He praised the courage of Marshal Tito and thus encouraged the development of Titoism, which is now a main objective of State Department policy.

GAIN FOR DULLES IS SEEN

On balance, too, he probably made domestic political gains with his line today—and this may explain his eagerness to take credit for the difficulties of the Communist parties.

It is a long time since Mr. Dulles has had any victories to claim. He has been under constant attack on Capitol Hill for weeks. Consequently, he chose today to let the TV cameras into his news conference for the first time, and he took full advantage of the publicity opportunities provided by his dramatic statement.

Maybe he was right in this, as he proved to be right, despite the contrary views of his critics, about publishing the Khrushchev speech as a State Department document. But many observers here do not think so.

"This is, above all, a time for the free world to remain strong in their unity," he said. "It is a moment of particular importance."

Everybody agrees with this, but many here believe it also is a moment when the deep divisions within the Communist Party are more likely to be encouraged by silence than by jubilant pronouncements in the State Department.

My War With the Mob

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include the third in a series of articles by Victor Riesel which appeared in the Washington Evening Star of June 28, 1956, entitled "My War With the Mob":

MY WAR WITH THE MOB—RACKETS "TAKE" ESTIMATED AT $1 BILLION FROM UNIONISTS TERRORIZED BY GOONS

(By Victor Riesel)

From Maine to California, from the suburbs of Detroit to the Everglades outside Miami, at least 200 union officials have been murdered in the past 20 years by the crime cartel operating inside labor.

It is literally impossible to calculate the number of bombings, beatings, knifings, dynamitings, feet burnings, chain floggings and shotgunnings of union men by the troops of the mob.

Arms and legs have been broken. Boiling water has scalded men. Stench bombs have emptied theaters and restaurants and ruined food and dress shipments.

The most prominent labor men attacked were the Reuther brothers, Walter and Victor. Each was shotgunned. Walter's life was saved only because a ringing telephone caused him to turn sideways at the very split second that the two-barreled gun went off. His right hand is still semiparalyzed as a result of that attack. The other Reuther brother survived a shotgun blast in the face but lost one eye. Both are still under constant bodyguard.

FEW CASES SOLVED

Despite the fact that these cases of murder and violence have been so numerous and different that it would take a Univac to assort them, few have been solved.

The thugs who shot or killed 56 union officials in St. Louis over the past 20 years are still free if they haven't died of natural causes.

No one has ever been taken in for the murder of such union officials as Norman Redwood of the Sandhogs, Tommy Lewis of the Building Service Employees, Johnny Acropolis of the Teamsters, Will Lurye of the International Ladies Garment Workers Union and a string of others.

THIRTY-FIVE SLAIN ON WATERFRONT

Some 35 men have been killed on the New York waterfront alone. There have been few solutions, arrests or convictions.

This isn't confined just to the Northeast. A Negro official of the laundry workers union was taken out in the Florida Everglades. He was shot and rocks were bounced on his head.

Joe De Sylva of the Los Angeles retail clerks had a brick and steel reinforced front on his union headquarters as a guard against dynamiting. Los Angeels detectives have told me of liquor stores being hit by heavy cans hurled by union men.

In Hermosa Beach, Calif., a business agent for the Reinforced Iron Workers Union, Bruce Dexter Parkhurst, was shot in the back by Chicago-type mobsters who escaped in a fast car.

Cross country in Hialeah, Fla., a late aide of the late Al Capone, Max Caldwell, brutally beat a member of the carpenters union because the carpenters were taking the lead in driving Caldwell out of the Central Labor Union. Caldwell earned his star in the underworld by stealing $900,000 from a retail clerks union and kicking women down the stairs when they complained.

PAID ASSASSIN SEIZED

A brazen murder attempt was made against crusading Paul Hall, leader of the Seafarers' International Union. The police accidentally picked up a suspicious looking car nearing Hall's New Jersey home. In it was a man with a shotgun. He confessed he had been paid to knock off Hall because of

the union leader's fight to clean the goons off the waterfront.

But even this horrendous record does not reflect the terror which rides the shoulders of hundreds of thousands of union members. On the waterfront, for example, the longshoremen have had to buy tickets for functions which never took place and for boat rides on nonexistent vessels. They've had to borrow money whether they neded it or not—at usurious rates from union officials.

On Long Island, members of the operating engineers had to buy up to $20 worth of liquor a month from the bar owned by union owner William De Koning, Sr. No drinks, on jobs. De Koning was finally jailed for extorting hundreds of thousands of dollars.

Union officials have taken out bank loans and job seekers have had to pay the installments in cash before they got on the job list. Employers—and members—have been forced to donate heavily for testimonial "gifts" for union officials—sometimes totaling up to $50,000.

OFF-HOUR WORK "DONATIONS"

Thousands of skilled workers have had to go out to the suburban estates of their union chiefs to contribute off-hour and weekend work building annexes, repairing homes, putting up stables for thoroughbreds and waiting personally on the big boss—if they wanted to work the next week.

Literally millions of workers went through the war breaking their backs at high speed skilled work to turn out weapons for our country—and yet were never permitted real rights in the union to which they paid dues. These were, and still are, known as permit men. They paid upward of a dollar a day to get a card. Even today, there are hundreds of thousands of class B union members who pay dues but can't vote or sit in on meetings or even address their union officials.

These are no petty rackets. They bring the mob upwards of a billion dollars—a figure I get just by totalling data put together by various investigating committees.

What these racketeers fear most is the spotlight of publicity. It is bitter to realize that all the glare into the snakepit has not yet moved the public.

Spirit of Independence Inspired by Paderewski Burns Anew in Poland

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. PRICE. Mr. Speaker, on the eve of the 15th anniversary of the death of the great Polish patriot, Ignace Jan Paderewski—so well known in America that we considered him one of us—it is encouraging and gratifying to witness the rekindling of the fire of liberty and freedom so well fed by him through his lifetime.

The inspiration Paderewski gave the Polish people is still nurtured in their hearts and the smoldering embers of their national patriotism today are bursting into full flame—threatening to engulf the Communist tyrants who have enslaved their Christian land for the past decade. In these efforts the Polish people have the sincere support of the entire free world. Here in the United States the prayers of millions are with them in their struggle.

Paderewski, world renowned composer and pianist, became the first Premier of the Polish Republic in 1919 after the people of Poland asserted their independence according to the principle of national self-determination embodied in the famous 14 points promulgated by President Woodrow Wilson. It was most fitting that this new blow for liberty being struck by Polish patriots should come on the 15th anniversary of Paderewski's death.

Cyprus: A Job for NATO?

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. UDALL. Mr. Speaker, many of us have been distressed by the tragic failure of British policy on Cyprus. Not only have our feelings for the rights of the Cypriots been offended, but it has produced unnecessary strife between the members of NATO alliance—Greece, Turkey, and Britain.

This week the Honorable Denis Healey, a leading foreign affairs spokesman for the British Labor Party, had an article published in this country in which he voiced the conviction that the best hope now for a solution of this knotty problem rests with the NATO council. This is a hopeful idea. It might well serve as a point of departure for the "three wise men" who, we are told, are now searching for the appropriate role for a new, enlarged NATO organization.

Mr. Healey's challenging article is printed below:

WHY NATO MUST END THE CYPRUS DILEMMA

(By Dennis Healey)

British policy on Cyprus faces total collapse. And, as things are, the West as a whole will be deeply involved in the tragic consequences of Prime Minister Eden's blunders. Failing a dramatic reversal in British policy, the situation can be saved only if the western alliance takes a collective initiative in the near future.

At present, Field Marshal Sir John Harding is making an all-out effort to kill terrorism on the island by force. Twenty thousand British troops—the majority young national service draftees—are trying to catch a hard core of EOKA terrorists who may number no more than 100. In the last 12 months, only a handful of this hard core have been put out of action. But the repressive measures by which Harding has tried to match the EOKA's intimidation of the Greek Cypriote population have provided many times that number of recruits for terrorism.

The military authorities complain that their task will be impossible unless the Cypriotes themselves collaborate. However, the policy of collective punishment, curfew and forcible searches has reduced even once-friendly Cypriotes to mutinous silence. By exiling Archbishop Makarios, Eden removed the only Cypriote through whom he could seek a political solution; worse still, he put Makarios in a position where he could be a martyr without personal suffering and could recommend intransigence without personal risk.

It is now admitted even by official circles that, unless EOKA can be stamped out by next fall, the cost of continuing operations on the island will be out of proportion to the latter's military value as a base. Moreover, if once the Greek and Turkish populations come to blows and the British troops have to assume police duties as well as hunting the terrorists, another 20,000 soldiers will be required and the operation will lose all military sense. Thus, at any moment Eden's Chiefs of Staff may rebel against his policy.

This is, if he has a policy. For both the officials and the journalists who have been on Cyprus during the last 12 months agree that the political problem centers on the one issue Eden still absolutely refuses to discuss: sovereignty. Proposals for constitutional reform or economic development are totally irrelevant to a political solution. Unless Britain can satisfy the 400,000 Greek Cypriotes of his readiness to consider Enosis or union with Greece, the causes of the present disorders will remain, whatever happens to the EOKA.

Until recently, Eden's excuse for rejecting Enosis out of hand was Turkish opposition. Indeed, he has done nearly everything possible to encourage and exacerbate Turkey's intransigence. Yet, although Turkey now presents a far more difficult obstacle than she did 3 years ago, neither her interests nor her feelings are yet so deeply engaged as to make compromise impossible. Apart from natural reluctance to see what was for centuries a Turkish possession pass into the hands of a traditional rival, Turkey's opposition to Enosis spring from fears for the future of the 100,000 Turkish Cypriotes if Britain is no longer in a position to protect their minority rights. But this is an issue on which negotiations could certainly produce solutions.

It is often argued in Britain that Turkey also fears for her security if this island, 40 miles off her southern coast, falls into unfriendly hands. Yet, the fact is that since Turkey surrendered her other offshore islands to Greece after World War I, Greek-Turkish relations have been better than ever before in history. Allied to Turkey in both NATO and the Balkan Pact, Greece could not have been conceived as a potential enemy until her relations with Turkey were poisoned by Britain's refusal to consider Enosis.

Indeed, one of the most dangerous products of Eden's Cyprus policy has been the conversion of Greece from a stalwart ally of Britain into something like an angry neutral. Just when it looked as if Greek democracy was firmly established after the long agony of the civil war, Cyprus gave the extremists of both left and right an ideal issue on which to combine. Not only the Communists, but also the wartime collaborators, are now making a comeback.

All this presents terrifying dangers if Britain continues her present policy until it finally breaks down. The collapse of Eden's Cyprus policy is bound to produce a major crisis in the British Government. In such a situation, it is easy to see the Prime Minister imitating Ernest Bevin's behavior in Palestine. He might well order the evacuation of British troops and leave the 2 communities to fight it out. If communal fighting begins on the island, Greece and Turkey are likely to be drawn in directly and full-scale war between them becomes a possibility. It will then be far too late for anyone else to intervene successfully.

There are some signs that Eden, aware at last of the catastrophe toward which he is racing, is having second thoughts. After refusing for nearly 3 years to permit discussion of Cyprus with any foreign government, on the ground that it was a matter of British domestic concern, he made a speech at Norwich on June 3 in which he at last admitted that Cyprus was not a colonial question or one between Britain and Greece alone, but was international. Unfortunately, in the next breath he said that Britain must have Cyprus as a national base in order to protect her oil supplies in the Middle East.

Yet, he has now conceded the essential point. Cyprus is a question for the entire western alliance. Indeed, Eden's insistence

on Britain's oil interests reinforces this point. For every member of NATO depends no less than Britain on Middle Eastern oil—some, like Italy, even more. The United States, Holland, and France also have the same financial interest in the oil as does Britain. Thus, if military force is needed to protect Middle Eastern oil, the other members of NATO have the same interest and obligation as Britain to provide it.

Moreover, it is difficult to conceive of circumstances in which Britain could use force to protect her interests in the Middle East except as part of an alliance. She did not use force in Iran in 1951, in Egypt in 1952, or in Jordan in 1956. It has become obvious that she will not use force to implement the Tripartite Declaration on Palestine unless her cosignatories, America and France, agree to join her. Of all issues, Middle Eastern oil is the one on which Britain could least afford to use military force without support from her allies. In any case, it has become obvious that, unless Britain can obtain local consent for keeping a base on Cyprus, the cost of keeping it by force will exceed its military value. There is now no way of winning that consent except through NATO.

All parties to the Cyprus dispute are members of NATO. All have in the last month asserted their belief that the alliance should deal with political disputes among its members. Unless NATO addresses itself to the Cyprus problem, Lester Pearson might as well abandon his search for new fields of NATO activity. In fact, NATO's future depends as much on a solution of the Cyprus problem as a Cyprus solution depends on NATO.

The great advantage of NATO over any ad hoc framework for a Cyprus settlement is that, representing a wider community of nations with broader interests, it can help all the governments concerned to save face when they have to compromise. This is as important for Britain as it is for Greece and Turkey. Moreover, NATO is ideally suited to find a satisfactory formula for the strategic interests of both Britain and Turkey on the island. Whether the base which emerged from negotiation was a British-leased base or a collective NATO base, the treaty which established it could define the conditions of its use in war so as to satisfy the needs of Middle Eastern strategy.

With Western strategic interests guaranteed by NATO, the remaining problem would be to find a compromise between the political demands of Greece and Turkey. Though this is becoming more difficult every day, it is doubtful that the problem even now is as formidable as that which faced Western diplomacy in persuading Yugoslavia and Italy to agree about Trieste. And in this case, provided all the NATO powers cooperate, compensation might well be found to ease the smart of the less fortunate party.

The longer NATO waits, the more difficult its ultimate intervention will become. Few in Britain believe that the collapse of Eden's policy can be postponed for more than a few months. Yet, his subservience to the Tory dinosaurs is now so complete that he will not find the courage to change course unless he is under effective outside counterpressure.

Dr. Samuel Paul Capen

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. RADWAN. Mr. Speaker, with the passing of Dr. Samuel P. Capen, former chancellor of the University of Buffalo, a great record has been indelibly written.

It was my distinct honor and pleasure to attend the University of Buffalo under Dr. Capen's leadership.

Dr. Capen's record is one that should have the attention of this body, and it is best expressed in an article by Mildred Spencer which appeared in the Buffalo Evening News, Buffalo, N. Y. The article follows:

FIGHTER FOR DEMOCRACY: DR. CAPEN STANCH CHAMPION OF AMERICAN FREEDOMS

(By Mildred Spencer)

"Mankind has a right to be free—and a concomitant obligation to protect that freedom, whatever the personal cost."

So Dr. Samuel Paul Capen believed, and so he lived. He stated his passionate convictions to students and faculty on many occasions, and before distinguished educational bodies. His firm stand made the University of Buffalo a beacon of academic freedom in troublous times when forces were at large which threatened to destroy some of this country's basic freedoms.

The chancellor sensed the threat to intellectual freedom as early as 1935. Then, in Easton, Pa., he told a conference of trustees of colleges and universities how he felt about repressive tactics by which some would check the utterances of unorthodox or unpopular beliefs by faculty or students.

Academic freedom, he pointed out, implies that "teachers are free to investigate any subject, no matter how much it may be hedged by taboos; to make known their findings in classrooms or elsewhere, to differ with their colleagues and present the grounds of their difference; to take part as citizens in any public controversy; to be sure that no repressive measures, direct or indirect, will be applied to them, no matter how unpopular they may become through opposing powerful interests or jostling established prejudices, and no matter how mistaken they may appear to be in the eyes of members and friends of the institution."

In June 1938, with the world hovering on the brink of war, Dr. Capen urged the graduating class to "fight for the preservation of democracy" by watching and thinking and talking "when our talk may be unpopular," by writing and by voting.

A year later, he referred to the conflict of ideologies between the dictatorships and the democracies as "a test of whether or not there are such things as human rights."

"Men want more than order," he added. "They also want freedom. They will pay a high price for order, but they will not long pay for it with their freedom. The policy of the totalitarian states denies the unconquerable impulse to freedom that is in men. It destroys the most valuable capital of the people, the power that resides in the unhampered play of the mind."

Again in 1940, the chancellor attested his belief in the dignity of the individual. Addressing the senior class he stated:

"I suppose that I represent an almost extinct species. I am an individualist and not ashamed of it. It is not now in style. I do not expect the members of this class either to be individualists or to approve of them. Nevertheless, I would like to have you think for a moment of all the trouble that regimentation seems now to be causing in the world."

Predicting, 6 months before Pearl Harbor, the probability that the United States would have to enter the world conflict, Dr. Capen asserted:

"There is no possible way for us to play safe. * * * No more than for the European nations, which asked only to go their peaceful way unmolested, can there be safety for us until the conflict is ended. All signs indicate that the struggle will be long. Inevitably your generation faces shocks and hardships and losses."

In the spring and fall of 1941, and again immediately after Pearl Harbor, Dr. Capen stressed the fact that bearing arms is not always the greatest contribution that college students can make to the cause of freedom.

"The country now needs highly trained men," he declared. "We demand of you stability, the ability to keep your heads, to resist hysteria, to use horse sense." And he stated firmly that "the most patriotic thing any young person can do who is on his way to completion of an important specialty is to go on with his education until he is called."

His understanding of young people was highlighted when he added:

"Perhaps some of you cannot wait. Perhaps the urge to participate is too strong to resist. If so, I say go and God bless you."

"Now more than ever," America is the hope of the world, Dr. Capen affirmed in 1942 after this country had entered the war.

"Between us and the Axis, the conflict is irreconcilable," he continued. "No compromise is possible. The end must be our absolute triumph, or no American would hold life worth living."

Dr. Capen admitted the necessity, during a war, of forfeiting freedoms and rights, but he warned students in May 1943 to be "inexorably determined to reclaim them completely, once the emergency is past."

"We must prepare for the challenge of the day of victory," he said in 1944.

"Many people, still overexcited and unsettled, will expect a brave new world to be born ready-made on the heels of war," he declared. "When it does not at once appear, they will be disillusioned and resentful. They will have been conditioned to violence and to quick action. They will be disposed to seek scapegoats whom they can blame for situations which dissatisfy them. They will be ready to listen to anyone who offers some absolute scheme for reforming society and making everybody happy, prosperous and safe. The demagogue with a panacea will have an enthusiastic following."

The charge that the United States "has flagrantly mismanaged its affairs in the first year of peace" was leveled by Dr. Capen in June 1946. "This democracy is being murdered in its bed by members of its own household," he affirmed, striking out at selfish chieftains of industry and labor, "racial and religious intolerance," and "lawmakers who lack the courage to enact laws to protect the general interest."

"Freedom is never won, never stays put," the chancellor said in November 1947. "If we mean to keep our heritage, we have to keep on guard so the wrong people don't upset it."

The same year he expressed his faith in youth and his belief that "there is little chance of communism gaining hold in our colleges and universities."

"I know that some skillful emissaries of the Communist Party can establish cells in some universities," he said. "The American Youth for Democracy is a thing of that sort. The AYD makes no impression at all if it is aired and not suppressed. If it is suppressed, the immediate reaction of young people is to come to its defense."

At his final baccalaureate service in June 1950, Dr. Capen once again affirmed his belief that academic freedom is a cornerstone of American democracy.

"Those who believe universities are hotbeds of Red radicalism are completely mistaken and misinformed," he asserted. "No university can protect a member who has been proved to be disloyal, but it must defend any loyal and honest teacher or student who may be attacked because his findings or opinions displease some people."

Fifteenth Anniversary of Death of Ignace Paderewski

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. FLOOD. Mr. Speaker, June 29, 1956, is the 15th anniversary of the death of Ignace Paderewski, the internationally renowned Polish composer, pianist, and patriot who in 1919 became the first Premier of the Polish Republic.

A great portion of the credit for the formation of this Republic has to be attributed to the efforts of Paderewski. Although he had already won world fame with his incomparable piano concerts, this Polish patriot considered the freedom and independence of Poland more important than his musical career. Early in life he said, "The vision of a strong and independent Poland has always been the lodestar of my existence. Its realization is still the great aim of my life."

No one was more aware than Paderewski that the establishment of an independent Poland would be a difficult task. Poland had been partitioned for nearly 150 years by her aggressive neighbors Austria, Prussia, and Russia. There seemed to be little chance that the Polish people could ever be united. However, the outbreak of World War I was to give them that chance.

Paderewski quickly took advantage of this opportunity that arose during the war. He came to the United States to arouse the sympathy of the American people for Polish freedom. He had previously in concert tours in this country won their hearts with his peerless music; he now came to open their hearts for the Polish people in their struggle for independence. In a short period of time he accomplished much. He was successful, through a series of lecture and concert tours, in raising funds for his war-ravaged homeland; he was instrumental in the recruitment of Polish-American volunteers to serve in the Polish Army already fighting with the Allies in Europe—and perhaps his greatest achievement—he obtained the sympathy of President Wilson for the Polish cause.

President Wilson was always a stanch supporter of the rights of small nations. Through Colonel House, a close friend of Paderewski, consultations were arranged in which this champion of Polish freedom expressed to the President his pleas for his beloved homeland. These meetings formed the foundation upon which the Polish Republic was to be constructed at the Paris Peace Conference. President Wilson was impressed with the devotion of Paderewski to his cause, and assured him that he was confident that one day Poland would be free and united. The famous 14 points that were published soon after these conversations and in which the Chief Executive stated that an independent Poland should be erected, was tangible evidence that Paderewski had succeeded in gaining the support of President Wilson. Paderewski's vision of an independent Poland was almost realized.

This dream became a reality at the Paris Peace Conference. After the war Paderewski returned to Poland and succeeded in uniting the various political factions and in forming a coalition government so that a unified country could formulate plans for the legalization of Polish freedom at Paris. He became premier of the new government and was chosen as chief delegate to the Conence. At Paris he took an active part in the delimitation of Poland's frontiers along much the same borders as discussed with President Wilson during the war. Finally, Paderewski's supreme confidence in a resurrected Poland became an established fact when he signed the Versailles Treaty.

Paderewski had contributed his time, energy, talents, and resources to aid in the establishment of the Polish Republic. Having accomplished the chief aim of his life, in 1921 he retired from public life and returned to his music. In 1939 ill health forced him to abandon his piano concerts.

It was while he was in retirement in Switzerland that his beloved country was once more invaded by Russia and Germany. Quickly, this heroic Polish patriot emerged from his retirement and although aged and fatigued he returned to America to solicit aid for his subjugated country. On January 11, 1940, he accepted the presidency of the exiled Polish Parliament in France.

He died on June 29, 1941, fighting to his last breath for the freedom of his native land.

I would like to take this opportunity on the anniversary of Paderewski's death to again express my concern for Poland and all other enslaved nations which are suffering under Communist tyranny. I am confident that the Polish desire for freedom expressed so nobly by her patriot Paderewski will never be extinguished despite the brutality of the Soviets. May the memory of Paderewski serve to encourage the Poles who are today oppressed by the ruthless Kremlin.

Boys' Clubs of America Commend CBS-TV Comics

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. HOLTZMAN. Mr. Speaker, it has come to my attention that a leading youth organization, Boys' Clubs of America, whose chairman of the board is a former President of the United States, Hon. Herbert Hoover, has commended a New York publisher for providing outstanding comic magazines to our youth. This is a matter of vital national significance which should be brought to the attention of all Americans who are vitally concerned with the moral and spiritual welfare of our children.

Mr. Ned L. Pines, president of Pines Publications, Inc., New York City, has been presented with the golden anniversary gold medallion and certificate of award of Boys' Clubs of America for his distinguished service to American youth by publishing exceptionally fine and wholesome comic magazines. This honor is most significant because of the considerable criticism that has been heaped upon this segment of the publishing industry in recent years.

This recognition accorded to Mr. Pines merits our attention because it focuses the spotlight of public opinion upon a publisher who believes in our youth and believes in providing them with wholesome entertainment. Mr. Pines, who has been a publisher for nearly 30 years, provides millions of our Nation's young folk wtih fine, wholesome comics such as Dennis the Menace, CBS-Television's Terrytoon comics and Mighty Mouse comics. I am indeed happy to see that he is getting this well-deserved recognition from one of the country's most respected organizations, devoted to the highest ideals of building the character of American boys.

I only hope that this award will spur other comic magazine publishers throughout the country to follow Mr. Pines' lead in publishing comics which we can, in good conscience, encourage our children to read and enjoy.

I want to read into the RECORD the text of the certificate of award and that of the presentation letter to Mr. Ned Pines from former President of the United States, Hon. Herbert Hoover, chairman of the board of Boys' Clubs of America:

BOYS' CLUBS OF AMERICA,
New York, N. Y., April 26, 1956.

Mr. NED L. PINES,
President, Pines Publications, Inc.,
New York, N. Y.

DEAR MR. PINES: It gives me great pleasure to inform you that Boys' Clubs of America has selected you to receive a special award in recognition of your distinguished service to American youth and your outstanding contributions to the Boys' Clubs movement.

I should like, therefore, to present to you this golden anniversary medallion and certificate of award.

Please accept my personal congratulations along with those of the other members of the board of directors.

Sincerely,

HERBERT HOOVER,
Chairman of the Board.

BOYS' CLUBS OF AMERICA—GOLDEN ANNIVERSARY AWARD PRESENTED TO NED L. PINES, PRESIDENT, PINES PUBLICATIONS, INC.

For distinguished service to American youth by publishing comic magazines whose outstanding wholesomeness, interest, and entertainment value exemplify the highest publishing standards.

A. L. COLE,
President.
DAVID W. ARMSTRONG,
National Director.
HERBERT HOOVER,
Chairman of the Board.
WILLIAM S. HALL,
Honorary President.

MAY 1956.

St. Mary's Diamond Jubilee

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to bring to the attention of the House the diamond jubilee of the establishment of St. Mary's Church in Phoenix. This was the first Catholic Church established in Maricopa County. From the nucleus of this parish there have been established 24 other parishes. On last Sunday, June 24, there was a communitywide celebration commemorating this event. Under unanimous consent, I include in the RECORD editorials from the Arizona Republic and the Phoenix Gazette of June 23, 1956:

[From the Arizona Republic of June 23, 1956]

BUILDERS

The copper-colored twin steeples of St. Mary's have long been a downtown Phoenix landmark. At this same site, on Monroe between Third and Fourth Streets, the original St. Mary's Church was dedicated exactly 75 years ago tomorrow. The original mass was said in Spanish and the Phoenix Brass Band was on hand to enliven the ceremonies.

It wasn't the first religious service, or even the first church, in Phoenix. The Presbyterians had held services in their original grass-thatched church 2 years earlier. And Father Kino had celebrated mass in the vicinity of what is now Phoenix some two centuries before the church was founded.

But St. Mary's was definitely the first Roman Catholic Church in Maricopa County, and the diamond jubilee of its founding will be observed by Christians of many races and creeds at the Thunderbird Room in the Westward Ho Hotel Sunday evening.

The spirit of the old Spanish missions broods over the Southwest. Everyone living in Arizona owes something to the Spanish priests who entered what must have appeared a foreboding and sterile land with sword in one hand and Bible in the other, determined on converting the heathen and honoring God. Their successors, at St. Mary's and elsewhere, have played a mighty part in creating this desert empire. Phoenix salutes them, proud of the churches and schools they have built, but even prouder of the fine citizens they have contributed to the city, to the State, and to the Nation.

[From the Phoenix Gazette of June 23, 1956]

MILESTONE FOR WORSHIP

Few community diamond-jubilee observances have so many "firsts" to mark as does this year in Phoenix. But 1956 is not only the 75th anniversary of the city of Phoenix, the Phoenix Gazette, and the First National Bank of Arizona; it is also the diamond jubilee of the founding of the first Catholic church in Maricopa County.

Tomorrow afternoon a memorial mass will mark the occasion at the present St. Mary's Church on Monroe betweeen Third and Fourth Streets—almost the exact site of the original church dedicated on June 24, 1881. The present pastor, the Reverend Victor Bucher, OFM, says that formal religious activity as an outgrowth of missionary work by Fathers Kino and Marcos de Niza began in this part of the State with dedication of the original St. Mary's.

The mass, at which the diocesan bishop, the Most Reverend Daniel J. Gercke, will preside, will be followed by unveiling of a historical plaque, and a commemorative banquet. All of the events are open to the public, as befits an occasion symbolizing this community's 75-year progress in the role of its churches, alongside material gains.

Record of Hon. A. L. Miller on Public Power and Reclamation: The Truth of the Story

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. MILLER. Mr. Speaker, a misstatement, if repeated often enough and by persons in authoritative positions, can inevitably acquire the appearance of fact. How many times have we heard the remark "It must be true, so and so said it and he ought to know"; "it must be true, I read it in the paper."

Misappropriations of the truth can come about quite innocently, or false impressions can be created deliberately. In either case, it becomes necessary to set the record straight, and I feel this compulsion now with respect to my record in Congress as it applies to Federal power projects.

The gentleman from Ohio [Mr. KIRWAN], Chairman of the Democratic Congressional Campaign Committee, by his May 22, 1956, attack upon my voting record and my motives, precipitated a campaign that has been taken up by segments of the New Deal press and Federal power zealots throughout the country. The fact that his intemperate remarks had no foundation in truth does not lessen the vigor of battle, and I suspect that his remark that "DOC MILLER would not vote for the second coming of Christ" may have brought smiles to the faces of the few who follow his line.

There is truth in his statement that I am interested in power and reclamation development for Nebraska. I want my State to progress. I have authorized legislation that created the Ainsworth project, the Sargent project, the Farwell project, the Mirage Flats project, the Lavaca Flats, O'Neill and Mirage Flats extension units; I have actively supported the Salt-Wahoo, the Frenchman-Cambridge, the Bostwick, and other irrigation and flood control developments in our State. I have also supported projects adjacent to Nebraska that have enhanced the growth of irrigation and electrical power for the people of these neighboring States as well as my own, such as Kendrick, Alcova and Glendo in Wyoming, and all of the outstanding projects in the seven-State Missouri River Basin.

During the 14 years I have been a Member of Congress I have supported at least 371 reclamation, hydroelectric, and flood-control projects that have passed the House. These acts authorized construction of works throughout the United States; the Chief Joseph project in Washington, Trinity, Ventura, and the Central Valley in California, the Washita in Oklahoma, Weber Basin in Utah, and the upper Colorado. I have voted for steam plants in the Tennessee Valley Authority, irrigation and power in Bonneville, dams and transmission facilities in the Southwestern Power Authority, and many others. My interest is not confined to Nebraska alone. Quite obviously, it is nationwide.

In 1952, President Truman declared a moratorium on new reclamation and power projects starts and when this order went into effect, I addressed the House as follows:

> It comes to my attention that no new starts have been before the Congress and the administration for some time; and if this program continues, the present irrigation projects will have been finished and we will be without a new start for irrigation. I earnestly hope that the policy of the Government and the Committee on Appropriations will be changed so that we can proceed with the orderly development of feasible irrigation and electric-power projects.

This, you will recall, was a Democratic administration and a Democratic Congress.

In 1955, it was my amendment, offered on the floor of the House, that increased the appropriations bill $32 million so there would be money for 8 new irrigation and power projects that had been deleted by the Democrat-controlled House Appropriations Committee.

Now, if my critics who have branded me as being anti-public-power had examined the record I am sure they honestly could not have issued these statements. I have supported the REA's and the rural telephone in Nebraska, and in the Nation at large.

At the same time, I have been concerned about economy in Government, and it was for this reason that I voted, with the majority of the Democratic 82d Congress, to trim the appropriations for power and reclamation projects for 1 year when we were experiencing adverse fortunes in the Korean war. The Government's current operating budget at that time was in the red by $14 billion, and the 5-percent cut I supported was certainly in order. The Democratic Party, described by some as the patron saint of public power, must not have felt that this action was intended to destroy public power because the majority vote was with the Nebraska delegation.

In recent days I have been told that I cannot qualify as a public-power supporter because I did not vote to build a high Federal dam in Hells Canyon when this bill was before the House Interior Committee. However, the issue is not that simple. It can be understood by a sketch of the factual background of this legislation. The Hells Canyon bill has been introduced in at least four different Congresses—the Democratic 81st, the Democratic 82d, the Republican 83d, and the Democratic 84th. In 1950 it died silently in the Senate. On June 18, 1952, it was killed by unanimous vote in the House Interior Committee, when the Democratic members controlled the committee by a 15-to-13 majority. It was again introduced and referred to the

committee of which I was chairman in the 83d Congress, but the sponsor of the bill did not request a hearing, and no attempt was made to press the bill forward. When Hells Canyon legislation was before the subcommittee of the House Interior Committee last year the Democrats walked out of the committee room to defeat a quorum call on a motion to indefinitely postpone action on the bill; but they did not again bring up the bill until Paul Butler, chairman of their national committee, ordered that it be done because of its importance to the reelection of the senior Member of the other body from Oregon, and Congresswoman EDITH GREEN, from the same State.

This, considered together with the fact that Idaho Power Co.'s three-dam proposal will cost less than half and produce 98 percent as much power as the Federal high dam, makes it obvious that the Hells Canyon issue is intensely political and nothing more.

I am sure that you, in fair-mindedness, will understand that there are two sides to this looking-glass. I could easily accuse Mr. KIRWAN of being against public power, because he admittedly killed the Fort Randall-Grand Island 230-kilovolt line. No better opportunity to prove his advocacy of public power could be presented to him, and the excuse he made to explain his opposition was indeed flimsy.

It is my hope that these decisions will be considered in the light of the welfare of our country, with intellectual honesty, and in the spirit of fairness toward the people upon whom these responsibilities rest.

Fleet Admiral Ernest J. King

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. BAUMHART. Mr. Speaker, the man who commanded the greatest naval armada in the history of the world will be laid to rest today. Fleet Admiral Ernest J. King, a native of my Congressional District, who died on Monday, June 25, will be buried—as he wished—in the Naval Academy Cemetery at Annapolis, Md., following funeral services today at Washington Cathedral.

Admiral King was responsible in great measure for the tremendous comeback of the United States Navy after it was so badly disrupted by the infamous attack on Pearl Harbor. A man who wanted to be judged by his performance rather than by his personal popularity, he set the pace for the Navy during World War II in his dual role as Commander in Chief of the United States Fleet and Chief of Naval Operations.

President Eisenhower and the many other wartime leaders who knew, worked with and respected Ernest King have already expressed their deep personal sorrow at his passing. But the people outside his immediate family who perhaps feel the Admiral's death most profoundly are the citizens of Lorain, Ohio, his birthplace. Lorain has had a long and close attachment to the man whose boyhood dream was to go to sea and who later commanded a giant navy of 1,800 ships, 23,000 planes, and 4 million men. Led by their mayor, 56 citizens representing Lorain are in Washington today to pay a final tribute to their community's most illustrious son.

Out of personal respect to Admiral King, I wish to include in today's CONGRESSIONAL RECORD the texts of editorials which appear in the Lorain Journal and the New York Times on Tuesday, June 26. They constitute an appropriate epitaph to the career of a man whose rise from lowly beginnings to a place of preeminence in naval history is in the finest American tradition.

[From the Lorain Journal of June 26, 1956]

ERNEST JOSEPH KING

In 1946—just 10 years ago this very month—a former Lorain railroad shopworker was in England to receive one of the world's highest academic honors. The chancellor of Oxford University, in conferring the doctorate of civil law upon Ernest Joseph King, remarked in Latin:

"You have invaded alike the realms of Glaucus, of Neptune, and of Jove the Thunderer."

Thus did the chancellor, Lord Halifax, turn to the myths of the ancients for a summing up of one of the great naval careers of modern history. Glaucus, least well known of the pagan deities involved in the figure of speech, reputedly presided over the fortunes of sailors and fishermen. Neptune ruled the depths of the sea, as many a student can testify, while Jove hurled his bolts from the skies.

Lord Halifax's little foray into the classics was singularly appropriate. In the course of becoming an admiral, the former railroad shopworker, a mechanic's son, had mastered the arts of war on water, under water, and in the air.

Yes, at the age of 47, after notable services in submarine as well as the surface operations of the United States Navy, Ernest King learned to fly. In naval aviation, he demonstrated the same competence he had previously shown with submarines, destroyers, and cruisers.

A man who had so much to do with the merging of the natural elements—with the practical application of scientific knowledge to naval uses—would merit a place in military annals on that basis alone. In Admiral King's case, there was much more, for he was fated to become the chief commander of the largest naval operation in the history of mankind.

If our interpretation of the man is correct, the secret of Ernest King's success is to be found in our Navy's own motto, Semper Paratus—always ready. If ever there was a man who took those words to heart and lived by them, it was the Lorain High School graduate who left for Annapolis in the summer of 1897.

Even in high school, Ernest showed that he knew what he was about, for he graduated as the valedictorian of his class. His oration was on Uses of Adversity, a subject not exactly remote from the lives of railroad shopworkers in that day.

Whether from ambition or a sense of destiny, the entire career of Ernest Joseph King up to World War II was a masterful preparation for the responsibilities he was to assume. Colleagues in the naval service can testify that he never really lived the life of a junior officer, for—as ensign, as lieutenant, and on up the ladder—his constant preoccupation was with the life of the future admiral.

For this, his country owes him a great debt. In keeping himself ahead of his times, professionally and technically, he had a great deal to do with forcing the Navy to keep up with technological progress.

As one of the foremost exponents of postgraduate schooling for Navy officers, King frequently incurred the displeasure or positive wrath of superiors whose heads as well as their hats were of brass. One such used caustically to address him as "Professor." And, while King was heading and building up the Postgraduate School at Annapolis, the man who then commanded the Atlantic fleet was passing the word that attendance at the school would be a detriment to any officer's career.

Ironically, then, some of King's greatest services to the United States were performed, far from the battle lines, in outwitting and circumventing the doughty numbskulls who insisted that they would fight the next war with the last war's weapons and methods.

Whether Ernest King could have roared like a Farragut or a John Paul Jones, had occasion required, need not be an issue for historians and biographers. The big point is that he did keep up with science and technology, that he was prepared when called to command more ships and sailors than any man had ever commanded before.

The lesson of his career is of vital importance at this very hour, when the Nation's security depends more than ever upon scientific objectivity. In an atomic era, indeed, diehard military thinking can threaten our very existence.

Lorain will ever be proud of this native son.

Lord Halifax didn't mention our railroad shops. It's many a mile and knot from them to the halls of Oxford—or to the command of history's biggest naval operation—but of such stuff is America made.

[From the New York Times of June 26, 1956]

ADMIRAL KING

History must reserve a place for Ernest Joseph King. An Ohio railway machinist's son who never saw blue water until he was appointed to Annapolis, Fleet Admiral King commanded in the world's greatest war the mightiest navy ever assembled under one flag and commanded it superbly. General Marshall, his opposite number on the Joint Chiefs of Staff, said once of Admiral King that the Navy leader was one of the finest strategists with whom he ever had been associated.

A strict disciplinarian, intolerant of criticism, contemptuous of public opinion, he was, nevertheless, exactly the type of leader that was needed when the Japanese attack on Pearl Harbor plunged the United States Navy into the toughest war it has ever had to fight. President Roosevelt lost little time in calling him back to Washington from his command of the Atlantic Fleet and making him Commander in Chief, United States Navy, and Chief of Naval Operations. He was the first Navy man ever to hold both posts.

Behind Ernest King, when he went to Annapolis in 1897, was no naval tradition, no high social position, no wealthy parents to make his days as a poorly paid young officer easier. He did have the driving ambition to be some day the boss of the United States Navy. He had the eager intelligence to make attainment of that goal possible. Realizing the importance of the airplane, he went to Pensacola Naval Air Training Station as a captain, 49 years old, to learn to fly, so that he would know the art as well as the science of aerial warfare. He was an expert submarine skipper.

Close friends of Admiral King know that behind the tautness of his official bearing

there was a kindly man, loyal to his friends, a gracious host and enjoyable companion. If few people ever saw that side, it will not detract from his place in history. The important fact is that when his country needed most a driving leader, intolerant of weakness, demanding perfection, Admiral King was there. It was fortunate for the United States that he was.

Island of Cyprus

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. DODD. Mr. Speaker, there is clear indication that the strife-ridden situation on the Island of Cyprus has become far more than the internal matter the British claim it to be. The persistent uprisings by the Greek population on this strategic Mediterranean Island, and the heavy handed manner that the uprisings have been put down by the British have become the focusing point of a most effective Communist propaganda attack on what the Kremlin terms "western colonialism."

We all know that the Communists are always on the lookout for some means of driving a wedge between the Western allies. Cyprus has become another Communist wedge that is rapidly weakening the solidarity between the United States and three of its most important allies: Greece, Britain, and Turkey.

The announcement that Soviet Foreign Minister Demitri Shepilov will confer with Greek Foreign Minister Evangelos Averoff should add to our concern. The United States has spent billions of dollars in Greece to insure that this valued ally would not fall prey to Communist domination.

However, the Greeks from ancient times have been a proud people, and our support for their cause in Cyprus means more to them than our money. Shepilov is an expert propagandist and knows full well the implications of the Cyprus situation. There is no doubt that he will attempt to capitalize on the vacillating policy with regard to Cyprus.

On March 20, I wrote to President Eisenhower suggesting that representatives of the divergent interests in Cyprus meet with him in Washington to attempt to settle this menacing rift between vital allies of the United States.

The letter follows:

MARCH 20, 1956.

The Honorable DWIGHT D. EISENHOWER,
The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: Together with most other Americans, I have become increasingly concerned about the critical situation involving the island of Cyprus. The forcing into exile of Archbishop Makarios by the British with the attendant civil disturbances on Cyprus and in Greece have added to the gravity of what was already a very difficult problem in a part of the world that is vital to the security of the United States and the rest of the free world.

I have noted with great interest that our Department of State has urged Great Britain and Greece to press for a peaceful solution of the Cyprus crisis and to establish a truly representative government on this Mediterranean island.

This is all good, however, I feel that the importance of the Cyprus situation calls for a more dynamic approach if we are to find a solution.

Therefore, I respectfully suggest that you invite representatives of the divergent interests in the Cyprus problem to Washington to confer with you in an effort to reach a solution.

It is my conviction that if such a meeting were to be held in Washington with you acting as mediator and as friend to all parties, the likelihood of finding a solution for this great problem would be materially enhanced.

I suggest that the most appropriate representatives at such a meeting would be Archbishop Makarios for the Cypriots and the British Governor of Cyprus, who exiled the Archbishop, for Great Britain.

Mr. President, I feel that if you were to make such an offer to mediate this strife between two of our closest allies it would be in keeping with our best traditions and would receive the approval of good people all over the world.

As an example of what can be accomplished by mediation of this type, I refer you to the accomplishments of President Theodore Roosevelt who in 1906 was awarded the Nobel peace prize for his success in settling the Russo-Japanese War which ended with the signing of the Treaty of Portsmouth, N. H., in 1905.

I respectfully offer these suggestions to you because I feel that the hour is late and that conditions on Cyprus and in Greece call for strong action of this kind.

Mr. President, I feel that if this suggestion should be promptly implemented, it would demonstrate in a dramatic and practical way that the United States of America and its friends are really dedicated to and devoted to the cause of peace and of justice in the world.

With all good wishes.

Sincerely yours,

THOMAS J. DODD,
Member of Congress.

Mr. Speaker, this recommendation as we know has not been carried out, and it now appears that there is little likelihood that it will be put into effect in the future. I do not feel that it is important that my recommendation be implemented, but I do feel strongly that the United States must promptly take positive action to amicably settle the dispute in Cyprus.

The British interest in Cyprus is to preserve its control over this small Crown colony which has an overwhelming Greek population. I maintain that the United States as the leader in the North Atlantic Treaty Organization has a far greater interest. In our position of leadership, and having assumed a major part of the responsibility of defending the West from Communist attack, it is our duty to take positive action.

The United States is neglecting the responsibility that goes with leadership if it sits idly by while strife in Cyprus destroys the unity of the NATO countries, and supplies the Soviet Union with potent propaganda ammunition.

Baker County Chamber of Commerce Opposes Hells Canyon Legislation

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. COON. Mr. Speaker, the Baker County chamber of commerce has sent me a resolution with their stand on legislation now pending in Congress on authorizing the construction of the high Federal dam at Hells Canyon. They urge the Oregon delegation to vote against this bill.

I wish to place this resolution in the RECORD so that the Members will know the stand of a representative group in Baker County, Oreg., on this legislation.

The resolution follows:

RESOLUTION OF BAKER COUNTY, OREG., CHAMBER OF COMMERCE

Whereas the Federal Power Commission which was established by an act of Congress, after a thorough and complete study following a hearing which extended for almost 2 years, has decided that the three-dam plan of the Idaho Power Co. is in the public interst for the purpose of improving and developing that particular stretch of the Snake River for the use and benefit of interstate and foreign commerce, and that public purposes such as flood control, navigation, recreation and power production could be effectuated to about the same extent with private construction, as with Federal construction, of the same developments in the Hells Canyon reach of Snake River; and

Whereas this area is confronted with a serious power shortage which will become critical within the next few years; and

Whereas the Congress of the United States did not see fit, during the time that the Federal Power Commission was conducting its studies to take any action toward authorizing the construction of any dam on this particular stretch of the river, and the only hope for a quick supply of electricity for this area is through the construction of the dams which have been started by the Idaho Power Co.; and

Whereas the Idaho Power Co., acting and relying upon the license of the Federal Power Commission, has already expended millions of dollars and is employing hundreds of men in compliance with the provisions of said license; and

Whereas Congress is now considering the enactment of legislation which would nullify and destroy all that has been done in the way of construction on the present projects and would override and set for naught the license of a duly constituted Federal board, and such action would result in the loss of millions of dollars and the confidence of people generally and of investors particularly in undertaking to construct any project on any river under Federal jurisdiction with private funds; and

Whereas if Congress does take the action contemplated, it will be years before a high Federal dam will be constructed, and the threatened power shortage will become a reality; and

Whereas we believe the order of the Federal Power Commission, founded upon all the engineering testimony introduced before it, is more likely to result in promoting the public interest than would action by the Congress founded upon political motives; and

Whereas we firmly believe that private enterprise, all things being equal, should be encouraged to develop the natural resources of this country:

Now, therefore, we, the board of directors of the chamber of commerce, which has 300 members and a total paid-up membership of 1,195, do hereby register our protest against the legislation now pending in Congress for the authorization of the high Federal Hells Canyon Dam and to urge the Oregon delegation to vote against said bill.

Ignace Jan Paderewski—The 15th Anniversary of the Death of Ignace Jan Paderewski

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. DINGELL. Mr. Speaker, today we celebrate the 15th anniversary of the death of Ignace Jan Paderewski, famed Polish musician, humanitarian, and statesman. Paderewski certainly deserves the laudation being accorded him for his untiring efforts and devotion to duty in helping restore the integrity and liberty of the great nation of Poland. Poland, long torn apart by internal insurrections and by external aggression of powerful neighbors, was given a new chance for national survival largely by the courage and energy of this one man, Ignace Jan Paderewski. He felt that an independent Poland, which had once played a major role in central Europe, was still needed there. Paderewski himself said:

The need of Poland is an integral part of the need of the world. Totalitarianism must be defeated and liberty and self-government restored. Until that is accomplished the rest is idle talk.

The history of Poland is familiar to us all. This history, often one of national frustration, defeat, and international strife, also has had many glorious chapters. The greatest opportunity, however, for Polish patriots to realize the restoration of Poland as an independent country came with World War I. Many Poles carried their dream for national revival to various parts of the world. Ignace Paderewski was chosen to go to America for this purpose. The reason for choosing him doubtless was that he was better known in the United States—through his musical career—than any other Pole, and he could speak and write English. The selection was a good one, too, for he not only won the sympathy of the American people but also that of President Woodrow Wilson. When Woodrow Wilson went before Congress to deliver his annual message, he mentioned Poland and stressed it should be independent, united, and autonomous. Twelve months later he listed an independent Poland as the 13th point of his famous 14 points. The creation of a free and united Poland by the World War I statesmen at Paris was largely due to the great prophet for the movement of Polish freedom, Ignace Paderewski.

The commemoration of the death of Paderewski this year coincidentally comes during the centenary celebration of the birth of Woodrow Wilson. These two men, more than many others of the past generation, held fast to a vision of the kind of healthy international atmosphere, based on faith in justice, righteousness, belief in the common cause of liberty and democracy, that would make the world a better place in which to live. We of this generation could do no better than to follow in the course they laid out.

Slighted Story

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 29, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article by Alfred D. Stedman, entitled "Slighted Story," which appeared in the St. Paul Pioneer Press of June 24.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SLIGHTED STORY

(By Alfred D. Stedman)

Five years have seen a remarkable drop, not only in the number of farms, but also in the total area being farmed in northeastern Minnesota. In crop land, the declines have ranged from 6 percent in Mille Lacs County to 47 percent in Cook County.

For a very particular reason, this change seems worth looking into. It sheds light on an off-the-farm movement that has become widespread from the less productive or marginal lands areas of the United States. The Minnesota facts present the migration in a brighter, more accurate light than usual.

The usual presentation to Congress and the public is in terms of disaster. The departing farmers are described as having been "driven off the farms," by a dreadful combination of low production, low prices, and low income.

But that is only one side of the story. A better and often overlooked side is unfolding, particularly upstate.

This is the story behind the story of the off-the-farm movement wherever it is marked. It reflects not just the push of low farm income but the pull of job openings in nonfarm industry.

In northeastern Minnesota, this side of the story emphasizes the effects of a foundation of permanence that is being built under the iron-ore industry by the great taconite development, with its use of the area's peat resource as a future prospect. Taconite augments the paper, pulp and other iindustrial activities of the northeast.

Lake and Cook Counties, where the off-the-farm trend has been pronounced, are now scenes of the main taconite development. The Minnesota Department of Health reports population gains of 70 percent in Lake and 40 percent in Cook County in 5 years. The past decade has seen the great industrial expansion in the Twin Cities and other centers, reflected in population increases of 58 percent in Anoka, 31 percent in Washington, 24 percent in Dakota, and big gains in several other counties of this State.

All of this has augmented the chances of farming people for part-time or full-time jobs off the farm. The story as to part-time work is beautifully analyzed by Prof. W. H. Dankers and F. L. Olson, of the St. Paul Farm Campus.

They show that in 1954 (a poor ore year) two-thirds of the farm operators in northeastern Minnesota were supplementing their farm incomes with nonfarm work. Half the farm families were getting the most cash from off-the-farm jobs. Where farm incomes under $2,500 a year are the rule and farming offers not 1 boy in 10 a prospect of substantial betterment, such off-the-farm opportunities are a godsend.

The truly dark side of the United States farm picture was timed, not with such off-the-farm movement but with depression that drove city jobless to the farm. Then the on-farm population and the heartbreak of trying to wring a living from inadequate farms reached the peak.

Now the population current is reversed and is strongly cityward. In the past 5 years people have been moving off the land at a million-a-year rate. The main flow isn't here, but is from the South's poor, overcrowded lands. Wherever the flow it raises problems, including those of concentrating landownership and of providing schools for bigger and bigger urban populations.

But Minnesota's experience does drive home an important point. This is that the present off-the-farm flow is not accurately labeled in terms of farm distress alone. It is a migration away from distress of past depression. It is generated by opportunities of farming people to help themselves by finding better jobs in industry. It is a move for betterment and for higher standards of living.

Congratulations

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. GAVIN. Mr. Speaker, I want to say that I heartily concur in an editorial which appeared in the New York News about our very good and able friend, the gentleman from Texas [Mr. MAHON] and the position he has taken on the billion dollar increase included in the defense appropriation bill.

Also I want to take this opportunity to comment on the work of the Secretary of Defense, Mr. Wilson. I think he is a great American who has been conscientious in the performance of his duty and who has turned in an outstanding record.

Any man who handles the spending of $35 billion a year as he has done for the past few years, with the tremendous responsibilities that go with it, has earned and deserves our hearty commendations.

The editorial follows:

[From the New York Daily News of June 28, 1956]

CONGRATULATIONS

Congratulations are due this morning, we feel, to Representative GEORGE MAHON, Democrat, of Texas. Mr. MAHON is chairman of the Appropriations Subcommittee which handled the big defense bill in the House. To this bill, the Senate day before yesterday tacked an extra $960 million for the Air Force—largely as a slap at Defense Secretary Charles E. Wilson for having called the talk of such an increase phony.

MAHON says he wants to know whether the Pentagon can or will use the money before he

advises the House to endorse the Senate's action. Thus, he refuses to go along with the more or less hysterical desire in both Houses to make some sort of monkey out of Wilson. Such calmness and broadmindedness are truly commendable, and we could wish there were more of same in Congress at this moment.

Marjorie Mitchell, American Pianist

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, June 29, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a series of comments, in the press of various foreign countries, about an outstanding young musician from Virginia.

Miss Marjorie Mitchell is from Charlottesville, and had an exchange scholarship under the Government-sponsored program. She made an outstanding success. Miss Mitchell has been assisted in her career by Mrs. Watson, of Charlottesville, the widow of Pa Watson, whom most of us knew when he served President Roosevelt.

She is further confirmation of the soundness and effectiveness of the exchange of student program.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

PRESS COMMENTS FROM EUROPE, 1954–56

Unfailing technique and great bravura—a genius. (Vienna, Wiener Zeitung.)

The pianist, Marjorie Mitchell, enchants us with her natural unaffected execution. Her playing was admirably clear and spontaneous. (Munich, Munchner, Merkur.)

Brilliant technique, fabulous accuracy, and great spirit. (Berlin, Spandauer Volksblatt.)

Beethoven's C Major Sonata masterfully performed. (Berlin, Togesspiegel.)

Her playing of Barber's Sonata tore the listeners from their seats. (Hamburg, Abendblatt.)

Tremendous musical impulse. Imaginative and exuberant use of virtuoso technique. (London, the Times.)

The power with which this attractive young artist mastered her exacting program is only to be found in few pianists. (Linz, Tagblatt.)

Brilliant—a palette enriched by many colors. (Geneva, La Suisse.)

A great talent—a clear vision in which temperament is controlled by intellect. (Amsterdam, Algemen Handelsblad.)

Thunderous applause followed a beautiful recital. Magnificent talent. (Athens, Franco, Hellinque League.)

Marjorie Mitchell's concert was absolutely outstanding and enthralling. (Stockholm, Tidningen.)

A virtuoso's technique coupled with incredible musical understanding, striking the audience with the force of lightning-arousing ovations. (Oslo, Dagbladet.)

Her playing was sparkling and her vital personality triumphed once more. (Oslo, Morgenbladet.)

A great experience—meeting such a versatile musical talent. (Copenhagen, Berlingske Tidende.)

Marjorie Mitchell's performance of Prokofieff's third Piano Concerto was brilliant, fascinating, and sparkling clear. (Helsinki, Nya Pressen.)

President's Illness Has Tragic Results

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 26, 1956

Mr. MULTER. Mr. Speaker. I commend to the attention of our colleagues the following article from the Washington Post of June 26, 1956:

PRESIDENT'S ILLNESS HAS TRAGIC RESULTS
(By Marquis Childs)

The full force of the effect of President Eisenhower's second major illness on the main goal of the administration, which is peace in the world, is now painfully evident.

The cancellation of Prime Minister Nehru's visit is a tragedy. The hope that it may merely have been postponed is dubious since Nehru's schedule of international visits is a close one and he must return to New Delhi for an important session of the Indian Parliament.

No one believed that in three days of talks the President and the Prime Minister would have resolved differences that have set the two countries apart. But through the informal, man-to-man kind of conversations that had been planned they would surely have come closer to an understanding.

This was the prospect carefully nurtured by the American Ambassador in New Delhi, John Sherman Cooper, and by the Indian Ambassador in Washington, G. L. Mehta. Both had worked painstakingly to bring about what they hoped would be a new start in the troubled relations between the two powers.

The disappointment that will be felt is particularly acute against the background of the exaggerated optimism of the bulletins issued in the first days after the President's emergency operation for ileitis. With due allowance made for the desire to reassure the public, it seems extraordinary to think that Press Secretary James C. Hagerty declined to say that the President's visit to the conference of Latin-American States in Panama would be canceled.

In a number of talks between the White House and the State Department the possibility was explored of curtailing the schedule of Nehru's 4-day visit. It was believed that if the dinner at the White House, tentatively set for the date of the Prime Minister's arrival, were eliminated, with Vice President NIXON substituting as host, and with a luncheon also cut out, the talks might be held.

But it was finally decided the tension of 5 or 6 hours of discussion was in itself too much for the President in the convalescent stage. There are differences in the outlook of the two governments, notably over Communist China, with Nehru arguing for a settlement with the Reds which would eventually mean the end of Chiang Kai-shek's stronghold on Formosa. To have explored such differences frankly and freely would have put the President under a considerable strain.

It has always been made clear that the real purpose of the visit was a frank and, it was hoped, friendly exchange between Eisenhower and Nehru. The original plan, set before the President's attack of ileitis, had been to go to the quiet and seclusion of the Presidential retreat at Camp David. There the two men, so dissimilar in background and outlook, could have come to know each other better.

Nehru did not want to take the time to come to Washington for conversations with Secretary Dulles, whom he had seen in the course of Dulles' quick swing through southeast Asia earlier this year. That feeling may well have been accentuated by Dulles' recent speech calling neutrality, as between Communist and non-Communist nations, "immoral."

Eisenhower's performance at the summit conference in Geneva last July convinced Nehru that the President wanted to reach a peace settlement with the Communists not only in Europe but in Asia. He wrote an admiring letter to the President inviting him to come to India.

Eisenhower replied by pointing to the difficulties of any long absence from the country for him as Chief of State under the Constitution and urging Nehru to come to this country.

Whether justified or unjustified, Nehru has had the conviction of a marked difference between the Eisenhower foreign policy and the Dulles foreign policy. It was in direct negotiation with the President that he had hoped to advance toward the peaceful coexistence that has always been the goal of India's foreign policy.

For those in this country, and among them are highly placed officials in the administration, opposing any form of coexistence and wanting the cold war continued as before, cancellation of the Nehru visit will be good news. But to those who have continued to believe that Eisenhower could achieve a peace with honor and in doing so build a bridge to the great uncommitted nations of Asia the news will be saddening, indeed.

Arms Control: 11th Hour

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 29, 1956

Mr. HUMPHREY of Minnesota. Mr. President, in the Washington Post on Sunday, June 17, 1956, a major editorial was devoted to the disarmament problem. The editorial was entitled "Arms Control: 11th Hour," and it concluded by issuing an "imperative call for Mr. Stassen and his colleagues to make a far more incisive and imaginative attempt than anything yet tried to move world arms control off dead center."

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ARMS CONTROL: 11TH HOUR

Prime Minister Bulganin's latest letter to President Eisenhower serves as another reminder that time is running out on arms control. There is, to be sure, a thick coating of propaganda on the Soviet note. The appeal to the United States, Britain, and France to parallel the Russian reductions in military manpower ignores the fact that the Western Powers have long since cut their forces substantially but without making a propaganda virtue of it. The Soviet suggestion of military withdrawals from Germany was timed neatly to embarrass Chancellor Adenauer at home during his visit here.

Yet it is impossible not to have some sympathy with the Soviet observation that the meetings of the United Nation's Disarmament Subcommittee in London have been largely academic. The Soviet attempt to compare a mere verbal ban on the use of nuclear weapons with the ban on chemical warfare after World War I is patently misleading. But from the Russian standpoint

the shifts in the Western position—from insistence on international atomic control to insistence on reductions in conventional forces to insistence on inspection safeguards against surprise nuclear attack as a mandatory prerequisite—may well seem confusing. Direct Russo-American negotiations, which are the suggestion implicit in the Bulganin letter, may not be the answer, but the urgency for some new initiative on nuclear control ought to be self-evident. Despite some serious individual efforts the disarmament meetings so far have produced no more than a sort of debate on the edge of disaster, whereas some supreme effort is required to pull the world back from catastrophe.

The stark fact is that development of the intercontinental ballistic missile is proceeding apace in both Russia and the United States. Indeed, there is a bitter irony in the contradiction between the insistence on safeguards against surprise attack and the race to develop a missile which will make such safeguards impossible. Sooner or later, and probably sooner, the ICBM is sure to be perfected. Then the last apparent possibility of effective safeguard will be gone. For any potential enemy will have it within his power to launch weapons with nuclear warheads that can reach any point on earth within a matter of minutes. There is no known defense against such weapons.

Each country goes blithely ahead testing large nuclear weapons, even though each has a stockpile sufficient to annihilate the other. Soon Britain also is to test megaton-size thermonuclear weapons. The Russians cluck their propaganda tongues at the American tests in the Pacific, saying nothing of their own recent experiments in Asia; each time the Russians explode a new weapon there is pressure in the United States for additional tests. And every such explosion adds to the level of radioactivity in the atmosphere and advances the possibility that the contamination by radiostrontium will become lethal. The many unanswered questions raised by the report of the National Academy of Sciences ought to strike a chill in the heart of every government.

Is there no way in which vision and courage can break this vicious circle? The one lasting result of the Geneva Conference last summer is the political acknowledgment of a scientific fact: that civilization could not withstand an all-out nuclear war. Possibly the Soviet Union, along with Britain and the United States, may be awed into responsibility by this fearsome knowledge. But there are no real scientific secrets, and basic nuclear materials are so plentiful and widespread as to raise the real possibility that any despot like Peron may soon have the capacity to blow the world to bits. This danger surely is as apparent in Moscow as it is in Washington and London. Yet no country has attacked the problem at its roots.

The Federation of American Scientists is the latest group to call for a worldwide ban on further testing of nuclear weapons, to be enforced through an international long-range monitoring system. The practicability of such monitoring had already been demonstrated by the American detection system. The federation goes further to advance a proposal already discussed on this page: A ban on the testing of intercontinental ballistic missiles, provided that competent authorities verify the feasibility of monitoring such tests. There is scientific reason to think that it is possible to devise a workable system for monitoring large missile tests. In the case of both nuclear weapons and the missiles for delivery, a moratorium on tests would act to retard further development.

There are always arguments against such bans, and not all of them can be discarded lightly. For example, unless the intermediate-range missile also somehow could be controlled, it could wreak havoc just as frightful as the ICBM. It also is said that the United States needs to conduct additional experiments with "small" nuclear weapons to prepare for defensive use (though why this requires explosions of megaton-size weapons has not been explained). There is the contention that you can't afford to halt scientific experimentation. A more powerful consideration is the possibility that if a potential enemy violated a test ban with a successful missile, the United States might test its own missile only to find that it was a failure.

Yet when all the objections are counted up, they amount to an argument for doing nothing. Meanwhile the clock moves inexorably closer to the time when these fiendish instruments of annihilation will be beyond any known means of control. No amount of money will then buy security. It is undoubtedly true that in today's context of world relations present stockpiles of nuclear weapons and efforts to develop the intercontinental missile are necessary to deter an aggressor; and no one would advocate destruction of these stockpiles or abandonment of the efforts until there was some foolproof system of control.. But the existence of and additions to these stockpiles ought not to delude us into what the London Times calls "the ultimate fallacy"—"the belief that it is possible to win a thermonuclear war."

Is there not an imperative call for Mr. Stassen and his colleagues, using President Eisenhower's world renown as a man of peace, to make a far more incisive and imaginative attempt than anything yet tried to move world arms control off dead center? Is it not time to make available to the people of the world all the present information about the effects of nuclear weapons, including radioactivity, possibly the most potent force of all for effective international agreement?

It may be that despite the most serious and sincere efforts the people of the world will have to steel themselves to living on the edge of a precipice over which they may be pushed at any moment. But the question that men of good will everywhere must continually ask themselves is: Will it be easier to reach agreement before half the world is reduced to ashes—or after?

Brain Trusters Still at Work—Industry Dispersal Plan Wins by Narrow Margin

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. HINSHAW. Mr. Speaker, the Victor Roterus who is said to direct area development activities for the Department of Commerce, and in fact, the entire office which he directs, should be removed and abolished, if the following report of his speech at Atlantic City is correct.

This speech should have been available to Members of the House yesterday, June 28, 1956, when, by the narrowest of margins, 200 to 197, the House approved a conference report containing amendments to the Defense Production Act, one of which, in effect, approved order No. I–19 of the Office of Defense Management. I have been approached by a number of the Members of the House, who voted "aye" on that vote, who said if they had been fully aware of the implications, they would have voted "no."

Mr. Speaker, that conference report was brought to the floor of the House, with only one-half hour's notice to its opponents and those opponents, including myself, had expected it not to come up for at least another day.

Mr. Speaker, the basic reason why I oppose, with all the vigor I possess, this planned dispersal of industry, is that as has been stated many times, and as everyone knows, the next war, if it comes, will be fought with the weapons and materials in being at the moment that war commences. After it commences, there will be no further war production. Hence, it is vital that the defense efforts of today be confined to the building of weapons, and the stockpiling of materials of war in safe places, without waste of time and funds of the Armed Forces in building new factories in remote places, with complete communities to surround these factories. The plans outlined by the Office of Defense Mobilization and the author of that speech at Atlantic City, Mr. Roterus would foist upon us an immense change in our economy, and expense at a time when we are struggling to arm ourselves against attack.

The article follows:

[From the Washington Post and Times Herald of June 29, 1956]

UNITED STATES TO DENY CONTRACTS IN TARGET AREAS—COMMERCE OFFICIAL SAYS MANY PLANTS ARE SITTING DUCKS

(By Laurence Stern)

OCEAN CITY, MD., June 28.—New industries locating within 18 miles of Washington and other prime nuclear bomb targets throughout the Nation will be denied Federal contracts, a Department of Commerce official disclosed here today.

Victor Roterus, who directs area-development activities for the Department's agency which handles defense matters, said industries now located within the 50 major hydrogen bomb target areas are sitting ducks for an aerial bomb attack.

He made the statement in a panel discussion at a meeting here of the Maryland Municipal League.

The newly announced policy runs counter to efforts by the Washington Board of Trade and numerous suburban Maryland and Virginia communities to attract new industry as a means of lightening the tax load on local residents.

In Washington, Arthur S. Flemming, Director of the Office of Defense Mobilization, said his agency's policy toward industry dispersal was contained in a directive published January 13 in the Federal Register.

He said he would be very much surprised if that directive resulted in a ban such as that described by Roterus.

The ODM order said it is the Nation's policy "to encourage and, when appropriate, to require that new facilities and major expansions of existing facilities important to national security be located insofar as practicable, so as to reduce the risk of damage in the event of attack."

It said the "distance of a facility from the probable area of destruction is the controlling factor in reducing the risk of damage.

Roteurs emphasized that existing industries within target areas are not affected by the ban. "Only newly constituted or relocated plants would be affected," he declared.

Roterus, Director of the Office of Area Development of the Business and Defense

Services Administration of the Commerce Department, declared:

"It is not the intention of the Government to force industry into the desert."

He said, however, that Federal authorities are applying a concept of defense through space in screening sites for newly located industries handling essential Government contracts.

Questioned later about his comments, Roterus said the actual distance of danger from nuclear attacks may be 25 to 30 miles from a city, not 18 miles as he had declared earlier. The Washington area is one in which a larger radius of danger area exists, he said.

It is within this area, he said, that the Government may withhold defense contracts or refuse to grant a speed-up in tax amortization allowances.

Roterus said this policy stems from an ODM pronouncement, presumably the one issued by Fleming in January.

His earlier statement came in reply to Mayor Dickran Y. Hovsepian, of Rockville, who said municipal officials are concerned about the effects of the new Federal requirements on four large industries now considering relocation there.

Rockville, Montgomery County seat, is within the 18-mile zone.

"This policy is complete news to the board," a spokesman for the Washington Board of Trade said last night. "If it is found that this policy is to be continued," he added, "the board of trade will make every effort to have the policy changed."

I. Alvin Pasarew, director of the Maryland State Planning Commission said Federal authorities are constantly switching the rules on us. He urged city officials attending the panel to plan for industrial development and not tie themselves to current Federal defense specifications.

Roterus told the group that a new joint site in Montgomery County for the Weather Bureau and Geological Survey is still not far enough out from the nuclear bomb danger zone.

Some 250 mayors, councilmen, and commissioners from 65 Maryland municipalities are attending the meeting.

They were told by State Senator Louis Goldstein, Democrat, of Calvert, president of the State senate, that a compulsory automobile insurance bill stands a good chance of passing in next year's general assembly.

Similar measures, opposed by rural representatives, have died in previous sessions. "We feel," said Goldstein, "the motorist who carries insurance should have protection from the uninsured."

Ignace Jan Paderewski

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. MULTER. Mr. Speaker, tomorrow, June 30, 1956, marks the 15th anniversary of the death of Ignace Jan Paderewski.

The world of culture knows him as a renowned composer and pianist. Freedom-loving people everywhere remember him as the first Premier of the Polish Republic. It was in 1919 that he was elevated to that post by the people of Poland, after they asserted their independence in accordance with the principles of national self-determination as contained in the famous 14 points of President Woodrow Wilson.

Paderewski was born in 1860 in a Polish province which was then under the domination of Russia. Much of his love of freedom was instilled in him by his father, who was imprisoned in Siberia.

Having attained world success in terms of both fame and money, he could easily have turned to an easy way of life. Instead, he returned to his homeland and his people where he devoted himself to furthering the true concepts of democratic freedom.

We hope some day to see the spirit of Paderewski revived not only in enslaved Poland but in every part of the world where liberty is presently suppressed.

Remarks on H. R. 12022, A Bill To Provide Relief for the Sponge-Fishing Industry by Making Special Nonquota Immigrant Visas Available to Certain Skilled Alien Spongedivers

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. CRAMER. I yesterday introduced H. R. 12022, being a bill for providing relief for the sponge-fishing industry by making special nonquota immigrant visas available to certain skilled alien spongedivers.

At Tarpon Springs on the west coast of Florida is located the only sponge-fishing community and industry in the United States. This community was established in 1905 when the Greeks brought to Tarpon Springs the first sponge boat equipped for sponge diving with a completely Greek crew. Prior to that date sponge fishing was entirely dependent upon "sponge hooking" or fishing from the surface with various size poles to bring the sponges from the bottom. Currently, sponge fishing is conducted in the beds off the Florida coast in maximum depths up to 26 and 27 fathoms. The industry continued to prosper until during the Second World War. Tarpon Springs provided 65 percent of the sponges, valued in millions of dollars used by our military forces and allies. The sponge fishing community near the end of the war numbered hundreds of active Greek-American sponge fishermen, and at least 200 vessels were manned and active. For one-half century the sponge industry constituted and kept open the economic life of the large Greek-American community of Tarpon Springs, Fla. As a community it is one of the outstanding Greek centers of the United States with a record of self-sustenance and great pride in all civic matters.

Approximately 8 years ago a mysterious disease struck at and ruined the entire sponge fishing grounds on the gulf coast, limiting the source of supply of what was generally stated to be the world's finest sponges. Many of the young descendants of those Greek fishing founders and those capable of working in the industry left for opportunities in the north. Frankly, there was much suffering in the community because of the loss of its one great source of income. I am proud to point out, however, that this Greek community has taken care of its own, and has fought through the years to provide a living for its people.

The sponge fields today have been by nature ridded of the blight and restored to their full productive ability. During the past year we have been successful in efforts with the Department of Interior, Bureau of Wild Life and Fisheries, Florida State University, University of Miami, Small Business Administration, Department of Commerce, and other Government agencies in organizing through the Sponge Industrial Committee of Tarpon Springs, Florida, a research of the potential of the industry and its rightful participation in the commercial market of the country. This has been a point of great effort on the part of the many individuals, organizations, and agencies.

In the further redevelopment of the industry an impasse has been reached through lack of experienced and capable spongedivers, skilled in the art of gathering this most useful and vital product of the sea. In Tarpon Springs there are ready and outfitted sponge fishing boats only awaiting skilled divers to put out for the sponge beds. Through the Florida State Employment Service determination has been made that nowhere in the United States are these skilled craftsmen available. Sponge-diving is an extremely skilled industry, one in which the Greeks have excelled for generations.

I have just introduced a bill, H. R. 12022, which would permit the entry to the United States of 50 skilled spongedivers for the relief of this industry, and to be employed therein; the same to be granted entrance to this country under this special bill not to be charged against the quota of the country from which they will come. It is anticipated these divers will come as Greek nationals for it is well known that the best sponge fishermen in the world are from the Dodecanese Islands of Greece, and particularly from the islands of Kalymnos, Halki, and Symi, where, from ancient times, sponge fishing has been the principal means of livelihood of these people. It is appropriate that such immigration should be permitted from these particular areas, because 90 percent of the original Greek population of Tarpon Springs originated from these same islands and these emigrees would find themselves among their friends and relatives. I would quote from a letter addressed to me by Archbishop Michael of the Greek Orthodox Church in North and South America in which he urged such action in the economic relief of Tarpon Springs, saying:

Granting permission to this type of highly specialized labor will certainly be a credit to the industry and will not be a burden to the community, but rather will safeguard an industry that has contributed much

economically to Tarpon Springs, to the State, and to our country as a whole.

Under the present immigration quotas and preferences established, this favorable action upon my bill is the only means available to save the economic life of one of America's most unique and proud communities.

As a member of the Judiciary Committee of the House of Representatives it is my intent to vigorously bring this matter to the attention of the committee seeking favorable report to the House of Represenatives during this session of Congress, or otherwise to seek passage of this needed legislation.

St. John's College

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 29, 1956

Mr. HUMPHREY of Minnesota. Mr. President, recently there has come off the press a great documentary of the history of St. John's Abbey. It is written by Father Colman Barry of St. John's College in Collegeville, Minn. St. John's this year is celebrating its 100th birthday anniversary.

I call to the attention of my colleagues a letter written to me by Rev. Roderic Albers, of St. Benedict's Convent and College, at St. Joseph, Minn., in which he briefly describes St. John's, the oldest institution of higher learning with a continuous history in the State of Minnesota.

I ask unanimous consent that this letter be printed in the Appendix of the RECORD.

Father Barry, the author of Worship and Work, has dedicated his life to the education of our youth and his intimate knowledge of the institution and of the era about which he writes. The motto of St. John's, "Pray and Work," is, indeed, the motto of Father Barry.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CHAPLAINS' HOUSE, SAINT BENEDICT'S CONVENT AND COLLEGE,
Saint Joseph, Minn., May 31, 1956.

DEAR SENATOR HUMPHREY: Today I sent you a copy of Worship and Work, by Father Colman Barry, O. S. B., the centenary history of St. John's Abbey. Dr. George N. Shuster of Hunter College in New York, speaking of Father Colman's book, says: "This book makes the story of St. John's an unforgetable part of the spiritual romance of America." And Dr. August C. Krey, Minnesota University historian, says of the same work: "This book presents an intimate story by a member of the community, recounting in full detail both its internal and external activities during a century."

As early as 1857 the Territorial Legislature granted the St. John's Seminary charter, making St. John's the oldest institution of higher learning with a continuous history in the State of Minnesota. In 1883 this charter was amended to give the school the name "St. John's University."

Besides conducting a school at Collegeville today for some 13 hundred high school, college and seminary students, the 360 members of the St. John's community are working in parishes, missions and schools in Minnesota, New York City, Bahama Islands, Kentucky, Mexico, Puerto Rico, and Tokyo, Japan.

The first Benedictines came to Minnesota from the Abbey of Metten in Bavaria, via St. Vincent's Archabbey in Pennsylvania. These men were mostly Bavarians. Today the membership includes almost every European nationality, several orientals, and a large number of Negro. Without a lot of fanfare St. John's has become interracial—and has made it work. The Negro who is ordained at St. John's, after his years of training, does not feel particularly conscious of his color or race. He attends the chapter meetings and votes as one of the family.

St. John's is an American institution. Its hundred years represent the best America has given to the solving the Old World antagonisms. It is typical of the hundreds of institutions that make America the land of the free. It is the center of the so-called liturgical movement in America—a reform representing more dignified and understandable worship of God. But the men of St. John's are proud of their ROTC, of their football team and so forth.

In its hundred years St. John's has tried to make good Christians, and good Americans. Its motto is: Pray and Work. At its centennial St. John's dedicates itself anew to the honor of God and the welfare of civil society.

Sincerely yours,
RODERIC ALBERS, O. S. B.

Adventures in International Friendship

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, June 29, 1956

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the contents of a brochure issued by the Rotary Club of Little Rock, Ark. This brochure describes in some detail the program of the club, by which the club members sponsor annually visits by two young men from abroad.

It is such a successful undertaking that I believe the Members of this body will be interested in it, and I hope it may inspire other clubs to follow the example of the Little Rock Club.

There being no objection, the brochure was ordered to be printed in the RECORD, as follows:

ADVENTURES IN INTERNATIONAL FRIENDSHIP

THE BACKGROUND OF OUR IDEA

In a world of conflicting political ideologies—democracy and communism—what can the Little Rock Rotary Club do in the field of international service to help clarify this confused state of affairs? That was the question put to our club assembly several years ago.

From that question evolved the "Little Rock Adventure in International Friendship"—a program to bring foreign visitors to the United States as guests of our Rotary Club. They would stay here 60 days—live as we live, see what we see, hear what we hear, do what we do. It would give them the opportunity to return to their respective countries and tell their own countrymen the truth about democracy under a capitalistic setup such as we have here in America.

Millions in Europe do not know what to believe about the United States. Firsthand statements, however, from their own countrymen have greater weight by far than statements made by outsiders, statements which are largely discounted.

PROCEDURE

Early in the Rotary year our membership ballots upon the continuation of the project, and also ballots upon the country from which they would prefer that the two students come for the coming year. This gives ample time for committees and contacts and selections, and authorizes the billing of the membership for their pro rata cost of the project. The committee then contacts the district governors in the country and an explanation of the plan and idea stating that we are ready to pay the expenses for two young men from their country to visit Little Rock for 60 days. We ask their cooperation in conducting the selection of a group of candidates for this adventure. The boys must be college students aged 18–25, they must be able to understand and speak the English language, and must be the caliber of young men who could return and express their experiences in an acceptable manner.

These young men need not necessarily be, or be related to, Rotarians, but each of them must be sponsored by some Rotary Club.

We ask the district governors to require of each candidate a 2- or 3-page presentation of his background, biography, educational, and business experience, and an essay on why he would like to visit America. We also require a recent photograph of the candidate to be attached. We ask the district governors to make eliminations from the candidates down to not more then 10, and then to send us the completed applications and essays on each of these 10 candidates.

Our own Rotary International student-project committee makes the final determination after studying the files on each of the 10 candidates. The two winning candidates are notified of their selections. We make reservations for transocean travel by plane with arrangements to give them $50 each upon their arrival in New York. (We give weekly spending cash later.) However, they fly directly to Little Rock for the beginning of their visit.

After the 60-day visit, they begin their return trip by train from Little Rock usually through Chicago with 2 days stopover there, with entertainment through contacts with Rotary International. From there they go to Washington for another 2- or 3-day stopover where they are the guests of Arkansas congressional Representatives, who show them around in Washington. From Washington they go to New York with a brief layover prior to their departure to their home country.

COST

The cost of the project varies depending upon the country selected. The principal item of expense is, of course, the air transportation. We have a club membership of around 290 members, and originally it was supported by a $10 voluntary contribution, which was paid by 180 to 200 members. The last 2 years the club has voted to sponsor the project on an assessment basis, and it has cost $9.50 per capita and $8 per capita for the past 2 years. The total cost of the French project was $2,500. The total cost of the Italian project was $2,271. The total cost for the German project was $1,840, and the total cost of the Finnish project was $2,250.

We recommend the assessment approach as it lessens the burden on all, and gives every Rotarian a participation.

WHAT THEY DO IN LITTLE ROCK

The visitors are met at the airport upon their arrival in Little Rock, and their usual

first evening is spent with the committee only, with a small get-acquainted dinner. Prior to their arrival, the 60-day visit has been allocated in weekly segments to 9 Rotarians, 1 for each week. This Rotarian is responsible for the appointments and activities of the two visitors during the week of his assignment, and all invitations for that period must be cleared with the Rotarian sponsor for that week. From the very beginning we have always had more invitations for entertainment in the home and various trips and experiences than we have been able to schedule in the allotted time, so this does not leave the boys very many idle moments.

We give them permanent residence at the YMCA. They are given planned tours through our courts, governmental agencies, our schools from the grade level up to a visit to the State University at Fayetteville. They attend church services each Sunday and Sunday schools of many denominations. They appear as guests and speakers at civic clubs and school gatherings in Little Rock and over the State. They go to the offices and factories of our Rotarians to see how business is conducted. They visit our agricultural areas to see cotton plantations, rice farms, timber reservations, bauxite and other mining activities. Rotarians vie with each other to have the boys as their guests, to take them on these tours, and to entertain them in their homes, for one of the things we especially want them to observe is the way in which Americans live at home. No attempt is made to propagandize the boys. We try to be natural and let them form their own impressions of our democratic processes; the workings of our free enterprise system, the independence of religious worship, the freedom of the press and speech; and the inalienable right of an American citizen to live and prosper according to his efforts and circumstances.

THE FINAL CHAPTER

When these young men return to their native land, they prepare reports of their visit which they present before the Rotary Clubs in the area in which they live, and the demand for these boys as speakers seems to exceed their ability to fulfill them. Transcripts of these reports which are forwarded to us have convinced us that our efforts and our money was more than well spent; and that these young men who have had only a picture show and textbook conception of America and American living, have developed an understanding and an appreciation of the real America which is an invaluable asset in our great problem of having nations understand one another. Each year we are more convinced than ever that the individual influences of these two boys each year will make a more than casual contribution as they report their impressions to their fellow countrymen.

We do not offer this project as a substitute for international scholarships or the student-exchange program, but rather it is a supplementary activity because we are bringing young men who would otherwise never come to this country. Even the student who studies in a country for a year is rarely accorded the privilege of visitation in the home and intimate participation in American daily activities such as is accorded the members of our student project.

From the speech delivered by Jacobacci to the Turin, Italy, Rotary Club after his return: "I am very thankful to the Turin Rotary Club, to the Italian district, and to the Little Rock Rotary Club for the splendid opportunity they offered me to visit the United States, to have known so many different persons who have done what was in their power in order to give me a total, complete vision of American life, to tie again those friendly links between two countries and their people so different and so far away."

From a letter received 6 years after his visit: "I have an incommensurable debt toward you. Little Rock Rotarians and all the people in your town—firemen, policemen, post-office clerks, nice girls at the record shop * * * those 6 weeks in Little Rock mean more to me than 1 year of my whole life. For this reason I was happy to hear that you are carrying further your foreign students program. Though some of you may feel sometimes that it is a hopeless task to convert to good ideals millions of people who have no opportunity of seeing your way of life at work, I believe that your contribution thereto will bear its fruits, by the example it gives to others and by the spreading of knowledge through those who had the privilege of being chosen as I was."

From Peter Kuhne, one of our German students:

"I know a young fellow in Germany, who was once over there in America. He had a big time in the United States of America, making speeches from time to time, in which he always used to speak about the angel of a foreigner, instead of the angle of a foreigner. It was not the only mistake he made, as far as I can remember, but nevertheless he had many good friends over there. When he returned to Germany everybody said, 'Peter has become a Yankee,' as he tried to disturb the outdated view of the United States of America which people still have in our country.

"* * * So often people ask me to show my United States of America picture album to them and on these occasions Arkansas and the most wonderful hours I was able to spend down there in the South turn up before my mind all of a sudden.

"Our problem child in West Germany is Mr. Ollenhauer, the leader of the Social-Democratic Party. That fellow ought to visit the United States of America in order to learn how real opposition works. I think the essential difference between American and German political opposition in government is this: When in your country the rough time which precedes the day of general election is over and the new-elected President enters White House, fights between the parties remain in the past and prolific cooperation between opposition and leading party with the goal of social and economical improvement is the common aim in the future.

"Give kindest regards to my Rotary friends. It might interest them that the idea of the program of international friendship was taken up by the Hamburg Rotary Club which invited last summer 10 boys of 5 European countries."

After his return, Asko Karttunen wrote as follows:

"I have been thinking of the fact that you fellows in the Club may decide not to bring anybody over during next spring, and if so happens I'm certainly going to feel sorry, not only for the guys who might have come over, but also for the men who have been given jobs in our foreign relations projects.

"I know the value of it—the value for myself, for Rotary and its members, for United States, and for the free world and democracy. Maybe the value is not something all the world sees and hears of, but it is the work of common men, wanting peace and freedom, something that in its humble way will strengthen understanding and friendship among nations, something that should not be given up, but made more widespread.

"So continuing the project would be a fine thing; I have had the honor to be part of it once, so I have every reason to promote its future life. It is worth the money—to you and to us. Like they sing in the 'South Pacific' there's 'nuttin' like a dame,' there is nothing like the Little Rock project.

"Life has been pretty busy with all the reading to be done. The summer is at its peak, and it's just dog-hot, even by your standards.

"My best wishes to the new President Dick and Secretary Bob as well as to the 'old guard'."

Peter Boyer from Paris had this to say after his return home: "I have had the opportunity to talk with many students—even Communists—and many of these middle class people who really make the majority in France appreciate very much my information coming first hand, and not through the lies of the newspapers."

EXCERPT FROM SEPTEMBER 1949 THE ROTARY MAGAZINE

Little Rock Rotarians are rightfully proud of this Fourth Object project, typifying as it does the active role Rotary Clubs everywhere are playing in broadening the understanding of world youth. And as for Pierguido and Guido now back in Italy—they expect to be better civil engineers and lawyers for it all * * * and better citizens of Italy and the world, too. It seems a reasonable expectation.

Great Accomplishment of Democratic 84th Congress

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. O'HARA of Illinois. Mr. Speaker, the record of the Democratic 84th Congress for constructive accomplishment is unsurpassed. There has been an absence of fanfare and of sensationalism but not of industry and of wise planning. Outstanding on that record is the $33 billion Federal roads bill, which will make a reality of the dream which this country has envisioned these many years.

What this measure will mean to the country has been expressed in terms of its significance to my own city of Chicago in an article appearing in the Chicago Daily News of Wednesday, June 27, as follows:

WHAT ROADS BILL MEANS TO AREA—STATE, LOCAL CASH FREED FOR NEW PROJECTS HERE

What does the $33 billion Federal roads bill mean to Chicago and Cook County?

It's a lot like striking oil at State and Madison, local highway engineers agree.

"It will make a reality out of projects that until now were little more than pipe dreams," said William J. Mortimer, county highway superintendent.

"It will cut completion of the Interstate Highway System here from 30 to 13 or 15 years," predicts R. H. Harrison, division engineer of the Federal Bureau of Public Roads."

It will free tens of millions of city, county, and State money—now earmarked for expressways—for additional highway projects, offers George L. DeMent, Chicago commissioner of public works.

Uncle Sam now picks up the tab for 50 percent of the Congress expressway, the Northwest, South, Southwest, and Edens expressways, plus the Wacker Drive extension.

The other 50 percent was divided among the city, county, and State.

Under the new bill, Uncle Sam will pay 90 percent of the freight—if such new construction qualifies as part of an Interstate Highway System.

And in Cook County nearly all of it does qualify, the experts say.

Here's how the county government would benefit, for example:

It issued $245 million in bonds last year to pay its part of the expressway system in the county, says Mortimer.

If the United States puts in 90 percent of the money for the expressways instead of 50 percent, Mortimer says the county could use most of the bond issue for projects like these:

Making Stony Island an expressway between 79th and 107th Streets to connect South Shore Drive with the Calumet expressway.

Build an east-west route near 55th Street to link Stony Island with Cicero or Harlem.

Construct an inland route through Chicago, possibly linking Midway Airport with O'Hare Field.

Participate with the city and park district in overhauling the outer drive between Oak and Cermak Road, flattening out the right angle curves between the river and Randolph.

Push through a crosstown route near California to link the southwest expressway with the Congress and northwest expressway.

Mortimer gave no estimates on how much these multimillion dollar projects would cost—and pointed out that it will be up to the State to split up the Federal fund more.

G. DeMent estimates there are $440 million in present and future road projects around metropolitan Chicago that qualify for the 90 percent United States grants.

He says the new United States bill will free county, State and city money for other road projects "that aren't eligible for Federal funds but that are still regarded as needed."

Governor Stratton has said he believes that half the United States funds given Illinois for an Interstate System during the first 1½ years of the program will be spent in the Chicago area.

Illinois is expected to get $8,100,000 this year and another $129,600,000 in the next 2 years. The whole building program is to take 13 years.

Stratton, Mayor Daley, and County Board President Dan Ryan already have ordered their engineers to submit reports on how the money can best be spent.

Capt. Chester McPherson Anderson

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1956

Mr. MULTER. Mr. Speaker, it has been my privilege, as a result of my affiliation with the United States Coast Guard, to have become acquainted with one of its unsung heroes.

Capt. Chester M. Anderson retires from the United States Coast Guard service tomorrow, June 30, 1956, after 32 years of loyal, efficient, and distinguished service.

Captain Anderson was born in Seattle, Wash., in 1894. He received his primary education in that city's schools and later attended the DeKoven Military School and the Navigation School of the University of Washington.

During World War I he served on active duty as a lieutenant, junior grade, with the United States Naval Reserve. He entered that service in October 1918 and was honorably discharged therefrom in September 1921. He continued to follow the sea until 1924 when he was commissioned as an ensign in the United States Coast Guard.

During World War II he was the commanding officer of the cutter *Algonquin*, assigned to the North Atlantic. His fine service is only partly recognized by the awards from our Government to him which consist of, among others, the Navy Commendation Ribbon for convoy escort operations in the North Atlantic during World War II, the American Defense Service Ribbon with Sea Clasp, the American Area Ribbon, the European-African-Middle Eastern Area Ribbon, the Asiastic-Pacific Ribbon, and the World War I and World War II Victory Medals.

During the last 4 years he has served as Director of the United States Coast Guard Auxiliary where he has done an exceptionally outstanding job. He systematized their procedures, he minimized and standardized the forms they use, he assisted with their new manuals, encouraged the enrollment of new men, and aided considerably in increasing the present roster of the northern area to well over 2,000 men and women.

He is loved and respected by all, particularly because of the way he extended himself beyond the call of regular duty.

I know that every Auxiliarist joins me in saluting him and wishing him well in all that he undertakes in the years ahead.

The Presidency

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Friday, June 29, 1956

Mr. HUMPHREY of Minnesota. Mr. President, I ask unanimous consent that the final column in Mr. James Reston's series on the Presidency, which have appeared in the New York Times, be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRESIDENCY, V—EVALUATION OF NEW INSTITUTIONS THAT HELP PRESIDENT KEEP UP WITH PACE OF HISTORY

(By James Reston)

WASHINGTON, June 21.—The American Presidency, like most other national institutions, is in a race with the pace of American history.

So swift is that pace and so vast the growth of the American Republic and its responsibilities, that all national institutions—and the habits of the men who run them—inevitably lag behind.

This is true in a special sense of all political institutions. It is true, regardless of the party in power, not only of the Presidency but of the Congress with its multiplicity of overlapping committees and its cult of seniority.

It is true not only of the machinery for electing Presidents but also of the methods of selecting powerful assistants to the President. And the problem of change in Washington is especially different. For change depends most of the time on the men who have benefited by the political habits and machinery of the past.

In this series of articles, of which this is the last, an effort has been made to draw a distinction between the President and the Presidency, and to report on some of the men and institutions that carry on the burdens of the office during the President's illness.

All these men are caught in this race with the fierce transition of the time. They are all conscious of the need of change. And while they do not change as fast as events, it does not follow that progress has not been made.

CABINET MEETING DAY

This, for example, was Cabinet meeting day in Washington (it is usually on Fridays). The only resemblance it bore to Cabinet meetings of Franklin D. Roosevelt's time was that it was held in the White House Cabinet Room.

The Cabinet under FDR was a story-telling bee—informal, unprepared, and unrecorded. When, after the war, officials and historians wanted to know what happened in these Cabinet meetings, they had to go to the late Henry L. Stimson's personal diaries. For no official record was kept, no agenda was prepared, no catalog of decisions was preserved. And the only consolation for the historians was that it probably didn't matter, for the Cabinet was not the place where the main business was conducted.

Today, the Cabinet (minus John Foster Dulles, Secretary of State, who was off in California scalding Nikita S. Khrushchev, his favorite target) arrived at the White House, each with his black Cabinet diary.

The secretary to the Cabinet, Maxwell M. Rabb, of Boston, had prepared an agenda. For each item on the agenda there was a background memorandum, setting out the points at issue, and a financial statement, indicating what the various proposals would cost, if adopted.

When Vice President RICHARD M. NIXON, pinch-hitting for the President, called the meeting to order, the Cabinet members did not have to be told the background of the problem (this took up most of the time in the Roosevelt meetings). The problems had been defined and the papers circulated to the members by the Cabinet secretariat earlier in the week.

Furthermore, a record of the meeting was kept by Mr. Rabb. And as soon as Mr. NIXON ended the meeting to go to Quantico, Va., for a survey of problems with the lords of the Pentagon, representatives of all the Cabinet members met at the White House. They recorded whatever decisions had been taken so that they could follow up on the action promised.

DIFFERENT FROM BRITISH

This is not to say that the Cabinet is now an agency of the Presidency comparable, say, to the British Cabinet. It does not have the power of decision, as the British do under the system of Cabinet responsibility. Nor does it deal with national security matters.

Its responsibility is to report and recommend policy on home matters—agriculture, natural resources, justice, etc. National security questions are dealt with in the National Security Council. The Council is now the most powerful agency of the Government under the President, and the most important arm of the Presidency.

This came into being under President Harry S. Truman on the basis of the experience of the war. It was the result of many years of anguish over the burdens of the White House, and was finally given statutory authority in the National Security Act of 1947, as amended in 1949.

This act did four things:

1. Established the Department of Defense (instead of separate departments of Army, Navy, and Air Force).

2. Created the Central Intelligence Agency for the collection and appraisal, at a central

point, of world intelligence relating to national security.

3. Set up the National Security Resources Board (now the Office of Defense Mobilization).

4. Established the National Security Council.

The purpose of the NSC was to advise the President on the integration of domestic, foreign, and military policies relating to national security; to assess and appraise the objectives, commitments, and risks of the United States in relation to our actual and potential military power; to consider policies on matters of common interest to the departments and agencies of the Government; and to make recommendations to the President in connection therewith.

ANTIFREEWHEELING DEVICE

This was intended to keep the separate departments dealing with security matters from running off in all directions—sort of an antifreewheeling device. And while nobody can ever hope to coordinate as many people as now work in the security field, it has done extremely well.

The statutory members of the NSC are the President, who normally chairs the weekly meetings on Thursday mornings; Vice President Nixon; the Secretaries of State (Mr. Dulles) and Defense (Charles E. Wilson); and the Director of the Office of Defense Mobilization, Arthur S. Flemming.

Others who attend are the Director of the Central Intelligence Agency, Allen W. Dulles, who opens each meeting with a world intelligence report; the Chairman of the Joint Chiefs of Staff, Adm. Arthur W. Radford; the Secretary of the Treasury, George M. Humphrey; the Assistants to the President for Disarmament (Harold E. Stassen) and Foreign Affairs (William H. Jackson); the Director of the Bureau of the Budget, Percival F. Brundage; and such other officials as the President wishes to invite.

The difference between the NSC and the Cabinet, other than that one deals with home affairs and the other with security affairs, is that the NSC is far more formal. It does everything on the basis of carefully prepared staff work, and almost always deals with questions that require a specific recommendation to the President for policy action.

If the President has something he wants studied, he refers it to his Special Assistant for Security Affairs, Dillon Anderson. Mr. Anderson is a conservative lawyer from Texas who has a gift for wry verse, which he does not use on NSC papers.

Mr. Anderson may then refer the question to the department concerned, or to several departments for their observations. And when the papers are then taken by the NSC permanent staff (most of whose top members have been there from the start of the agency), the staff prepares them for the consideration of the National Security Council's planning board.

POWER OF PLANNING BOARD

Much has been written, though little is known, about the NSC. What is more important is that even less is known about the council's planning board, which does most of the pick-and-shovel work for the NSC and a great deal of its thinking.

It is, therefore, the principal planning and coordinating interdepartment committee in the issues of war and peace and one of immense power. This, of course, is flatly denied by all its members, who are not only anonymous but practically invisible.

The planning board met this afternoon in room 382 of the Old State Department Building—nine men whose names are almost unknown beyond the top level of official Washington.

Mr. Anderson, the aforementioned writer who normally is chairman of the planning board, was not present this afternoon. He was away on Kwajalein Atoll with Lewis L. Strauss, the atomic energy chief, presumably listening to bangs. His place was taken by the man who has been staff secretary of the NSG from the beginning, James S. Lay, Jr.

The other members on hand today were Robert R. Bowie, the Harvard teacher who is Assistant Secretary of State and head of that department's policy planning staff; Robert Amory, Jr., of the Central Intelligence Agency; Maj. Gen. Francis W. Farrell, representing the Joint Chiefs of Staff; Jarold A. Kieffer of the President's Advisory Committee on Government Organization; C. Dillon Glendenning of the Treasury; Robert E. Mattison of the White House Disarmament Staff; Ralph W. E. Reid, Assistant Director of the Bureau of the Budget, and Karl Harr of the Department of Defense.

BASED ON PAPERWORK

The famous men who sit on the NSC base their discussions like the Cabinet, on carefully prepared papers, and they are not restrained in their criticisms. But the men in big government who prepare the papers for Cabinet members, who have a thousand other things to do each week, are in the key spot, regardless of how much they may deny their authority.

These instruments of departmental cooperation—the NSC, the NSC planning board, and the Operations Coordinating Board, which sees that the NSC policies are carried out by all concerned—provide the President with solid staff services, but they cannot substitute for the President.

As Sidney W. Souers, the first executive secretary of the NSC, wrote about interdepartmental committees of the past:

"[They] suffered for lack of a definite mission * * * and most of all, from authoritative direction."

This is true to a certain extent today in the NSC. The council and its planning board can recommend, but the constitutional responsibility of the President is still the duty to decide.

When he is available he works hard at the NSC papers. And even now he is beginning to send his observations to the staff from the hospital. But he is not able, and has not been able during his two illnesses, to go through the long hard task of arguing out the NSC problems and hammering them into the policy he wants.

"The powers and duties" of the Presidency, mentioned in article II, section 1, paragraph 6 of the Constitution, do not refer only to those simple acts of signing papers that have to be signed so that the public business can go on.

They refer not only to the President but to the whole of the Presidency: to the direction of these staffs, to the hard decisive business of choosing between dangerous courses.

This is why there is apprehension in Washington about the illness of President Eisenhower. There are institutions behind him that carry on better than his political opponents would have the public believe, but these institutions do not work so well without him as his political supporters pretend.

A Tribute to Ignace Jan Paderewski

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. REUSS. Mr. Speaker, 15 years have passed since the death of Ignace Jan Paderewski and nearly 100 since his birth. Each year his contribution to mankind's welfare shines more brilliantly in the pages of history.

It is appropriate to recall that this year also is the centennial of the birth of another great champion of human liberty, Woodrow Wilson. Wilson and Paderewski worked together in the common effort for the self-determination and independence of Poland which was achieved after the First World War.

The 20 years of Polish freedom—from 1919 to 1939—were glorious ones. Paderewski was the first Premier of the Polish Republic and his name is inextricably tied to the cause of Polish liberty.

Providence is rarely as generous in her endowments as with Ignace Jan Paderewski. He would have won immortal fame as a composer and artist alone. But linked with his brilliant musical achievements was his dedication to a free Poland. When he died on June 29, 1941, he left a record of which all Poles and all Americans of whatever national origin will find inspiration for generations to come.

Farm Newspaper Polls Kansas Farmers

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, June 29, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Tiller and Toiler, a newspaper in the Kansas farm belt, which shows the feelings of farmers polled in that section of the West.

I believe this trend will attain full force by November.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRATS REVERSE 1952 IN STUNNING VICTORY—EISENHOWER, HALL, BENSON DEFEATED IN POLL

With the Democratic candidates for the presidency and the governorship of Kansas smashing to overwhelming victory over President Eisenhower and other Republican candidates, the Tiller and Toiler today closes its second postcard poll of rural voters after 10 straight days of balloting of all farmers in Hodgeman and Edwards Counties. Final victory margin for the Democrats on the presidency stands at 156–131, or 54 percent of total votes cast.

Added to the vote in the Tiller and Toiler's April Pawnee County farm poll—both polls are the first newspaper polls in Kansas this election year—the grand total of cumulative votes on the presidency in the three counties adds up to 591 for the Democrats against 377 for the Republicans. This means that 61 percent of the voters in the three central Kansas counties will apparently vote for Senator Kefauver, Adlai Stevenson, or Governor Harriman against only 39 percent for President Eisenhower, Senator Knowland, or Vice President Richard Nixon.

Each day the count of the ballots returned in the mail on the 3-county poll has been attested by prominent local Democrats and Republicans from outside the Tiller and

Toller officer, and the qeustion asked on the ballots were rigidly nonpartisan. The question on the possible Democratic presidential candidates, for example, read: "If the presidential election were held tomorrow, would you vote for a Democrat—whether the candidate was Senator Kefauver, Adlai Stevenson, Governor Harriman, or some other?" Similarly, the question on possible Republican candidates read "If the presidential election were held tomorrow, would you vote for a Republican—whether the candidate was Dwight Eisenhower, Richard Nixon, Senator Knowland, or some other?"

The significance of the undeniable rebuke extended to President Eisenhower, it is believed, makes not only Kansas likely to go Democratic this November, but all other wheat States—perhaps all farm States—as well. Pawnee, Hodgeman, and Edwards Counties are typical Kansas wheat counties. Moreover, they voted for Eisenhower in 1952 by fantastic majorities, 2½ to 1 in Pawnee County, 4 to 1 in Hodgeman County, and nearly 3 to 1 in Edwards County. The stunning reversal of opinion demonstrated by the poll can be traced to dissatisfaction and even hatred of administration farm policies. This is clearly shown in the 179 to 97 vote to fire Secretary of Agriculture Benson in Hodgeman and Edwards Counties, and the 473 to 162 vote to fire him in Pawnee County. Adding Pawnee County, this makes a total of 652 votes to fire Benson against only 265 to retain him, or a margin of better than 2 to 1.

The enormous Democratic sweep is further demonstrated by the vote on the governorship. Here Democrat George Docking, of Lawrence, only Democratic candidate to file for the office so far this year and the candidate defeated by Gov. Fred Hall in 1954, moved to a 164 to 110 victory over Governor Hall or Warren Shaw, Hall's primary opponent in Hodgeman and Edwards Counties. Including the Pawnee County vote, Docking rolled up a 617 to 333 victory for 63 percent of the total vote. This makes Docking look like a sure victor over any Republican candidate this fall.

Even the Tiller and Toller staff, admittedly partisan, has been amazed by the Democratic landslide. But day after day, as farmers, after voting Democratic straight down the line, marked their ballots with the recurring refrain: "I was a Republican in 1952 but not any more," and drew gallows beside the fire Benson box, sometimes adding, "And Eisenhower, too," it became clear that hundreds upon hundreds of formerly Republican farmers had turned Democratic.

Acreage allotments, lower prices, and relatively poor crops, of course, have undoubtedly influenced farmers to go Democratic. But it must be remembered that both Edwards and Pawnee Counties are well east of the 100th meridian, traditional demarcation line for dust bowls and poor wheat country, and that part of Hodgeman County is also east of this line. Moreover, Edwards and Pawnee Counties are now harvesting wheat crops which on the harvested acreage will not be far below the long-term average for these counties. However, President Eisenhower's unfulfilled 1952 promise of 100 percent of parity for farmers has undoubtedly stuck in many farm craws, as this promise was mentioned frequently, too, in writing in the ballots. On only 3 of the 10 days of polling were the Republicans able to chalk up a majority for their candidates.

The fact that the Tiller and Toller polled only farmers in Hodgeman and Edwards Counties, while polling all towns but Larned in the Pawnee County poll, has been cited by a few Republicans as evidence that the town vote might upset the country vote. But this did not prove true in Pawnee County towns, and in the last Presidential election there was not 1 percent difference proportionately between the way Larned as a city and Pawnee County rural voters cast their ballots. Town prosperity in Kansas is so inextricably tied in with farm prosperity that there is little, if any, difference in totals piled up in town versus country.

The Tiller and Toller wishes to thank its subscribers and friends for their intense interest in the 2 polls, which brought an average 18 percent return from the 3 counties—more than triple the return received in the ordinary postcard poll, and evidence of burning interest in candidates and issues this election year.

Altogether, 977 voters expressed their opinions in the 3 polls. As usual, weekend votes and yesterday's votes were counted by local attorneys. James Boyd, prominent local Republican and present county attorney, and Maurice Wildgen, prominent local Democratic attorney, counted the weekend and yesterday's ballots.

Final results in Tiller and Toller Poll (Hodgeman and Edwards Counties)

For a Democratic President:	
Monday	15
Tuesday	39
Wednesday	30
Thursday	34

Robert Dinwiddie: Grandfather of the United States

EXTENSION OF REMARKS
OF

HON. PORTER HARDY, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1956

Mr. HARDY. Mr. Speaker, in an extention of my remarks in the Appendix of the CONGRESSIONAL RECORD of August 20, 1954, under the title "Robert Dinwiddie: Grandfather of the United States," I included an article on this subject by Philip Bergan, published in the Phoenix, a student's magazine of the Archbishop Stepinac High School, of White Plains, N. Y.

The ensuing publicity in both Virginia and New York was gratifying, for it served to focus attention on this celebrated colonial Governor of Virginia and his part in discovering George Washington.

On June 22, 1956, the mayor of Portsmouth, Va., Hon. Fred A. Duke, proclaimed July 6, 1956, as Dinwiddie Day in his honor. This will be observed with appropriate celebrations including the renaming of the principal hotel in Portsmouth as the Governor Dinwiddie. This is a fitting prelude to Virginia's 1957 commemoration of the settlement of Jamestown.

On June 24, 1956, the Virginian-Pilot and the Portsmouth Star carried an editorial which provides additional historical highlights, which I am sure will be of interest to my colleagues. The editorial follows:

DINWIDDIE AND WASHINGTON AND THE PORTSMOUTH STORY

Dinwiddie and Washington streets run along parallel courses in Portsmouth. There is a parallelism between the history of the city and the career of a colonial administrator for whom a hotel is to be named. Frank D. Lawrence, president of the Hotel Portsmouth, has announced that the name of the hotel will be changed to the Hotel Governor Dinwiddie on July 6, its 10 anniversary.

Robert Dinwiddie was Governor of Virginia when Portsmouth was established in 1752. Technically his title was lieutenant governor during the period from 1751 to 1758 when he was the colonial administrator of the colony under the Crown. Colonial Virginia's administration is divided into three periods.

The Virginia Company of London governed the colony under a charter from the Crown from 1607 to 1624. The colony was directly administered by governors and lieutenant governors appointed by the Crown in two periods. The first period lasted from 1624 to 1652. From 1652 to 1660 Cromwell's Roundheads held the power in England, and the colony also was under the Commonwealth. After that, Virginia was again under the Crown until 1776 and the Revolution,

after which she was a free and independent State.

Virginia's colonial administrators had various titles during the three periods that preceded statehood. They were presidents of councils, deputy governors, and governors. The last two under the company had the simple title of governor. They were Sir George Yeardley and Sir Francis Wyatt. Both these governors later held the same office, with the same title, under the first period of administration under the Crown. There were 11 administrations during this period and only seven of the administrators held the full title of governor.

The three governors under the Commonwealth all held the unqualified title. When the Restoration came, and Virginia and England were again under the Crown, Sir William Berkeley became the first Governor of Virginia. Between 1660 and 1704 there were governors and lieutenant governors and presidents of council as the chief administrators of the colony. Between 1704 and 1768 (the Dinwiddie period) the office of Governor of Virginia was a sinecure held by Crown appointees in England who did little more than enjoy the title. A president of council served after that, and John Murray, Earl of Dunmore, was governor in chief from 1775 to 1776, when he was overtaken by the American Revolution.

Dinwiddie and Washington—these are storied names like Portsmouth's. Dinwiddie, the governor-in-fact, sent a young surveyor named George Washington to drive the French out of the Ohio region and later named him commander of the Virginia militia. Virginians had a chance to judge the character of Washington when he had to defend 300 miles of mountainous frontier with about 300 men.

Virginia's judgment of Washington lasted beyond Dinwiddie's time. Washington was the military leader of the American Revolution, who won American independence as much by the force of his character as by the force of arms. When a traveler pulls up in front of the Hotel Dinwiddie, he can tell himself he is making a stop along the highway of history. The governor for whom the hotel is named is the one who named Washington to his first major commission. He played a grandfatherly role to the man who has been called the Father of His Country and Portsmouth give him honor that is his due.

Judge Burns on Manhattanville, 1956

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 29, 1956

Mr. KEOGH. Mr. Speaker, in the present state of world affairs, intelligent advice, based on ripened experience and proven sound judgment, is of inestimable worth, especially to well-educated graduates who will be in a position to assist in the formulation of programs to meet the changing need of this progressive age. Such worthwhile counsel is contained in the excellent commencement address recently delivered by Judge John J. Burns to the graduating class of Manhattanville.

Judge Burns, of New York and Boston, is an acknowledged leader of the legal profession. His preeminence in the art of jurisprudence, his enviable record as an educator, jurist, and director of far-flung business enterprises entitle him to recognition as a scholar whose analysis of governmental philosophies is of commanding interest.

Citizens throughout our Nation will be better informed by reading the well-chosen address of Judge Burns, and I therefore ask unanimous consent that the text be inserted in the Appendix of the CONGRESSIONAL RECORD:

It is a great honor for me to be asked to speak on this occasion, which marks such an important milestone in the lives of these young ladies.

All of us friends of Manhattanville should be particularly happy that His Eminence, Cardinal Spellman, has honored us with his presence. It is no exaggeration to say that this great new Manhattanville College with its unrivaled scenic splendor, its outstanding architecture, its novel engineering, with its great promise for future growth and service, would hardly have been possible had it not been for the drive, the sympathy, the energy, and the great intelligence contributed by His Eminence to a cause that lies very near to his heart. I can testify to this from personal knowledge, and I am sure, as the years move on and class after class of young ladies leave these sheltered halls to take their part in carrying to the world God's pattern for society, Your Eminence will be much comforted by the realization that you have played such a decisive part in the inauguration and development of the new and glorious Manhattanville.

I suppose Mother O'Byrne is by this time so used to compliments that she has developed a tolerance for them. One of the most gracious and felicitous paragraphs was used by New York University last year in awarding her an honorary degree. She was particularly praised for her great skill as a teacher and as an administrator.

Some years ago I was asked to address an alumni group in Boston. I made a study of the metropolitan press for a week in September 1921, the year of our commencement, and for a similar week 25 years later. The thought behind this survey was that in our day-to-day existence people little by little become inured to social changes. They lose their faculty for indignation. They come to ignore downward trends in morality, the integrity of the family, the mores of the community, and the like. Even though I had expected to be startled, I was unprepared for the shocking disclosures.

Take homicide, for example. In the earlier period, a murder case was a causé celebré. They were infrequent and treatment by the press and the public reflected the novelty of the occasion. In the later period homicides had come to be regarded as almost an inevitable part of the scene of daily life.

In the earlier period divorces were not uncommon, but it was clear that great social stigma was attached to persons who had been parties to a divorce. In the later period the courts and the press were filled with news about divorce libels and marital misconduct, and the marriage bonds were broken for such frivolous causes that society had stopped just a little short of institutionalizing divorce by consent.

In the field of juvenile delinquency the earlier period showed concern for minor acts of youthful indiscretion, but there was hardly any showing of that strange anarchy that now goes under the name of juvenile delinquency.

In like fashion could be found the contrasts in such items as organized gangsterism, abandonment of children, sales of pornographic literature, dope addiction, public corruption, and political subversion. The study showed that there were in effect forces of evil leading to the gradual erosion of the individual and the national character.

If you young ladies, who I am sure have lived a happy existence in these holy surroundings, were to cast your minds back in memory to the days of your entrance, and reflect upon the pace at which our modern world is changing, you could not but be impressed that the change is for the worse.

Experts tell us that crime is increasing four times as fast as the national birth rate.

Insanity has multiplied, and suicide is a growing concern to the well-being of the Nation. I might at this point state that of all the nations in the world, the suicide rate is lowest in Ireland and Spain, two countries still boasting of a sound family life and a true devotion to our blessed mother.

This is not the time or occasion to do more than note in passing that the deep sleep of the American people has been hardly disturbed, and the so-called spirit of Geneva and the New Look of the Russian tyrants seem to have become a huge success. God help America! Having abandoned principles, having adopted expediency, our motto being to scrap ideals and to seek friendship in the international field by getting the best money can buy, we are proving to the hilt the truth of the aphorism that, "If you stand for nothing, you will fall for anything."

All these manifestations may be summed up in one phrase—we are a secular society. What then is this disease of secularism in a nation that boasts of its huge Sunday church attendance? It means that, so far as a guiding principle of action, so far as a hallmark of culture is concerned, America and a good part of western civilization have decided to do without God in their daily lives. Thus secularism becomes a hypocritical form of paganism. It is correctly described as neo-paganism.

Michael de la Bodoyere, the prominent Catholic publicist, has recently speculated about what would happen if communism should actually be abandoned by its leaders and the Kremlin should restore religious and political freedom. Of course, we must be on our guard and never lose sight of the fact that Khrushchev, the new boss of the Kremlin, was in large measure responsible for the unspeakable betrayal at Warsaw when the Polish patriots were lured to a certain death at the hands of the Germans while the Russians stood at ease at the entrance to the city within hearing distance of the cries of the dying. We must, as Pope Pius XII has said, "be wise in the ways of these terrorists," unbeguiled by their new slogans and unconvinced until new deeds and new attitudes proclaim their contrition and amendment. But perhaps we are wrong, perhaps a combination of internal pressures and external propaganda has made dialectic materialism unpopular with the present Russian leadership.

The principal point of De la Bodoyere's conception of what is likely to happen should communism end in Russia is that while there would undoubtedly be great dancing in the streets, relief from tension, reduction of armaments—a much-to-be-desired goal—western civilization would still be left plagued by seculiarism. Undoubtedly the materialism which from the start dominated the Communist world would continue, even if the philosophy of communism were abandoned. Here in the Western World it is doubtful if the alarming trends I have described would in any way be eliminated or corrected by the disappearance of the world Communist threat. After all, much as we dislike to admit it, our much-vaunted American way of life is frankly secularistic, and the probabilities of change seem dim, indeed.

There are on this great day, my dear young ladies, many reasons why you should be congratulated, but none more important than that you have received a training here in Manhattanville that is avowedly based on fighting the evil of secularism with every weapon at the command of the good nuns and Holy Mother Church. It is because your training has been inspired by the age-old

conviction of the great society of nuns—first things first—that you were taught by a teaching process that conforms to God's divine plan for ordering human society.

A few months ago I had a conversation with Father Barnola, rector of the Jesuit University in Caracas, Venezuela. We discussed the contrasts in the deaths within the last few years of the two most famous Spanish exiles—George Santayana and Ortega y Gasset.

George Santayana, philosopher, poet, critic, essayist, and novelist, was born in Madrid in 1863, and baptized a Catholic.

In 1872 he came with his family and settled in Boston. His faith did not survive the cold front of the Back Bay. He had a brilliant record at Harvard, where later on he headed the philisophy department, from the turn of the century until 1912. At that date he quit Harvard to lecture at the Sorbonne in Paris. Some years ago he took up permanent residence in seclusion in a convent in Rome, where he died on September 29, 1952.

He was during his lifetime Harvard's proudest boast. Difficult to class in terms of a school of philosophy, he is probably most accurately termed a skeptic. We must remember that Harvard and practically all the secular universities of this country have no system of philosophy like Manhattanville and other Catholic schools, which truly regard philosophy as the queen of sciences, and acknowledge that when God created the human mind it was for the purpose of making rational and to God's purposes the whole scheme of education.

It is very difficult to place Santayana in a conventional category of philosophical schools. It was not the ideas he generated so much as his skill as a teacher and writer that made him famous. All through his life, as appears from his autobiography, he admired the Catholic Church and was particularly familiar with the great Catholic architecture here and abroad. He spoke very frequently of his admiration for the Catholic Church and yet remained unreconciled even in death, despite the fact that in his later years he was the object of the tender solicitude of a convent of nuns in Rome.

Ortega, philosopher, critic, essayist, and publicist, was born also in Madrid and, like Santayana, became a voluntary exile from Spain. He was educated by the Jesuits and later studied at several German universities where he became famous throughout Europe as a skillful exponent of the German culture against the Latin culture. Somewhere in the course of his studies he abandoned the Catholic faith. He turned out to be the church's most bitter critic. Because of the tremendous influence he had upon European youth, there are undoubtedly today throughout Europe literally thousands of anticlericals who owe their slant to the brilliant if heretical teachings of Ortega.

And, yet, despite a mature life of skepticism and violent diatribes against the church, when his final hour came in Buenos Aires not very long ago he sent for a priest and very unostentatiously was received back into the religion of his fathers.

I asked Father Barnola what explained this difference in two great men. He said very simply, "The grace of God." And that explanation, my dear friends, cannot be broken down by the most talented of minds, the most brilliant of philosophers. It is valid for the mighty and the humble, for the king and for the peasant.

One last thought and I shall conclude. I propose a toast to you young ladies—a pagan toast, upon which is superimposed a Christian motto with which you are all familiar. Here, then, to the Manhattanville class of 1956: Ad multos annos, ad majorem Dei gloriam.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by the Vice President at Annual Convention of the Lions International

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 2, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Vice President of the United States before the 39th annual convention of the Lions International.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS OF THE VICE PRESIDENT OF THE UNITED STATES BEFORE THE 39TH ANNUAL CONVENTION OF LIONS INTERNATIONAL, MIAMI, FLA., JUNE 30, 1956

I have selected a subject today which I believe is the most important and vital issue of our time. I should like to state it in the form of a question. What United States policy is best designed to reach the goal we desire for ourselves and for others—freedom in a world of peace?

Let me first make three basic propositions clear.

This subject is one which is completely devoid of partisanship. No political party has a monopoly on patriotism or on devotion to the basic objective all Americans share, of keeping our country strong, our people free, and the world at peace.

There is understandable and honest disagreement among equally well-intentioned men as to what our policy should be during this period. Some say we spend too much for defense, and some, too little. Some say we should increase foreign aid, others that we should reduce it. Some say that in view of recent events we are being too tough on the Communist world, others that we are too soft.

The third proposition that I wish to make clear is that I claim no infallibility or omniscience in this field. I bring you no secret information—no magic formula. What I would like to do is to present to you as objective a picture as possible of the problems which confront the policymakers in Washington, and some suggestions as to how we can deal with those problems.

THE AMERICAN POSITION

Let us first examine the position of the United States on this great issue.

The yearning for peace is deep in the heart of every American. It is rooted in every page of our history. The waves of immigrants who made this Nation great came here to escape the strife and turmoil of older lands, hoping here to find the sanctuary of freedom, a land of peace.

But we are not alone in this pursuit of peace. In nation after nation, on both sides of the Iron Curtain, the voice of countless millions is heard asking for an end to war and bloodshed.

War has never been glamorous to those who took part in it. The thrill and excitement of battle, the joy of triumph, are feelings which sometimes come to the spectator who sees war at a distance. Novels and dramas often portray war as a path to glory. But this is not the reaction of those who are in the midst of the struggle. The weary soldier, the bereaved mother, the widow, the orphan—they find no glamor, no thrill, in the harsh reality of destruction and death.

This response to the demands of elemental human decency has been reflected in the foreign policy of the United States. We have been forced into war, but we went with reluctance. When we fought, it was not because we considered peace as a lesser value, but only that we felt that freedom was more important. It is no accident that America's great leaders who have known war at first hand, from our first President, George Washington, to President Eisenhower today, have desperately fought to save mankind from useless slaughter.

The United States of America covets nothing that belongs to other peoples. We do not seek to dominate other lands. We seek a world in which the immense energies of the atom, and the other great discoveries of modern science, will be used to build, not to destroy. The only enemies we want to attack are poverty, disease, ignorance, and fear. We hope that the entire world, including the people now under Communist rule, may one day share the prosperity and freedom we count among our blessings. This quest for peace and world prosperity is the official policy of the United States. It has been stated time after time by President Eisenhower and Secretary of State Dulles.

But the battle for peace will not be won simply by being for peace. No panaceas, no cliches, no slogans will win this battle. Only hard, tedious, exacting, and dedicated work will achieve our goal. That is why I believe that we are so fortunate to have had during this critical period the wise, experienced, inspirational leadership of a man who knows war, and is a symbol of peace throughout all the world, President Eisenhower.

The problem of achieving our peaceful goals is difficult even when we know what we are faced with. It is infinitely more difficult when there is disagreement on the nature and magnitude of the threat to peace. We find ourselves in such a predicament today as we try to determine the answer to this question: What are the real policies of the Soviet Union and the related Communist states at this time?

COMMUNIST LINE CHANGES

The Soviet leaders have proclaimed the possibility of peaceful coexistence between Communist nations and the rest of the world. They have denounced some of the policies of Stalin. They have toured the world seeking alliances with neutral nations. They have offered the hand of friendship to Socialist parties throughout the world, claiming that now they can work together for the same goals.

What is even more surprising is that there are signs of changes in the internal administrations of Communist countries. It may be too much to say that the first signs of freedom have appeared. But the stark terror or earlier years has been partially lifted at least for a time.

What do these moves mean? The Soviet leaders talk peace. But are their actions in harmony with their words? We should ask this question without cynicism, and without bitterness. If we could be sure that the Soviet leaders were willing to promote peace, justice, and freedom throughout the world, we should be willing to forget the nightmare of the past 40 years and thank God that now we can work together for the good of all.

We face a painful dilemma. If we reject Soviet so-called peace moves, many nations may consider us as warmongers. If we accept these offers uncritically, we may weaken our alliances and thus invite the very war we seek to avoid.

How do we escape this dilemma? I think that the simplest and most honest way is this—to proclaim to the entire world, as we have, that we are always ready to listen to words of peace, but that we will act only when these words are followed by deeds. Some complain that such a policy is too firm, too rigid. But a firm policy will not discourage the Kremlin if it really seeks peace. The leaders of Russia are realists. They know that in the light of past history the burden of proof is on them. For nearly 40 years we have had various changes and twists in Soviet policy. But events have always proved that these changes were deceptive. They were aimed to mislead the free world and too often they succeeded.

Surely we cannot be charged with being calloused and indifferent to the cause of peace if we bear these facts in mind. I am sure that the very Communist leaders who proclaim peace and coexistence would despise us as weak-minded if we did not demand the most rigorous proof that conditions had really changed in the Communist world.

THE SOVIET RECORD

Let us for the moment look at the record in this respect. In the last 35 years, there have been 8 complete about-faces in Soviet policy.

In 1920, the Soviet Union gave independence to the Baltic States, Estonia, Latvia, and Lithuania, and in 1940, annexed them.

In 1921, shortly after the Soviet Union was formed, Lenin backtracted on his announced program of communizing Russia in a short time. Instead he encouraged private enterprise at home, and even invited foreign engineers and technical experts to help build Soviet industry.

In 1929, Stalin reversed the field, wiped out private enterprise, and forced farmers into collective farms, starving or imprisoning millions who refused to cooperate.

Six years later, Stalin, terrorized by fear of Hitler, ordered all Communist parties throughout the world to adopt a new line. They were to become respectable and cooperate with all non-Communists in a united front against Fascism.

Yet, in 1939, the bloody hands of the two cruel dictators, Stalin and Hitler, were clasped in a fast pact of friendship. This protected Hitler's eastern front and started the Second World War.

When Hitler turned on his partner in 1941, Stalin once again proclaimed devotion to freedom and democracy. In fact, under the influence of this line, Earl Browder said, in 1943, that capitalism and communism could coexist after the war.

Two years later, Browder was purged when the iron first was unveiled and Soviet troops moved out to conquer defenseless peoples in Europe and Asia.

Today the Communist line has shifted back to that of Earl Browder in 1943.

History is a greater teacher. Certainly in this case it should teach us caution.

As Secretary Dulles said just 9 days ago, the fact is that it is possible for a dictatorship to have one policy for public consumption, and a different or even opposite policy as its real program. It is perfectly equipped to deceive the unwary, since it can clamp an Iron Curtain of censorship over all its actions. It is accountable to no one for its policies. In dealing with the outside world, it can reveal or conceal, as it pleases. Until this Iron Curtain is lifted, we can not be sure of the realities behind honeyed words.

TESTS OF SOVIET INTENTIONS

Is there anything, then, that we know for sure about the Communist world and its tactics and strategy for the future? Let us examine what is publicly known about the present military, political, economic and subversive policies of the Soviet Union. In these four fields let us contrast Communist words with Communist deeds. This will help all of us to understand the foreign policy of our Nation in these confusing times.

MILITARY STRENGTH

In the military field, the Soviet leaders have announced a reduction of 1,200,000 men in its armed forces, the scrapping of some naval units, and other actions which would seem to indicate less emphasis on military preparedness.

This is what the Soviet leaders say. Now let's see what it means. Assuming that the announced reduction in Soviet armed forces has actually been made, it will not affect the core of its military strength. The Soviet Union is one of the most powerful military nations in the world. To quote Secretary Dulles, "Soviet industries are working at top speed to develop ever more potent atomic and nuclear weapons." It has excellent aircraft in abundance, a large and powerful army, and a navy that includes hundreds of the latest and best submarines. Its research in the use of guided missiles apparently is beginning to pay off.

A real disarmament program must cut deeply in three areas of offensive weapons—atomic weapons, bombers and guided missiles, and long-range submarines. Until concrete action is taken in these areas—action which can be corroborated by an adequate inspection system—we cannot say that deeds have been added to words in this phase of the Soviet peace campaign.

DIPLOMACY AND POLITICAL ACTION

In the sphere of diplomacy and political action, the leaders of the Soviet Union have been intensely active in building up alliances and seeking to win friendship. Within the Communist orbit, relations with Yugoslavia have been improved and for the first time the political independence of a Communist nation has been acquiesced in by the Kremlin. So-called neutral nations have been cultivated with all the arts of salesmanship. There have been friendly gestures directed toward many countries now united in defensive alliances against Communist aggression. Premier Bulganin and Mr. Khrushchev have gone to great trouble to convince many nations that the Soviet desires peaceful coexistence.

But on the other side of the picture we find disturbing deeds which contrast with peaceful words. The shipment of arms to the Middle East increases the chances of war in that critical area. The Soviet leaders have been adamant in refusing to end the artificial division of Germany. They have also refused to help France establish peace in North Africa. While Foreign Minister Shepilov proclaims in Egypt that the Soviet opposed all colonialism, it has not yet surrendered an inch of territory which it took by force during the last 15 years, with the exception of a small part of Finland, and the badly plundered state of Austria. As trate, no torrent of words will drown out the cries of the millions of captive peoples who are suffering under this modern type of colonial imperialism which the Communists have imposed.

In other words, there are two styles of Soviet diplomacy today. There is the soft line that is being used to woo nations that have recently been freed from colonial status. This line is also used to foster trade relations when this is to the advantage of the Soviet Union. But there is also a hard, almost ruthless line which is used for Germany, France, or any other nation that is trying to get concrete, workable assurances of peace. In view of this record, are we unfair in asking if the Soviet is really seeking peaceful coexistence, or if it is merely using this as a means for gaining allies and friendly neutrals?

ECONOMIC POLICY

A third area of conduct involves international trade. Determined efforts are being made to expand the exchange of goods with other countries, particularly with nations that are beginning to develop their natural resources. Loans, both of money and of technicians and engineers, are offered to many peoples so that they can go ahead with economic expansion.

If this were a peaceful world, we would rejoice at this expansion of trade. We would be particularly happy that assistance is being rendered to nations whose standards of living are so low in comparison with our own.

But past Soviet trade programs have not been beneficial to the parties involved in them. They have been far too political in their motivation. At times they sought to tie a nation's economy to that of the Soviet Union so that it would ultimately lose its political independence. At other times they sought cover for agitators and political agents who stirred up internal subversion in the host nation.

In other words, these were not really legitimate patterns of world trade. Rather we had here a dressed-up version of the economic imperialism that caused such merited resentment in the last century. We cannot but ask the question, Is this trade designed to help other nations, or to make them economic satellites of the Soviet Union?

INTERNAL SUBVERSION

A final test of Soviet peaceful intentions is found in the area of internal subversion within free nations. Communist agents, Moscow controlled, have long been active in almost every nation in the world. They are a serious threat today in large areas of Africa, Asia, and Latin America. Less than 2 weeks ago our press carried stories about difficulties caused by Communist activity in Brazil. Burma and Malaya are troubled with Communist-led civil wars. We know the story of China, Korea, and Indochina.

Once again, when we seek to check the line of peaceful coexistence with actual Communist practice, we find relatively little evidence of substantial change. It is true, as Secretary Dulles pointed out earlier this week, that the large Communist Parties of France and Italy have been critical of Soviet leadership. Beyond doubt, the denunciation of Stalin has created great internal strains and caused much soul searching in their midst.

Yet, with all these difficulties, they remain true to the principles of Marx and Lenin. They are quarreling over their own relations with each other, rather than over basic beliefs, which continue to be materialistic and godless. So, while we should welcome these signs of dissension in the Communist world, we dare not assume that Communist subversion will lessen. Even if these parties were to shake off an an extent the uprisings in Poland which were reported in the press yesterday so eloquently illustrate the old pattern of complete Moscow control, their principles and aims and would still run counter to those of the free world.

In these four areas then—the military, political, economic, and subversive programs of the Soviet Union—we have a checklist of actual performance under the new line of Communist policy. On the basis of this checklist, we have no guaranties that will allow us to relax our defensive preparations. Those who demand that we junk our present programs and adopt a so-called bold, new foreign policy forget that Soviet capabilities for evil have not disappeared, and their intentions are not purified. If the situation is changing in that liberalizing forces are at work, it is largely because of the policies the free world has followed.

Does this mean, then, that we ignore completely the new policies of the Soviet leaders? Not at all. But it does mean that we do not abandon a program which has proved to be successful in checking Communist expansion and which has forced the Kremlin leaders to adopt new tactics.

A POLICY FOR AMERICA

Our course of action then becomes clear.

Militarily we must maintain our strength and continue to assist our free world allies to maintain theirs until we get more concrete proof that the Soviet leaders are reducing their strength.

Economically we must recognize that the men in the Kremlin have opened a new front. This is in reality a tribute to the success, not only of the programs which have shored up the military strength of the free world, but also of our Marshall plan, our point 4, and other economic aid programs. We have not moved over to challenge the Soviet leaders through aggression and subversion. They have moved over to challenge us and to challenge us right in our own backyard in terms of our own economic system, in terms of the relative abilities of communism and free enterprise to meet and satisfy human needs.

It would be foolhardy for us to ignore this challenge. We must constantly explore ways and means to make our economic program more effective in meeting the new Soviet tactics. I know the impatient arguments well-intentioned people throughout the country make against these programs. They say they don't like giveaways, that the recipients of our aid don't appreciate it, and that often they fail to support our diplomatic policies in world councils.

PURPOSE OF ECONOMIC AID

Let us recognize at this point the objective of our economic assistance programs abroad. They are not aimed at buying the friendship of other peoples. This would be a foolish and unobtainable goal. They are not aimed at creating subservient economic satellites throughout the world, as are the Soviet economic programs.

What are we trying to do then? We know that a people who are economically strong enough to retain their independence and freedom can resist the imposition of tyranny of any type, including Communist tyranny. And a program which helps any country keep its independence helps all countries who want to keep theirs.

We must deal with Communist subversion in our own country in a fair, sane, and effective manner. The naive idea that there is such a thing as an American Communist Party should be exploded once and for all. What we face is a foreign-controlled, conspiratorial Communist organization in the United States. Its members and supporters do not owe their allegiance to the United States and, as such, they should be dealt with accordingly under the laws of the land.

Our program for information must be strengthened and, as I stated just a few weeks ago at Lafayette College, it is particularly important that we greatly expand our program for exchange of students and leaders from other countries. I can speak from experience when I say that our guests of today are ambassadors of goodwill tomor-

row. They see at firsthand the fruits of freedom and democracy. They know that we are a peaceful people and that we harbor ill will toward the people of no other nation in the world.

EXCHANGE WITH COMMUNIST NATIONS

It is particularly important that we not overlook any opportunity to expand the exchange of persons between the United States and countries behind the Iron Curtain. We should accept the challenge of honest interchange of views. We should do this, not with the naive idea that everything is changed, that all will be better overnight, but rather as earnest apostles of peace.

We can be friendly without receding one iota from our principles of freedom and justice. We can deal on a person-to-person basis with the Russian people, and those of other Communist lands, but we will not compromise on the system of communism itself. It is true that, in the past, such visits have often deluded naive and unprepared persons. But the program I envisage would not be wild-eyed visits of the 1930's. Rather I believe that informed and competent Americans, who know and understand the Communist system, could take advantage of these new opportunities to talk frankly and honestly with their counterparts behind the Iron Curtain. Thus we could plant ideas of freedom and justice which, in the long run, would bear real fruit.

As far as citizens of Communist nations visiting the United States are concerned we should recognize that such forms of information as radio broadcasts, pamphlets, news releases, and the like, may now have less effect than previously on the people behind the Iron Curtain. They have just been told by their own leaders that virtually everything they heard or read during the 29 years of Stalin's rule was at its best inaccurate, and at its worst unmitigated falsehood. Consequently, people behind the Iron Curtain may be affected now primarily by what they see, and not by what they read or hear. That is why exchange of persons is so vitally important in this area.

By this approach we can cut through the confusion and uncertainty that the Soviet "new look" has caused in many circles. Our approach will be simple and positive. Where Soviet deeds do not harmonize with peaceful words, we shall keep up the military, economic and political strength that is the only sure deterrent to war. And whenever the opportunity arises to tell of the virtues of freedom, we shall proclaim the faith that has made America great.

Freedom is a priceless right cherished by every man, no matter how poor he may be or how lowly his position in life. It is cherished by the people of the Soviet Union and in the satellites. It is honored in India and Indonesia. It has spread like fire through the colonial world of Africa. We believe in freedom. We practice freedom. We want it for ourselves and for others throughout the world.

With this as our message, we can never lose in a struggle with the slave philosophy of communism.

Fluoridation of Drinking Water

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter that I received from a constituent who is opposed to artificial fluoridation of public drinking water.

The letter is as follows:

This artificial fluoridation of public drinking water is really endangering peoples lives. If these people that are at the head of these chemical associations would only stop and realize what harm they are doing to the people of this Nation, instead of helping them. Believe me they should stop and think twice before doing these things.

I realize you are very busy, but this matter is vitally important now.

Sincerely,

Mrs. EDWARD BARWINSKI,
Denver, Colo.

Income Taxes

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. ROGERS of Florida. Mr. Speaker, most of us regard a family as a single economic unit producing income for the common benefit of all members of the family. However, for income tax purposes the unit has traditionally been the individual, and not the family. Since our personal income tax has always been a graduated tax, the higher the income of the individual, the higher the tax rate which applies to it. In most families the husband is the income-earner and the tax rates are applied to his income. But if the husband and wife are regarded as the tax unit of the family and the income can be divided between them, the total family tax will be less in most cases than if the family income is taxed only to the husband. This follows because more of the family income will then be taxed at lower rates. The tax on two $4,000 incomes is much less than the tax on one $8,000 income.

Prior to 1948, residents of community property States were in a particularly advantageous tax position because under the property laws of those States the income of husband and wife was regarded as belonging one-half to each of them, even though all of it was earned by the husband. In common law States, such as Florida, income could be split between the husband and wife only in special cases where property could be held jointly, or where property could be conveyed from one spouse to another to attain a division of income. Income items, such as salaries, could not be divided in any way in common law States. As between couples residing in California this resulted in a much higher tax for the Florida couple and offered a real inducement to retired people to move to California to gain a tax advantage, even though they may have preferred to come to Florida.

In 1948, Congress acted to place the common law States on a parity with community property States and allowed, for the first time, income splitting on a joint return. Income splitting means that after the total income for both husband and wife has been determined it is divided and the tax computed on one-half. This tax is multiplied by two. The effect is about the same as though all income of the husband and wife were community income reported on separate returns.

From 1948 to 1954 the community property States and common law States occuppied the same position for tax purposes, and the residents of community property States had no tax advantages not enjoyed by residents of common law States. This is as it should be. But in 1954, when the new Internal Revenue Code was enacted, new discriminations were produced against residents of common law States in favor of residents of community property States.

The 1954 code changed the tax on dividend income by permitting the taxpayer to exclude from gross income up to $50 of dividends received from a domestic corporation. In addition, the 1954 code permits the taxpayer who is 65 years of age or over a credit against his tax liability, known as the retirement income credit. This credit can operate to reduce the retired income-taxpayer's tax liability by a maximum of $240 per year. This credit is equivalent to the tax at the first bracket rate of 20 percent on amounts of retirement income up to $1,200.

A Floridian whose gross taxable income includes $100 in dividends and $2,400 of retirement income derived from a pension can take only $1,200 of his retirement income into account for purposes of the $240 credit, and only $50 of his dividends into account for purposes of dividends exclusion. Since he purchased the stocks from which his dividends are derived from his earnings and performed the services for which the pension is paid, he may not take a retirement credit for his wife, nor may he take an additional $50 dividends exclusion for her.

Yet a Californian in the same circumstances is permitted two $50 dividend exclusions and two retirement income credits. This discrimination results because the Internal Revenue Service has ruled that the community property laws of our Western States must be taken into account in applying sections 37 and 116 of the Internal Revenue Code.

In the official explanation sent out with the 1955 tax returns the Internal Revenue Service took the position that married residents of community property States were entitled to two $50 dividend exclusions, even though the stocks owned by the husband and wife were paid for completely by the earnings of the husband. To the same effect in revenue ruling 55–597 the service has ruled that a husband and wife domiciled in a community property State are entitled to two retirement income credits, even though all of the retirement income of the couple may have been earned by the husband.

The resulting discrimination against residents of Florida and other common law States can best be pointed up by an example. Assume that we have two taxpayers, both are married, have no dependents, both are over 65 years of age, and that their wives are over 65, but that

one lives in Florida and the other in California, and that income tax is computed on the basis of the same income:

	California community property State	Florida common law State
Gross income:		
Rents	$1,500	$1,500
Interest	1,500	1,500
Dividends	1,600	1,600
Pension	2,400	2,400
Total	7,000	7,000
Dividends exclusion	100	50
Adjusted gross income	6,900	6,950
Less:		
Standard deduction	690	695
Personal exemptions	2,400	2,400
Taxable income	3,810	3,855
Tentative tax	762	771
Retirement income credit	480	240
Dividends credit	60	62
Tax payable	222	469

The double retirement income credit and the double dividends exclusion enjoyed by the couple residing in California results in a tax bill which is $247 lower than that paid by the couple residing in Florida. $247 is a lot of money to a retired couple. It can mean the difference between comfort and want.

The general purpose of the bill H. R. 11920 which I have introduced is to equalize, with respect to the items covered by the bill, the income-tax treatment of husbands and wives in States which do not have community property laws with the treatment of husbands and wives in community property States. There are eight States which have community property laws. This bill will give like benefits to the 40 States which have been discriminated against.

The first section of the bill relates to the retirement income credit provided by section 37 of the Internal Revenue Code of 1954.

Under existing law, if an individual has received earned income before the taxable year he is allowed a credit against tax for amounts received by him as retirement income. Under community property laws this means that both the husband and wife are entitled to the credit on the basis of the income each is considered as receiving under such laws.

The effect of the first section of the bill is to permit a husband and wife who made a joint return to treat one-half of the earned income and and one-half of retirement income as received by one spouse and one-half by the other. These provisions do not apply unless it is to the advantage of the taxpayers. Section 2 of the bill relates to the partial exclusion from gross income of dividends received by individuals.

Existing law permits an individual to exclude dividends from gross income to the extent the dividends do not exceed $50. Thus, if the dividends constitute community income a husband and wife may exclude a total of not to exceed $100 whether they file separate or joint returns. Under section 2 of the bill the total exclusion is $100 if the husband and wife file a joint return. Section 3 of the bill relates to limitation on capital losses. Existing law provides: "In the case of a taxpayer other than a corporation, losses from sales or exchanges of capital assets shall be allowed only to the extent of the gains from such sales or exchanges, plus the taxable income of the taxpayer or $1,000, whichever is smaller." In the case of a joint return the limitation is computed with respect to the combined capital gains and losses of the spouses. If separate returns are filed by a husband and wife the limitation applies separately to each but the advantage of splitting income under the joint return system is lost.

Subsection (a) of section 3 of the bill increases the $1,000 limitation to $2,000 if a joint return is filed. Subsection (b) makes a technical conforming change in the definition of "net capital gain."

The Administration's Medicinal Insurance Plan for Federal Employees Is a Makeshift and Ramshackled Affair, According to John Cramer of the Washington Daily News

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, I would like to take this occasion to point out that a policy resolution adopted at the AFL–CIO merger convention relating to Federal employees called for a:

Hospital and medical insurance program for Federal employees with employee representation in administration of plan and Federal Government to underwrite at least 50 percent of the total cost, and with administrative principles consistent with those approved by the AFL–CIO for administration of health and welfare funds negotiated with employers in private industry.

In support of the administration's medical insurance plan for Federal employees the Civil Service Commission claims, among other things, that most Federal employees carry basic hospital and surgical insurance to take care of the first need. The Civil Service Commission also maintains that those Federal employees who do not have such insurance can get it at the local level for a modest cost. In August 1954, however, Nelson Rockefeller testified in favor of a radically different plan which would have provided basic coverage just as does a bill I have introduced, H. R. 12005, to provide for Government contribution toward personal health service benefits for civilian employees in the Federal service. Mr. Rockefeller said at that time that:

I think the interesting factor is that here with families having incomes between $2,000 and $4,000 only 51 percent have some coverage, and that is the group in which the bulk of the Government employees are. We can consider they are typical of the United States average that only about 51 percent of the Federal employees in this wage group would have any hospitalization insurance and that is the most common area for them to take coverage in.

In a statement I submitted to the Post Office and Civil Service Committee of the House of Representatives on June 29, 1956, in support of my bill, I said, in part:

If a program such as I propose in a bill, H. R. 12005, I introduced on June 27, 1956, is adopted, namely, 50-percent participation by the Federal Government plus payroll deduction for the employees' share of the cost for basic medical, surgical, and hospital care, the cost of a major medical program to supplement the basic program would be drastically reduced. * * * Let me make myself perfectly clear. I am not opposed to a major medical-insurance program, but it is quite clear, or so it seems to me and to others, that a basic health program of the type put forth in my H. R. 12005 must come first. I believe that my position roughly parallels that of the representatives of the Blue Cross hospital service plan, the Blue Shield medical service plan, Group Health Association, the International Association of Machinists, AFL–CIO, and perhaps other organizations who have testified, or will testify, before your committee on the administration's 1956 plan for medical insurance.

I was very interested, Mr. Speaker, to read in the Washington Daily News of July 2 a really excellent article by John Cramer, one of the outstanding reporters in the Nation's Capital, entitled, "Why Free Medical Insurance Plan Is Opposed."

Mr. Cramer writes that:

On the surface, the administration's major medical proposal is pretty, indeed. It would protect employees against most expenses of catastrophic-type illness or injury. And it carries the alluring tag: This is free. It will cost your nothing. Search beneath the surface, however, and you'll find the plan a ramshackled affair—and, above all, a makeshift affair.

It was painfully assembled over many months after the administration found it too difficult to keep its original 1954 promise of a basic health-hospital insurance plan for Federal employees—as distinct from major medical.

Because the President publicly was committed to a health program of some sort, his aids had to come up with something.

What the President's aids came up with should, and must, be painstakingly examined. So far, it looks like a goldbrick. John Cramer has carefully examined it in his article of July 2, an article so important that I include it here for the information of my colleagues.

WHY FREE MEDICAL INSURANCE PLAN IS OPPOSED

(By John Cramer)

This is for the many Federal employees who can't understand why there should be opposition to the administration plan to grant free major medical insurance to United States workers and their families.

Here is why:

The plan would hurt many employees—and actually increase their out-of-pocket medical expenses.

It very possibly would hurt as many as it would help.

It especially would hurt thousands of married women who now provide health insurance for their families.

It clearly would discriminate against organizations such as Blue Cross, offering prepaid hospital services, and Blue Shield, offering prepaid surgical services.

On the surface, the administration's major medical proposal is pretty, indeed. It would protect employees against most expenses of catastrophic-type illness or injury. And it carries the alluring tag: "This is free. It will cost you nothing."

MAKESHIFT

Search beneath the surface, however, and you'll find the plan a ramshackle affair—and, above all, a makeshift affair.

It was painfully assembled over many months after the administration found it too difficult to keep its original 1954 promise of a basic health-hospital insurance plan for Federal employees—as distinct from major medical.

Because the President publicly was committed to a health program of some sort, his aides had to come up with something.

So they came up with major medical.

But let's look beneath the surface. Let's look first at what the plan would do to organizations such as Blue Cross and Blue Shield.

There are two basic types of health-hospital protection. They compete against each other.

1. The insurance company or indemnity-type offers specific dollar amounts for specific illnesses, injuries, or periods of hospitalizations.

2. The service type Blue Cross and Blue Shield plans deal only indirectly in dollars. Instead, they offer prepaid days of hospitalization, or prepaid surgical services.

The administration proposal would discriminate against Blue Cross and Blue Shield because:

They would be frozen completely out of the Federal employee major medical field—even though they already operate to a large extent in that area and plan to expand into it further. Under the administration proposal, major medical protection would be handled exclusively by insurance companies, and by Federal employee unions with their own insurance-type plans.

Blue Cross and Blue Shield not only would be frozen out of major medical. They actually would be forced to trim back the protection plans they now offer—in order to mesh them into the insurance company-controlled major medical program.

Under the administration plan, employees and the dependents would be protected against 75 percent of all major medical expenses after the first $500 of hospital expense, first $250 of surgical expense, and first $100 to $200 of medical-care expense (depending on the employee's income).

BEYOND

Blue Cross and Blue Shield offer plans whose benefits usutlly go well beyond these dollar limits.

And about half of all Federal employees—here and elsewhere—have Blue Cross and Blue Shield coverage.

Once the administration major medical proposal went into effect, however, Blue Cross and Blue Shield say they would be forced to repackage and downgrade their own basic-coverage plans for United States workers.

Blue Cross would offer hospital protection only up to the $500 limit in the major medical plan. Blue Shield would offer surgical and medical-care protection only up to the $200 and $100–$200 limits.

And, as a result, many employees would find themselves with less real protection than they now have.

Instead of near 100 percent protection against certain brackets of health cost, they would have only the 75-percent protection of the major medical plan.

In recent testimony before a House committee, Washington's Dr. Donald Stubbs, speaking for Blue Shield plans, cited an actual case to illustrate how the administration plan would increase out-of-pocket medical expenses for many employees.

FILES

His case came from the files of Medical Science of the District of Columbia, of which he's president of trustees.

It involves a male employee who had both Blue Cross (group hospitalization) and Blue Shield (medical service) coverage.

He incurred $1,301 in hospital expenses and $500 in surgeon's fee—a total of $1,801, which Blue Cross-Blue Shield paid in full.

But had the major medical plan been in effect, and had this same employee been covered by downgraded Blue Cross and Blue Shield plans (up to $500 hospital protection and $250 surgical) the situation would have been far different.

His downgraded Blue Cross-Blue Shield coverage would have paid $750.

His major medical coverage would have paid three-fourths of the remainder—$788.

And the employee himself would have had to pay $363, all out-of-pocket loss, traceable policy to the major medical plan.

Here are three other cases which illustrate how the major medical plan would hurt many employees—cases from the files of Group Hospitalization.

BILL

Case 1: Involved an employee who incurred a $542.85 hospital bill, and $500 surgical bill, a total of $1,042.85 of which Blue Cross and Blue Shield paid all but $6.10. Had the administration plan been in effect, his downgraded Blue Cross-Blue Shield coverage would have paid the first $750, major medical would have paid 75 percent of the remaining $292.85, and the employee would have wound up paying $73.46.

And the employee's out-of-pocket loss, as a result of major medical, would have been $73.62.

Case 2: Involved an employee with Blue Cross coverage only who incurred a bill (hospitalization plus $39 for pathology) of which Blue Cross paid all but $39.30. Had the Administration plan been in effect, downgraded Blue Cross coverage would have paid $500, major medical would have paid 75 percent of the remainder—and the employee would have paid $447.64.

In this case, the employee's out-of-pocket loss would have been $408.34.

Case 3: Involved an employee with Blue Cross and Blue Shield coverage who incurred hospital bills for $946.23, and a surgeon's fee for $500 which is coverage paid in full. Had the Administration plan been in effect, his downgraded Blue Cross-Blue Shield coverage would have paid $750, major medical would have paid 75 percent of the rest, and the employee would have paid $236.56—all of it out-of-pocket loss.

HOW

Here is how the Administration plan would hurt married women in Government.

Thousands of these women now are enrolled in Blue Cross or Blue Shield plans which provide the only medical protection for their families. In many cases, the woman is the one who buys the protection because group coverage is not available to her husband.

If the major medical plan went into effect, her Blue Cross-Blue Shield coverage would be downgraded to major medical levels like that of other employees.

But that's only part of the story.

Under the Administration plan, families of married women would not be covered by major-medical protection unless the husband was physically or mentally unable to work.

Thus, the married woman would lose much of the coverage she now has—and be barred from the extra coverage extended other employees.

Review and Reappraisal of Military and Economic Foreign Aid Programs Absolutely Necessary

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, all Members of the House were circulated last week with a statement signed by members of the Hoover Commission task force on overseas economic operations headed by the former Secretary of Commerce, the Honorable Charles Sawyer.

These outstanding Americans insist that the time has come to immediately review and apprase our foreign aid programs and they support that such a review could best be accomplished by adoption of the resolutions now pending in the House and Senate and introduced by our colleagues, HARRISON, of Virginia, and CHURCH, of Illinois, and on the Senate side by Senator MARTIN, of Pennsylvania.

Mr. Speaker, under leave to extend my remarks, I am inserting at this point the statement hereinbefore referred to:

To the Senators and Representatives of the 84th Congress:

The undersigned have been concerned with the problem of foreign aid since its inception. All of us were members of the Hoover Commission Task Force on Overseas Economic Operations. We hold varying opinions regarding the nature, merits, and size of foreign aid but we are united in believing that the time has come for an immediate review and reappraisal of both our military and economic programs.

While there are obviously many ways of conducting such a review and reappraisal, we urge the Congress to approve the resolutions introduced in the Senate by Senator MARTIN, Republican, of Pennsylvania, and in the House by Representatives HARRISON, Democrat, of Viriginia, and CHURCH, Republican, of Illinois, which propose an inquiry by a joint congressional committee.

The reasons for our position may be summarized:

1. A review of foreign aid encompasses the planning and management of a Government-operated business that is spending billions of taxpayers dollars every year in providing military equipment, capital goods, consumer commodities, and personal services to over 60 countries and their dependencies.

2. The operation of this program over the years has raised questions bearing upon the adequacy of the planning, the efficiency of management and the waste of appropriated funds.

3. It has become increasingly difficult to distinguish between economic aid and military assistance.

4. There is an apparent need for comprehensive end-use checks in the field.

5. Any reappraisal to be useful should, in our opinions, be founded upon thorough factfinding designed to trace foreign aid dollars from their appropriation to final use. The real need is to determine the actual costs of selected programs and projects and then to relate the costs to the impact upon both the recipient countries and the United States.

6. A review of all these matters appears to us to be the sole responsibility of the

Congress which appropriates the necessary funds.

7. The review and reappraisal should be a bipartisan undertaking. It should be conducted without participation, direct or indirect, by the executive agencies whose operations are involved.

8. A congressional review should not conflict with the activities of any civilian advisory board that might be conducted by the President. Any such Presidential board or commission would presumably be preoccupied with matters of policy whereas a congressional committee would be primarily concerned with the use of appropriated funds. In our opinion both studies are essential but should be carried out independently in their respective fields to avoid any suggestion of self-examination by the executive agencies in respect of their operations.

Respectfully submitted.

CHARLES SAWYER.
FERDINAND EBERSTADT.
JULIUS KLEIN.
HENNING PRENTIS, Jr.
HARRY A. BULLIS.
FRED CRAWFORD.
ARTHUR FOYE.

Courageous Poles

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the June 30 issue of the Chicago Daily Tribune:

COURAGEOUS POLES

Free men the world over are watching Poland where courageous men and women are risking their lives to protest against bolshevik oppression.

As yet there is no evidence to suggest that this uprising will overthrow the regime in a day, a week, or a month; all that is almost too much to hope for at the moment. But faith breeds faith and courage breeds courage. The spirit which asserted itself on the streets of Poznan will be strengthened, not weakened, by any acts taken by the Communist government to suppress the revolt. The protest will grow and one day it will succeed.

The Communist regime in East Germany has never been the same since June 17, 3 years ago, when German men and boys, having no other weapons, threw rocks at Russian tanks; and the Russian soldiery, to their everlasting credit, were reluctant to shoot down the demonstrators. The end may still be far off, but in East Germany that was the beginning of the end of bolshevism.

Now—and not for the first time—there has been a similar demonstration in Poland. Sooner or later communism will be driven from Poland unless men prefer slavery to freedom and national degradation to national independence.

It has become the fashion in recent years among those who fancied themselves liberal and cosmopolitan in their outlook to decry and deplore nationalism as if it were something retrograde and unworthy. True, many sins can be charged to nationalist excesses but so can many of the great achievements of the mind and spirit. The men and women who participated in the revolt in Poznan were reacting as Poles—nationalist Poles—to an alien oppression.

Within a few days we shall celebrate our own successful uprising against a foreign oppressor. Our own liberty is the first and finest fruit of our own nationalism.

Congressman Lester Holtzman Reports to the People—Fourth Annual Report

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. HOLTZMAN. Mr. Speaker, each year, after the work of the Senate and House of Representatives is done, it has been my practice to send a report to the folks back home.

INTERNATIONAL AFFAIRS

Since my last report to the people, the passing months have witnessed far-reaching developments all over the world. Abroad, there have been changes in the faces and tactics of the Russian leadership as it wages a life-and-death struggle with the free world for the souls of men everywhere. In Europe, our friends and allies continue to develop new answers to the ancient questions of security from attack and from want. In the Near East, little Israel once again looks into the guns of a rearmed and vastly strengthened Arab world. In Asia, countries that for centuries had not known freedom forge ahead in the quest for a stable economy and a secure democracy. In Africa, new forces are emerging and pressing problems of varied kinds clamor for solution. Our Latin-American neighbors have seen the removal of one of those despots who now and then gain a temporary foothold in some part of the world only to be booted out when their excess becomes too much to bear.

DOMESTIC AFFAIRS

And here at home, events and problems of equally great importance crowd each other in rapid succession. In the area of civil rights, the historic Supreme Court devision on school desegregation has opened a period of progress and readjustment in many States of the Nation. The merger of the two major labor organizations into one union gives a more dynamic voice to the aspirations of millions of our citizens. The continued stresses of competition between big and small business call for imaginative and constructive solutions to safeguard a stable economy. Our farmers are still confronted by falling income while our consumers face rising prices. From our nation's laboratories come reports of scientific advances in the fashioning of destructive weapons and, at the same time, in the fight against polio and other diseases. The preservation of our natural resources, threatened lately by the big giveaways arranged by a businessman's administration, requires the attention and ingenuity of our best minds. The optimum size of our armed forces, the wisest arrangements for aid to our allies, the protection of the rights of the individual against the occasional transgressions of government bureaucracy, the safeguarding of adequate earning power of our wage earners and of the economic security of our elder citizens, the building of housing, schools, highways, dams, and waterways to serve our expanding Nation—all these and many other problems must be tackled by your Congressman and his colleagues.

A CONGRESSMAN'S RESPONSIBILITY

Of course on most of these issues, a Representative's main job is to inform himself thoroughly enough to be able to cast his vote in the best interests of his constituents and of the country as a whole. On others, he must participate in committee hearings and deliberations which must come before proper legislation can be framed. And yet on others of particular interest to him, he may formulate and sponsor bills which embody his thoughts and recommendations.

I should like to invite the comments of my neighbors in the Sixth Congressional District to legislation I have introduced:

BILL NUMBER AND PURPOSE

H. R. 10072, strengthen our civil-rights laws so that all Americans may enjoy equal opportunity.

H. R. 6509, H. R. 6510, H. R. 6511, grant tax relief to the average man and woman by increasing the allowance for dependents from $600 to $1,000.

H. R. 9687, H. R. 5277, increase the minimum wage to $1.25 per hour and reduce the workweek to 35 hours.

H. R. 9844, provide $100 per month pension to veterans of World War I at age 60.

H. R. 4443, assist cooperative housing owners by reducing FHA insurance premiums.

H. R. 6828, H. R. 4805, amend and revise the McCarran-Walter Act.

H. R. 2108, curb low-flying planes by making airlines and pilots criminally responsible for violations of law.

H. R. 3842, H. R. 3227, prohibit the importation of souvenir firearms by returning servicemen and their dependents.

House Concurrent Resolution 74, condemn religious persecutions behind the Iron Curtain.

H. R. 3479, control inflation by giving the President authority to freeze the the economy of the United States.

H. R. 7390, expand benefits under the civil-service retirement system.

H. R. 8667, relieve victims of disaster from the forces of nature.

H. R. 11624, give bargaining recognition to civil-service employees.

House Concurrent Resolution 43, safeguard consumer interests by keeping down the cost of living.

H. R. 9430, increase unemployment compensation benefits.

H. R. 6543, repeal the unfair provisions of section 14B of the Taft-Hartley Act.

In addition, I have voted in favor of the following legislation: The Mutual Security Act; extension and liberalization of the Social Security Act; reduction of individual income tax and excise taxes; admission of 200,000 refugee immigrants; Housing Act, providing for additional public-housing units; Federal

aid for highway construction; Federal aid for school construction; increased benefits for veterans; broadening of unemployment compensation program; pay increases for postal workers and other Federal employees; increase in minimum wage; statehood for Hawaii and Alaska; St. Lawrence seaway development; reciprocal trade agreement extension.

I would also welcome the feelings and attitude of my constituents on legislation that I have opposed and voted against: The tidelands oil bill; the Dixon-Yates contract; the natural-gas bill; the shipment of arms to the Arab States; the reduction of the Air Force budget; the curtailment in building veterans' hospitals; the increase in first-class mail rates; the disposal of Government-owned synthetic rubber plants.

BACK HOME

In addition to these legislative endeavors, a Congressman's job affords many opportunities to take a hand in solving some of the local problems back home. I am fortunate to live in an area within easy commuting distance to the Nation's Capital, so that it has been possible for me to take an active part in the civic work which is so integral a part of the communities that have sent me to Washington to represent them. In any rapidly expanding area such as my district, there is an urgent need for additional schools and traffic lights and police protection, and I hope my constituents will continue to call upon me to take part in their drives for these vital community services.

Mr. Speaker, during the last 4 years, my greatest pleasure and privilege has been the chance to meet with so many of my neighbors, to profit from their thoughts and recommendations, and to try to serve their personal and civic needs. Their friendship and sincere interest will always be this Congressman's most lasting compensation.

Washington Lowdown Book Said Not Distributed

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. BURDICK. Mr. Speaker, about June 2, 1956, a book entitled "The Washington Lowdown" was offered for sale. The book was written by Larston D. Farrar who is a writer here in the city of Washington. It is reported that newsstands order the book, the publishers ship out the books, but they do not get to the newsstands. In other parts of the country the books are selling by the thousands. Just what is the trouble here? The book does not boost either party but attempts to give some pertinent facts about the leaders of both.

There is no legal action pending for the purpose of suppressing the book; no injunction has been served on either the author or publisher, but still the books cannot be obtained in Washington. I am curious to know what is the reason for this surreptitious ban on these books. If the people of the District want to read it, what is preventing them from getting the book? It cannot be the exorbitant price asked for the book, because the retail price is 25 cents per copy. The publishers have a good supply of these books and the news dealers want to handle them as they sell them as fast as they can be had. In spite of this the newsstands cannot get the books.

Can it be that the higher ups who may or may not have been criticized have influence enough, with legal action, to stop the flow of these books to the public? If there is some force squelching the sale of these books, surreptiously, I am sure those who believe in free speech and a free press want to know what it is.

Respect for Supreme Court Going Fast

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial entitled "Respect for Supreme Court Going Fast," which appeared in the Texarkana Gazette for June 12:

RESPECT FOR SUPREME COURT GOING FAST

One needs only to read the newspapers to conclude that never have so many people held the Supreme Court in such low regard as they do at this time.

Here are a few examples picked at random from local and big-city newspapers:

James F. Byrnes, a former Associate Justice of the Supreme Court, says the Court "must be curbed."

"Power intoxicates men," Byrnes said in a copyrighted article in the U. S. News & World Report. "It is never voluntarily surrendered, it must be taken from them, the Supreme Court most be curbed." With strong southern support the National Association of Attorneys General wants Congress to limit the United States Supreme Court's power to determine whether Federal laws supersede State statutes. The national association also adopted a resolution favoring nullification of a Supreme Court decision holding that the Federal Smith Act supersedes the Pennsylvania sedition laws. The decision prevents the State from prosecuting subversives under its own laws.

Senator STENNIS, Democrat, of Mississippi, urges that Congress revalidate State sedition laws which were virtually nullified by a recent Supreme Court decision.

STENNIS said the decision was the latest in a series of cases in which the Supreme Court has disregarded established precedent to achieve further centralization of government.

A Waxahachie district judge says that political decisions by the United States Supreme Court likely is one reason the public generally has lost a lot of respect for courts and lawyers.

Criticism of the High Court came from District Judge A. R. Stout of Waxahachie in a talk before the Dallas Criminal Bar Association.

Judge Stout denounced recent decisions by the High Court as warning clouds of an end to free government.

He referred to the High Court's decision as being made by men more distinguished in politics than they ever were in law. He said that judges should be fearless and able—not political experts.

These stories may reflect the feeling of lawyers generally over the country.

Not even the Supreme Court of the United States can function efficiently with so much ill will.

More Opposition to H. R. 4090

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. PELLY. Mr. Speaker, two important newspapers on the Pacific coast have had editorials recently opposed to H. R. 4090, a bill on which hearings were held last week by the subcommittee of the Senate Interstate and Foreign Commerce Committee.

I hope the logic of these two editorials will not go unheeded by the appropriate members of that subcommittee:

[From the San Francisco Call-Bulletin of June 11, 1956]

USELESS EXPENSE

Legislation whose effect would be to saddle the operators of American cargo ships with extra and useless expenses running into thousands of dollars is due for debate on the floor of the House in Washington tomorrow.

The bill (H. R. 4090) would amend the 1934 Communications Act to require all United States cargo vessels to install a gadget known as an automatic radiotelegraph call selector. For those vessels which did not install the device another radio operator would be required.

What the selector does is to pick up any given ship's signal and ring an alarm bell. Thus an individual vessel can be contacted without rousing the radiomen of all the other vessels in the vicinity.

However, several Government agencies, steamship operators, and some maritime unions have opposed this bill on the valid grounds that the device is not yet perfected, that its compulsory installation would be a needless and costly complication, and that it contributes nothing to safety at sea.

Government agencies which take a dim view of this legislation include the Federal Communications Commission, the Coast Guard, and the Department of Commerce.

Their views should be heeded. It doesn't make sense to force upon American ships a superfluous device, which may well be obsolete in a few years, at extra cost which, incidentally, their foreign competitors would not be required to bear.

[From the San Francisco Examiner of June 23, 1956]

UNWANTED GADGET

Any device that increases the safety of ships at sea is desirable. But it is axiomatic that every such device must first withstand testing and receive the approval of qualified experts.

Despite this sound axiom the House of Representatives has just passed H. R. 4090, a measure compelling all American cargo vessels with less than two radio operators to in-

stall an unproven radio alarm gadget largely duplicating one all vessels have carried for 30 years.

The Federal Communications Commission, the Coast Guard and the Commerce Department all oppose the device as untested and unnecessary. The Radio Officers' Union declares it would help little in emergency. The American Merchant Marine Institute and the Pacific American Steamship Association say it has been tried and found wanting; they further assert it would run up costs by requiring a second radio operator and needless overtime payments.

The Senate should recognize it is measures like these that drive American ships to foreign registry, and should kill the bill.

1956 Platform of the Democratic Party of Massachusetts

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. McCORMACK. Mr. Speaker, under the chairmanship and leadership of State Senator JOHN E. POWERS, the Democratic leader in the Massachusetts State Senate, the committee on platform of the Democratic State convention recently held in Worcester, Mass., adopted a forward-looking platform in the best interests of the people of Massachusetts, and one consistent with the progressive policies of the Democratic Party of Massachusetts.

In my extension of remarks, I include the "1956 Platform of the Democratic Party of Massachusetts" upon which platform and pledges the Democratic Party of Massachusetts can go forward confident of victory and success next November in the State and national tickets:

1956 PLATFORM OF THE DEMOCRATIC PARTY OF MASSACHUSETTS

We, the Democrats of Massachusetts, in convention assembled, do proclaim and adopt this platform as a prelude to victory in November.

STATE GOVERNMENT

We pledge an administration of government which will reflect the ideals, the dignity and the compassion of the citizenry.

1. We renew our opposition to a sales tax.

2. We promise a revision of the tax structure to alleviate the present unwarranted burden on real estate.

3. We favor an adequate salary increase for all State employees, and not for the select few.

INDUSTRY

We pledge a reestablishment of an economic climate within the Commonwealth, which will restore the confidence of industry and business in the administration of government.

1. We record our opposition to existing freight differentials which hamper and impede profitable participation in interstate commerce by business concerns in Massachusetts and the entire New England area.

2. We promise the establishment of a program which will assist existing industries to expand and attract new industries to the Commonwealth.

3. The Democratic party looks with alarm at the diminishing profit margins of small business concerns, leading to many business failures, and the increasing growth of mergers leading to giant corporations. We urge appropriate studies and legislation in this field, leading to an opportunity for small business to keep sufficient invested capital to enable it to exist, expand and remain the bulwark of our free competitive system.

LABOR

We believe in the dignity of labor and the right of individuals to join labor unions for collective bargaining, free from interference, restraint or coercion from the employer. We believe in free collective bargaining. We believe that a free labor movement is ssential to democracy and the free enterprise system.

We favor:

1. Repeal of the Taft-Hartley Law.

2. A $1.00 minimum wage for all persons with time and one half in excess of 40 hours per week and 8 hours per day.

3. Compulsory sickness disability insurance with a State fund.

4. An increase from $25 to $35 per week in unemployment compensation benefits.

5. Re-employment rights for injured workers.

6. Workmen's compensation benefits equal to two-thirds of the injured worker's average wages; and subsistence payments adjusted to the fluctuations in living costs to injured workers and their families. Same to be integrated under a State operated program of workmen's compensation.

7. Increases in salaries for schoolteachers with a $3,500 minimum.

8. A Labor representative in the Department of Commerce versed in labor relations and industrial matters.

9. A Labor representative in the Department of Public Utilities trained in labor relations and consumer problems.

10. Strengthening and better policing of minimum wage and of the child labor laws including the school-attendance law and correction of abuses under the industrial homework laws.

EDUCATION

We pledge a return to the program which was inaugurated under a prior Democratic administration whereby school-construction aid will be provided to the cities and towns of the Commonwealth.

1. We favor the establishment of a medical and dental school to be affiliated with the University of Massachusetts.

2. We favor expansion of the facilities of the teachers colleges to provide trained teachers for all schools of the Commonwealth.

3. We favor expanded facilities at the University of Massachusetts to provide educational opportunities for the youth of the Commonwealth.

4. We favor expansion of the programs for the benefit of retarded children and for vocational training for the physically handicapped.

HEALTH

We, as Democrats, express our conviction that the health of the citizenry is the prime concern and the foremost obligation of government.

Accordingly, we favor:

1. Every practicable governmental effort to attract and retain in State service, able, competent, sympathetic personnel for the care of our less fortunate citizens.

2. An integrated administration of the State health agencies.

3. The full use of existing facilities for the care and custody of those afflicted, and the erection of new modern facilities for their increased protection.

4. Under the Republican administration, the department of public health has utterly failed to administer the Salk polio vaccine program. The Democratic Party deplores this lack of concern for family health and security. It is the humane realization of the Democratic Party that our children and expectant mothers must never again be exposed to the dread disease of poliomyelitis.

HOUSING

The objective of our free democratic society of a decent home for every family is still far from attainment. Assistance from the Commonwealth is necessary. The first approach should be through private enterprise and individual homeownership. For those families which cannot be housed by this method, assistance through public housing must be provided.

CIVIL RIGHTS AND CIVIL LIBERTIES

In respect to civil rights, both nationally and in Massachusetts, the Democratic Party has made equality of opportunity not an ideal to be sought, but a reality to be practiced.

We wholeheartedly support the decisions of the Supreme Court in outlawing segregation in the public schools. We favor the elimination of segregation in housing. We abhor second-rate citizenship. We recognize no race, color, or creed as a minority group.

We revere the memory of the late Maurice J. Tobin, pioneer in the fair employment practices field.

We affirm our belief in the cardinal precept of our constitutional system that the Supreme Court is the final arbiter of the laws of the land. Accordingly, we express our deep concern and manifest indignation of any effort, by any group, anywhere in the land, whereby the Constitution, as interpreted by the Supreme Court, is flaunted for the base reason of maintaining a decadent way of life which from its inception was alien to the American ideal.

In the struggle for freedom and security we must be careful we do not sacrifice our individual liberities guaranteed us by the Constitution.

VETERANS

We, as Democrats, recognize and acknowledge our veterans of all wars. In gratitude and respect, we pledge to defend, and retain, and increase the benefits granted to them and their families. We are ever mindful of our obligation to the veteran in the fields of public housing, civil service, pensions, hospital and medical care, and in all other endeavors of government.

COST OF LIVING

As Democrats, members of the political party ever sensitive to the needs of our citizens, we view with alarm the increased cost of living with which the people of Massachusetts have been burdened by the callousness of the present Republican administration.

Accordingly, we favor:

1. Greater control to be lodged in the division of necessaries of life.

2. The establishment of a division within the department of public utilities charged with the responsibility of representing the public at rate hearings.

STATE FINANCES

As Democrats, and as citizens of the Commonwealth, we view with justifiable alarm the present financial condition of our Commonwealth. We deplore the extravagant practices of the present Republican administration which has deprived the Commonwealth of the enviable credit position it enjoyed under the predecessor Democratic administration.

ELECTION LAWS

Democracy begins with the registration of the voter. Every avenue of convenience should be left open to the unregistered and prospective voter to perform this civic duty. Our election laws need considerable revision in order to make them uniform.

We favor:

1. Bipartisan boards of registrars for all cities and towns.
2. Bipartisan count of ballots in all cities and towns at State elections.
3. Preventing the counting of votes in towns in State elections during voting hours.
4. A complete count of ballots used or unused in elections and recounts.
5. The restoration to city councils of the right to revise or change the ward lines of their cities.
6. To have all voters designated on the street lists of our cities and towns.
7. To provide for the initiation of partisan municipal elections in our cities.
8. The local registrar of voters shall, at least 2 months before every gubernatorial election, notify every unregistered citizen that he is unregistered and specify the times and places for registration.
9. The required number of evening sessions for registration be increased.
10. The elimination of the vicious "gerrymander."

SMALL LOANS AND USURY

We favor strengthening of the Small Loans Act by increasing the regulated statutory limit, and the adoption of an effective usury law.

CONCLUSION

As Democrats, familiar with the glorious attainments of past Democratic administratitons, and proud participants in, and copossessors of the surging spirit of the Democratic Party, we express our unbounded confidence in the integrity of our fellow Democrats throughout the Nation, and in their ability to express in the platform to be adopted at the national convention our views, our convictions, and our ideals in the fields of national and foreign affairs.

As Democrats we conclude this our platform of the Massachusetts Democratic Convention of 1956, by giving expression to our esteem, affection, and continued confidence in the Honorable JOHN F. KENNEDY, our distinguished United States Senator from Massachusetts, and our equal unbounded respect in the Honorable JOHN W. MCCORMACK, the majority leader of the House of Representatives in Washington, and other distinguished Democratic members of the Massachusetts congressional delegation.

Northeast Deserves Support

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, July 2, 1956

Mr. PAYNE. Mr. President, I ask unanimous consent that an editorial entitled "Northeast Deserves Support," which was published in the Bangor (Maine) Commercial of June 27, 1956, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NORTHEAST DESERVES SUPPORT

New England's congressional delegation has decided to line up in support of the Northeast Airlines application for a southern route.

Most Maine residents with the economic welfare of their State at heart had wondered why such a decision hadn't been reached previously.

This is no reflection on Maine's congressional delegation which worked hard to bring about the final result. We are fortunate in having an excellent representation in the Congress. Men and women who take their responsibilities seriously.

The importance of Northeast Airlines can not be minimized. It is one of Maine's most important transportation links. Air transport today has assumed an equal importance with rails and highways, without such transport we cannot keep pace with the rest of the Nation * * * and not keeping pace can be fatal to our economy.

Northeast is a New England airline, it is a concern that originated in New England and is dedicated to providing the best possible service to the area. It has officials who understand the problems of the region.

We can remember during World War II when Northeast was forced to cut back on its transport planes, yet had the determination to keep going. Smaller planes had to be substituted, yet Northeast flew its routes, it made its scheduled stops * * * and this at a sacrifice.

We talked with Northeast officials in those early days of World War II and they were consistent in placing the national defense above and beyond any financial aspect of operation. At the same time they expressed the hopes that in the days following World War II there would be an opportunity to expand and to provide the service which they believed was essential to the region.

Now, it seems, such service is forgotten, instead the Federal Government, which regulates the airways of the Nation, trends toward promotion of airlines originating outside New England.

Northeast has a just case, a right to expand, and deserves the full and active support of each and every individual in New England.

The Revolt in Poland

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the July 1 edition of the Chicago Sun-Times:

THE REVOLT IN POLAND

If the world needed proof that there has been no change in the plight of satellite captives of the Kremlin since the death of Stalin, it came Thursday in Poznan, Poland.

Polish workers who are bitterly unhappy over low wages and bad food marched on public buildings in protest. They were cut down by guns and tanks. At least 38 were killed and 270 wounded in a blood-letting that was greater than the 1953 riot against the Red masters in East Berlin.

The revolt is a reminder that the spark of freedom still burns in the hearts of those who have been trapped behind the Iron Curtain. The news of the revolt, and the reasons for it, ought to be broadcast by the United States to every corner of the world to demonstrate what communism does to those it rules.

Under the bourgeois imperialists—that is, the people themselves—who formerly ran Poland, a worker earned $315 a month. Today he earns $95—which in Poland is the price of a pair of shoes.

Moreover, the revolt is tangible evidence that shows how wrong was George F. Kennan, former United States Ambassador to Russia, when he recently advised Americans that there is a finality, for better or worse, about what has happened in Eastern Europe. He believes the Poles, Chechs, and others should not be encouraged to believe they can pick up again where they left off 10 or 20 years ago. This is a counsel of despair for such as those who faced the Communist guns last Thursday.

Instead, the United States ought to seize the opportunity to get over to the Iron Curtain captives that we have not forsaken them. The United States can do this by protesting again and again that the Reds have not lived up to the guaranty of the Yalta agreement that the Poles should have the right to run their own affairs. The United States should press for these rights in the United Nations and in the forum of world opinion—even to the extent, perhaps, of threatening to break off relations with Poland.

It is true that the Communists have been easing their grip on Poland. In the last few weeks, the internal-security organization has been cutback 22 percent, the penal code has been overhauled, and amnesty or reduction of sentences promised to 70,000 prisoners. Perhaps the loosening of the chains gave the people heart to revolt.

The outbreaks in Poland and in other sections behind the Iron Curtain recently indicate all goes not well with Bulganin and Khrushchev. Despotism cannot work except through the iron discipline of a Stalin.

We have now seen, by the manner in which the Communists handled the Polish revolters, that they have not abandoned Stalin's methods. They denounce Stalin but they still rule the satellites with his methods.

Honoring the Heroes of Korea

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include the text of remarks by Hon. Henry Cabot Lodge, Jr., United States Representative to the United Nations, at the dedication of the United Nations memorial plaque in remembrance of the men of the armed forces of member states who died in Korea in the service of the United Nations. The occasion is the dedication of this plaque at 10 a. m., Thursday, June 21, in the United Nations Headquarters Building. Mr. Lodge speaks as representative of the country which, at the request of the United Nations Security Council, acted as the unified command of all United Nations forces in Korea, and of the forces of the Republic of Korea:

Mr. Secretary General, Mr. President, Excellencies, ladies and gentlemen, the United States of America was the unified command during the fighting in Korea and it is accordingly my privilege to speak on behalf of the 16 member states who contributed troops, that is, Australia, Belgium, Canada, Colombia, Ethiopia, France, Greece, Luxembourg, the Netherlands, New Zealand, the Philippines, Thailand, Turkey, the Union of South Africa, the United Kingdom and the United States of America. With the men of the Republic of Korea, who carried such a large part of the load, these men carried on the fighting, sustained the losses and won the victory.

The passage of time since these men died has made it all the clearer that this victory was worth winning. At stake was the very existence of this organization, the United

Nations. At stake was the question of whether peace-loving nations could band themselves together to repel a ruthless and unprincipled aggression—or whether the doctrine that might makes right would triumph and, having triumphed in Korea, would then, without much doubt, spread to the rest of the world. Stated in the simplest terms, such was the issue.

The men whom we remember here today faced this issue. They proved their capacity to endure and to conquer. They won their war—and they preserved for us the chance to go forward. Their sacrifice reminds us that we do not measure man's life by its length but by its height. Indeed, the English poet, Ben Jonson, saw this long ago when he said:

"It is not growing like a tree,
In bulk, doth make man better be;
Or standing long an Oak, three hundred year,
To fall a log at last, dry, bald and sere:
A Lily of a day
Is fairer far in May,
Although it fall and die that night;
It was the plant and flower of light.
In small proportions we just beauties see;
And in short measures life may perfect be."

For the future let the memories of our United Nations dead inspire us with the thought that the very existence of the United Nations must always depend on the willingness of the members to back up words by deeds—and in some cases by the blood of our sons.

It is fitting indeed that we here, in the presence of the highest ranking officials of the United Nations, should bow our heads in prayer, as we have just done, and that we should for these great ends dedicate this plaque.

Mr. Speaker, I also include herein remarks made on this same occasion by Hon. Dag Hammarskjold, Secretary General of the United Nations, and by Hon. E. Ronald Walker, Ambassador and Permanent Representative of Australia to the United Nations and President of the Security Council:

REMARKS BY MR. DAG HAMMARSKJOLD, SECRETARY GENERAL OF THE UNITED NATIONS

Mr. President and excellencies, we meet here to dedicate this plaque inscribed "In grateful remembrance of the men of the armed forces of member states who died in Korea in the service of the United Nations, 1950–53."

"In grateful remembrance of the men"—it is the individuals we honor with this plaque. But it is fitting that the organization in whose service they gave their lives, is here represented first by the President of the Security Council which assumed the main responsibility. Those who gave their lives came from many countries. Ambassador Lodge is on this occasion representing not only those from his own country—as we know they were the great majority—but all who made their personal sacrifice, irrespective of their nationality.

An occasion such as this one is a poignant reminder that behind every historic action, national or international, is the individual human being, each giving of his courage and his devotion. Those whom we honor today were called upon by their governments to fight, as loyal citizens of their own countries, for a common cause. In devoted service they made the supreme sacrifice.

To their memory it is fitting that we should pay simple and humble tribute. We cannot recall the lives they gave, and only in a small and imperfect measure can we share the grief of those they loved and left behind. But in paying them honor, we can resolve to remember always their example of selfless sacrifice. In the memory of their devotion was can find cause to renew our own. In the memory of their service, we can seek to be worthy in our lives to the building of a peace that will endure.

REMARKS BY AMBASSADOR RONALD WALKER, PERMANENT REPRESENTATIVE OF AUSTRALIA TO THE UNITED NATIONS AND PRESIDENT OF THE SECURITY COUNCIL

Mr. Secretary General, Excellencies, ladies, and gentlemen, we are about to unveil a memorial to the men of the United Nations forces who died in Korea. As President of the Security Council, I consider it a privilege to pay tribute to those brave men who, at the call of the United Nations, took up arms to resist aggression and gave their own lives so that others might live in freedom.

The countries that contributed forces to the United Nations effort and suffered losses in Korea can, of course, never forget the extremely heavy sacrifices which were borne by the people of the United States, nor the leadership and generous cooperation which the United States gave to all who rallied to this United Nations cause. I consider it is particularly fitting therefore that the permanent representative of the United States should also speak to us in today's ceremony on behalf of all the countries which gave the men in whose memory we dedicate this plaque.

This occasion recalls many vivid memories for me personally. As Australian representative on UNCURK last year and as Ambassador to Japan for some years, it has been my privilege to know many of the men of the various components of the United Nations forces—in Korea, in bases, and hospitals in Japan, and in the United Nations headquarters in Tokyo. These men shared a noble comradeship that transcended all differences in nationality, in tongue, and in race, and will long be an inspiration to those who observed it or experienced it.

Not long ago I stood in the beautiful United Nations cemetery on the outskirts of Pusan, where the hills look down on the fields in silent graves. Some countries, such as the United States, have brought their dead home, while the men of other countries have found their last resting place in the land for whose freedom they have fought. Beneath the flag of the United Nations, beneath their own national flags and the flags of their comrades in arms flown in honor of all the fallen, for me as an Australian it was especially impressive when visiting the graves of my own countrymen, and our kinsmen of the Commonwealth, to lift my eyes to the neighboring rows of Turkish graves and the other United Nations graves beyond.

Today in the headquarters of the United Nations we honor the memory of all these men and we share the grief of those who mourn them, whether here or in distant lands. The fallen belong to their own people but they belong also to us all. Their lives and their sacrifice were dedicated not only to their own countries but also to that wider loyalty which in time to come will unite all men and women into one peaceful family. We shall not forget them.

America Needs Full-Time Patriots

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a statement made by Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation. Mr. Hoover knows what he is talking about. His statement follows:

WORDS TO LIVE BY—AMERICA NEEDS FULL-TIME PATRIOTS

(By J. Edgar Hoover)

"God grants liberty only to those who love it, and are always ready to guard and defend it."—DANIEL WEBSTER.

There is no place in America for part-time patriots. If our Nation is to live, if we are to continue to enjoy the fruits of liberty, we can do no less than follow the example of the men who won that freedom for us. Freedom, while a heritage, must be rewon for each generation.

With complete selflessness and with blazing intensity of spirit, our forefathers dedicated their lives first to securing and then to maintaining, freedom. They know at first hand that life without freedom is intolerable. And so they dreamed of freedom, fought for freedom, lived for freedom, breathed it and spoke of it, prayerfully and without self-consciousness.

Benjamin Franklin could say simply and eloquently, "Where liberty dwells, there is my country." And when the salute of cannon in celebration of the Fourth of July reached his ears, a dying John Adams could arouse himself long enough to murmur, "Independence forever."

Independence, freedom, liberty—are words that ring like exulting bells. Today we need such bells to be rung. This Nation is face to face with the gravest danger ever to confront it. The menace of communism is no simple, forthright threat. It is a sinister and deadly conspiracy which can be conquered only by an alert, informed citizenry dedicated to the preservation of the principles on which America was founded.

If our Nation is to retain its liberty in the future, now, as never before, its citizens must understand that the inescapable price of freedom is eternal vigilance. And eternal vigilance, with dedication to its cause, brings unity and strength in time of crisis.

Low Second-Class Postal Rates Have Provided Best Informed Citizenry of the World

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. BURDICK. Mr. Speaker, I am alarmed when I hear these distinguished gentlemen stand up and argue seriously that some publishers—not many, they admit that, but some—are still making a little money to cover their taxes, and that we ought to take it away from them before they manage to hide it.

Publishing is one of the lowest-profit industries in the country, and personally I wish they made a lot more. There wouldn't be any United States as we know it today if it weren't for newspapers and magazines. And without newspapers and magazines this free and informed United States we do know today would not be here tomorrow.

I learned my ABC's from a magazine. It was called Farm Home and Fireside, and it cost the whopping price or 25 cents a year. That was pretty high for us farmers out in Dakota, so we had a

rotation system. Our folks were the second on the list that got it. When we were through it it we passed it on.

I do not know if Farm, Home, and Fireside was any great shakes as an intellectual magazine. I remember it carried a lot of stories about detectives and fights with Indians. That was not escape literature, either—in those days we had Sioux Indians all around the ranch. They used to knock on the kitchen door to bum coffee. But that little magazine also brought the whole community information about farming methods that there was no other way of getting. It told about new farm machinery and better livestock. And it reminded us that there was a great big world beyond Graham's Island, N. Dak.—that maybe the world did not even end at Minnesota.

If I were going to name the elements that have rendered this country great, I would put reading very near the top of the list. And if I were going to name the things that have made reading possible, I would put down first of all the public-school system and the great institution of second-class mail. It it were not for second-class mail we never would have gotten that magazine out in Graham's Island. If it were not for low second-class rates a lot of families could not get magazines and newspapers today.

No other country in the world can match our hunger for information or our techniques for getting that hunger satisfied. We Americans are learning more and more as the years go by. I just wish some foreign countries, and I do not need to name them, could say as much.

In my opinion, it is just as absurd to call the net costs of the postal service a deficit as it would be to call the net costs of the Agriculture Department a deficit. The Post Office is an essential avenue of communication. The information it disseminates through newspapers and magazines not only sharpens our minds—it gives people a look at the products of our industry. It keeps the heart of business pumping. Certainly, we need a Post Office that is efficient and well run, but once that is taken care of we ought to throw this ridiculous talk about deficits right out the window. What we are getting as a result of low second-class rates is the best-informed citizenry of the world, and even if the Postmaster General is right when he claims it is costing the taxpayers money it is cheap, in my opinion, at the price. The proposal to as much as double the price we are charging to carry newspapers and magazines through the mails is an affront to commonsense and a disservice to the people of this country.

GOP Must Face It: Take or Dump Nixon?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, July 2, 1956

Mr. BENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Akron Beacon Journal of July 1, 1956, entitled, "GOP Must Face It: Take or Dump NIXON?" written by John S. Knight.

I think the editorial makes good reading, not only for Members of this body, but for all Americans. There has been much talk about our great Vice President, and there has also been much unfounded criticism directed at him. I think Mr. Knight, in his editorial, lays it on the line.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOP MUST FACE IT: TAKE OR DUMP NIXON?

(By John S. Knight)

At the recent conference of governors in Atlantic City, the 21 Republican heads of States signed a petition asking President Eisenhower to run for reelection but pointedly left out any reference to Vice President NIXON.

The official explanation, which nobody believed, was that it just hadn't occurred to them to include NIXON.

The truth is that NIXON's name was omitted by design. Gov. Fred Hall, of Kansas, author of the Eisenhower petition, has quoted one of the GOP governors—quite possibly himself—as saying, "For God's sake, keep NIXON's name off of it."

So NIXON was ignored because the Nation's Republican governors, with ears close to the ground and moist fingers testing the winds of public opinion, consider the young but experienced Vice President something of a political liability.

But the question may be appropriately asked: Why are the Republicans so self-conscious over DICK NIXON?

What is there about this affable, contemplative young man which makes him such a controversial figure?

Why do so many people say "I just don't like NIXON," without, in most instances, being able to offer valid reasons for their dislike?

These are interesting questions worthy of consideration because the much discussed and often cussed No. 2 man in our Government is only a heartbeat removed from the Presidency.

ABLE YOUNG MAN MADE FAST PROGRESS

RICHARD MILHOUSE NIXON is a success in the American tradition. He was born to parents of moderate circumstances, worked as a boy in the family's general store, and became an excellent student with a flair for debating.

After young NIXON was graduated from Whittier College with second highest honors in his class, he won a scholarship to Duke University where he achieved further distinction in the study of law.

Following service as a naval officer in the Pacific during the war, he ran for Congress and defeated the veteran Jerry Voorhis, a five-term Representative who was usually found in bed with the leftwingers.

In 1950, NIXON was elected to the United States Senate by defeating Helen Gahagan Douglas, a known lefty who had won some fame and fortune on the legitimate stage.

NIXON's most notable accomplishment in the House was his relentless digging into the case of the traitorous Alger Hiss. The result was Hiss' conviction for perjury and subsequent imprisonment.

Before Eisenhower's nomination in 1952, I predicted several days in advance that NIXON would be the Vice Presidential candidate. Upon reading the story, NIXON was so surprised that he bought a number of copies of the Chicago Daily News because as he told his wife, "This may be the only time I will ever be mentioned for that high office."

Ike, being new to politics, didn't realize at first that he could, if he wished, dictate the choice of a running mate. At the request of his intimate advisers, Eisenhower submitted a short list of acceptable names and from this list NIXON was selected.

DIFFICULT CHORES PERFORMED FOR IKE

As Vice President, DICK NIXON has been a trusted and faithful aid to the President.

No Vice President in modern times has been as diligent in the pursuit of his duties, nor as well informed in the science of government.

NIXON's good-will trips to the Far East and Central America, undertaken at the President's request, have been notable successes.

In the political field, NIXON has borne the brunt of the battle. He is an aggressive and resourceful campaigner who cheerfully accepts the tough political chores which are so displeasing to the President.

From the hour of Eisenhower's first illness, NIXON has conducted himself with admirable dignity and restraint.

There have been no foot-in-the-mouth statements, nor any attempts at self-glorification.

WIDESPREAD DOUBTS VAGUELY EXPRESSED

In view of this record, and it appears to be substantial, why do the Republican governors and other segments of the party believe DICK NIXON has political "B. O."?

They will tell you privately, as several have told me, that they like him but DICK NIXON is "just not popular with the people."

Some folks, they say, think he is too young. Others don't like his looks, or remark that he can't be trusted.

Reference is frequently made to the California campaign fund and NIXON's "corny show on television."

The women like Ike but NIXON leaves them cold. When pressed for a good reason, you get this typically feminine retort: "I just don't know what it is, but I don't like that man."

And of course, DICK NIXON is extremely unpopular with Democratic leaders who resent his hard-hitting campaign speeches and the alleged aspersions on their patriotism.

I venture the opinion, however, that inherent in the thinking of those who don't like NIXON, for whatever frivolous reason may be expressed, is a solid doubt that he would make a good President.

And this, I submit, is the only question worthy of consideration.

Not all of DICK NIXON's career has been marked by the best judgment.

I found myself in violent disagreement several years ago with his statement before the American Society of Newspaper Editors that American troops should, if the French pulled out, be sent to Indochina.

It seemed to me that NIXON was naive and uninformed when he told Rotary International in Chicago that "Geneva was the last hope for peace."

He has had some questionable associates such as Murray Chotiner, who is presently under investigation for attempting to influence Government contracts in behalf of clients.

But on the whole, he has made fewer mistakes than most young men suddenly elevated to such a high office, and his record of accomplishment is one of which he and the country can well be proud.

GOP HURTING SELF BY INDECISION

My own view is that the Republicans are doing DICK NIXON a great injustice.

Either he is a man of presidential caliber, or he is not.

Because the Republicans have staked everything on a second term for Eisenhower, this question becomes tremendously important.

If the tergiversating Republicans, who are shying away from NIXON, feel he lacks the

proper qualifications, why don't they stand up in the meeting and say so?

Do they have a better candidate?

If not, the silent treatment they are giving NIXON is hurting the man who may be nominated for President if Ike doesn't run.

No one is being fooled by the present Republican strategy except the strategists who say every day that Ike is better in every way.

It is idle to pretend, and dishonest as well, to act as if NIXON did not exist.

It is incomparably stupid to brush him off, or wish that he might go away.

It is grossly unfair to NIXON, who has given such yeoman service to his country and to his chief, to backbite the Vice President without having the courage to speak out against him in public.

For the NIXON problem, if that it can be called, is on their doorstep and the Republican leadership should come out of their dream house and face up to it.

Interest Charges of the United States

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, July 2, 1956

Mr. MARTIN of Pennsylvania. Mr. President, in the Pittsburgh Sun-Telegraph of Friday, June 29, Sylvia Porter had a very interesting comment relative to the interest charges of the United States.

We now pay annually, in interest on the public debt, total of $7 billion a year. This is the amount of total Government spending only 20 years ago. We should all rejoice that we are cutting the debt in the fiscal year just ended.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEVEN BILLION DOLLAR INTEREST
(By Sylvia Porter)

You cash in a United States saving bond you bought in 1946 for $75 and get back $100. The difference of $25 represents the interest the Treasury pays you on this, your tiny slice of the public debt.

The bank on your corner turns in for $1 million a block of New United States securities it bought from the Treasury 90 days ago at $993,600. The $6,400 difference represents interest the Treasury pays the bank on its slice of the public debt.

The manager of your corporation's pension fund clips the June 15 coupon on the $5 million of United States Treasury 3-percent bonds the pension fund bought for investment a year ago. The $75,000 he adds to your fund's resources represents the interest the Treasury pays for one-half year on this amount of its 3-percent bonds.

TWO HUNDRED AND SEVENTY-THREE BILLION DOLLARS

All over the Nation, tens of millions of individuals, tens of thousands of banks and corporations own the two-hundred-and-seventy-three-billion-dollars-plus of United States securities on which the Treasury pays interest.

Each of these individuals and institutions gets interest from the Treasury at periodic intervals or on the due date of a security.

Yet few who get the interest bother to think what the individual payments mount to over the weeks, months, year. You think of your $25, the bank thinks of its $6,400, etc., etc.

They add up to the staggering total of $7 billion. That's the total of interest the Treasury will pay to the individuals and institutions holding its securities in the 12 months beginning this Sunday.

This week, the Nation's public debt is in the headlines, for this is the end of the Government's fiscal year and Congress has just voted a new bill that will allow Treasury Secretary Humphrey to borrow enough in the next 12 months to raise the debt temporarily to $278 billion.

SOLID LOAD

So this is a timely day to dig into what that debt means. And one thing it signifies is an annual interest burden approximating total Government spending in the fiscal year of 1937—only 20 years ago.

No matter what the effort to hide it, the central fact is that $7 billion of the taxes we'll be handing over to the Treasury in these months will go to cover just interest on the debt.

Need for Calm Appraisal in Budget Considerations

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, July 2, 1956

Mr. WATKINS. Mr. President, I am quite concerned about the way in which critical judgment in the Senate is often too easily swayed by personal antipathy for certain administration figures and need—at any cost—to make provision for what is called a political issue."

I believe a case in point is the recent Senate action in which the majority decided, what I regard as very meager study to increase the Air Force budget by some $960 million over the amount requested by the Department and by the administration.

I am not alone in this concern, and certain newspapers have seen fit to comment editorially on the need for more calm and judicial thinking, before we so casually add another near-billion to our mounting tax burdens and foist upon a Department, with an obvious lessening in congressional controls, such a huge sum.

I cite an editorial and which I believe is somewhat typical of such editorial reaction. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICAL PIQUE VERSUS NATIONAL DEFENSE

The Senate should not be proud of its action in voting to give the Air Force nearly a billion dollars more than President Eisenhower had requested.

Politics and pique were strong factors in the action—politics because the Democrats hope to use the airpower issue in the campaign; pique because a number of Senators were offended by Secretary Wilson's bumbling remarks about the issue. The feeling regarding Wilson was clearly shown in the oratory preceding the vote. He was attacked as inept, vain, arrogant, and contemptuous of Congress. That, however, was beside the point, for a Cabinet member's personality or actions can hardly be cited as a valid reason for upsetting a carefully planned defense budget.

Some of the backers of the Air Force increase were, of course, sincere. That applies especially to Senator SYMINGTON who is an earnest advocate of air power. But the sincerity of many others is subject to reservations.

The Senate's action is an invitation to extravagance. As Senator BYRD pointed out the Air Force already has 20 billion dollars in unspent funds and such unexpended balances lessen congressional controls. When the Senate says, in effect, "Here, have another unasked-for billion," the effect on those who spend the taxpayer's money can easily be anticipated.

This is not the first time, though, that Presidents have had trouble with overly generous Congresses. It happened during the previous administration, but President Truman exerted his prerogative and impounded additional funds granted the Air Force. The same course is open to President Eisenhower if the House, which gave the Air Force a billion dollars less than the Senate, goes along with the increase.

Mr. Eisenhower's military reputation certainly should have carried weight in the Senate. That it did not is only another sign—if one is needed—that this is a Presidential election year. The vote split was generally along party lines, with 43 Democrats and 5 Republicans voting in favor of the increase and 37 Republicans and 3 Democrats voting against it. We are pleased to note that Senators WATKINS and BENNETT stood by the President on the issue, for we are convinced that the President is right.

Problems of Small Business

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 2, 1956

Mr. THYE. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a copy of a letter which was addressed to the Honorable Arthur F. Burns, Chairman of the President's Committee on Small Business, by Mr. John C. Davis, executive director of the National Small Businessmen's Association.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 26, 1956.

The Honorable ARTHUR F. BURNS,
Chairman, President's Committee on Small Business, Executive Office Building, Washington, D. C.

DEAR DR. BURNS: I appreciate your letter of the 22d inviting me to meet with you or your associates to discuss the problem of small business as seen by my association, and relating to the possible activities of the President's Cabinet Committee, of which you are chairman. I will be happy to accommodate myself to any date you set.

Perhaps we could facilitate our meeting if I set forth some of our feeling.

We recognize the need for amendment of the present tax formula to accommodate the need of small business productive enter-

prise for the accumulation of equity capital. We also feel that the present tendency toward mergers might be checked if the inheritance tax law were overhauled in such a way as to encourage the descent of business either through family enterprise or corporate association. In this connection, I am enclosing a copy of a letter which was read into the CONGRESSIONAL RECORD of June 20, 1956, page A4912 by Congressman JAMES ROOSEVELT, of California. This is typical of many such in our files.

Our feeling on the need for tax revisions is directed most strongly toward the field of productive enterprise rather than that of the retail or wholesale businesses. Our feeling is that these may be well covered under the present law, but a brief review reveals that, under the present tax structure, it is no longer possible for a small productive enterprise to grow by the accumulation of capital out of earnings. Our feeling is that this segment of our economy, so vital to the preservation of our enterprise system, must be given special consideration.

You are perfectly aware that this source of equity capital was a major factor in the growth of most of our successful corporations, a majority of which began their service as small businesses.

While we feel strongly about this need for tax review we also know that appropriate adjustment of administrative and regulatory policies under the existing law could accomplish a great deal. On the basis of individual cases brought to our attention there is evidence that small business is frequently subjected to overzealous collection efforts which are both harassing and oppressive. It has become a common practice to assert a tax claim without consideration of its adverse effect upon the growth of the business.

It is also evidenced in our records that overzealous collection efforts result in undue interference with management policy without having any real significance as far as the overall tax revenue is concerned.

There is also a suspicion that these tactics result in making the collection branch of the Treasury an arm to exert undue union coercion.

Since the small-business man has neither the tax experts, the money nor the time to cope with these methods we believe that substantial results can be achieved by a close scrutiny of collection methods on the part of the administration.

We recognize that the anti-trust law enforcement is necessary to the protection of small business. However, on the basis of our information we believe that anti-trust violation has been somewhat exaggerated as a small-business problem. Our feeling is that action under this law should be limited to cases in which violations are clearly oppressive and damaging to healthy competition rather than to petty cases of little or no significance to the public or to the business community.

With regard to Government contracts and procurement as these affect small business, it is our feeling that they should be continually reviewed in order to offset the known tendency to follow the easy course and place the major part of procurement contracts with large companies, even though the items involved can be produced by small business.

We feel that small business should be accorded a larger place in Government-financed research and development programs. After all, there is no monopoly of individual ideas and there is some evidence that disregard of this fact has resulted in loss of vital development in technology.

As regards the availability of financing for small business, we feel that loans by private banks take adequate care of short-term financing. Long-term equity loans by the Government is a question of dubious policy. Private investment companies aiming at this market are appearing, and their progress indicates that this form of financing may be adequate to meet any reasonable need. We would suggest a thorough exploration of this avenue of credit approach before supporting any Federal program that might lead to the indiscriminate placing of loans without proper local supervision.

To conclude, we feel that adjustment of the tax rate by legislation, or present collection practices by administrative action, is the most pressing need of small business.

I realize that these comments are necessarily incomplete in view of the scope of the subject, but hope that they can establish a discussion area for our meeting. I will look forward to our meeting, and again want to assure you of the willingness of our association to cooperate.

Sincerely,

JOHN C. DAVIS,
Executive Director.

B-N-G Mung Bean Sprout Balm

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. WICKERSHAM. Mr. Speaker, on last Thursday, the 28th of June, a press conference was held at the Willard Hotel at which wonderful news was announced both for the people of the United States and Oklahoma. It was disclosed that after many years of research, the sensational burn remedy known as B–N–G Mung Bean Sprout Balm will finally be made available to the American public.

The announcement, made by Mr. Ben E. Zaremba, president, and Mr. Roy Lindburg, general manager of manufacturing Worth Pharmacal Co., is of special interest to the people of Oklahoma since over 90 percent of United States production of mung bean sprouts is grown in our State. For this reason, Mr. Speaker, I have followed the development of this wonderful medicine during the past 6 years, and I would like to express my appreciation to Mr. William Vaughan, east coast regional distributor of B–N–G for bringing the mung bean sprout balm to my attention.

Mr. Speaker, due to the interest expressed in this medicine both in Oklahoma and other parts of the United States, I ask unanimous consent that the release made last Thursday be printed in the RECORD at this point, and also consent that one of the congratulatory telegrams which the Worth Pharmacal Co. received from many of the great industries of this country, which reads as follows:

FLUSHING, N. Y., *June 27, 1956.*

Mr. BEN E. ZAREMBA,
President, and
WILLIAM W. VAUGHAN,
Care Washington Hotel,
Washington, D. C.:

Congratulations for putting on the market B–N–G. A fine product which should have great success.

ARDE BULOVA,
President, Bulova Watch Co.

NEW DRUG ANNOUNCED—VEGETABLE ENZYME STABILIZED; RESEARCH FOR BURN TREATMENT ASSURED

WASHINGTON, D. C.—Market and research plans for a new burn and dermatitis drug treatment were announced here today by the Worth Pharmacal Corp., of Oak Lawn, Ill.

Although B–N–G, an aqueous extract of mung bean sprouts, has been the subject of public discussion as a healing agent for major burns throughout the last 6 years and has been in use in many hospitals and first-aid clinics for emergency treatment, the product has not been released to the public until today. The announcement by Ben E. Zaremba, president of Worth Pharmacal Corp., today, revealed the following developments:

First, release of B–N–G for public use in the treatment of minor burns and dermatitis;

Second, a program of long-range research into the benefits and uses for the stabilized enzyme of the mung bean sprout in the treatment of major burns and for other purposes of the drug and chemical fields will be established; and

Third, a program for the study of improved methods for the treatment of industrial and disaster burns will be expanded in cooperation with principal safety organizations and numerous industrial companies.

STATEMENT BY BEN E. ZAREMBA, PRESIDENT, WORTH PHARMACAL CORP., OAK LAWN, ILL.

WASHINGTON, D. C.—For the past 6 years, many people in public life, in the field of medicine, in industrial chemistry, and in the press have shown keen interest in the development of a new treatment for burns and dermatitis which we have named B–N–G. We deeply appreciate this humanitarian interest and I wish to thank all of these people again today.

Many people who have had loved ones or friends who have been treated with B–N–G for what otherwise would have been painful burns or disfiguring dermatitis conditions have been urging us to make it available for public use and treatment.

It is now possible for me to announce that B–N–G is to be made available to the public, to drugstores, to doctors, and to all industrial establishments where burn injuries are possible or prevalent. In addition, I am happy to announce that the Worth Pharmacal Corp. will undertake to insure that a program of long-range research will be undertaken to determine the major benefits to be derived from B–N–G for severe burns and for additional uses in the chemical industry. To support this program, the Worth Pharmacal Corp. will set aside a fixed percentage of revenue from gross sales for research and development.

We wish to make it clear that B–N–G has not been willfully or callously withheld from the market. Although we have had thousands of letters urging us to place B–N–G on the market, we have not felt that the time was right until a series of tests had been made. It was not enough that we knew that the product was safe. It was not enough that we have seen scores of people wonderfully treated for burns and for dematitis and poison oak. It was necessary to prove through research and testing that B–N–G was absolutely safe.

In addition to the testing work undertaken in 1947, we have recently completed a research project which has been under the direction of Dr. Lawrence Rosner, president of the Laboratory of Vitamin Technology, Inc., Chicago, Ill., which establishes the fact that B–N–G is nontoxic and nonirritating and indicates that B–N–G, as a treatment for scalds, has the same effectiveness that many of us have observed in other severe burns. Although Dr. Rosner was forced to cancel his

trip to Washington for this meeting, he will be available at any time for consultation or press interviews by telephone. His report, a copy of which we have here, clearly justifies our plans for additional research in the field of severe burns and scalds. Although no public agency has yet volunteered to join in this research program, it is our hope and belief that, in the future, the agencies most concerned with burn problems—military services, civil-defense authorities, etc.—will join us in seeking the answer to the problem of saving human life and the avoidance of painful disfigurement from burns.

Some of you know that B–N–G, like the sulpha drugs and penicillin, resulted from development following an accidental discovery. An explosion in one of our plants resulted in the serious scalding of several workmen. Immediate action was necessary. For first-aid, the only liquid, or aqueous, treatment available was a compress of mung bean sprouts which we applied, freshly cut and ground. When the doctors at the hospital saw that the scalded areas treated were free from serious damage and scars, they urged us to develop the extract which eventually has been named B–N–G. In the ensuing years, many severely burned individuals have been treated with B–N–G, either by their own request or by doctors, and have avoided serious consequences—scars, pain, and subsequent plastic surgery. These are the people who have been most insistent that we place the product on the market.

Today, we announce that B–N–G will be made available under the label which describes it as a treatment for minor burns, sunburn, poison ivy, poison oak, and dermatitis.

In addition, we announce our own program for further research activities. Foremost in this field, of course, is the need to secure more and more information concerning the effect of B–N–G treatment for severe burns. For several years, industrial first-aid emergency rooms have been using B–N–G solution on an informal basis and doctors in numerous hospitals and first-aid clinics have been applying the solution in emergency burn cases. The histories of these treatments are valuable, but we will seek more information.

Of most interest to industry is the real secret of B–N–G, and that is the stabilization of the enzyme of the mung bean sprout extract. Although the use of mung bean sprouts in the treatment of burns is not new, our chemists have achieved a dramatic and startling development: They have successfully stabilized a vegetable enzyme. This is an accomplishment which challenges the entire chemical and drug world with the tantalizing possibility of new drugs, new solutions making use of the vegetable enzymes which have heretofore been elusive or unmanageable.

These problems, and many others, will be probed through the Worth Pharmacal Corp. research program. In the meantime, we derive great satisfaction, today, in announcing the release of this great service to humanity, B–N–G, for public use.

Dr. Eric A. Walker Named To Succeed Dr. Milton S. Eisenhower as President of the Pennsylvania State University

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. VAN ZANDT. Mr. Speaker, by unanimous vote of the Board of Trustees of the Pennsylvania State University, University Park, Pa., Dr. Eric A. Walker, now vice president and dean of the College of Engineering, was named as the 12th president of the 101-year-old university to succeed Dr. Milton S. Eisenhower, retiring president.

Knowing Dr. Walker personally and in behalf of his many friends throughought the Nation, I am inserting in the CONGRESSIONAL RECORD the following articles incident to his election which appeared in the June 30, 1956, issue of the Centre Daily Times, State College, Pa.:

COLLEGE DEAN ADVANCED TO SUCCEED DR. EISENHOWER AS 12TH PRESIDENT

Dr. Eric A. Walker, who had yet to assume the vice presidency officially, today was hailed as the 12th president of the 101-year-old university.

The 46-year-old Walker was named to succeed Dr. Milton S. Eisenhower by unanimous vote of the Board of Trustees at a special meeting on the campus yesterday afternoon.

His selection came close on the heels of the acceptance by the Board with utmost regret of Dr. Eisenhower's resignation. Dr. Eisenhower had submitted his resignation June 8.

Dr. Walker and Dr. Eisenhower plan to determine at an early date when the changeover will be made. Dr Eisenhower, in his letter of resignation, had asked to be relieved no later than December 31.

The new president was chosen vice president last October and was to take over that position tomorrow. He came to the campus in 1945 and has been dean of the College of Engineering and Architecture since 1951.

He said he was gratified by the confidence expressed in him by the board and was fully cognizant of the heavy responsibility it will impose.

"It will not be easy to follow in the footsteps of a man like Milton Eisenhower," Dr. Walker declared, "but I trust that I shall prove equal to the task."

He added he looked upon the assignment as one of opportunity and challenge.

Dr. Eisenhower pointed out to the board why for purely personal reasons his decision to resign was irrevocable, and expressed the belief that Penn State is destined to become one of the most distinguished State universities in the Nation.

Dr. Walker, a member of Borough Council, was born in Long Eaton, England, attended high school at Wrightsville in York County. He earned his bachelor, master, and doctor of science degrees at Harvard University.

He first came to the university in 1945 from the Harvard Underwater Sound Laboratory at Cambridge, Mass. The family, including two children, Gail, 13 and Brian, 9, resides on West Park Avenue.

In the 3 years preceding his move to Penn State, Dr. Walker was research associate, assistant director, associate director of the laboratory, and was in charge of the development of ordnance weapons. For his work there, he was awarded the Naval Ordnance development award and also a Presidential certificate of merit.

With his predecessor, the late Harry P. Hammond, Dr. Walker completed arrangement with the Bureau of Ordnance in the Navy Department whereby the Ordnance Research Laboratory was established at the university.

He served as its director and also as professor and head of the department of electrical engineering from 1945 to 1951.

Upon becoming dean of the College of Engineering and Architecture, he was credited with expanding its work to include the research reactor facility; the computation center in the department of electrical engineering; and development of the 2-year curricula in electrical technology and drafting and design technology.

He also was influential in stimulating research programs among the small industries of the State.

Earlier this year, Dean Walker was named by President Dwight D. Eisenhower to a new national committee for the development of scientists and engineers and serves as vice president of this group. He also serves on an Army scientific advisory panel and is a member of the Naval Research Advisory Committee, which advises the Chief of Naval Research on research and development programs for the Navy.

The American Society for Engineering Education earlier this week selected Dr. Walker to direct a comprehensive study of the Nation's needs for research in engineering.

From 1931 to 1940 he taught mathematics and electrical engineering at Tufts College and at the same time conducted research for Doble Engineering Co. in Medford Hillside, Mass.

In 1940 he was employed by the General Electric Co., Pittsfield, Mass., on a special project and later that year joined the faculty of the University of Connecticut, where he remained until 1942. From 1941 to 1943, he also served as a consulting engineer for Colt's Patent Fire Arms Co., Hartford, Conn.

Dr. Walker has served as a vice president of the American Society for Engineering Education which held its national meetings on campus last year and in 1952 was named chairman of the Engineering College Research Council.

He is a member of the American Institute of Electrical Engineers, the American Physical Society, a fellow of the Acoustical Society of America, a member of Tau Beta Pi, engineering honor society, and a registered professional engineer in the States of Pennsylvania and Connecticut.

DECISION ON CHANGE-OVER UNDECIDED AS PRESIDENT SEES DISTINGUISHED FUTURE

Neither President Milton S. Eisenhower nor President-elect Eric A. Walker was prepared today to say when the latter would officially assume his new position.

The board of trustees left this decision in the hands of the two men, indicating meanwhile that Dr. Eisenhower had expressed a willingness to serve until the end of the year.

Dr. Eisenhower, in pointing out to the board yesterday why he would not reconsider and stay on as the university's 11th president, had this to say:

"It is with a heavy heart and the deepest regret that I shall leave Penn State. I have treasured the wholehearted cooperation and friendly association I have had with the trustees, the alumni, the faculty, and the students.

"I wish to say a special word about the Board. It is truly remarkable that a group of 32 could so consistently agree on the major outlines of Penn State's development. Both quantitatively and qualitatively, and so vigorously work together for the benefit of all the people of the commonwealth.

"I am immensely proud of the fact that in my 6 years at Penn State the board and I have never had a disagreement on a single major issue.

"I know that my successor will have the same kind of cooperation. Believe me, no matter where I shall be in the future, a part of my heart will always be here and I wish for Penn State the full realization of its true destiny, which is to become one of the most distinguished universities in the Nation."

PRESIDENT OF WHAT—SON OF NEW PRESIDENT FINALLY GETS THE NEWS

Brian Walker, 9-year old son of president-elect Eric A. Walker, was the last to learn that his father had achieved a new station at the university.

Young Walker was at the Little League ball park helping the VFW "B" team beat

Metzger's, 9–0 when it as announced that his father had been elected president of the university.

His father, meanwhile, had made an appointment to assemble the family for an official photograph at 6 p. m. Brian was late, but jubilant when he approached the Walker home proclaiming that his team had won.

His mother quickly urged him to change his clothes and join the family for the photograph.

The photographer, placing the family for his picture-taking, asked the youngster to stand in front of "the new president."

"President of what?" young Walker asked, the last to learn that his father only a few hours before had been named to succeed Dr. Milton S. Eisenhower as president of the university.

Naming New Bridge

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 28, 1956

Mr. VELDE. Mr. Speaker, I am pleased to place in the RECORD a resolution which has been passed by the city council of East Peoria, Ill., suggesting that the fine new bridge which is now being built across the Illinois River between Peoria and East Peoria be named the Murray M. Baker Bridge. A similar resolution has been passed by the city council of Peoria, Ill.

I am personally acquainted with Murray M. Baker and know that he is one of the leading citizens residing in Peoria, has been a civic-minded leader in both business and social circles, and is probably more responsible than anyone else for getting the movement started to build this new bridge.

The resolution follows:

RESOLUTION

Whereas for more than the past half century Murray M. Baker, of Peoria, Ill., has contributed tremendously toward the progress, growth, and the general welfare of this community, the Peoria area, the State of Illinois, and the Nation; and

Whereas he was primarily responsible for the location of the Caterpillar Tractor Co. in this community as one of its founders and played a most important part in the location of R. G. LeTourneau, Inc., in Peoria, Ill.; that as a result of his efforts in bringing these two large industries to the Peoria area, he has made this area the earthmoving capital of the world; and

Whereas as chairman of the War Defense Council for the State of Illinois during World War II, he was the first to recognize the imperative need for a new bridge in the Peoria area across the Illinois River to relieve the congestion in East Peoria and Peoria, and for many years he has guided this project; and

Whereas by reason of his support and planning which he has done over a long period of time, he has contributed immeasurably toward this new bridge, which is now under construction, becoming a reality, which connects the city of East Peoria and Peoria, Ill., between Fayette and Jackson Streets, in Peoria, Ill.; and

Whereas during the lifetime of Murray M. Baker, the number of employees of Caterpillar Tractor Co. have increased from about 40 employees to in excess of 26,000 employees, during all of which time he has been a director of Caterpillar Tractor Co., or its predecessors; and

Whereas Murray M. Baker is a well known industrialist, an outstanding civic leader, a pillar in his church, a great optimist, and a great American; and

Whereas his energy, leadership, and backing have contributed most materially and substantially to the industrial, civic, educational, philanthropic, and social life in this community: Now, therefore, be it

Resolved, That the city council of the city of East Peoria, in recognition of and in honor of the noble and great public service rendered by Murray M. Baker, of Peoria, Ill., to our community, the Peoria area, our State and Nation, hereby joins in the naming and hereby names the new bridge now under construction across the Illinois River between Fayette and Jackson Streets, Peoria, Ill., and connecting with the city of East Peoria, Ill., the Murray M. Baker Bridge, and in and by this resolution all necessary authority is granted to the proper officers of this council to do all necessary acts in connection with carrying out the purposes of this resolution, and it is further directed that certified copies of this resolution be sent to the Honorable Murray M. Baker, 1222 Moss Avenue, Peoria, Ill., and the Honorable Edwin A. Rosenstone, director of public works and buildings, Springfield, Ill., and to the Bureau of Public Roads, Washington, D. C.

Benefits From the Purchase of Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. BARTLETT. Mr. Speaker, the Wenatchee Daily World in an editorial on June 20, 1956, reminded its readers in a most comprehensive way of the values derived from the purchase by the United States of Alaska in 1867. Under leave to extend my remarks in the RECORD, that editorial from the Washington State paper is included here:

IF WE HADN'T BOUGHT ALASKA

Have you ever stopped to think what might have happened if we hadn't bought Alaska? Don't do it unless you want cold chills creeping up and down your back, for if we hadn't done it, Russia would probably still own it.

It was just 89 years ago today, on June 20, 1867, that this second-best real estate deal we ever made was completed.

The treaty with Russia for the purchase was ratified.

For a mere $7,200,000 we got an area of 375,296,000 acres, one-third larger than all the Atlantic States from Maine to Florida.

It figures out less than 2 cents an acre.

It wasn't as good a land deal as we made when we bought the Louisiana territory from France 64 years earlier for $15 million. We paid a little more per acre—roughly 3 cents for this—but we got better land.

We are spending billions today for defense and other billions for foreign aid, much of it for military aid to countries that might be able to help keep world peace.

Just figured purely as a defense investment, the $7.2 million we paid out for Alaska was a mere pittance.

The defense angle wasn't too much of a consideration 80 years ago. It has become important since.

But suppose we just glance briefly at the economic value of both Alaska and the Louisiana Territory.

Consider the income we have received from this area in the years since.

Alaska, with its fur-bearing seals, fish, gold, copper, tin, and forests has repaid its cost hundreds of times over.

But looking back at the country in 1867, it is no wonder many called the purchase "Seward's Folly," and "Seward's Ice Box." Charles Seward was our Secretary of State when the purchase was made, and was one of the foremost proponents for the transaction.

There were only a handful of people there. In fact when the first census was made in 1880, there were only 33,426 inhabitants, and 10 years later the figure had dropped to 32,052.

In 1950 there were 128,643 and 2 years later it had grown to an estimated 191,000.

When we bought the Louisiana tract from France in 1803, we extended our borders westward from the Mississippi River to the Rockies and from the Gulf of Mexico to the Lake of the Woods north of Minnesota.

Our States of Louisiana, west of the Mississippi, Arkansas, Missouri, Nebraska, Iowa, South Dakota, North Dakota, except for a small tract in the northeast corner held by Britain until the treaty of 1891, Minnesota west of the Mississippi, Kansas, Oklahoma, and parts of Montana and Colorado.

It is a good thing to look back on some of these early deals and realize that we weren't always as free and liberal in handing out our money as we are today.

We had some pretty shrewd bargainers who sat around the council table a hundred and fifty years ago when we bought Louisiana, and 89 years ago when we bought Alaska.

We can be thankful today that they were.

Not only did we get our money's worth many times over in an economic way, but our survival as a Nation might have been different without Alaska.

If you want a good shudder, contemplate what the last 10 years would have been with Russia looking down our neck from Alaska.

And we wonder too, if our neighbor to the north, Canada doesn't sometimes ponder the same thing, from her own point of view.

They may feel sometimes that they have some grievances with us, and they have, but at least they have no electrified fenses, patrolled no-man's land and iron curtain restrictions along the borderland.

We don't like to appear boastful, but we honestly believe we are better back-yard neighbors than Russia would be.

The American Fishing Industry

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, July 2, 1956

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks of Thomas Fulham at the 123d quarterly meeting of the New England Council at Poland Springs, Maine, on June 15, 1956. They are a very clear summary of the current status of the American fishing industry.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

PROBING THE DEEP SEA

Thanks to Miss Rachel Carson and her delightful book, The Sea Around Us, it is now possible to talk to a group of people about the ocean and some aspects of the fishing industry without explaining that the Grand Banks of Newfoundland do not start one mile from Boston lightship and that Spencer Tracey is not still at sea with Freddie Bartholemew on a sailing vessel as depicted in Captains Courageous. As a matter of fact, fishing is no longer a romantic adventure, but a very serious industrial enterprise aided by scientific instruments such as loran, radar, radio telephones and the underwater radar devices called Fischlupe or fish finder that actually scans the ocean floor as the diesel-powered vessel roams the surface These are the facts than anyone can see.

Not so apparent, but equally as factual, is the life and death struggle for survival that is being waged currently by the fishing industry. The opponents in these struggles are many, some economic, some scientific, and some just manufactured from the perverseness of the individualistic characters who go to make up the people of the industry.

It was not always this way, for the early settlers in the New England area settled in a veritable paradise of marine life. One Francis Higginson, a settler in the Bay State Colony, reported in 1630, "The abundance of seafish are almost beyond believing," and a contemporary, Thomas Morton, wrote "Multitudes of cod, in addition to sturgeon, salmon, herring, eels, smelts, shad, halibut, flounder, and bass, as well as lobsters are there, infinite in store in all parts of the land, and a great store of oysters in the entrance of all rivers." He speaks of mussels, clams, razorfish, cockles, and scallops. I'm sure that Mr. Higginson and Mr. Morton never dreamed that the people who would occupy the land adjacent to these vast natural resources would one day be faced with the problem of foreseeable depletion and be contemplating a program of planned harvesting, lest there be nothing left for future generations.

It is most unfortunate that the average person who relies on the daily press for information usually sees nothing more about fishing than a beautiful picture of an ice-encrusted trawler on a winter's morning or the annual reporting of the hearings before the Tariff Commission which are usually filled with dire predictions about the loss of the New England fishing industry to Canada and the great masses of unemployed that will soon be walking the streets of Boston, Gloucester, Portland, and New Bedford. This has been going on since 1944 and, although there have been some dislocations, the industry is far from dead. But the effect of this adverse publicity has not been good. The public refuses to believe that New England has anything left but a decayed industry. The banks and other financial institutions have assumed that at best anything associated with fishing is a dubious risk. Governmental bodies occupied with considerations of agriculture, mining, electronics, and the implements of war have until very recently seen no future in wasting time with the feeble pleadings of fishing people. So, we have been left to our own devices.

What kind of an industry am I talking about? How important is it to the economy of New England? According to the latest figures of the Fish and Wildlife Service, the fishery resources of New England support an industry employing over 50,000 men in $80 million worth of boats, plants, and equipment, handling over 900 million pounds of fish annually at a value in excess of $53,300,000.

I'm certain that if a major corporation in the country announced plans to establish such an activity in the New England area, that between chambers of commerce, governors, mayors, and representatives of the New England council knocking at their door, that they would have little time for anything but interviews.

What is in store for our fishery resources and the industry that exploits it? We have been most fortunate over the past years to have in our Fish and Wildlife Service and the various State agencies who are charged with the care of our deepwater and shore fisheries men whose sole occupation has been a devotion to the cause of conservation and improvement. To this end, they have explored, researched, and studied the populations, habits, growth cycles, and natural enemies of the fish and shellfish on which we exist. It was apparent to them that either we regulate our destructive fishing practices or we would destroy our resource. At first, they tried explanation, but once the futility of this course was established, an international convention of 11 nations was called to be held in Washington in 1949. From this meeting emerged a treaty which established the International Commission for the Northwest Atlantic Fisheries. The vast area covered by this regulatory body extends from the southern tip of Greenland to the back of Cape Cod, and was divided up into five principal areas. The area which concerns us the most, area 5, encompasses the Gulf of Main and Georges Bank. After much deliberation, it was determined that, by increasing the size of the mesh in the trawl nets to 4½ inches, that there would be enough room for haddock of immature size to escape being caught or destroyed. It was predicted also that over a period of 13 years, allowing for variances in natural factors, that the availability of haddock on Georges Bank would be increased one-third or 90 million pounds per year. That regulation has now been in effect about 3 years. The landings at the Boston Fish Pier for the first 5 months of 1955 were 63 million pounds. The landings for the first 5 months of 1956 were 68 million pounds, an increase of 5 million pounds. Of course, it is almost presumptuous to ascribe the total increase to this conservation measure, but there are strong indications that it may be so.

The industry has always been fortunate in its congressional representation from this area. In 1952 Senators SALTONSTALL and KENNEDY from Massachusetts, joined by a majority of the other Senators and Congressmen from New England, introduced a bill which bears both of their names which asked that $5 million be set aside annually from the approximately $14 million collected by tariffs on fishery imports, which now goes to the Department of Agriculture. These funds were to be used over the entire United States for research, exploration, and marketing service as allocated by the Fish and Wildlife Service assisted by an industry advisory council. After due hearings were held and committee reports made, it was voted into law as a 3 year appropriation of $3 million per year. At first glance, this does not appear to be much money, but the $500,000 allotted to New England was a vast increase. It meant that now we could operate 2 research vessels 12 months of a year, rather than 1 vessel for 12 months every other year. Laboratories which had skeleton forces and no equipment could open staffed and equipped to provide valuable technological services which would otherwise be impossible to obtain.

We have now operated under the provisions of this bill for over 2 years. The results have been startling and of great importance. Two discoveries which have received considerable publicity have been the extensive deposits of huge deep water lobsters and the existence of large schools of ocean perch in depths of water which have never been fished. Of even greater importance, but not as newsworthy to the general public, has been the compilation of vast data on salinity, temperature, and movement of water masses, as well as many thousands of miles of continuous plankton tows which reveal the movements of eggs and larvae of both the commercial species and the other fish on which they feed. The economic importance of this research is that it can be translated accurately into predictions of just how much fish of any given species will be available to be caught in those areas 3 and 4 years from now.

Another very significant legislative development has been the introduction of the Payne and Magnuson bills. The Payne bill, which soon will be enacted, calls for $550,000 annually to provide for the training of personnel for the fishing industry. This excellent bill provides further that the funds be matched 100 percent by the States, colleges, universities and technical schools using the program. It will be apportioned by the Fish and Wildlife Service on an equitable basis among the several States and Territories having special interest in fisheries. A particular feature which should prove to be of great value to the widely scattered small port fishermen is an extension service which should provide information on the latest developments to the individuals in those areas.

The Magnuson bill is much more far-reaching because it provides for a reorganization of the entire Federal system for fisheries. There will probably be many changes before it becomes law, but in brief summary, it separates the fishing function from the wildlife function in the Fish and Wildlife Service and places this administration directly under the Secretary of the Interior. It will have its operating functions under an autonomous commission of five men. There has been another bill introduced by Congressman BONNER which would provide for an Under Secretary of the Interior whose duty would be fish and wildlife. Then, the two divisions would be separated and each would have a director and two assistant directors. The authority provided in the Magnuson bill would be approximately the same under the Bonner bill. In effect, regardless of what bill eventually passes, the fishery function of the Federal Government will have its own administration, budget, and determination and will be in a much stronger position. These are very favorable developments.

Last week, startling news was released by the White House which contained three provisions: (1) That the Saltonstall-Kennedy Act be placed on a permanent basis without the $3 million limitation; (2) that a Bureau of Fisheries be created with sole responsibility for Federal programs related to Fisheries; and (3) that Congress create a special $10 million revolving fund which would set up 10-year loans at not less than 3 percent for the maintenance, repair, and equipment of fishing vessels. Of these three provisions, the Bureau can be set up by administrative procedures already established by law, but the other two will require legislation.

With this very sketchy background, let us examine the conditions of the New England Fisheries today. Actually, is it in a healthy condition?

If the industry will follow the advice and guidance of the marine biologists, it is conservative to predict between haddock and ocean perch alone an increase in yearly availability of over 100 million pounds from nearby sources.

What the deposits of offshore lobsters will mean to New England is problematical, and much study will have to be made, but there they are, and when the smoke clears somebody will be using them.

The attitude of the Federal Government is more favorable than at any time in recent history as evidenced by the legislation under consideration.

The large company-owned trawler fleet is shrinking, but developing rapidly is a new class of medium trawlers which are individu-

ally owned and operated. This development will need financial aid and technical assistance.

The acceptance of new convenience seafood products, such as fishsticks, is opening an entirely new market concept to the processors and marketers. The wealth of products which can be prepared from the multitude of various seafoods staggers the imagination. They will provide a new dimension to menu variety.

There is new confidence in the industry. New facilities costing over $1 million were dedicated recently in Gloucester, $150,000 was spent in Portland, investment in new plant and equipment has increased in New Bedford, and Boston, which is supposed to be dying, will shortly announce a $2 million expansion project. This is hardly an indication of defeat.

The stage is set for a dramatic revival in New England fishery fortunes.

It will not be stopped by imports or stifled by blind adherence to traditional methods.

The marine biologists, oceanographers, and related scientists have shown that the raw material is there.

The country's appetite for sea products is hardly sampled.

The various governmental bodies are interested and sympathetic.

Private as well as public capital will be available.

I do hope that we may have all of you along for this voyage.

Reaction of Foreign-Aid Funds Upon United States Economy

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, July 2, 1956

Mr. WATKINS. Mr. President, in the debate last week on the mutual-security program, I was again disturbed by the apparent lack of understanding of exactly how our so-called foreign-aid funds react upon our own economy.

Also, I believe that many persons think that these funds—much like a Government check—are simply put into the hands of some foreign ruler or government, which thereupon deposits them to its own local bank account and uses them much as our people use the funds deposited in their own checking accounts; that is, for whatever pleases them.

Actually, of course, much of our foreign aid consists of goods and services, produced in this country, and which then go abroad. I am sure that the impetus to the American economy of the mutual-security program, if it were suddenly and conclusively removed, would have reverberations up and down our land of far-reaching import.

In this connection, I call attention to an article written by James M. Haswell, a Chicago Daily News writer, which was syndicated to other newspapers and was published in the Salt Lake Tribune of June 19.

By pondering the statements made in the article I think many of us will be reminded that foreign aid is not so completely foreign as we may be led to believe.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COSTLY FOREIGN AID FUNDS FEED UNITED STATES INDUSTRY FIRST

(By James M. Haswell)

WASHINGTON, June 18.—Congressional talk about foreign aid sounds as though it were all going out and none coming in.

Some people speak of it as taking dollars away from Americans to give to Europeans and Asiatics.

Such talk overlooks the fact that foreign-aid dollars make business in this country before they ever leave these shores.

Harry W. Arnold, president of the Ohio Chamber of Commerce recently circulated in Congress a statement that President Dwight D. Eisenhower's 1956–57 foreign-aid request would cost Ohio taxpayers $292 million.

Figures from the International Cooperation Administration and the Census Bureau indicate this same foreign-aid request would bring $408 million worth of business into Ohio.

Using the same premises:

Michigan taxpayers would pay $368 million and Michigan farmers and manufacturers would get $393.5 million business.

Illinois taxpayers would pay $81 million and Illinois would get $345,600,000 business.

People talk about foreign aid in terms of dollars but foreign aid actually is goods and services.

Some of the goods and services are produced in the countries to which the foreign aid goes.

But the great bulk is produced in this country.

The International Cooperation Administration reports that 91 percent of the foreign-aid funds spent on agricultural commodities last year was spent right in this country for American farm products.

Seventy-one percent of the money spent on industrial goods went to American manufacturers, and 88 percent of the money spent on military goods furnished wages for American workers and profits for American corporations.

Ohio is one of the great centers of American industry. Ohio accounts for 9 percent of the value added by American manufacturing. Ohio also furnishes 3.1 percent of the Nation's farm products.

Michigan does 12.2 percent of defense-type manufacturing, 8 percent of general manufacturing, and raises 2.1 percent of the farm goods.

Working out all these percentages, it appears that postwar foreign-aid spending already has brought Ohio about $2,900,000,000 business. Michigan $2,300,000,000 and Illinois $3,100,000,000.

Report on the Situation of the Czechs and the Sudeten Germans in Exile

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. BURDICK. Mr. Speaker, the following article by Mr. Franz Gaksch of Munich, member of the Bavarian Landtag and editor of the Volksbote, is one in which all proponents of right and justice will be interested. The courage and persistence of these people who are fighting for political and economic freedom deserve the admiration of the free world:

ELEVEN YEARS SINCE THE BEGINNING OF CZECHOSLOVAKIA'S COMMUNIZATION

Eleven years elapsed since the time of the takeover in Czechoslovakia by the Communist-led National Front in 1945, since the time of liquidation and suppression of all Czech non-Communists and anti-Communists by the regime and system of Dr. Benes, Dr. Zenkl, Dr. Lettrich, Dr. Stransky, Juraj Slavik, and Ferdinand Peroutka, since the time of suppression and liquidation of all political parties of the center and the right, which opposed communism, since the time of the erection of the "people's courts" which sentenced to death thousands of political adversaries and sent hundreds of thousands into prison and concentration camps, since the time of forced nationalization of industries, trade and property, since the time of abolishment of freedom of election and speech, since the time of the introduction of a uniformed Communist and pro-Communist press, licensed by the National Front, since the time of introduction of "Soviets" in Czechoslovakia, the time of the beginning of building up kolkhozes and since the time of the bloody expulsion of 3.3 millions of Sudeten-Germans and Hungarians from their centuries-old homeland in Czechoslovakia by the very same National Front regime, during which nearly 300,000 Sudeten Germans lost their lives.

Three years later, in 1948, the National Front completed sucessfully the communization of Czechoslovakia and handed over the full power to an exclusively Communist regime. Eight years elapsed since that time, since February 1948, when the Communists took over full power and let their National Front comrades go west in order to continue their work there.

I. THE NATIONAL FRONTERS

The National Front Communist collaborators, who, in 1945, were chosen and selected for cooperation by the Communists (the Communists e. g. also enforced new leaders to other parties of the National Front, until that time politically meaningless, but who suited them) who fully communized Czechoslovakia from within, either by their procommunism or unintelligence, and who, in 1948, were permitted to go west by the Communists, were also chosen and selected as the only and exclusive representatives of the Czechs and Slovaks at home and in exile by an American private society, the Free Europe Committee, Inc., financed by the Crusade for Freedom, and planted in leading position in Radio Free Europe and in the Council of Free Czechoslovakia.

The so-called Czechoslovak desk of Radio Free Europe is led by men like its editor in chief, Ferdinand Peroutka, a prominent journalist of the National Front, who used to write that the Bolshevist revolution is as great a historical impulse as Christianity, and who even today maintains in his weekly commentaries over the same Radio Free Europe that, due to the Communist movement, we are standing on the threshold of a new era and that, re political and economic freedom, no return to the time before the Communist take over is possible.

Peroutka's deputy in Radio Free Europe is one Dr. Jan Stransky, who, as a member of the National Front Parliament, propagated Soviet Russia and the cession of a great part of Czechoslovakia to the Soviet Union. Weekly commentator is also Dr. Jaroslav Stransky, Jan Stransky's father, who was Minister of Justice of the Nationalist Front Government, who elaborated and signed the

expropriation decrees and the decrees constituting the people's courts and who therefore carries the principal responsibility for the bloody justice and suppression of all adversaries by the National Front.

The Czechoslovak desk in Munch is headed by Julius Fuerth (Firt), who was one of the leading men of the National Front press, and is known be have signed as member of the National Front Parliament, together with Peroutka and other cooperators of Radio Free Europe, the declarations for true brotherhood with Soviet Russia. His deputy is one Dr. Martin Kvetko, former regional minister of the National Front in Slovakia, who is responsible for the agricultural expropriations there, coresponsible for the erection of concentration camps for the adversaries of the Communists in Slovakia, and who, even after the full Communist takeover in Czechoslovakia in February 1948, voted in the Parliament for the new Communist Gottwald government, thus giving it, together with other National Front pals, the full legality.

Other leading editors and festival speakers over Radio Free Europe include the former Communist Milos Vanek, responsible during the National Front regime for the nationalization of many, even small enterprises, and who, however, is now leading the economic department of RFE's Czechoslovak desk; furthermore Karol Belak-Berger, who was one of the National Front journalists; Jiri Pistorius, the former Minister of the National Front; Marxist Vaclav Majer, who signed the same decrees as Stransky; the former chairman of the foreign relations committee of the National Front Parliament, Dr. Ivo Ducacek, who pushed energetically the friendship with the U. S. S. R.; the leader of the Nationalist Front in Slovakia, Dr. Jozef Lettrich, who insisted that Czechoslovakia be a people's democracy, and that all nonleftist parties be prohibited because of being, as he called it, outmoded; Dr. Petr Zenkl, who was Deputy Prime Minister of the National Front under the Communist Gottwald, and who was a great promoter of the friendship to the U. S. S. R.; Dr. Miloslav Kohak, Dr. Vratislav Busek, Frantisek Listopad-Synek, Otto Graf, the friend of men, who turned out to be Communist agents; Ivan Herben, Ing Filo, Dr. Matej Josko, Samuel Bellus, Professor Macek, and other former pro-Communists, Communist collaborators, and fellow travelers. The Radio Free Europe cooperator staff included also several direct Communist agents like Vladimir Kucera, Marie Dvorakova, Jiri Kalas, and others, who have already returned to Communist Prague.

The Council of Free Czechoslovakia, which is the continuation of the National Front in Exile, financed too by the Free Europe Committee, is again led by the same former Communist collaborator, Ferdinand Peroutka, who is president of its committee, by Dr. Juraj Slavik, former Ambassador of the National Front regime to Washington, by Dr. Petr Zenkl, Dr. Jozef Lettrich, Vaclav Majer, and other National Fronters and collaborators of the Communist Party line quoted above.

The Council of Free Czechoslovakia and the men of Radio Free Europe both working with American money, make today reproaches to their former comrades in Czechoslovakia. In official programs and broadcasts the councilmen propagate the renewal of the National Front, the upholding of the nationalization of Czechoslovakia, of many of the Communist measures, the upholding of the abolishment of the nonleftist political parties there, and the upholding of all the achievements of the National Front, including the perpetuation of the expulsion of the Sudeten Germans and Hungarians, and of the subjection of the Slovak people. As far as the fight against communism is directly concerned, these men have never repented and rejected their pro-Communist attitude—on the contrary, they have been developing programs which on principle clearly suit the Communist line. They propagate socialism, lowered down an Iron Curtain on everything which was changed in America since the Roosevelt era, and fully protect eastern and international communism by the following lines:

They give a false interpretation of communism as being a mere Soviet imperialism, a danger only from those visible Communist parties, a danger only from without, and fully suppress every word about the true character of this international Communist conspiracy, about the danger from within, about the infiltration of the free world, universities, press, etc.—they never mention anything about the causes of the loss of China, about the Harry Dexter White case, about the true causes of the Communist successes in the past (including Czechoslovakia, where they conceal their true activities).

They uphold the Yalta agreement, the Kosice program, the National Front.

They never broadcast names of American Communists and spies, the fifth amendment Communists, etc., and they fully suppress every word about the congressional committees fighting communism in the United States of America. Thanks to the former Communist collaborators in Radio Free Europe, the East knows absolutely nothing about the existence of men like JENNER, EASTLAND, MUNDT, WALTER, VELDE, REECE, DIES, and other great men. The National Front men in FRE do completely suppress any mention of Senator MCCARTHY.

They attack, in substance, petty and known Communists and do not stress adequately the existence of a system of officers of the secret police in the East and of that "Invisible Government" behind the scenes there; they warn the people insufficiently of the sly methods of the men behind the Secret Police, etc., in the countries behind the Iron Curtain. In this way, while superficially shouting against communism and calling it names, they are misinforming East and West, and blinding the eyes of the people in the East.

On the occasion of the Sudeten-German Day in Munich on Whitsuntide 1954 Senator JENNER stated in his letter to Dr. Rudolf Lodgman von Auen:

The Communists also needed non-Russian allies, whose pro-Communist nationals could be sent to Western Europe and the United States to infiltrate our anti-Communist agencies here and abroad and reduce American psychological warfare to impotence."

And this is exactly what certain National Front men of the Council of Free Czechoslovakia are doing today.

II. THE ANTI-NATIONAL FRONT CZECHS AND SLOVAKS

The leaders of the Czech and Slovak political parties, which were suppressed and liquidated by the National Front and which, before World War II, used to represent the majority of the Czechs and Slovaks (their majority was about 2:1 in the last free election in 1935), were either executed or imprisoned by the Communists and the justice of the National Front, in 1948, 3 years later, still kept in prisons—unable to escape to the West as the National Front men could do. It was the clear policy line of the Communists: only the soft-heads were permitted to escape, while all real Czech statesmen and politicians were kept in Czechoslovakia by force.

Despite this fact, many members and some leaders of these parties are, however, in exile. Ninety percent of the exile Slovaks, and still more at home, stand against the Council of Free Czechoslovakia and have their great organizations, such as the Slovak National Council Abroad, whose leading man in Germany, Matus Cermak, fell victim to an explosive assassination in Munich, the Slovak Liberation Committee, the Slovak League of America, the Democratic Bloc of Slovaks, and the National Committee for the Liberation of Slovakia, including names such as Philip A. Hrobak, Ferdinand Durcansky, Dr. Frano Tiso, Dr. Boehm, Petr Pridavok, Dr. Hrusovsky, Dr. Krajcovic, Dr. Stefan Lukats, Dr. Michael Zibrin and others. They are all for a free Slovakia.

As far as the Czechs are concerned the rank-and-file members of the Agrarian Party, the greatest party in pre-war Czechoslovakia, which was suppressed by the National Front, opposed the Council of Free Czechoslovakia for the same reasons for which they once opposed the National Front, which had robbed them and started the collectivization of Czech agriculture. The Agrarian Party has among its leaders the former prewar Minister Dr. Josef Cerny (the only non-National Front Minister), who had been persecuted and imprisoned by the National Front. He does never speak over Radio Free Europe. Other leaders of the Agrarian Party such as Prof. Dr. Frantisek Kral are strong enemies of the National Front.

The Artisan Party (Trade Party) was also forbidden and liquidated by the National Front. Its members are against the National Front and against the Council. Its leaders include e. g. Karel F. Stekr, who is also secretary general of the Union of Czech Industrialists in exile, whose president is Dr. h. c. Jan A. Bata, cofounder of the greatest shoe manufacturing trust in the world.

The National Democratic Party, once prohibited by the National Front, now opposes sharply the Council of Free Czechoslovakia, including the RFE personnel. Mr. Jiri Havelka, the young son of a former Czech minister, is president of this party. This party has already made intelligent and energetic actions in participating in the American political life.

The People's Party was a member of the National Front. In exile, it divided itself into three parts: the first one is cooperating with the Council of Free Czechoslovakia e. g. the former National Front Minister Dr. Adolf Prochazka, who has the same pro-Communist past and activities as his colleagues Stransky, Majer, Ripka, Zenkl, and Lausman; the second one opposes in one way or another the Council and the RFE-lines, but adheres to Czecholsovakism, and finally the third and strongest part the name "Czech Christian Democratic Movement," its organizations being under the leadership of the former member of parliament, Dr. Bohdan Chudoba, of Ladislav Lobkowitz, Josef Kalvoda, Simeon Ghelfand, etc. This movement quit the forced Czechoslovak conception, giving the Slovaks the right for full self-determination and thus absolutely opposing the Council.

A further Czech group is the "Czech Democratic Federalists" around Vladimir Pekelsky, who cooperates with Ghelfand and Lobkowitz.

Surmounting all other men, however, the Czech general of the army, Lev Prchala. General Prchala was supreme commander of the Czechoslovak armies and minister plenipoteniary in Eastern Czechoslovakia. He fought Hitler and, in 1939, went, via Poland and France; to Great Britain. In England, he opposed the pro-Soviet policies of the Czechoslovak exile government of Dr. Benes and especially the Czechoslovak-Soviet Treaty of Friendship of 1943. In 1945, meanwhile becoming chairman of the Czech National Committee in London, General Prchala refused to return home, to the Czechoslovakia of the National Front and declared the Kosice-Government program and the nationalization and expulsion decrees as not binding for the Czech people. His predictions and his firm opposition against the U. S. S. R. proved true, when in 1948, Czechoslovakia, due to the activities of Benes, Peroutka, Slavik, Zenkl, Ripka, and Lettrich as well as others fell into absolutely Communist hands.

General Prchala, together with his associates, first of all Dr. Karel Locher, personifies the moral and sound line of Czech policy since the time before Hitler and Benes, and his movement started active work for the liberation of the Czech countries. In 1950, the Czech National Committee signed an agreement with the democratic representatives of the Sudeten-German expellees, providing for the return of the Sudeten Germans, for the right for self-determination of all nations of former Czechoslovakia, i e. the Czechs, the Sudeten-Germans, the Slovaks, the Hungarians, the Subcarpathian Ruthenians and the Poles. In 1955, the Czech National Committee under the presidency of General Prchala, was joined by the Czech Christian Movement under the presidency of Dr. Bohdan Chudoba. In radiobroadcasts to the Czech countries behind the Iron Curtain, started in December 1955, General Prchala proclaimed as the aim of the liberation fight also the restoration of private property and free enterprise in the Czech countries.

III. THE SUDETEN GERMANS

The National Front regime of Czechoslovakia, led by the Communists Benes, Peroutka, Zenkl, Slavik, and others, expelled in 1945 nearly all of the 3,300,000 Sudeten Germans from their centuries-old homeland, since these Sudeten Germans represented the hard core of anticommunism in former Czechoslovakia. About 2 million of the Sudeten Germans are now living in Western Germany. They are organized in the Sudeten German Landsmannschaft and have their foreign representation in the Sudeten German Council, led by Dr. Rudolf Lodgman, of Auen, the members of the German Bundestag—Hans Schütz, Richard Reitzner, and Johannes Strosche, as well as the member of the Bavarian Landtag, Dr. Walter Becher. The Sudeten Germans have also a number of men in the German Federal Parliament and Government as well as in all state parliaments and governments.

The Sudeten Germans notice with astonishment that the Free Europe Committee supports and encourages the nonrepenting National Front men, who once suited the eastern Communists so well, while rejecting all non-National Front men, or using them only in very subordinate positions, and while rejecting also all repenting National Fronters. The elimination of the non-National Front Czechs as well as all repenting National Fronters, and the support for the nonrepenting former Communist collaborators deprives the Sudeten Germans of real possibilities of understanding with the Czech nation; it, moreover, hinders in America anti-Communist statesmen, preaching the policy of liberation and a true anti-Communist fight. It cripples fully the anti-Communist combat and efforts for liberation of the Czechs and Slovaks, and it aids invaluably the Communists in the East.

IV. THE FUTURE POLICY

Viewing realistically the situation, I come to the conclusion that there is only one moral and political program for the future for the exiles and the refugees from former Czechoslovakia, which can and will unite all decent men of all nations of the former Czech state. In my opinion, it has two points:

1. The full and absolute restoration of conditions within the former Czechoslovak territory as they existed before the Nazi and the Communist interference, i. e., the full return to the situation of 1938. This means the return to private property, free enterprise, and trade, which once made Czechoslovakia great; this means the return of the nationalized industries and agriculture into the hands of the Czech, Slovak, etc., proprietors. This means also the return of the Sudeten Germans and Hungarians to their homeland, and the return of their properties to them. This means restoration of all political and economic freedom, the full restoration of all political parties suppressed by the criminal National Front, the return of free press, free elections, justice, administration, and of a free government. Only this program can unite all of them, except the Communists and their pals. In other words, the full freedom, justice, and order must be restored. The return to freedom must be all or nothing.

2. Under these restored conditions, the full right for self-determination for all nations must be applied. If the Slovaks want their own state, they must have it. Every Czech politician wishing a common state, including the Slovaks, must realize that he cannot force them against their will. And a political insight would show him that only a magnanimity in granting the Slovaks full right for independence could possibly win them over for a common federation. The same concerns all other nationalities of former Czechoslovakia. The right for self-determination so grossly neglected in the first Czechoslovak Republic after 1918, must be applied to all nations within the territory of Czechoslovakia.

On the basis of a program concerning the restoration of the conditions before the illegal Nazi and Communist interventions—and only on this basis—will it be possible to unite all of the anti-Communist Czechs, the Sudeten Germans, the Slovaks, the Hungarians, and all other nations. Let us not think egotistically: if the Sudeten Germans will demand only their return to their centuries-old homeland, the Czech non-Socialists only the return of free enterprise and their property, and the Slovaks their independence—no unification can come. The years of exile have taught us that we must develop a program on a basis on which all freedom-loving forces can unite.

As long as this program is not being preached by the West, in radio broadcasts to the East, as long as, on the contrary, the national fronters continue to preach Titoism and the restoration of the national front, attacking decent Czechs and Slovaks, so long the enslaved peoples in the East can clearly understand that the liberation is many years remote.

The years still ahead of us before any liberation would come will contribute to the clarification of the program of many of the Czechs to the unification of all well-meaning men among them, and will also be the time of the struggle between the two basic programs:

The one program of the national fronters who wish to restore this national front and who show nothing but their present fruitless activities in Radio Free Europe on the one hand; and

The other program, advocated by the Sudeten Germans, which asks for the restoration of full political and economic freedom for all—the Czechs and the Slovaks as well as the Sudeten Germans.

As Dr. Walter Becher, secretary general of the Sudeten German Council, stated already in his CONGRESSIONAL RECORD insertion of April 25, 1955, in view of the present international situation as well as of the future one, the final judge on these two programs will be the American people. I do not doubt for a moment which program will win.

Vitamin E Said Effective in Treatment of Heart Disease

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. BURDICK. Mr. Speaker, Mr. Otis J. Bouma who is president of Mature Americans, Inc., has some information on vitamin E which has been indicated to be very effective in the treatment of heart disease. Under leave to extend my remarks, I would like to include the following material Mr. Bouma sent me on the subject:

[From the Canadian Medical Association Journal]

THE USE OF ALPHA TOCOPHEROL IN ACUTE AND SUBACUTE THROMBOPHLEBITIS

(By Priscilla Suffel, M. D., London, Ontario)

The increasing incidence in recent years of thromboembolic disease, particularly coronary thrombosis, emphasizes the urgency of the problem of maintaining blood fluidity within the vascular system of so-called normal people, and the need for administering anticoagulants as a prophylatic measure after operation and childbirth.

The literature on blood coagulation has become voluminous, signifying the complexity of the subject. The discovery of vitamin K, factor V (plasma Ac-globulin), factor VII (SPCA), antithemophilic globulin and Christmas factor has cleared up much of this mystery, but the mechanisms related to the "antithrombin" phenomenon are not yet clearly understood. Indeed, there is a surprising lack of unanimity about this.

In the normal blood there is an effective mechanism for suppressing coagulation. Formation of plasma thromboplastin takes an appreciable time and depends upon contact of the blood with a foreign, nonendothelial surface to develop an essential activator. This, therefore, is a very important factor in preventing intravascular clotting. In addition, the naturally occurring inhibitors, such as antithrombin, heparin, antithromboplastin, and other circulating anticoagulants in the globulin fraction of plasma, are factors tending to maintain the fluidity of intravascular blood.

The discovery of heparin and dicoumarol has provided the clinician with two powerful anticoagulants for thromboembolic disease, but in coronary thrombosis there is a wide difference of opinion as to the advisability of using anticoagulants for both the seriously ill and ambulant patients. As more and more complicating hemorrhages are reported, a swing toward the conservative side appears to be developing. There has been less controversy, however, about the place of anticoagulants in the treatment of peripheral venous thrombosis and pulmonary embolism. For in spite of intensive prophylactic and therapeutic measures designed to prevent such thrombosis and embolism, measures such as early ambulation of the postoperative patient, leg exercises for the bedridden, or elastic bandages and stockings for patients with varicosities, the incidence of venous clotting and pulmonary embolism does not seem to decrease. As the use of heparin or a dicoumarol compound is too hazardous and cumbersome for routine use, physicians must diligently search for a safer and at the same time a simple method both to prevent and to treat all types of thrombosis.

The clinical use of alpha tocopherol in peripheral thrombosis was first reported by Shute et al. Subsequent reports of its application in preventing and treating phlebothrombosis and thrombophlebitis have been very encouraging.

OUR OBSERVATIONS

At the Shute Institute we have treated 327 cases of thrombophlebitis from 1946 through June 1955, 24 of which were acute and 45 subacute. For purposes of discussion we have defined an acute case as one showing considerable local swelling, tenderness, and redness, with or without constitutional manifestation of fever, leukocytosis, and tachycardia. The subacute case is one showing only slight swelling, pain, or discoloration, usually without constitutional symp-

toms. The chronic case is one showing neither heat nor redness but with a good deal of linear tenderness or a positive Homans test or definite tenderness on lateral compression of the calf, and sometimes swelling. All these cases were treated with alpha tocopherol alone. Calcium has never been used concomitantly. Not once have the usual anticoagulants been used. This in itself is a significant observation. Moreover, even in acute cases no antibotics were given, and no bed rest has been advised during the last 6 years. Hospitalization has not been necessary. No elaborate quick test is involved in controlling these cases. Therapy is oral only, and cheap. There has not been one hemorrhagic complication encountered in our series, or in any other series in the literature. Embolism has not occurred, despite activity, in any patient on tocopherol treatment in this series. All these points set this treatment apart and render it unique. Others have been convinced of its value in preventing embolism in postoperative cases.

The results of the treatment of patients with acute thrombophlebitis and subacute thrombophlebitis are summarized below. It should be remembered that this study was done on consecutive, unslected private patients. Obviously such a series cannot be investigated with parallel controls. It must be compared with similar series in the literature.

Of the 24 acute cases, all were clinically cured within 3 weeks, the majority of them showing obvious improvement within 3 days. Of the 45 subacute cases, 25 showed a good result, that is, marked clinical improvement within 3 weeks; 19 could be classified as fair, that is improvement within 3 months, while 1 showed no improvement.

The chronic phlebitis cases were not included here, for one rarely expects much benefit from any form of treatment. Remarkable improvement has been observed in occasional cases, however.

The effect of alpha tocopherol on acute peripheral thrombosis is dramatic. Within 5 days there is usually definite evidence of subsidence of inflammation, provided an adequate dose has been given from the onset. To be effective one should use massive doses of dependable preparations of alpha tocopherol—500 to 800 international units daily. In Canada a Federal regulation requires that alpha tocopherol preparations be labeled in terms of the League of Nations international unit, and that the contents accurately correspond with the claim on the label. In some other countries there is very inadequate supervision of both labeling and content. Hence our stress on the term "dependable."

If progress is slow, the dose of alpha tocopherol should be increased promptly until evidence of substituting phlebitis is indubitable.

DISCUSSION

The first suggestion of any relation between alpha tocopherol and blood coagulation was made by Adamstone, who described obstruction of the blood vessels in the yolk sac in chicks fed a vitamin E-deficient diet. Early intravascular thrombosis was seen. This resulted in local ischæmia, vascular stasis in the blood channels, and finally hemorrhages. Mason reported that the classical fetal resorption in vitamin E-deficient pregnant rats was due to such vascular abnormalities in the uterine wall as stasis, distension and thrombosis (notably venous). Faust observed a hyaline leukocytic thrombus attached to the wall of the ventricle in one of his vitamin E-deficient rabbits. In histological studies of that myocardium evidence was found of a small break in the continuity of the endothelium of the vasa vasorum, and platelets had conglutinated there.

On account of its chemical structure, vitamin E is a potential antagonist to vitamin K, as first suggested by Zierler et al. For example, vitamin K deficiency has followed the administration of alpha tocopherol quinone, an early tocopherol oxidation product. Both in vitro and in vivo these workers found alpha tocopherol vigorously antithrombic. Indeed, they suggested it was antithrombic in its n r mal concentration in human blood; therefore it may normally prevent intravascular clotting.

Another set of studies on alpha tocopherol as an antithrombin was carried out by Ochsner and his associates at Tulane University. They were in search of a safe anticoagulant for post operative thromboembolic patients. They found by in vitro experiment that disodium alpha tocopherol added to thrombin prevented clot formation when fibrinogen was added to the thrombin. Further study indicated that alpha tocopherol was present in the accelerator globulin which showed antithrombic activity when precipitation with calcium was carried out. In their discussion they suggested that phlebothrombosis is the result of a relative disproportion between the prothrombin and the antithrombin levels of the blood. The thrombin released as a result of injury following surgery is inactivated by circulating antithrombin. When the antithrombin titre is low, phlebothrombosis develops. Because of the in vitro effect of disodium alpha tocopherol on thrombin and the finding of tocopherol-like compounds in the accelerator globulin, it was assumed that alpha tocopherol might be the antithrombin.

Enria and Ferrero in Italy did a very convincing experimental study on the relation of alpha tocopherol to thrombosis. They produced thrombosis in an isolated segment of the femoral vein in a controlled series of dogs. Dogs given alpha tocopherol alone showed a tremendous increase in collateral circulation about the site of obstruction and an absence of inflamatory reaction in the wall of the thrombosed vessel. Some canalization of the clot was also noted. However, canalization occurred more rapidly and more effectively in animals given Tromexan (ethyl biscoumacetate) together with alpha tocopherol. Puente Dominguez and Dominguez in Spain in their turn performed very interesting experimental studies on the effect of alpha tocopherol on collateral circulation after arterial obstruction in rabbits. They produced femoral artery obstruction by double ligation and by enveloping the vessel at the femoral ring in folds of cellophane. No medication was given in the control group. Intramuscular alpha tocopherol, 10 milligrams per day, was given to the experimental group. Arteriographic studies were made on all animals, living and dead. Histological investigations were also carried out at the sites of obstruction. Arteriography as well as disection showed no collateral circulation in the control group. The vitamin E-treated group developed a great arterial arborization about the site of the obstruction, both in the superficial and deep femoral systems. The caliber of these collaterals throughout their course was sometimes equal to that of the normal femoral trunk.

All these experiments would indicate that alpha tocopherol may be a majar antithrombin, circulating normally in the blood stream and so preventing intravascular coagulation. Theoretically, therefore, it should be superior to other anticoagulants as it does not suppress prothrombin or other such factors; therefore it cannot produce the hemorrhagic tendency so common with heparin, dicoumarol and the newer Tromexan.

The effect of alpha tocopherol on collateral circulation is another important factor in improving local circulation, minimizing local inflammatory reaction and preventing thrombosis from sludged blood.

Further research should be pursued to explain the role of alpha tocopherol in intravascular thrombosis. In the meantime, alpha tocopherol should be widely used in the prevention and treatment of thrombosis, whether coronary or peripheral, in the light of the evidence reported in the literature and our own encouraging experiences.

SUMMARY

Alpha tocopherol is uniquely valuable in the treatment of acute and subacute thrombosis of peripheral veins. It is very safe, permitting ambulant management without fear of either embolism or hemorrhagic complications.

Foreign Policy Descends Into the Valley of the Shadow of Death, Says William C. Bullitt

---

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, two of our former Ambassadors to Russia are at swords' points as to what we should do about Russia. The Honorable William C. Bullitt, who served as United States Ambassador to Russia from 1933 to 1935, in a slashing article in U. S. News & World Report for June 29, says that since the Second World War our foreign policy has led us from a pinnacle of power and security into the valley of the shadow of death. He charges that former Ambassador to Russia George F. Kennan played a part in our descent from safety to danger.

Mr. Speaker, under leave to extend my remarks, I am including Mr. Bullitt's statement:

Since the Second World War our foreign policy has led us from a pinnacle of power and security into the valley of the shadow of death. Mr. George F. Kennan played a part in our descent from safety to danger, and it is not unreasonable to hope that he may be able to suggest a path of escape from the pit into which he helped to lead us. Even a discredited guide is apt to know some landmarks.

It is a pleasure to find in the latter part of Mr. Kennan's address a bit of good advice. He rightly attacks those American politicians who grovel before unfriendly governments and try to buy friendship by offerings of the American taxpayers' money. Our gifts to Nehru (Prime Minister Nehru of India) and his neutralist disciples, who act as advance agents for our enemies, have brought us nothing but contempt. Mr. Kennan is wise to urge our politicans to try to earn respect for the United States and to abandon efforts to purchase popularity.

Strangely enough, he suggests that we should channel such aid as we may give in future "through some international agency." He seems to have forgotten the manner in which UNRRA (United Nations Relief and Rehabilitation Administration) spent a considerable amount of our money in accordance with the advice of Communist sympathizers and dupes. Fortunately, no American Congress is likely to be bitten twice by that dog. In any event, Mr. Kennan's "international agency" aberration does not diminish the merit of his contempt for American grovelers.

To praise this comment of Mr. Kennan's is to exhaust all the approval that can be

accorded to his address. The rest of it is softness, self-satisfaction, and defeatism.

What does Mr. Kennan advise us to do to survive as an independent nation?

1. He believes that the changes which have recently occurred in Russia represent "the beginning of that mellowing process which overtakes sooner or later all militant movements," and that they point the way "to the restoration of a more normal and hopeful relationship of the Russian people to their world environment and to us in particular."

He goes on to say: "I can see no reason why a satisfactory and hopeful relationship should not be established between the United States and Russia, even though the respective social systems and political philosophies remain theoretically in conflict."

How agreeable it would be if that were true! But there is no evidence that it is true. Khrushchev has attacked Stalin but he has never attacked a single article of the Communist faith. The political philosophy and the social system of the Soviet Union are still based, as always, on the godless Communist creed which teaches that the duty of every Communist is to destroy every capitalist country like the United States.

There is nothing theoretical about the conflict. In the past 11 years the Soviet Union and its agents have forcibly seized control of countries containing more than 700 million persons. The Communists will not stop their attacks—they can only be slowed. Stalin and Beria are dead, but the rest of the old gang of criminals, which is guilty of more murders and tortures of men, women, and children than any other gang that has ever existed in any country, including the Hitler gang, is still running the Soviet Union and the countries it has enslaved.

These Kremlin gangsters, by denouncing Stalin, are merely trying to kill 2 birds with 1 stone: to shift the blame for the unhappiness of life in the Soviet Union from their own shoulders to those of the dead Stalin, and to slow down the rearmament of the free countries of the world by convincing them that it is useless to go on spending money on armaments since the Soviet Union will never attack.

Meanwhile the Soviet Government is pushing its production of intercontinental bombers and nuclear bombs and ballistic missiles so intensely that our chief expert on this problem, Gen. Curtis E. LeMay, has testified that by 1959 the Soviet Union may be strong enough to destroy the United States by sneak attack.

"MELLOWING PROCESS" IN KREMLIN?

Mr. Kennan's desire to trust the Russians is so powerful, however, that he finds a "mellowing process" in this crude Kremlin maneuver. This is the same sort of wishful thinking that led Harry Hopkins to convince the ailing Roosevelt that he could and should trust Stalin.

2. Mr. Kennan then turns to Communist China and says: "I must say that up to this time I have been able to observe in the conduct and outlook of the Chinese Communist leaders nothing that could give justification for any immediate hope of better relations between ourselves and them—nothing, in fact, but the most profound arrogance, inhumanity and obstinate error in the understanding of the Western world."

Four paragraphs later he writes: "I feel that the present Chinese leaders have given to this country the deepest and most unjustified sort of offense, which they should not be permitted to forget at any early date. I see nothing to be gained by entry into any direct diplomatic relations with them. Let us rather keep our distance, defend our own interests with whatever ruthlessness the situation requires."

These paragraphs are sensible and logical but between them Mr. Kennan has inserted a paragraph in which he advocates that we should now permit these same Chinese Communists to have a seat in the United Nations. He knows that this would mean the presence of large numbers of Chinese Communist agents in New York, and, indeed, throughout our country. He knows that the admirable, loyal, law-abiding Chinese communities which are scattered throughout the United States would then be under enormous pressure to swing to the Communist side.

He knows that the Nationalist Chinese, our friends in Formosa and throughout the world, would rightly feel betrayed. He knows that gradually almost all the 11 million overseas Chinese—whether in Singapore, Indonesia, Vietnam, the Philippines or elsewhere, would go over to the Communists. He knows that every Communist state in the United Nations is another enemy in a seat of power. He knows that admission to a seat in the U. N. would be a steppingstone for the Chinese Communists to an embassy in Washington, and for desertion by our Government of the Chinese Nationalists in Formosa.

He inserts the knife with diplomatic delicacy. In Washington, "No! No!" he says; in New York, "Yes." He advocates that against the Chinese Communists we should "defend our own interests with whatever ruthlessness the situation requires," but his ruthless action with regard to their admission to the U. N. turns out to be to "abstain from voting on this particular question."

At times, Mr. Kennan seems to understand that to grovel is not the way for a nation to win respect and friends; but he seems not to understand that, throughout the world, disrespect for the United States would be multiplied many fold if we should permit the Chinese Communists to have a seat in the United Nations. That would be the ultimate grovel. The truth seems to be that, in Mr. Kennan's emotional constellation, to grovel is not to grovel if you grovel to the Soviet Government or its satellites.

3. Mr. Kennan's other suggestions are equally queer. He thinks we should abandon all effort to free the people of the satellite states from Soviet slavery. He writes: "What we must recognize today, in the case of the satellites, is that evil, like good, produces its own vested interests. Where regimes of this nature have been in power for more than a decade, there can be no question of putting Humpty Dumpty together again and restoring the status quo ante * * * there is a finality, for better or for worse, about what has now occurred in Eastern Europe."

These are as peculiar words as have ever been written by an American who pretends to know something about history; for they are flatly untrue. The vested interests of evil do not become permanent or respectable or sacrosanct at the end of a 10-year period or any other period. Most of the history of the past 180 years consists of the successful struggles of oppressed peoples to destroy the vested interests of their oppressors.

If Mr. Kennan's statement were true, there would never have been a United States. The vested interests of England in its American colonies had existed for more than 150 years when our forefathers destroyed them and won our independence. The vested interests of the Hapsburg monarchy in Bohemia had been so absolute from 1620 to 1848 that the Czechs scarcely remembered that they had been a nation; but, in 1918, the Czechs won complete independence and ended every vestige of Austrian vested interest in their country.

For centuries, Italy was nothing more than a geographical expression divided between the vested interests of Germans, Austrians, Spaniards, Normans, French, and a gaggle of local tyrants. Yet the Italians, in the Nineteenth century, destroyed those vested interests and became a united nation.

HOW OTHERS WON FREEDOM

Poland, transformed by the third partition in 1795 into a mere conglomerate of vested interests of Russia, Prussia, and Austria, won her absolute independence in 1918. In my childhood the Cubans, with our help, ended the old vested interest of Spain in their country. In my youth the antique vested interests of Turkey in Syria, Iraq, Lebanon, Palestine, Jordan, and Saudi Arabia were destroyed.

Examples from the past could be multiplied, but let us look merely at what has happened since the close of the Second World War.

Great Britain has been pushed out of its vested interests in India, Pakistan, Ceylon, Burma, Jordan, Israel, and the Sudan.

France has been driven out of its vested interests in Laos, Cambodia, Vietnam, Morocco, and Tunisia. The Netherlands has given up its vested interest in Indonesia.

The Soviet Union, to be sure, since the Second World War, has established vested interests in 11 satellite states containing more than 700 million souls. But to assert that these Kremlin conquests are permanent is to drop to the level of an adolescent schoolboy, ignorant of history, attempting to pose as a worldly wise cynic while he smokes his first cigarette.

The fact is that every vested interest of evil succumbs in the end to man's will to be free. Since Mr. Kennan aspires to be taken seriously, his perversion of historic fact is as shocking as his readiness permanently to abandon the enslaved peoples of Eastern Europe to the Kremlin criminals.

4. Mr. Kennan then advocates that large neutral zones should be set up between the United States and the Soviet Union—not by neutralization of the Soviet satellites in Eastern Europe and the Balkans, not by the neutralization of Communist China, North Korea, and North Vietnam, but by the neutralization of our allies, Germany and Japan, and "the surrounding areas as well."

PLAYING INTO SOVIETS' HANDS

Nothing could better suit the Soviet Government's purpose to weaken the Western World. The physical strength of our side in the struggle for survival would be vastly reduced if Germany and Japan should be neutralized. Respect for the United States would be diminished to the vanishing point. Nearly everyone in the world would be convinced that the Soviet Union had us on the run, and most human beings—who are not heroes—would feel inclined to mount the Soviet bandwagon.

With regard to Germany, Mr. Kennan writes: "I have always doubted the wisdom of the decision to rearm Western Germany and to bring her into the Atlantic Pact. It seems to me that American policy should be aimed at the reunification of Germany and the earliest possible establishment of that country as a neutral factor that can blunt the sharp edge of military bipolarity in Europe and help, eventually, to mitigate the intensity of conflict between East and West.

"I am aware of the memories and inhibitions that cause the French and many other Europeans to contemplate such a prospect with unmitigated horror. * * * If our European allies insist that we must try to solve the European problem of today on the basis of the conditions that prevailed 20 years ago, then I am bound to say I see no solution of that problem at all, and no very good reason, therefore, why the United States should continue to commit resources to the vain hope of its solution. This, as I do not need to stress, is a very serious conclusion."

Thus Mr. Kennan advises us to cut off aid to our European allies unless they will accept the reunification of Germany at the price of her disarmament and neutralization. That would, indeed, be "a very serious conclusion" if it had been reached by the Government of the United States instead of

by Mr. Kennan. Fortunately, the two are not the same.

With regard to Japan, Mr. Kennan makes even more grotesque remarks. He regrets our conclusion of a peace treaty with Japan "which settled nothing with respect to the adjacent areas and provided for an indefinite stationing of American forces on Japanese territory." Then he states: "I suspect that this may have had more to do than we suppose with the outbreak of the Korean war." The Korean war started on June 24, 1950, more than 15 months before the peace treaty with Japan was signed on September 8, 1951. This is possibly the first time in history that a later event has been suspected to be a cause of an earlier event. Perhaps Mr. Kennan will now prove to us how the election of President Eisenhower in 1952 helped to produce the election of President Truman in 1948.

"I think," writes Mr. Kennan, "American policy ought to be pointed toward a solution in which the Japanese Archipelago, like Central Europe, could eventually come to constitute a bridge, and an area of reconciliation, rather than a bone of contention, between the two great world systems."

Here is wishful thinking of the type that is based on ignorance. The fact is that Japan's respect for the United States received a dagger thrust when Harry Truman dismissed General MacArthur, whom the Japanese revered. The death blow to Japan's respect for the United States was delivered when Truman's policy of acceptance of defeat by the Chinese Communists and the conclusion of an armistice at the 38th parallel, instead of at the Yalu River, was carried to the bitter end by President Eisenhower. Since then the Japanese have regarded us as a new-rich nation which has no idea how to use its money or its strength to insure its own survival or the survival of its friends.

Mr. Kennan says that he has "confidence in the maturity and enlightened self-interest of the Japanese people." That is more confidence than any Japanese has today in the political system of his country. A neutralized Japan would drift rapidly into the Communist orbit. In defense of Mr. Kennan it should be said that he probably does not understand the consequence of the measures he advocates since he knows almost nothing about the Far East.

Mr. Kennan knows the Soviet Union well. He was named after his great uncle who had written a best seller on the sufferings of the exiles in the prison camps of the Tsar. All his life Russia has been his romance.

He learned to speak Russian fluently and acquired an extensive acquaintance with Russian history and literature. In 1933, when I chose the secretaries for the first it has such destructive nuclear weapons that it can reduce our power of retaliation to negligible proportions by a sneak attack.

We are only now entering the period of supreme peril. Some Americans believe that American Embassy in Moscow, I selected Mr. Kennan as a junior member of my staff. An admirable subordinate, passionately interested in his work, he carried out my orders efficiently. He was, to be sure, inclined to give the Russians the benefit of every doubt—not because they were Communists, but because they were Russians—and he was apt to flee from harsh reality.

He had a book which he reread every year, and he imitated its balanced sentences in his writing. It was the Decline and Fall of the Roman Empire, by Edward Gibbon. Mr. Kennan's devotiton to that book gave him a pessimistic bent of mind for one so young. He was more captivated by declines and falls than by rises and achievements.

His views were stimulating but he found it almost unbearable to have a beautiful theory slain by a refractory fact. It was, therefore, entertaining to listen to him but unwise to take his notions seriously and, in spite of my liking for him, I acquired gradually a distrust of his judgment.

EMOTIONAL INVOLVEMENT IN RUSSIA

Mr. Kennan's appointment as Director of the Policy Planning Staff of the Department of State in 1947 aroused in me, therefore, lively apprehensions—which, unfortunately, turned out to be justified. His emotional involvement in Russia was so great that he could not bear the idea of standing up to the Communists with force, even in China.

In 1952, Mr. Kennan achieved one of his great ambitions: He was appointed Ambassador to Moscow. A few months later the Russians demanded his recall because of his indiscreet statements. He was astounded. He was so fond of the Russians that he had talked to them, and about them, as if he were reproving an elder brother, and he had not realized that they did not love him nearly so much as he loved them.

Since then he has spent most of his time at the Institute for Advanced Study at Princeton, N. J. That institute has nothing to do with Princeton University; and its inmates, from Dr. Robert Oppenheimer to Mr. Kennan, live in the higher atmosphere of nuclear physics and international morals.

The American foreign policy there evolved by Mr. Kennan is based on 4 main proposals:

1. Trust the Kremlin criminals.
2. Admit the Chinese Communists to the U. N.
3. Abandon permanently the enslaved peoples of the Soviet satellite states.
4. Encourage Germany and Japan to cease to be our allies and to become neutrals.

This is defeatism.

Mr. Kennan seems to have transferred his interest from the "Decline and Fall of the Roman Empire" to the "Decline and Fall of the United States." His advice, if accepted, would hasten the day when he would have the material to write that book.

But we are not defeated. If we were to have war with the Soviet Union tomorrow, we would probably win. We are not yet in as great peril as Great Britain after Dunkirk. To be sure, we have no United States standing behind us. We have no one standing behind us. In this fight we ourselves are the last reserve. And we know that within a few years the Soviet Union may feel that it has such destructive nuclear weapons that it can reduce our power of retaliation to negligible proportions by a sneak attack.

We are only now entering the period of supreme peril. Some Americans believe that we can cringe our way to safety; but most Americans have enough commonsense and physical and moral courage to face the fact that to try to appease the unappeasable is folly. We cannot turn a tiger into a cat by stroking it. We can shoot it. We can keep it ringed with fire until it loses its nerve and runs.

The essential, indispensable factor for our survival is the maintenance of our power to deliver, at any moment, on the Soviet Union a weight of nuclear explosive far heavier than the Soviet Union can deliver on us. That is the ring of fire.

If we maintain that ring long enough, the Soviet Union will, I hope, lose its nerve and turn and run. Khrushchev's admission that Stalin was a low and brutal criminal may gain for the living criminals of the Kremlin a slightly improved standing with their own people, and it may cause soft dupes and easymarks outside the Soviet Union to relax their vigilance and their defense against the tiger.

Yet, at the same time, the official revelation that Stalin was loathsome must have dealt an almost fatal blow to the Communist faith. Since 1918 the deepest source of strength of the world Communist movement has been the quasi-religious fanaticism of the believers in the gospel according to Marx, Lenin, and Stalin. Without sacrilege, it is possible to ask what would have been the disillusionment of the early Christians if a church council, 38 years years after the Crucifixion, had proved that St. Peter was a brutal criminal and that St. John was a torturer.

I have known something about Russians since 1914 when I was in Moscow at the outbreak of the first World War. I cannot imagine that the spirit of the Communist movement will survive unshaken the impact of the official admission of the truth about Stalin. I hope that the spirit of the tiger has received such a blow that he will slink away if we maintain our ring of fire.

I believe that, if we face the Soviet Union with an absolute determination not to cringe or appease or submit, and a happy will to face whatever the Lord God may bestow, be it honor or death, we shall win.

American Prisoners in Red China

EXTENSION OF REMARKS
OF

HON. T. JAMES TUMULTY

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 20, 1956

Mr. TUMULTY. Mr. Speaker, after the stirring speech my distinguished colleague, THOMAS J. DODD, of Connecticut, made here in the House recently on behalf of the American prisoners held by Red China, a crusade has started to rescue these forgotten Americans. In New Jersey intensive activity is taking place under the leadership of the Right Reverend Monsignor Cornelius J. Boyle, an energetic and devoted priest himself. I am sure all of us desire to do our share in ransoming these captives. The following letter and information sent to me by Mr. Allen C. Bradley, who is aiding Monsignor Boyle in this great cause, follows:

THE ADVOCATE,
Newark, N. J., June 29, 1956.

Hon. T. JAMES TUMULTY,
House Office Building,
Washington, D. C.

DEAR MR. TUMULTY: A short while ago Mr. THOMAS J. DODD, of Connecticut, made a speech on behalf of the American prisoners still in Red China. In that speech he asked other Members of the House to take up the fight in their own States.

With that thought in mind, I submit to you the enclosed articles. You will notice that something is being done for these Americans. Monsignor Boyle has appointed me to get the campaign under way. I might add at this time that it will be put on an archdiocesan level very soon, with Monsignor Boyle as director.

I was very fortunate to meet and talk to Father Harold Rigney while I was in Dallas, Tex., attending the Catholic press convention. The stories he told made me determined to see that no stone is left unturned until these Americans are set free.

You can feel free to tell the other Members of the House that we in New Jersey have not forgotten these men and are now ready to do something about their freedom.

Thank you very much for your cooperation. If there is any more information that you may need, please call on me. You may use the enclosed articles and this letter for the CONGRESSIONAL RECORD if you wish.

With best regards and personal thanks, I remain,

ALLEN C. BRADLEY,
The Advocate.

[From the Newark (N. J.) Advocate of June 16, 1956]

ESSEX COUNTY FEDERATION

A resolution to participate in the Freedom Crusade recently instituted by Rev. Harold Rigney, S. V. D., a recent prisoner of the Chinese Reds, was voted at the June 6 meeting.

Since his arrival home, Father Rigney has urged that American citizens deluge Mao Tse-tung, head of China's Communist government, with polite letters petitioning for release of 13 Americans still held prisoner. Eight of them are priests. Father Rigney suggested that letters be addressed to Chairman Mao Tse-tung, Peiping, China. He also recommended use of a 25-cent airmail stamp since this amount would equal the pay received by a carpenter in Red China for several hours work.

Msgr. Cornelius J. Boyle, spiritual director, announced this week that he would send letters to the parish organizations outlining the plan and urging cooperation of all members. He said he hoped the result would amount to many thousands of China-bound letters.

[From the Newark (N. J.) Advocate of June 30, 1956]

AMERICANS HELD IN RED CHINA

EDITOR: On September 10, 1955, Communist leader Mao Tse-tung promised release of all 13 Americans imprisoned in China.

Father Harold W. Rigney, a recently released China missionary, proposes a startlingly logical proposal which I heartily endorse.

Father Rigney urges a compaign of letter writing to Chairman Tao Tse-tung, Peking, China, advising him that you are a citizen of the United States of America, and the nature of your employment, who is greatly disturbed by the continued imprisonment of 13 Americans in China whom he, Mao Tse-tung, on September 10, 1955, promised to release.

The approximate pay for 1 day of a Chinese carpenter is 25 cents, therefore airmail postage costing 25 cents would be the most effective.

Communism is amazingly sensitive to public opinion, therefore positive action as suggested by Father Rigney is necessary.

Please remember these men in your prayers.

RT. REV. MSGR. CORNELIUS J. BOYLE,
Spiritual Director, Essex County Holy Name Federation, Newark.

Federal Aid to Classroom Construction

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorandum:

Federal aid to classroom construction; a memorandum for the Members, dealing with the Kelley bill and the proposed amendment based upon the Scrivner plan of Federal aid, prepared by RALPH GWINN, dated July 2, 1956

State	Kelley bill States will pay in	Kelley bill States will get back	Income tax collections fiscal 1954	Under Scrivner plan a sum equal to 1 percent of tax collections will be returned to the States
Alabama	$2,172,000	$8,968,658	$365,904,000	$3,359,010
Arizona	928,000	2,537,686	153,119,000	1,531,190
Arkansas	904,000	5,313,957	148,110,000	1,481,100
California	30,480,000	27,545,819	4,671,633,000	46,716,330
Colorado	3,588,000	3,611,322	553,265,000	5,532,650
Connecticut	7,364,000	4,782,562	1,168,589,000	11,685,800
Delaware	5,152,000	835,050	869,525,000	8,695,250
Florida	3,868,000	7,623,902	599,990,000	5,999,900
Georgia	4,008,000	10,237,501	581,573,000	5,815,730

NOTE.—Income tax includes collections for old-age insurance. Actual benefits would be somewhat less than shown in Scrivner plan after adjustment for that factor, an average of 7.2 percent.

Increasing Rates of, and Liberalizing the Basis for Payment of, Non-Service-Connected Pension and Service-Connected Compensation

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 27, 1956

Mr. HENDERSON. Mr. Speaker, some months ago a veteran from Zanesville wrote to me on the subject of the forgotten man, pointing out in great detail that the veteran of World War I had not been afforded the consideration from his Nation that the veterans of other wars had received and are receiving. It was pointed out that the veteran of World War I who had faced the enemy with as grim determination as the veteran of any other war had not received the benefits of a GI bill of rights or adjustment to civilian life such as have been afforded to the veterans of the more recent conflicts. In addition, this letter pointed out that the veterans of World War I have now reached the place in life where a great number of them are no longer employable.

We know, Mr. Speaker, that it is one of the tragedies of our American way of life that when a man has reached an age of 50, or 55, or 60, that it becomes increasingly difficult for him to find suitable employment to meet the necessities of life. Indeed, it is a sad commentary upon America and its tremendous resources and opportunities that those opportunities show themselves less readily to those persons of the advanced years. The problem has become more acute in America because of the fact that we are living longer and that a greater number of our citizens attain advanced age.

It has been the thought of many of the veterans of World War I that some assistance from a grateful Government whom they served so faithfully and well should be forthcoming. In many of the

communities throughout the United States organizations have been established by veterans of World War I to discuss and advocate legislation beneficial to them. There is one such organization in Zanesville, Ohio, which is the largest city in my district, and I have heard from the members of that organization on numerous occasions urging that Congress do something to benefit the veterans of World War I, for they have now reached the point in life which was reached by the veterans of the Civil War and the Spanish-American War for whom congressional action was forthcoming.

Specifically they have asked for consideration of a pension of $100 upon attaining the age of 60. It is pointed out that the average life of the veteran of World War I is now age 62 and that his years of life expectancy are not great. This bill does not go that far, but it is a step in that direction. This bill as amended will provide for a presumption of disability and a non-service-connected pension of $90 for veterans of World War I who have attained age 65. In voting in favor of this legislation I will have voted in behalf of the veterans of World War I, remembering "the forgotten man."

Address by Paul G. Blazer, Chairman of the Board of the Ashland Oil & Refining Co.

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 25, 1956

Mr. PERKINS. Mr. Speaker, as an illustration of the economic opportunities of our time, I ask unanimous consent to include in the RECORD the speech of Mr. Paul G. Blazer, chairman of the board of the Ashland Oil & Refining Co.:

My fellow members of Newcomen, speaking for the personnel of Ashland Oil & Refining Co., I take pleasure in expressing our appreciation of the honor conferred on our company on this occasion by the Newcomen Society in North America and the members of the Kentucky committee.

I hope, Mr. Chairman, that my presentation this evening of an account of the organization of a small oil refining company and its growth over a period of years, may interest you and call attention to a method of industrial development which is susceptible of wide application.

The roots of the organization which you are honoring extend back through many mergers and property acquisitions to the earliest days of the oil refining industry. Many personalities have contributed their business philosophies, as well as their energies and skills, to the various business undertakings which have been consolidated into the present Ashland Oil & Refining Co. and its subsidiary companies.

The present parent corporation was formed on October 31, 1936, when Swiss Oil Corp. and its subsidiary, Ashland Refining Co., were consolidated. But that is a comparatively recent date in the histories of the many loyal and proud organizations which have been joined and expanded to comprise the Ashland group of companies.

Swiss Oil Corp., a producer of Kentucky crude oil, was organized here in Lexington by J. Fred Miles in 1918. Mr. Miles, a capable and resourceful oil producer from Oklahoma, who had been attracted by oil discoveries in Kentucky, interested important Chicago and Cleveland capital in his Kentucky ventures and brought prominent Kentuckians into his organization. E. L. McDonald had resigned from his position as counsel of the Louisville Title Co. to take an executive position with Swiss Oil, and Thomas A. Combs, one of the most prominent and highly regarded business leaders of central Kentucky, became president of the company, but Miles, as vice president and general manager, continued for some years as the dominant factor in the company.

Union Gas & Oil Co. had discovered, in extreme eastern Kentucky, a large oilfield which Mr. Miles was most anxious to acquire. Having learned that the owners of that company were interested in getting into the business of oil refining, in order to refine the crude oil produced from their properties, he decided to purchase a suitably located small refinery, hoping thereby to facilitate the acquisition of the important Union Gas & Oil Co. properties. He outlined his plans and made a proposal to me when he learned, in October 1923, that I was planning to resign from my position with Great Southern Refining Co., which had its principal offices in Lexington and operated refineries there and at Pryse, Ky.

I had been thinking along similar lines and had in mind the transportation advantages of 2 small refineries which had been established a few years earlier adjacent to the Ohio River, 1 near Ashland and Catlettsburg, Ky., and 1 at Latonia, Ky. Also I desired a larger ownership participation in a refinery, since I had only a 3-percent interest in the Great Southern Refining Co., which had been organized in 1919 by my school classmate J. E. Shatford, with the financial support of Messrs. Desha Breckinridge, Leonard Cox, George Graves, Charles Manning, Frank Justice, Jim Combs, and other prominent Lexington businessmen.

Backed by funds supplied by Swiss Oil, I arranged to buy, at a price of $212,500, the little 1,000 barrel per day refinery of Great Eastern Refining Co., which had been promoted and built near Ashland by a chemist who previously had been associated with us at Great Southern. Messrs. Jack Dalton and John Kelly, coal operators of Huntington, W. Va., were the owners of the refining company, and John Grossenbach, whose business experience was limited to the coal industry, was the general manager. It was not surprising that the venture of these coal people into oil refining had proved unprofitable and they were glad to sell their refinery, including a small towboat and oil barge.

On February 2, 1924, Messrs. Combs, Miles, McDonald, and I were the incorporators of Ashland Refining Co., with a paid in capital of $250,000. We took over the operation of the refinery which had 25 employees who were working 7 days per week and 12 hours per day. I moved to Ashland. Since Swiss Oil had supplied the capital for the new venture, it is understandable that William Wapples, the only member of the Swiss Oil organization to come to Ashland, was our first treasurer.

Our refinery operations were successful from the very first month. We increased wages and reduced the hours of work. Within a few years, Ashland Refining Co., the small subsidiary formed solely to facilitate the purchase of some oil producing properties, began showing larger earnings than the parent company. Mr. Miles, who had not been active in the operations of Ashland Refining, became so impressed by the financial success of our venture that he left Swiss Oil and acquired personal control of an idle refinery at Louisville.

Each year we increased our refinery capacity, our sales volume, and our financial strength. Our large competitors were frankly puzzled; they continued to predict that we would go bankrupt like most independent refiners.

One afternoon in 1930, I received a telephone call from the owner of the Tri-State Refining Co., which a few years earlier had built a new refinery of modern design across the Big Sandy River at Kenova, W. Va., within sight of our refinery. He and I were close friends and keen competitors. He was inexperienced, however, in the business of oil refining and marketing. He told me that his plant recently had been losing almost $1,000 per day and that he would turn it over to us if we would assume and promptly pay off the accumulated indebtedness which he personally had guaranteed. He named an approximate figure of around $300,000 and we closed the deal over the telephone. I learned later that he had been trying to sell his refinery to one of the larger oil companies.

We operated that plant long enough to return our investment. We might have made it our principal refinery, except that it lacked room for expansion. Within two or three years, we moved its principal operating equipment across the river to our Catlettsburg plant. The purchase of the Tri-State Refinery, with its associated marketing facilities, was our first important expansion by acquisition.

The Ashland and Tri-State refineries received Eastern Kentucky crude oil through the facilities of the Cumberland Pipe Line Co., which, before the dissolution, had been one of the Standard Oil companies. It was a common-carrier line serving at first only refineries of the Standard Oil group, which included the Louisville refinery of Standard Oil of Kentucky, the Parkersburg, West Virginia plant of Standard of New Jersey, and the three refineries of Atlantic Refining Company at Philadelphia, Pittsburgh, and Franklin, Pennsylvania.

Because of our more favorable location in relation to the oil fields of Eastern Kentucky, we could afford to pay a higher price for that oil than our larger competitors. We paid our bills promptly, and each year more of the oil producers had begun selling their oil to us; by 1931, we had become the principal refiner of Eastern Kentucky oil. Also, we were taking practically all of the oil gathered by the 750-mile pipeline system of the Cumberland Pipe Line, which served more than 5,000 small oil wells.

In September 1931, we purchased the Cumberland Pipe Line system. It was the most significant acquisition we ever have made.

The Cumberland Pipe Line Co. owned and operated the Kentucky pipelines of the Southern group of pipeline companies, which had a network of thousands of miles of gathering and trunklines extending from the oil fields of Kentucky, West Virginia, and western Pennsylvania, to the large refineries located along the Delaware River. They were headed by Forrest M. Towl, located at 26 Broadway, in New York City, who as a young engineering graduate from Cornell University, had gone with Mr. Rockefeller in 1885, and had become chief engineer of the original Standard Oil Co. I thoroughly enjoyed my negotiations with Mr. Towl in connection with the purchase of the pipeline properties. He was truly a gentleman of the old school.

To provide a better perspective of the transaction between Ashland Refining and Cumberland Pipe Line Co., it is necessary to point out that the physical properties of Cumberland Pipe Line Co. represented an investment of more than $3 million constructed at a time when building costs were low. The depreciated value of the properties as carried on the books of Cumberland,

at the time of our purchase, was close to a million dollars, which was almost two-thirds as much as Ashland's total net worth. The principal stockholder in Cumberland was the Rockefeller Foundation, which owned approximately 25 percent. The balance of the stock was publicly owned, since it was traded on the New York Curb Exchange. Some of my friends and associates thought we were taking on more than we would be able to handle.

The Kentucky pipelines were reported as showing an operating loss of about $15,000 per month, and Mr. Towl, obviously, wanted to make a sale. We were anxious to buy the properties because ownership would assure our supply of eastern Kentucky crude oil. A purchase price of $420,000 was agreed upon, of which $60,000 was to be in cash and the balance in 4 installments of $90,000 each, payable every 6 months. It was one of the very few times that we have ever paid for properties in installaments. In addition to the pipelines, rights-of-way, pumps, tanks, and buildings, we were to receive such excess oil as might be in the "over and short account." Apparently no one knew—and certainly we didn't—the amount of oil in that account, as it did not show on the books of Cumberland. It turned out to be worth in excess of $100,000.

Within a few weeks, we had put into effect many economies which turned the previous operating loss of Cumberland into a profit of more than $15,000 per month, thereby providing the installment payments as they came due. Our economies did not involve any reductions in wages; Mr. Towl had agreed that Cumberland would take care of any employees we might not require. One girl in our office, with a comptometer, took over the work which was reported to have required much of the time of 15 men at Oil City, Pa., who had been receiving the crude oil runs by telegraph daily from each Kentucky lease and had been computing the number of barrels by hand. That was 25 years ago. Today, a large electronic computer could do the same work in a few minutes each day.

I ask your indulgence for having reminisced at such length concerning the details of the acquisition of our first refineries and of the Cumberland Pipe Line properties. Unquestionably, these transactions determined the future of our company by setting a pattern for the subsequent expansion which, without unusual risk, has enabled our small initial venture to grow into the organization which you of the Newcomen Society, and so many guests, are honoring tonight.

Our favorable purchases and successful operation of properties, which had shown losses for their previous owners, encouraged us to believe there must be many similar opportunities. Much of our expansion occurred during the early thirties when so many recently established companies, such as ours, were thinking in terms of retrenchment. Capital was not readily available; earnings tended to be meager, yet Ashland Refining was looking constantly for profitable expansion, and some of its most important acquisitions came during the depth of the depression.

We were especially interested in finding ventures connected with the refining, transportation, or marketing of oil products, which had failed to meet with success because of unfavorable situations which would be corrected. If they fitted into our overall objectives and we thought we could convert them into profitable operations, we were willing to invest our available funds, even though we knew there would be problems of the kind most people would prefer to avoid. In more recent years, however, our most favorable mergers and acquisitions have been facilitated by tax considerations or other personal reasons of the owners.

Ours is a highly competitive, rapidly growing industry which calls for constantly increasing capital expenditures. It is not surprising that the individual owners of some of the most successful independent oil companies have been unwilling to continue to reinvest all of their earnings, and frequently increase their indebtedness, in order to provide the new facilities required by an industry which becomes more technical and more complicated each year. Often a tax-free exchange of the stock of their privately-owned company for the stock of our publicly-owned company has offered them a satisfactory solution.

In a few instances we have taken over businesses which otherwise might have been obliged to liquidate. Occasionally, we have paid relatively high prices for properties which had a special value to us. We have not hesitated, on occasion, to purchase obsolete manufacturing equipment in order to acquire the associated sales volume. It is much easier to construct new equipment than to build sales. We have greatly expanded and modernized the most of the operations we have acquired. In fact, we have spent $41,500,000 for improvements to the plans and facilities we have purchased from other companies. Usually we have been able to help earnings by increasing production without increasing the number of employees. Almost invariably we have been able to raise wages.

Each of the many companies in the Ashland group has contributed not only physical properties, business experience, customer relations, and financial strength, but collectively they have developed a corporate personality which is as truly the composite of all its forebears as is the personality of a person the product of his heredity and environment. Of course, every business organization has its own distinctive personality; few corporations, however, so comparatively young as ours, have been privileged to draw upon the resources of so many predecessors and profit from such a remarkable business heritage.

The name of "Ashland" was adopted in 1936 for the new parent corporation because Ashland Refining Co., through its refining and marketing operations over a period of 12 years, had become better known than its parent, Swiss Oil; and the officers of Ashland, upon the death of Senator Thomas A. Combs, president of Swiss, had been elected to the management of that company. The original officers of Ashland Refining have provided, for the past 32 years, much of the management of the operations of the Ashland group of companies.

Looking through the roster of people who have contributed importantly to the success of the Ashland group, we find among them those who were associated with Swiss Oil, Union Gas & Oil, Great Southern Pipe Line, Great Eastern Refining, Tri-State Refining, Cumberland Pipe Line, Minamax Oil, Western Reserve Refining, Allied Oil, Central Pipe Line, Canton Refining, Cleveland Tankers, Lakeland Tankers, Aetna Oil, Freedom Oil, Valvoline Oil, Galena, Frontier Oil, National Refining, and many others.

Valvoline, Freedom, and Galena date back to the earliest days of the oil industry, when crude oil was refined to make lubricants and coal oil—25 years before the gasoline engine. Those names and their supporting organizations have retained their identities through the years, and now are an important part of the Ashland group. National Refining was a lusty, strong, independent oil company before the turn of the century. Their White Rose and Enarco brands were known to thousands. Cumberland began laying, in 1902, its pipelines, which continue to serve the oil fields of eastern Kentucky.

The Aetna Refinery was one of the first in Kentucky and was operating successfully when Swiss was organized to drill for oil, in 1918. Great Southern, which provided the initial refining experience for the management of Ashland Oil, built the first independent pipeline into Lee County, giving competition to the older, Standard Oil affiliated, Cumberland Pipe Line. Great Southern supplied crude oil to dozens of independent refiners, including 5 plants which now, more than 30 years later, are in the Ashland group.

Swiss Oil furnished the financing and was responsible for the organization of Ashland Refining in 1924, acquiring, in 1925, Union Gas & Oil, which then was the most important producer of Kentucky crude oil. Meantime, Ashland Refining had purchased the refinery and towboat and barge of Great Eastern Refining Co. as well as the associated marketing properties of Minamax. Tri-State Refining Co. then was building a competing refinery at Kenova, W. Va., to be followed by a river terminal at Covington, Ky., near Cincinnati, and then by their purchase of the extensive West Virginia marketing properties of Hi-Grade Oil & Gas Co. That same year, Allied Oil was organized in Cleveland to market fuel oil to the steel companies, receiving much of its supply from Ashland Refining. Allied was responsible for the organization of Cleveland Tankers, Lakeland Tankers, Canton Refining, and Central Pipe Line. Shortly thereafter, Frontier entered the scene as a fuel oil marketer in Buffalo, and later built a successful refinery.

Ashland built its first modern towboat and barges in 1936, and soon augmented its crude oil supply with purchases of oil from the Illinois Pipe Line at Owensboro, Ky., making its first movement of crude oil by water. Later, the extensive western Kentucky gathering system of the Illinois Pipe Line Co. was purchased by Ashland and combined into a joint operation with the Fordsville gathering system of another company, thereby further increasing Ashland's crude oil supply. In 1945, Ashland purchased from a major oil company more than 400 producing wells in Lee County, Ky., along with the affiliated refinery at Pryse and pipeline system formerly owned by Great Southern. Thus, those properties and the management of Ashland Oil became associated again after more than 20 years' separation. This acquisition permitted the consolidation of the Cumberland and Great Southern pipelines, which for so many years, had duplicated service to the same oil fields, their lines often lying only a few inches apart in the same creek bottom.

The merger into Ashland Oil in 1948, of Allied Oil and its affiliated companies added 50 percent to the size of the Ashland group. Ashland thereby secured a foothold on the Great Lakes, to be further strengthened by the important merger, in 1950, with Frontier Oil Refining Corp. at Buffalo. The Frontier acquisition included a well-located small refinery, a number of valuable gasoline service stations, 12,000 domestic heating oil customers, and an extensive industrial fuel oil business. A few months later, Ashland purchased the Findlay, Ohio, refinery of the National Refining Co. and gained, also, another fine sales organization. The linking of that plant by pipeline with the terminal at Toledo, acquired through Allied Oil, and thence by pipeline with a new terminal constructed at Detroit, put Ashland products into those great industrial areas.

Ashland also was strengthening its position in Kentucky by merging with Aetna Oil, thereby acquiring a refinery at Louisville and extensive marketing facilities in central and western Kentucky and along the lower Ohio River. About the same time, Freedom-Valvoline Oil Co. came into the Ashland family, giving the group a national advertised brand name—Valvoline—known throughout the world; and with a refinery equipped to manufacture premium quality motor oils and lubricants. Valvoline, which this year is celebrating its 90th birthday, is reported to be

the oldest trade name in the oil industry. It was awarded the gold medal for lubrication at the Paris Exposition, in 1875.

Kellogg petroleum products, a more recent acquisition, obtained through an exchange of stock, added more than 100 service station outlets in Buffalo and vicinity, and 5,000 fuel-oil customers—also, a fine sales organization to support the frontier refinery. Scores of other local marketing operations have been added to provide better distribution of our refined products in our principal marketing area, extending from Tennessee on the south to Wisconsin and Michigan on the north, and from Illinois to western Pennsylvania and New York State. Similarly, acquisition of important crude-oil-producing properties, in Texas, Louisiana, Oklahoma, Montana, and the Illinois Basin, added to our crude-oil supply.

Almost every month additional properties or companies are acquired by the Ashland group. Although the most of these additions are comparatively small, yet their acquisition is of vital importance, of course, to the personnel associated with the properties, and every acquisition makes it distinctive contribution; otherwise, there would be no justification for the addition, since increased size, alone, has no merit.

There are many problems inherent in the methods of expansion which we have used so extensively. Questions pertaining to personnel must be put at the top of the list. We consider the morale of an organization the most important single factor contributing to business success or failure. The feeling of personal insecurity, often associated with mergers, must be overcome. It must be replaced with the confidence that there will be greater opportunities and that every employee will be advanced without favoritism. Mergers must not result in stepchildren.

Every organization has in it much that is good and desirable, but each organization also has its weaknesses and peculiarities. A merger of two companies is far more than a financial transaction. Sometimes there are financial complications, but financial problems, because of their very nature, have a common denominator; in the case of our company their solution always has been simple, as compared with problems pertaining to people. Unquestionably, problems pertaining to personnel require more careful attention when large cohesive groups of people are added through mergers than when organizations expand through the selection and employment of individuals such as is characteristic of the usual industrial growth.

Mergers frequently require the reconciling of different philosophies of business. Planning and patience are necessary in order to avoid inequities to individuals and to protect personal pride. It is not easy to bring two groups of people, who have been trained differently, into a smoothly functioning team under a consolidated leadership. The acceptance of a certain amount of entrenched inefficiency may be necessary; likewise new talent must be recognized and rewarded. A period of months may be required in which to relocate people into positions where their abilities may be better utilized and their shortcomings minimized.

In connection with every merger or important acquisition there usually will be differing policies as regards employee relations, wage scales, pensions, insurance, retirement, the selection and training of supervisors, delegation of authority, the type of executive organization, communications between individuals and departments, and dozens of varying customs which can become a source of dissatisfaction. All of these, and many other factors, some of which are quite intangible, directly influence the morale of an organization.

A critical analysis of the basic business policies and philosophies of the Ashland group of companies, which I believe is appropriate for this occasion, is difficult for me to present, since I have been so closely associated with their development.

To provide a more objective appraisal, I shall take the liberty of quoting excerpts from a dissertation submitted by Joseph L. Massie to the faculty of the School of Business of the University of Chicago, in connection with his candidacy for the degree of doctor of philosophy. The subject of his thesis was Management of a Growing Company: Ashland Oil & Refining Co.

Dr. Massie, a student of business management, who formerly taught that subject at the University of Kentucky, and now is assistant professor of business administration at the University of Chicago, spent the greater part of 3 years studying the history and management of our group of companies. The records of the company since the organization of Swiss Oil and Ashland Refining, including personal correspondence and my hundreds of reports to the directors over a period of more than 30 years, came under his careful scrutiny. He interviewed scores of people, including our competitors.

Under the heading of Objectives of the Management, Dr. Massie states:

"Survival was the primary objective of the management in the early period. Although large profits were made in the first few years, the management refrained from expanding at too great a rate. The conservative credit policy, the retention of earnings, and the continued use of relatively old equipment were reactions of the Blazer management to the earlier policy of the Swiss Oil Corp. Probably Blazer reasoned that first he must build security within the structure of the Ashland Refining Co. His early success in the development of a good credit rating for the subsidiary and the ability of the subsidiary to obtain funds on its own credit, illustrate the result of this drive for security first.

"After survival seemed assured, the primary objective changed to gaining greater security of the company's competitive position. In this connection growth became important. While growth itself never appeared to be an objective, numerous comments pertained to expansion as a means of 'insurance' * * *; in the later years he appeared to fear that the company might become too large.

"A third objective of the management related to management's responsibility to employees and to the public. The development of the Ashland family illustrates a means by which the management sought to gain its goal. Location of the firm in a small community caused the management to identify its goals with those of the locality. This objective which involved treating each employee on a personal basis, had definite effects upon techniques of management.

"The family goal of the management established an atmosphere that permitted the development of strong informal organizations. While these spontaneous groups often were evident only upon close study of the operations, they formed a most important aspect of the total organizational picture.

"This objective extended to all those with whom contacts were made, e. g., the community, business suppliers, and customers, etc. The chief executive felt that good public relations could best be achieved by every operating employee without formalization of functions. As a result, no executive held the title of public relations specialist. It was felt that an atmosphere of informal action rather than formal planning would result in more sincere, and therefore more effective, public relations.

"As the company became larger the management initiated several actions in an effor to maintain high morale by means of the family concept. In line with the theory held by the chief executive that it would be advantageous for the employees to own the stock of their company, the company offered several stock purchase plans to employees, beginning in 1938. A type of profit-sharing plan was initiated in 1947 in which 'employee dividends' were paid quarterly to employees and declared by the board of directors in the same manner that the board declared dividends on stock.

"A fourth objective of the management was to promote competition in the industry through positive actions. Although the chief executive managed a small company, which was the type that the Government sought to help, he consistently fought efforts to freeze a formal pattern by regulation of the industry. This attitude first became clear during the days of the NRA codes in the 1930's when Blazer was an important industry leader on Government committees. This experience with Government administration had a lasting effect upon his ideas of management. Many of the formal techniques employed in government did not fit administrative experiences in the small company. In December 1933 he first indicated his thinking to the board of directors: 'Our company * * * has less to gain and more to fear than others from this regimentation of the industry.' It was his belief that Ashland's advantages were based upon a unique group of factors which would be neutralized in any governmental effort to 'stabilize' or 'regulate' the industry; a small growing company should not seek to freeze a pattern in which it has a small share.

"Throughout the 30-year period, Blazer took and aggressive part in the fight of the independents against the majors; yet he preferred to emphasize direct competitive means rather than appeals to Congress or to the courts. In fact Blazer gave testimony before congressional committees which had the effect of supporting the interests of the major companies. Several times this action was taken to show the majors the importance of the support of independents—a part of the larger picture of bargainging power with the larger companies. Such moral suasion to get an even break from the large companies, e. g., through admittance into pipelines, through exchanges of gasoline, etc., were in Blazer's opinion much more effective than appeals to legislative or judicial power.

"Underlying the concepts of management which evolved in this company, the idea of flexibility has been pervasive and fundamental. The emphasis that the Chief Executive placed upon this single idea was fundamental to most of his managerial techniques. Flexibility in this context refers to the quality of adaptability to external changes, susceptibility to modification of actions, resiliency of policies, and responsiveness of the entire organization to meet new problems; it is the antonym of rigidity, unchangeability, inflexibility, and inelasticity.

"The recognition of this concept of flexibility is by no means new; many writers have referred to certain aspects of the idea. None, however, appear to have placed as great an emphasis upon its application to a growing firm as did the chief executive of the Ashland Oil & Refining Co.

"A major part of the concepts of management that proved useful to this management can be classified under 5 distinct types of flexibility: (1) technological flexibility, (2) marketing flexibility, (3) financial flexibility, (4) personnel flexibility, and (5) organizational flexibility."

In his comments on personnel flexibility, Dr. Massie states:

"A fourth aspect of flexibility relates to dependence upon executives who are 'generalists' in lieu of specialists. Blazer felt that this phase of flexibility resulted in high morale and good cooperation and was, therefore, essential to other aspects of his philos-

ophy. He outlined this idea in a commencement speech, in 1950:

"'The demand for trained men to fill the best jobs in large companies exceeds the supply. There are more vacancies near the top than down the line. I don't know why that should be, unless it is because large business is inclined to make specialists out of its key people, thereby precluding breadth of experience. Possibly a contributing factor is the necessity for the various levels of authority in big business to make decisions and assume responsibility for those under them. Or it may be because so much emphasis has been placed on technical training and not enough on those qualities which make for leadership. In that connection, we must never forget that essentially we shall always live in a world of people—rather than in a world of things. Others can do for us more than we can do for ourselves.'"

I am most appreciative of Dr. Massie's permission to quote so extensively from his analysis of the objectives of our company and of his appraisal of the philosophies of our management—particularly as regards our attitudes and relations with employees, with the United States Government, and with the public.

These fields of human relations are deserving of, and are receiving, greatly increased attention from all corporate managements. As a company grows, the complexity and the importance of these relationships increase. In an expanding industry, however, continued corporate growth, and skill in the solution of related problems appear to be necessary for competitive survival. The degree of success of management in meeting these interesting challenges appears to me to be of even greater significance than the growth of the business.

As Ashland Oil has continued to grow, so we have struggled to retain the informal, friendly organization of a small company. We have endeavored to inject into our relations with the public, our employees, customers, and stockholders, what I like to think of as a small-town, large-family attitude. That becomes increasingly difficult now that we are owned by 30,000 stockholders, and operate in hundreds of communities through a number of thousand employees, with sales of $250 million per year.

We hope, however, that we have engendered throughout our entire organization a loyal, friendly, cooperative spirit, which will leave its imprint for many years. If we have accomplished that, we need have no fears concerning the future.

Tribute to Representative Clifford R. Hope

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. HOEVEN. Mr. Speaker, Clinton Davidson, author of This Week in Washington, has paid a fine tribute to our colleague, Representative CLIFFORD R. HOPE, who is soon to retire from Congress. Under leave to extend my remarks, I include the article as follows:

In a few days Representative CLIFFORD R. HOPE will close his office in Room 1111, New House Office Building, and go home to Garden City, Kans., a retired Congressman.

It will be a voluntary retirement after 30 years in Congress, years in which he has played a leading role in the development of farm legislation. Few men have served in Congress with greater distinction, or more unselfish devotion to the cause of agriculture.

CLIFF, as almost everyone knows him, has been more than an outstanding legislator. He is one of the finest men, in every sense, that we have known in more than 25 years in Washington.

CLIFF is listed as a Republican, but he always has placed the interest of agriculture above that of the party. In the past 4 years, 2 of which he served as chairman of the House Agriculture Committee, he has differed frequently and sharply with the farm policies of Agricultural Secretary Ezra Taft Benson.

No farmer or representative of farmers has ever been turned away from CLIFF'S office. He has made hundreds of speeches to farm groups in every part of the Nation. Few men in Congress, if any, have a more sympathetic understanding of farmers and farm problems than CLIFF HOPE.

He very probably has had a major part in the writing of more farm legislation than any other man who ever served in Congress. His knowledge of an interest in agriculture includes every phase of it in every part of the country.

He is a quiet, thoughtful man who seldom loses his temper. His reputation for fairness has won and held the friendship and respect of both Republicans and Democrats in Congress, as well as that of farm spokesmen who appear before the Agriculture Committee.

CLIFF came to Congress from the Fifth District of Kansas in 1926, and was one of the few Republicans to survive the 1932 Roosevelt landslide. He became a member of the House Agriculture Committee his first term in Washington, and the ranking minority member in 1933. He served as chairman in 1949 and 1950, and again in 1953 and 1954.

One day last month a portrait of CLIFF HOPE was unveiled to hang permanently in the House Agriculture Committee hearing room, one of the four great farm representatives so honored in over 150 years. Chairman HAROLD COOLEY, a North Carolina Democrat, in paying tribute to CLIFF, said:

"No man in either House of Congress has made a greater contribution to the farmers of America than CLIFF HOPE. His life has been a blessing and a benediction not only to farmers but to all people of this great country."

The Fallbrook Case

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. UTT. Mr. Speaker, under leave to extend my remarks I wish to include the following article which appeared in the June 1956 issue of Western Water News. Mr. Phil D. Swing, who wrote the report which the article summarizes, is a former Member of Congress from southern California:

THE FALLBROOK CASE—ANALYSIS OF APPELLATE COURT REVERSAL OF YANKWICH DECISION

In view of the continuing interest in the Fallbrook case and the fundamentals of Federal-State relations which were brought into focus by the recent decision of the United States circuit court of appeals, a summary of the decision is presented in this issue of Western Water News. The summary comes from a report which was made to the directors of the Fallbrook Public Utility District by their attorney, Phil D. Swing, who participated in the case as a friend of the court.

BACKGROUND OF THE CASE

Early in 1951, the United States Government filed a complaint against the Fallbrook Public Utility District, the Santa Margarita Mutual Water Co., the Pratt Mutual Water Co., and some 3,000 individual farmers in the Fallbrook area. The Government accused the water users of taking water from the Santa Margarita River in direct violation of the rights of the United States of America as it was involved in the marine base development at Camp Pendleton in San Diego County.

BROAD INTEREST IN THE CASE

The first case to come to trial before United States Judge Leon Yankwich was against the Santa Margarita Mutual Water Co. On July 1, 1953, after a protracted trial, Judge Yankwich decided in favor of the Government and the case was appealed to the Ninth United States Circuit Court. The Attorney General of California, Edmund G. Brown, entered the case and actively participated. The Santa Margarita Mutual Water Co. was represented by William B. Dennis.

The Yankwich decision was reversed by the appeal court, and the case has been remanded to the United States District Court in Los Angeles. Possibility of appeal to the United States Supreme Court by the Federal Government has been recognized, but no definite decision has been made as to disposition of the case. No disposition has been made of the cases against the Fallbrook Public Utility District and the several thousand farmers.

POSITION UPHELD

In summarizing the case, counsel Swing said that: "An analysis of the formal opinion of the court shows that the position and contentions of Fallbrook have been fully upheld and sustained. This can be said without in anywise minimizing the credit due the attorney general and the attorneys for the State division of water resources for the splendid briefs prepared and filed by them in the case."

Enumerating the points brought out in the decision of the court of appeals, Swing reported to the Board: "'The admitted 'sovereignty' of the United States over the lands within Camp Pendleton, did not give the Federal Government any greater rights against upper riparians and appropriators to the waters of the Santa Margarita River than a private landowner would have had. The exclusive jurisdiction of the United States stopped at the boundary lines of Camp Pendleton and while after it got the 'physical possession of the corpus of the water' it could then use it for whatever purposes and wherever on Camp Pendleton it chose, this was not evidence ever of enforcible 'property rights in the flow against upper riparians and appropriators.'

"The judgment was reversed because it declared there was no surplus water subject to appropriation. The opinion declared that the trial court's findings, that there was no surplus water, 'are not well founded in the present record'."

PROCEDURE ABUSED DISCRETION

Swing reported that the decision held back to the end its most conclusive reason for reversing the judgment, to wit: separate trials of separate defendants. Fallbrook had from the very beginning protested this method of trial but the Government's attorneys insisted upon it. Now the appellate court declares that procedure was unwarranted and constituted an abuse of discretion.

The decision said: "The only proper method of adjudicating the rights on a stream, whether riparian or appropriative or mixed, is to have all owners of lands on the watershed and all appropriators who use water from the stream involved in another watershed in court at the same time.

"The trial court violated this principle by issuing a declaratory judgment as to the right of the United States as against one claimant whose rights were junior, which had the effect of preventing a trial of the other water rights involved without giving a hearing as to the individual owners."

MILITARY NECESSARY VERSUS CITIZENS' RIGHTS

In analyzing the decision, Swing said: "The judgment was reversed because it recognized and approved military uses out of the watershed as a substitute use for the Government's riparian water right.

"The appellate court said: 'The Government brief blares out like a trumpet the military necessity in the use of Pendleton against the aggressors. It was on the postulate that the United States of America could utilize water in the State of California successfully to wage war that the case was tried. This reasoning seems to have had effect on the findings of the trial court.'

" 'The theory of the Government agents seems to be that, if a military post be established upon the mouth of a stream and the State voluntarily cedes sovereignty of the area, on the ground of military purposes and future military necessities, the Government obtains the right to use all of the water which in the state of nature flowed there.

" 'The steady beating of the war drums in the Government's brief by references to military necessity tends to deflect full consideration from the property rights of ordinary citizens'."

SANTA MARGARITA'S RIGHTS

Swing reported that "the rights of the Santa Margarita Mutual Water Co. were lightly considered by the appellate court. The decision in discussing the rights of Santa Margareta Mutual Water Co. said:

" 'The trial court found that Santa Margarita had not made any diversion and the State had issued no permits for diversion or storage. In other words, here was a paper application.

" 'If the partial judgment in this case had only gone to the extent of declaring under the laws of California one who has filed an application for appropriation of water, which had not been acted upon by the State authorities and under which no diversion had been made, acquired no privileges which should conflict with the vested real property rights of riparian owners and established appropriators, no appeal would probably have been taken.'

" 'The Government apparently desired to try Santa Margarita because it was obviously in the weakest position of any prospective user on the stream'."

Labor Racketeering

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. ANFUSO. Mr. Speaker, the Daily Mirror last Friday finished an exposé on labor racketeering written by that crusading reporter, Victor Riesel, who was blinded a short time ago because of his previous exposés of labor racketeering.

Mr. Riesel has submitted shocking evidence that mobsters, hoodlums, and cheap labor racketeers have:

First, interfered with our national security "by withholding workers from employers whose projects were racing for deadlines set by contracts with the Federal Government." Some of these contracts pertained to our atomic energy research program.

Second, compelled businessmen who wanted to bid on Government contracts to first consult certain union officials to determine the take of these crooked union officials on the contract. If one dared to bid on a Government contract without the union bosses' permission he would be forced out of business.

Third, threatened and bribed public officials, judges, and prosecutors.

Fourth, murdered at least 200 other union officials throughout the United States who dared to interfere with their rackets.

Fifth, created a super second government run by an army of thugs operating under the laws of the underworld.

Mr. Riesel's daily column in the Daily Mirror has for years blazed away at labor racketeers. Until the foul acid attack on him he felt himself immune because of his status as a reporter. He pathetically stated this observation in his exposé:

It is bitter to realize that all the glare into the snakepit did not move the public.

He concluded by challenging the Congress of the United States to take proper action. Speaking of congressional probes, he says:

There must be congressional probes. Otherwise the ball falls between two outfielders. The Government finds that it can't handle clever criminals on any charges except income-tax evasion. So, some of the worst hoods get away with sentences as short as 8 months on tax raps. There just are no laws to deal with the subtleties of the crime cartel and to jug men like Frank Costello.

Mr. Riesel also told the millions of Mirror readers that previous congressional probes have been allowed to die when they hit pay dirt. Referring to our own 84th Congress, he made this blistering accusation:

Why, after Illinois Senator PAUL DOUGLAS found a score of union officials using welfare and pension funds as their own money, was his investigation permitted to die?

Mr. Speaker, it is my considered opinion, and I have spent a restless weekend thinking about this matter, that we cannot let this defiance of law and order to go unchallenged. We cannot permit a second government within the United States. Congress, and only Congress, has the power to write the laws that would put an end to this sort of racketeering.

I am reminded, Mr. Speaker, that the union officials involved are only a small fragment of the large body of union leaders who have battled, and continue to battle, the crooks, that the millions of men and women of organized labor are pleading with us that we drive the crooks and hoods out of their unions.

Without the power of the Government many union officials have risked their lives to clean their own houses. Most outstanding are:

First. Samuel Gompers, the father of the labor movement himself.

Second. George Meany, president of the AFL–CIO.

Third. Walter and Victor Reuther, of the Automobile Workers Union.

Fourth. Mr. Alex Rose, president of the Hatters Union.

Fifth. Mr. David Dubinsky, president of the International Ladies Garment Workers Union.

Sixth. Mr. Joe Curran, president, National Maritime Union.

Seventh. Mr. Jacob Potofsky, president of the Amalgamated Clothing Workers Union.

Eighth. Mr. Paul Hall of the Seafarers International Union.

Ninth. Mr. Luigi Antonini, vice president of the International Ladies Garment Workers Union.

Tenth. Mr. Edward Mollisani, member, general executive board of the International Ladies Garment Workers Union.

Eleventh. Mr. August Bellanca, vice president, Amalgamated Clothing Workers Union of America.

There are many other unsung heroes in the labor movement who are daily battling the crooks.

Mr. Speaker, I am this day introducing a resolution calling for a full-scale investigation of labor racketeering and all other interference with the proper conduct of labor unions; that this investigation be made by a select committee of the House who are after all the true representatives of the people; and that this committee have all the necessary powers to subpena and the right to call on any agency of our Federal Government to assist in this investigation.

Let us have a complete and full study. Let us call on Victor Riesel and the public to present such facts as they have at their disposal. Let us call on the honest labor leaders with a record of defying the hoods to present their suggestions.

In the end we should be able to write legislation that would clean up the labor movement and keep it clean.

Crimes of the Communist Conspiracy

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. DODD. Mr. Speaker, for many years leaders in the United States and elsewhere in the free world have been charging the Communist conspiracy with a wide range of crimes against humanity. Many of these charges involved crimes which, by their magnitude and cold cruelty, almost defied belief. Eye witnesses to these crimes who later escaped to freedom have added their testimony to support the charges made against the elite class of communism. Still others, who themselves were once Communists, have come forward to add more evidence to a record of crimes against humanity which knows no equal in history.

In our lifetime we have witnessed the rise and fall of the Nazi tyranny with a black record of crimes against humanity which shocked all recent people. Following World War II the criminal leaders of the Nazi conspiracy were brought to

justice in the international war crimes trials at Nuremberg. As executive trial counsel at the trial of the top Nazi leaders, I came to know the details of those terrible crimes. In the many months devoted to the preparation for and trial of those international criminals, we pieced together one of the greatest human tragedies ever to be recorded in the dismal record of man's inhumanity to man.

The 83d Congress created the Select Committee To Investigate Communist Aggression. It was my privilege to serve as a member of that committee. In that capacity, we examined hundreds of witnesses under oath and made a careful examination of thousands of affidavits attesting to the criminal nature of communism and the many crimes committed in its name.

This intensive inquiry lasted for 2 years and was climaxed with the submission to Congress of 27 official reports which have since been universally hailed as among the most authoritative works on the conspiracy of communism available anywhere in the world. But with all this work, which includes voluminous information on some of the most extensive crimes of communism, the job of completely documenting all such crimes and identifying all the persons implicated in them is far from complete. To accomplish this task will require a full-time body, officially authorized and operating under rules and procedures, which will assure the orderly collection and verification of all facts and evidence as well as individuals implicated in the crimes.

The urgency for going ahead with this project is emphasized by one of the speeches of Communist Party Boss Khrushchev at the 20th Congress of the Communist Party in which he charged Stalin with many terrible crimes. Khrushchev by no means included all the crimes against humanity committed by the Communist leaders, but he performed a real service when he testified that Stalin had both directed and participated in crimes of mass violence, genocide, and political murder. But Communist Party Boss Khrushchev neglected to fill in a number of essentials which are important both for the record and for the judgment of all mankind. Here is some idea of what I mean by details:

First. What part did Khrushchev, Bulganin, Molotov, Zhukov, Mikoyan, Kaganovich, Voroshilov, and other Communist leaders play in the decision to carry out these crimes against humanity and the actual carrying out of the Stalin order?

Second. Did not these same leaders of communism praise Stalin for his inhumanities and cloak them with deceptive phrases so as to keep the truth from the people of the world?

Third. What acts of opposition, if any, to these crimes were engaged in by the Communist elite who now attempt to place all the blame for these terrible crimes upon Stalin and Beria?

Fourth. Could Stalin and Beria alone have carried out this long list of crimes? If not, what action has been taken to punish all those who played the cruel game of tyranny with Stalin and Beria?

Besides, Khrushchev neglected to even mention some of the worst crimes committed against humanity during the Stalin reign. Here are but a few of them:

First. The deportation of 100,000 patriots from Estonia, Latvia, and Lithuania to Russian Siberia in the course of 48 hours during the tragic days of June 13 to 14, 1941. It is an established fact that General Serov, now chief of Internal Security of the U. S. S. R., issued NKVD Order No. 001223 which set in motion the mass arrests and deportation in the dead of night of these good people. But who were the higher-ups authorizing this action and who were all the people who carried out its evil ends? For example, what part did Molotov, Vishinsky, or Malenkov play in these crimes?

Second. The false arrest and forced deportation to the U. S. S. R. of over 100,000 Hungarians from their homelands in 1945–46, and the studied effort to liquidate all Hungarian leadership, such as that symbolized by Cardinal Mendzestz.

Third. The slaughter in the Polish Home Army of patriots, which occurred when Moscow encouraged these patriots to rise up against the Nazis as the Red Army approached Warsaw, and when the battle was at fever pitch the Red Army halted across the river from Warsaw. What part did Zhukov, as marshal of the Red Army and actual field commander in that area, have in this cruel plot to destroy the Polish Home Army?

Fourth. The manmade famine in the Ukraine during 1932–33 which caused the death by starvation of 5 million Ukrainians at a time when the crops in that country were better than average. Molotov was then first secretary of the Communist Party in Kiev, a position that controls all that happens in Ukraine. Khrushchev was then a party functionary in the Ukraine, and a very zealous one. How could either of these men possibly escape responsibility for this terrible crime against humanity?

Fifth. The calculated plan carried out in Slovakia to destroy all the leadership elements in the population and to replace them with foreign Communists who are engaged in an effort to break the spirit of the Slovak nation which for 1,000 years has struggled against foreign occupation and for national independence. Who are the Communist elite responsible for this crime?

Sixth. The slave-labor system of the Communist empire takes its manpower from every one of the nations under the heel of the Kremlin. Are not the present leaders of communism responsible for the enslavement and death of millions of people by permitting this system to persist?

Seventh. Armed aggression against non-Communist nations, causing death, maiming, and tragedy for millions of innocent people. Korea and Vietnam are the most recent examples of this type of crime against humanity. What part did Zhukov, as the leading military strategist of the Red army, play in mapping out the plans for these ruthless aggressions and for putting them in motion? Thousands of American mothers and fathers, whose sons died or were wounded in the defense of human freedom in these countries are entitled to the answer to this question.

Again, Mr. Speaker, these are but a few of the major crimes committed by the Communist conspirators which should be fully recorded and documented by an international agency.

There is a tendency these days to forget the true nature of communism. The Russians are engaged in an all-out campaign to confuse and dim the memory of free people on the real facts about life under communism. There are dangerous signs of a softening up process among free nations as the illusion of peace is advanced by the Communists. Our basic free world alliance, the North Atlantic Treaty Organization, has shown signs of weakening as the false belief spreads that the danger of another war of aggression by the Communists has passed. Many nations which up until recently have sought a neutral course in world affairs are now drifting into the Communist orbit. These are all danger signs for those who work and pray for peace because they can lead nowhere but to war—under conditions which would be favorable to the Communist conspiracy.

It is for these reasons, Mr. Speaker, that I have introduced in the House today, House Joint Resolution 668, because I feel this resolution represents positive action we can take in the cause of a just and lasting peace.

I include the text of that resolution at this point in my remarks:

House Joint Resolution 668

Joint resolution to urge the creation of an International Juridical Commission within the framework of the North Atlantic Treaty Organization in order to document the crimes against humanity committed by the international Communist conspiracy and to reduce the dangers of world war III

Whereas there is an abundance of evidence now available to support the charge that the leaders of the international Communist movement are guilty of a long list of crimes against humanity; and

Whereas there are many persons in the free world able to give eyewitness testimony to the crimes against humanity committed by the leaders of communism and to identify official documents, directives, records, and other written evidence necessary to support the essential details of such crimes; and

Whereas the orderly collection and safekeeping of such evidence and testimony is essential in order that a just and truthful account of Communist crimes be made a part of history; and

Whereas the leaders of the international Communist movement are now engaged in an intensive campaign to place sole guilt and responsibility for these crimes against humanity upon the deceased Dictator Stalin thus relieving themselves of complicity in such crimes; and

Whereas the effort of the present rulers of the Kremlin to absolve themselves from complicity in a long list of crimes against humanity is aimed at covering the conspiracy of communism with a deceptive cloak of respectability which can only lull free people into a false sense of security, divide the free world alliances, and rapidly increase the danger of world war III;

Whereas the experience gained at the International War Crimes Trials at Nuremberg following World War II demonstrated that the scarcity of authentic records, sworn tes-

timony of eyewitnesses, and other documented evidence made difficult and in some cases impossible the prosecution of persons who were participants in a wide range of crimes against humanity; and

Whereas the North Atlantic Treaty Organization is a grouping of free nations dedicated to the defense of human freedom and the safeguarding of such nations against Communist aggression: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That it is the sense of Congress that the establishment of an International Juridical Commission, within the framework of North Atlantic Treaty Organization, is both necessary and timely in order to document all available evidence on the crimes against humanity committed by the leaders of the international Communist conspiracy; to prevent those individuals implicated in such crimes from purging themselves of guilt by passing all responsibility to former leaders of the conspiracy now deceased; to prevent the conspiracy of communism from cloaking itself with unwarranted respectability and to reduce the dangers of a world war III.

The President and Secretary of State are respectfully urged to take immediate steps to cause the establishment of such an International Juridical Commission within the framework of North Atlantic Treaty Organization.

Bars Up for Out-of-State Students

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Bars Up for Out-of-State Students" which appeared in the June 28, 1956 issue of the Messenger, of Madisonville, Ky.

The editorial is as follows:

BARS UP FOR OUT-OF-STATE STUDENTS

The New York Times, in conducting a survey among 48 State universities, including our own university at Lexington, finds that all of them—under the pressure of ever-growing enrollment—are finding it necessary to make admission of out-of-State students more difficult and more expensive.

The trend in this direction, which educators told the Times investigators isn't due to sectional antipathies, but is the result of a realization that the first duty of a State is to provide an education for its own residents, is gathering speed. Less and less room exists for nonresidents from year to year, so the story goes, and the universities can't see much improvement in this regard ahead.

The usual role to hold nonresidents to a reasonable minimum is to require that they have higher grades than resident students, and that the nonresidents be required to pay a higher tuition rate. Ohio State University, for instance, insists that nonresidents have grades in the upper 10 percent, while most others require that they be in the upper 50 percent.

As for relying on high uition fees to discourage nonresidents, Vermont sets the fastest pace, the study shows. Vermont's tuition for nonresidents is $720 a year, compared with $360 for Vermont, for instance. North Dakota has the lowest out-of-State tuition—$189—with the fee for North Dakotans $129.

On a national average basis, the fee for nonresidents is $413 and for residents $180.

Admissions directors interviewed in the survey predicted that the trend toward limiting nonresidents even more strictly is going to spread instead of narrow, since the enrollment in schools of higher education is growing all the time. At present it is 3 million, a figure which is twice what it was 15 years ago.

By 1970, they predict in a glimpse into the future, it will be up to 6 million.

When 1970 rolls around, unless the States can provide additional facilities, it is forecast that nonresident students on a public campus will be a novelty, as they were many decades ago. That is because no State is going to turn away its own residents to make room for those from other States who want to attend out-of-State schools.

Nor can they be expected to do so.

Excerpts From Addresses Made on the Floor of Congress Relative to Farm Problems by Hon. J. Harry McGregor

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. McGREGOR. Mr. Speaker, I feel that the people whom I represent in Congress would like to know of my activities and my position on various issues. I recognize that time and space make it impossible to cover all subjects. However, knowing the interest of the farm group in legislation directly affecting them, I would like to review a portion of my activities on this subject.

MAY 4, 1955—CONTROLS AND PRICE SUPPORTS

Mr. Speaker, as one who is sincerely endeavoring to seek a solution to some of our farm difficulties, I took a poll of the 17th Ohio District trying to learn just what our farmers and our people are recommending. The following were the questions and the replies received:

Which is your choice on the farm program relative to price support and crop control?

One hundred percent price support and right crop control. Yes, 8 percent; no, 92 percent.

Flexible price support and medium crop control. Yes, 64 percent; no, 36 percent.

No price support and no crop control. Yes, 30 percent; no, 70 percent.

This clearly demonstrates to me, Mr. Speaker, that my constituents are thoroughly familiar with the fact that the 90 percent parity program has been the cause of tremendous farm surpluses which is now costing us approximately $1 million per day for storage and maintenance services. My farmers are also of the definite opinion they want a minimum of Federal controls and are looking forward to the time when they can live as free citizens without Government interference. If the New Dealers are going to continue to force rigid controls upon the farmers under the guise that they, the farmers desire it, then they should be reasonable and allow all farmers to vote on the referendum. It is unfair that all farmers should be forced to abide by the decision of a referendum vote when all farmers are not given the right and opportunity to voice their views by ballot.

Why not establish a program that will ultimately allow us to get rid of controls, Mr. Speaker, so that the farmers of today will be able to make an honest living and not be dictated to by some bureaucrat who, in many instances, knows nothing about farm problems.

JANUARY 23, 1956—PERMIT ALL FARMERS TO VOTE ON WHEAT REFERENDUM

Mr. Speaker, I think we have become a great Nation because of the many freedoms it is our privilege to enjoy. That freedom has been protected at the ballot box by an expression of the views of the majority. With this thought in mind, I have introduced a bill, H. R. 8697, to permit wheat farmers, including those who plant less than 15 acres of wheat, to vote in any wheat marketing referendum conducted by the Secretary of Agriculture.

The records will show that in Ohio, only 57,000 of nearly 152,000 wheat producers have the right to vote. This certainly is unfair. If this bill is passed, Mr. Speaker, I am sure that we will be carrying on the majority views of the people and that is what we want. Regardless of the "pros" and "cons" of a marketing program, the majority of the people should determine whether it should be in effect or not in effect.

JANUARY 23, 1956—PERMIT FARMERS TO GROW WHAT THEY NEED

Mr. Speaker, I find a great deal of hardship is prevailing among my farm group because of certain portions of an agricultural program which was passed several years ago and is now in effect. Many of my farmers find themselves in a position of not being able to grow enough grain to feed even their livestock and to give them an adequate supply of straw.

I have introduced a bill, H. R. 8698, which will exempt from marketing quotas farmers who raise grain entirely for their own use on their farms either as feed or seed. I feel this legislation will give freedom from a program to that group of farmers who now do not derive benefit. Certainly in this great Republic responsible farmers should have the right to grow the crops that are necessary to sustain their own farms without Federal control or interference.

JANUARY 26, 1956—GIVE RURAL MAIL SERVICE TO ALL

Mr. Speaker, I have introduced a bill, H. R. 8845, which gives authority to the Postmaster General, subject to the postal laws and regulations, the right to extend rural mail routes. This bill, if it becomes a law, would give rural mail delivery, as nearly as practicable, to the entire rural population of the United States.

I previously had introduced a bill similar to this making it mandatory that all be given rural mail service. It has been proven to me, Mr. Speaker, that my previous mandatory bill would not be equitable or workable as in some areas of our country it would be nearly impossible to be in compliance with that mandatory clause.

I am reintroducing the bill and I have been assured by those in control that

everything would be done wherever at all possible to see that the intent of the law be carried out. This legislation, Mr. Speaker, will probably require realinements of routes but when this is done, I feel certain that practically all will have rural mail service to their property, and it will cost our Federal Government only a small amount. After all, Mr. Speaker, we are all citizens and we are entitled to equitable service and treatment regardless of where we live.

JANUARY 30, 1956—M'GREGOR SUPPORTS GASOLINE REFUND TO FARMERS

Mr. Speaker, I am most happy to add my support and vote to H. R. 8780, which relieves farmers from excise taxes in the case of gasoline and special fuels used on the farm for farming purposes. I was most happy when President Eisenhower, in his state-of-the-Union message, insisted that the Congress pass this legislation immediately and bring some semblance of relief to the farmers.

I sincerely hope that the Agriculture Committee will start hearings immediately on the other portions of the President's recommendations to give relief to agriculture groups. I hope that the committee will forget politics and recognize that the farmers need immediate help. I feel certain that this Congress is in accord with most of the President's recommendations to give immediate relief to the agriculture people.

MAKING SURPLUS FOODS AVAILABLE TO WESTERN EUROPE—FEBRUARY 22, 1956

Mr. Speaker, I am most happy to see that President Eisenhower is making our surplus food available to western Europe, which has suffered from blizzards and floods in one of the worst winters in 20 or 30 years. I am particularly pleased with his statement, and I quote:

The United States stands ready to make surpluses of agricultural commodities, which we have in abundance, available for relieving the distress of the people in these areas.

Mr. Speaker, to me this is a great humanitarian deed, and I am one who has always felt that it was ridiculous for us to have surplus food when people in other parts of the world are hungry. I congratulate the President on his immediate action to relieve the distressed.

AGRICULTURAL SURPLUSES—MAY 29, 1956

Mr. Speaker, on January 17, 1956, I introduced H. R. 8549, a bill to prohibit the use of real property owned by the United States for the production of agricultural commodities which are to be disposed of by sale. It seems ridiculous to me that we have had a policy of renting farmland that is owned by our Federal Government to people who, in turn, produce the very crops that are in surplus.

The Federal Government had been following a policy of buying this property, constructing the needed projects and then leasing thousands of acres, in many instances, back to the previous owner who puts the land into production of crops we now consider surplus and for which we are now paying the farmers for not growing. To me this is a silly procedure. After many conferences with the Defense Department, a decision was reached whereby this program could be put on a sound and logical basis simply by a Presidential directive. I am happy to advise the President made a public release, and I quote from that release:

The President today by memorandum requested the heads of all executive departments and agencies to place in effect specified policies designed to limit the leasing of federally owned farmlands for the production of price-supported crops in surplus supply. The President's action was taken to make the leasing of farmlands owned by the Federal Government consistent with the administration's program to reduce price-depressing surpluses and to bring agricultural production into line with markets.

Now, Mr. Speaker, I would like to quote from the President's Executive Memorandum to all executive departments and agencies:

1. Except as provided in paragraphs 2 and 4 hereof, leases of farmlands made by the Federal Government on or after the effective date of this memorandum shall prohibit the cultivation of price-supported crops in surplus supply.

2. In the case of acquisition of farmlands by the Federal Government on or after the effective date of this memorandum, if price-supported crops in surplus supply are growing on such lands at the time of acquisition, the harvesting of such crops may be permitted.

This directive, Mr. Speaker, by the President establishes a policy that is in accord with the administration's program to reduce depressing surpluses and would bring agricultural production into line with market demands. I am highly pleased that this policy, that has been adopted, will accomplish the objective of the bill I introduced, H. R. 8549, and will assure fair and equitable treatment to the farmers that are leasing Government-owned real property for agricultural purposes.

HIGHWAY BILL, 1956, FARM-TO-MARKET ROADS, AND REA

Mr. Speaker, it has been my privilege to be a member of the Public Works Committee ever since I came to Congress. These years of service on that committee has placed me as senior minority member of the Subcommittee of Roads, which position carries with it possible additional responsibilities, as well as privileges. As senior member of the Subcommittee of Roads it was my duty to assume my proportionate share of responsibility for the highway legislation recently passed by this Congress, H. R. 10660. The records will show that I was especially active and took the initiative in provisions that will give additional Federal assistance to the farm-to-market roads. This legislation gives permission to the State highway department and local authorities to use Federal funds on county and township roads. The specifications covering these roads can be drawn by local county engineers, with the approval of the highway department, and need only to meet the requirements of the local communities. This means that Federal highway funds can be used on farm-to-market roads without rigid adherence to Federal specifications which often in the past, because of the exhorbitant cost, have prevented the construction of needed roads in many sections of rural areas.

The record will also show, Mr. Speaker, that I was very active in having a provision included in the new highway bill which grants permission to use Federal funds to pay for the cost of relocating both public and private utility facilities necessitated by construction of highway projects. This means that all utilities, including either storm sewers or sanitary sewers in a village or city, or telephone poles and facilities, including REA, which have to be moved due to the relocation of a roadway, will have proportionate share of that cost borne by the Federal Government. This certainly will mean a great saving to the REA users and small telephone companies which, in the past, have been forced to bear the cost of all relocations when compelled to do so by new road alinements.

Mr. Speaker, the new highway bill has many fine provisions which, in my opinion, will give us a better system of highways, both on farm-to-market, primary, urban and interstate. It is cheaper to drive a car or a truck over a good road than it is over a bad one. We had approximately 38,000 highway fatalities last year and about 110,000 highway accidents. Let us hope and pray that this vast expenditure of money that we are putting into highways will make our travel more pleasant, less expensive, and without accident.

Mr. Speaker, it certainly is my hope that my constituents will keep me advised of their opinions and interests because only by this contact am I, as their Congressman, able to know their views and express them by my actions and votes on the floor of Congress. Their suggestions are always welcome.

Technical Assistance: Instrument of National Policy

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. HAYS of Arkansas. Mr. Speaker, recently the World Alliance Newsletter published an extract of a speech that I made at the Conference on University Contracts Abroad sponsored by American Council of Education, and under leave to extend my remarks I include my statement as follows:

TECHNICAL ASSISTANCE: INSTRUMENT OF NATIONAL POLICY

(By BROOKS HAYS)

Many of the independent nations of the world cherish their independence, but do not fully appreciate the nature of the East-West conflict. Most of them, I am sure, would recognize in case of armed aggression that they do have a stake in the issue that divides the Communist and the free world.

Without neglecting the importance of a strong military defense, we must share our productiveness with the less favored peoples of the world. Even if we were not thinking in terms of global strategy against communism, we should be busy convincing the

"neutral" third of the world's population that we are gravely concerned with assistance programs that are only remotely related to our own narrow national interests. This involves our ideals. It involves the philosophy upon which we have built our Nation.

UNITED STATES POLITICS AND WORLD PROGRAMS

There are political implications in these world programs. The businessman fears that the cost may be too much, although the U. N. proper, with all organizational activities, takes only 8 cents per year from the United States taxpayer, and when we add the activities of the specialized agencies, the total cost is still only 67 cents per United States citizen per year. Some of our people fear that energies are diverted that could be used at home. It is difficult to establish that in promoting world progress we promote our own self-interest. But it is true, and we must try to be convincing on that point. There are also considerations outside the appeal of our national self-interest. Underneath the surface of mental skepticism is a potential nobility in the heart of the American voter, and he has springs of generosity and intelligence that can be channeled in constructive directions.

U. N. TECHNICAL ASSISTANCE

Some of the most interesting things that were talked over in United Nations meetings this year concerned the U. N. technical assistance programs. One of the expanded technical assistance program's functions is to coordinate the work of such specialized agencies as the World Health Organization, the U. N. Children's Fund, the Food and Agricultural Organization, and the International Postal Union. These multilateral operations are extremely important for the underdeveloped countries. Multilateral programs spread the burden, and other nations are eager to assume some of the responsibilities for them.

Every person recovering from a dread disease through miracle drugs feels grateful to find that some of them were discovered in foreign laboratories. The farmers who are aware of the benefits of research abroad, and of the help in their fight against crop diseases, feel a new sense of internationalism. The interdependence of our modern world is, of course, something that I do not need to labor. But perhaps we talk too much of what we have done for other people and too little of our debt to them. We should impress our own people with the fact of interdependence, and certainly we should avoid every appearance of trying to impose our own culture on other peoples.

There is an impression among those who have not probed deeply the question of political sentiment that we should retreat from responsibilities for leadership in education and health and material progress throughout the world. While we cannot read the Russians' minds or appraise their decisions, it is evident that they are transferring some of their energies away from the military into the economic and propaganda fields. We must not let them out-run us. We must be in there fighting for the kind of bold, effective technical assistance program that convinces the people of the world that we are concerned about living standards, and that the people of the United States want to share our incredible productivity with them. If we move into blighted areas and neglected places with imagination and leadership, we will win in this global struggle with the Communists, and nothing can obstruct us. I fear that if we follow a pinch-penny policy for technical assistance and foreign aid, we may lose this race to those who believe altogether differently about man, about human society, and about the processes of government by which order and justice are sought.

UNITED STATES PUBLIC IS FOR TECHNICAL ASSISTANCE

We are making headway. The technical assistance program is being accepted, and I think it is because of the fine admixture of practical values with our historic ideal of service. Every poll I have seen supports this. Only 6 percent of the college-educated people are opposed; 94 percent are for it. The percentage in favor goes down a little, according to the polls, if specific sums are mentioned. They always look too big, whatever the figure, but the principle is embedded in the thinking of the American people, and even in the group of the lowest educational level—the grammar school level—50 percent know about technical assistance and are generally for it.

The technical assistance program should not be greatly affected by changes in the administration or control of Congress. We must have the total resources of both parties to prevail in this great human service. There is too much suffering abroad, and there are too many expectations of us, to leave unutilized our tremendous moral and intellectual resources.

Address of Dr. Ezequiel Padilla of Mexico

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. ANFUSO. Mr. Speaker, several weeks ago Dr. Ezequiel Padilla, the former Minister of Foreign Affairs of Mexico, delivered a most interesting and thought-provoking address at a luncheon of the Pan American Society of the United States, which was given in honor of the Latin American consular corps in New York City.

Dr. Padilla is without a doubt one of the leading statesmen of the Western Hemisphere and one of the greatest friends of the United States. He served as Foreign Minister of Mexico during the World War II period and was one of our most ardent supporters and defenders. During those trying years, and also in subsequent years, he has urged strong collaboration and cooperation between the 21 American Republics to form a solid and cohesive front of the American nations.

Prior to becoming Foreign Minister, Dr. Padilla served three times as a Congressman, twice as a Senator, then was Attorney General, Secretary of Education, and later Ambassador. He has always shown complete dedication to the principles of freedom and constitutional government.

Mr. Speaker, Dr. Padilla's address is entitled "One Single Continental Destiny." I am pleased to insert it into the RECORD and commend it to the attention of all my colleagues:

ONE SINGLE CONTINENTAL DESTINY

(By Ezequiel Padilla)

Mr. President of the Pan American Society of the United States, ladies, and gentlemen, my presence in this splendid hall makes me think how correct the observation is that an orator would not cross the street to listen to a speech but that he would cross a continent to deliver one.

Exactly 14 years ago on this very spot, when I was Minister of Foreign Affairs of my country, I delivered a speech on Pan-American Solidarity. Mr. Hasler, who was then president of this society, was kind enough to enable me to listen across a great distance to the first babblings of one of my sons who had recently been born in Mexico City. And yet, what the child said to me has remained an impenetrable mystery to me. I felt myself carried away by emotion, because that weak little voice made me think of the moral grandeur of the undertaking which the free countries were carrying out in order to leave behind for our children, after that era of catastrophes, a world of security and of justice.

On that day in April 1942, we were all moved by the grave war news. Nevertheless, there were neither worries nor doubts in our hearts; our thoughts were filled with confidence in the final victory. In our America, the spectacle was magnificent; from New York's Fifth Avenue to the humblest villages of South America could be seen our 21 flags interwoven, forming the rainbow of continental solidarity. Of course we were in danger, but at the Rio de Janeiro Conference our nations had sealed one sole destiny and had dictated wise measures for defense. It was the romantic year of American fraternity. We all felt proud of defending a common cause with bravery.

Fourteen years have passed and the hopes for the permanent peace of the world have been frustrated. The threats which surround our America today are much more serious. And yet, the means of collective defense, and above all the conviction that we are manning the same ship lack the force and the decision of that time? Why? Our continent has been protected by extraordinary privileges: we have lived far from the zones of disaster. Thanks in great part to the formidable forces of this American Nation, our skies, our territories, our seas have not suffered from the horrible days of the war. Our peoples, unharmed, grew and prospered while other regions of the earth were covered with desolation and ruins. Was it not natural then that the men of America should have purified their devotion for the redeeming doctrine which, in this era of anguish, has kept us safe within the confines of fraternity and peace? What then is the cause for the crisis which has unquestionably begun to undermine the cordial union of our poeples these last 10 years? There are two fundamental causes: one is the immense Soviet propaganda; the other the economic anarchy in which our continent lives.

It is very frequently said that the frightful powers of destruction of atomic weapons have made a new war impossible. Without accepting this conclusion which is not supported by the tragic history of man—but which fits admirably into Communist doctrine and tactics, which is why the Soviets have unleashed their fabulous peace propaganda—the evident result is that this struggle for the domination of the World has been removed from the field of armed war to the field of peaceful conquest. This strategy grows more spectacular every day. And it is here, in the field of peaceful conquest, that communism seeks to fulfill Lenin's prophecy that, once the peoples of Europe and Asia are conquered, America will fall like a ripe fruit. In this peaceful conquest, Soviet propaganda is a formidable weapon. Through it, the Soviet Union, invaded and in flames in 1942, has transformed itself into the Communist empire of 1956, with a billion slaves. And propaganda is not only an ideological war, as is often said: it is a war of subversion, of penetration, of sabotage which, without firing a gun, undermines the strength of a nation until it crushes it. For this end, Russia spends $3 billion per year on propaganda, while the United States, to combat it, has a budget of 3 percent of that sum. The prodigious feats of Communist propaganda are too well known to attempt to enumerate them. Its work in Europe and in Asia is inscribed in the tragic contemporary history of nations once sovereign and now reduced to slavery. Its mission in

America is the same as unfolded in all parts of the world: infiltrate, subvert institutions, open the doors to the enemy in order to surrender the fate of our people to police terror and to a philosophy without God and without liberties. It is imperative, then, to organize a more effective continental defense. Not only are the laboratories of the United Stats and of England working but the Russian's behind the Iron Curtain as well, in territories that lack time limitations for work and whose laborers do not declare themselves on strike. Each day, nuclear weapons are more manageable and the fifth column with its bacteriological armaments can constitute a combination that would signify the possibility for a fatal blow of destruction.

I have referred to operations which conspire against security. But there is another activity intensely directed against the economic integration of the continent. The defense against this propaganda which tries to profit by the dislocation of our markets in order to spread distrust and create profound animosities, accusing the United States of exploiting our Latin American countries, is not only a job of vigilance, of repression or of ideological programs; above all it must be a job of construction.

Permit me to recall the time when my illustrious friend, Mr. Sumner Welles, presented me to President Roosevelt in 1942. After the introductory words he said: "I wish that you would listen to the pan-American ideas of Mexico, represented by Dr. Padilla." Then I unfolded before President Roosevelt the ideas which I had expounded at the Rio de Janeiro Conference in the name of my country: The construction of a continent as a harmonious whole, not with the aim of establishing national or international privileges, but of building the well-being of the American masses, affirming at the same time the dignity of the free spirit.

History teaches us that those generations that live through the decisive hours of the great changes in the destiny of mankind do not have an immediate realization of the presence of a new epoch; I believe that is the case of our modern times. Not everyone is aware that we are already in the new atomic era; that is to say, in the greatest revolution in history. The technological forces which man has conquered already have the capacity of creating abundance. And the grave danger into which we may fall is to reason with yesterday's ideas about the problems of today's revolution. Today's peoples, unlike those of yesterday, are aware that their liberation is already within the reach of man. Some entrust its realization in the midst of liberties to the paths of democracy, to free enterprise; but others, influenced by Soviet propaganda, feel that it is surer and more rapid to achieve this liberation by means of what they call the system of compulsory economy, submitting themselves to the terror of totalitarian tyranny, that is to say, sacrificing present generations to attain through forced marches the well-being of future generations. Time does not allow me to analyze this imposture; but that is the thesis of Communist China in the Orient; that is the thesis of communism in the whole world. In any case, the impatience of peoples rent by privations and misery demands a solution. In our America the solution is to reach an accord between all our peoples in order to use the new creative powers of human well-being, conquering the great valleys and the great rivers, the riches of the oceans and beneath the earth, the application of nuclear power and the use of the space of the continent to create an American civilization which will be an advance view of what humanity dreams and hopes.

The statesmen of the United States declare rightly that the first bastion of defense is a healthy and vigorous economy. This principle ought to be extended to all of America. The fabulous prosperity of the United States lacks persuasive force before the heart-rending poverty of Latin America. Let us bear in mind that our enemy is not communism, since our peoples believe in liberty. The Orient, it is often repeated, supports tyranny because it has known no other form of government throughout the ages; but this is not the case of our America. Among us, all the nations have free constitutions, and even in the darkest hours of dictatorships—where they existed—the people fought for the conquest of its liberties. This gathering can hardly imagine what it costs to dream and fight for liberty in the midst of dictatorships. For another thing, all of America is profoundly religious and therefore rejects a system which, like communism, denies men the right of worshipping God in their conscience. For this reason, not even doctrines of third positions or of neutrality have made any impression in our America, because they are considered morally cowardly and abject forms of deserting the fortress of duty. No. Communism is not the enemy; the enemy is economic anarchy in which our American peoples struggle. Cotton, sugar, some metals, coffee, wool, and other fundamental products for the well-being of the Latin American masses constitute present problems which, instead of bringing our peoples together, separate them. We should not accept the bankruptcy of intelligence and the technique of our governments for not finding in inter-American commerce channels of security in production, prices of primary materials and manufactured products. It is comforting to observe in our governments the resurgence and the preoccupation with the authentic operation of the Pan-American doctrine. To abandon these grave realities to anarchy can expose us—in this era when the markets of the world are in dispute, and when Russia openly tries to capture the Latin American markets—to suffer a worldwide economic defeat as dangerous as a military defeat. It must not be forgotten that Latin America is the principal purchaser from the United States, that it has a rapidly increasing population of 150 million inhabitants, and that it possesses a great number of strategic materials for the hours of danger. We must create a powerful inter-American market. But how can we obtain it if our nations do not unite to deliberate and resolve the multiple problems which arise in an undertaking of such great magnitude? The creation of a climate propitious to foreign investments, the setting aside of zones exclusively for national investments; the reply to a growing, active youth with legitimate ambitions which wants financing for the projects of its economic undertakings and wants thus to be able to maintain its independent homes, an inter-American bank which frees it from the usury that frustrates all its hopes; the financing and construction of tens of millions of lodgings for men who live in hovels unworthy of human dignity; hundreds of thousands of kilometers of modern highways and new conveyances; the application of the formidable conquest of science and of nuclear energy which is already unfolding the magic of its force; in other words, all the marvelous power of modern men and even the unsuspected technological powers which are to come, urgently demand a continental economic convention which should deal with plans for the creation of prosperity for the Americas. There is certainly a school of thought in our Latin America which dreams of anarchy self-sufficiency; but it is sterile arrogance, contrary to the true interests of the people, to think with the meager savings of our incipient Latin American production we can erect the gigantic creation of the new forces of the world.

In our Latin America, cooperation among the governments is enormously important in order to materialize these redeeming programs. In other matters they must assume the construction of undertakings which private enterprise cannot carry out. Besides the joint planning of a Pan-American economy, which must be made under the sign of free enterprise, initiative and generous action by the governments is also needed.

The philosophy of profit and of free enterprise—as my friend Spruille Braden has demonstrated so eloquently in a recent speech—has been the constructive force of the economic greatness of the United States. Until now, no economic system has been invented which guarantees prosperity while at the same time guaranteeing human liberties; but this philosophy of competition and profit cannot by itself have the same result as an international system. This has also been understood by the United States which has spent fantastic sums throughout the world—tens of billions of dollars—without any profit motive. Why, when it is a question of organizing a continental economy, could the cold calculations of speculation and of profit not be overcome? Friendship and solidarity have their roots in the human heart.

The 18th century was the Age of Reason; the 19th century was the Age of National Selfishness; the present century is the Age of Human Emotion. A few months ago the Tampico region was struck by tremendous floods; the United States quickly sent boats, helicopters, food, medicine and the most valuable of its contributions, a team of men who, in those anguished hours, showed not only goodwill in their behavior, but also devotion and heroism. The change which took place in our Mexican souls in those days of nobility of deeds and of true solidarity, is incalculable and indelible. Its influence can be noticed in the cordiality of the recent meeting of our Presidents Eisenhower and Ruiz Cortines. No cold and calculated diplomatic step has ever achieved such profound results.

Allow me to terminate by recalling this beautiful sentence from Lincoln: "If you wish to convert men to your cause, persuade them that you are their true friend."

Soviet Airpower

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. DODD. Mr. Speaker, I wish to call the attention of my colleagues to an excellent article in the New York Times of today. This article is written by Mr. Hanson W. Baldwin, military editor of the Times.

Mr. Baldwin has properly analyzed the disadvantages accruing to the United States from the visit of General Twining and other Air Force officers to Russia.

Nothing will come of these visits except a great and more powerful propaganda weapon for the Russians to use against the United States. This is a fact that the administration does not seem to recognize.

I hope that every Member of the House will read this article, which is as follows:

SOVIET AIRPOWER: I—A REPORT OF UNITED STATES OFFICERS' FINDINGS DURING VISIT TO MOSCOW AERIAL SHOW

(By Hanson W. Baldwin)

Moscow, July 1.—The United States delegation to last Sunday's Soviet Aviation Day

was en route home today with only slightly more technical knowledge about the Soviet Air Force than it had when it arrived. Most of the facilities shown to the Americans represented, in the words of one officer, "seventh-grade stuff."

But the visits of 28 foreign air force delegations to the Soviet Union were deliberately used by the Communists as the basis for a forum to preach peaceful coexistence and disarmament.

The political and psychological importance of the visits, in the Soviet Union, in the United States and in the rest of the world, particularly in the neutral nations, in Western Europe and in the Communist satellites, was certain to be major.

The Communists have emphasized the "comradeship" between Russian and United States airmen, and photos showing Gen. Nathan F. Twining, who headed the United States delegation, clinking glasses with the Russians are being widely distributed.

The voice of the United States Air Force Chief of Staff, recorded on tape, has been broadcast repeatedly over the Moscow radio and it is evident that this Communist capital of the world is doing all it can to foster the impression of a tete-a-tete between United States and Soviet leaders.

SOVIET MIGHT WAS STRESSED

The visits, of course, cannot be fully evaluated yet, but it is possible the Russians have left the impression they wished to implant despite the paucity of technical information they released. In a nutshell this impression might be described as: "We are too strong to be licked; therefore you have got to get along with us."

Moscow also wants for its air force leaders reciprocal return invitations from the countries it invited here. Former Foreign Minister Vyacheslav M. Molotov said so in so many words to Gen. Paul Bailly, Chief of Staff of the French Air Force, who leaves here tomorrow.

But there are some obvious risks and dangers to communism, particularly in the satellites, in permitting such contacts as that represented by General Twining's visit. Freedom is a heady wine, and even a slight easing of internal restrictions and resumed contacts with the West might encourage a greater degree of independence in the satellites. At least that is the clear hope of the West.

UNITED STATES SUPERIORITY IS CITED

It was clear that, like many other experts who came to the Soviet Union, members of the United States delegation were confused by the contrasts and contradictions they encountered on every hand. The Americans were divided in their technical evaluations. Some stressed it would be dangerous to draw any conclusions on the basis of what we have seen. But there probably were three salient and overwhelming impressions:

1. The United States is still clearly superior to the Soviet Union in airpower today.

2. The rate of the Soviet developmental progress in airpower since World War II, and particularly since 1947 when the Soviet Union purchased 55 Rolls-Royce jet engines from the British, has been very rapid.

United States research and development funds, along with the military budget, were severely curtailed from the end of the war until the start of the Korean war, and the Nation is still paying today for the failure in those years to exploit all possible research leads. The rate of development of the two powers, in other words, will be an index to who will win the airpower race tomorrow.

3. Research and development and technical education must be stressed in the United States at all costs. Strong operating forces must be maintained, of course, for United States strength has been, and will be, a primary deterrent to aggression. It may be responsible for the present trend toward "sweetness and light" in Soviet tactics. But it would be a mistake to put too much money into the production of the big B–52 long-range jet bombers, which cost about $8 million each, since overstressing these planes might force a curtailment in research funds. In any case, in a few years the B–52 may be technically obsolescent.

OLD TRANSPORTS STILL USED

In addition to these general impressions, other conclusions that appear valid to this correspondent have been drawn here by other foreign observers.

All the foreign visitors were impressed by the contrasts and contradictions in Soviet airpower—the most modern right alongside the most obsolescent. The IL–12 and IL–14 twin-engine, propeller-driven transports with speeds of less than 200 miles an hour, and with a passenger capacity of 18 to 24, still are the mainstays of the Soviet airlines and of military air transportation.

The IL–14 still is being built in quantity despite the development of the TU–104 twin-jet transport. There do not appear to be any radar ground-control approach systems to guide planes to Soviet airfields in low visibility. Many Soviet pilots do not appear to be trained in instrument flying. There do not appear to be any rocket mountings on Soviet all-weather fighters although all United States air-defense fighters now are equipped with rockets or missiles instead of guns.

INCONSISTENCIES ARE NOTED

The Russians say they have air-refueling systems, but no evidence of them ever has been seen, except an unidentified protuberance on the nose of a twin-jet medium bomber. Soviet pilots at the field at the Monino Air Force Academy visited by General Twining yesterday said they were required to fly a minimum of 300 hours annually compared with the 100-hour minimum required of United States Air Force pilots to maintain their flight pay. Yet it is not believed that the Russians have enough aviation fuel to permit such requirements.

There are many other apparent deficiencies and inconsistencies. On the other hand there is the undeniable fact that the Russians have some good new jet bombers and fighters and they know how to fly them.

Another salient conclusion that can be drawn from even a brief look at Soviet air power is that the Soviet Union has profited greatly from the United States, Germany, and Britain. Many silhouettes of Soviet aircraft closely resemble United States planes and General Twining remarked yesterday upon the exact "Chinese copy" of the four-engine, propeller-driven B–29 bomber he saw at a Soviet airfield. The B–29, manufactured in the Soviet Union as the TU–4, is a World War II bomber with a range of about 2,606 miles and a speed of about 300 miles an hour. It is obsolescent now except for special tasks, but the Russians have hundreds of them that they use for training and other jobs.

A CAPACITY FOR COPYING

The moral is that they have a capacity as copyists and an ability to adapt and modify to their needs the best developments of other nations. In addition, they have excellent designers of their own.

Another obvious fact about Soviet aviation is that the Soviet Union's military education system is emphasizing a thorough blend of theory and practice. The schools inspected by General Twining appear to combine many features of United States technical or training schools, with classroom and laboratory instruction of the college or university type. The equipment is modern and the courses are long and complete.

The Soviet Union is strong in the air. But it probably is not so strong as it would like to make the world think, and definitely not so strong as some press reports would seem to indicate. Some observers, for instance, do not believe the Soviet Union has as many heavy jet bombers as past reports have indicated; no more than 12 to 15 Bisons have been seen at any one time.

Protest in Poland

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial in the New York Times of Saturday, June 30, 1956, which discusses the recent uprising of the steel workers in Poznan, Poland, against their Communist rulers:

PROTEST IN POLAND

The long and honorable history of Poland has many chapters that tell of brave resistance to oppression and struggle for freedom. Now a new chapter has been added to that history by the steel workers of Poznan. They have defied the Communist dictatorship to demand bread and freedom. The answer they received was the same brutal one given to the East German workers in 1953, to the Soviet slave laborers who demanded freedom after Beria's purge and to the people of Tiflis last March. The answer was bullets from the guns and tanks of the Communist soldiers and police. Thirty-eight dead and 270 wounded are the grim statistics admitted even by the Warsaw regime.

The first barrage of Communist bullets stripped off the mask from those who claim that the Communists represent and rule for the working class. It was the proletarians of Poznan who took to the streets to voice their demands and it was the proletarians whose lives were taken by the bullets. There are no "capitalists" in Poland today. The Polish Government's talk of imperialist agents is simply nonsense, a device to justify its brutal policy. The facts could not be plainer. As we of the free world speak out in protest and sorrow, we have the right to demand that all who claim to have humanity and sympathy for the oppressed speak out with us. Will the Communists outside the Iron Curtain speak out against the latest crime of those who succeed Stalin?

Reports from Poznan indicate that the workers who tried to voice their grievances there were misled by the supposed new atmosphere in Poland. They thought that now, when past crimes are being admitted, they could freely exercise the basic rights of petition and of public assembly. The dead and wounded testify eloquently to the error of those expectations. Rights which our workers regard as elementary are still forbidden in the Communist workers' paradise.

For the moment the unrest in Poznan has been drowned in blood. But it would be a mistake to think that the basic causes of these events have been removed, or that there is no likelihood of repetition elsewhere in the Communist world. Ever since World War II the vital interests of the workers under Communist rule have been sacrificed to the pitiless drive to build up military power. Instead of bread and decent housing the workers have been offered displays of the military might their sacrifices made possible. But one cannot eat guns or live in a tank, and the workers want to enjoy the fruits of their labor just as do workers everywhere.

The Poznan events demonstrate the moral and political bankruptcy of Polish communism in two ways. First, when the workers'

original peaceful demonstration was turned to anger, it was against the Polish United Workers (Communist) Party and the Polish secret police that their wrath was turned. These are our enemies, the workers said in effect. Thus an initial act of economic protest was turned into a political demonstration of the highest significance. Second, the Polish Government had no better answer to the workers than bullets and tanks. Could there be a clearer demonstration of bankruptcy by any government?

In a democratic country this could well bring down the government in power. But Poland is a dictatorship and its Communist rulers have no intention of being dethroned. Yet they cannot escape their responsibility before the Polish people. The police and soldiers fired at the workers in Poznan. Will they do so again if similar events erupt elsewhere? Already we have reports that some of the police and army men in Poznan showed sympathy for the demonstrators. As the full implication of these events sinks in, will not the sympathy of the Polish people for the victims rise higher, and will not the demands for an accounting rise until ultimately it becomes unanswerable?

The Polish Government claims that it recognizes that economic conditions are bad and that it is trying to do something to improve them. It has said that before with imperceptible results. It still accepts Khrushchev's thesis that heavy industry must have higher priority than consumer goods and the standard of living. The Poznan demonstrations may force new concessions. But the workers' demands for freedom and the fury at the Communists and the Communist secret police show that the steel workers of Poznan recognize the fundamental truth that freedom and Communist dictatorship are incompatible. That is the lesson of Poland.

Japan and United States Textiles

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. FLYNT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a letter which appears in the letters-to-the-editor section of the Washington Post and Times Herald of today, July 2, 1956.

This letter, which was written by Mr. O. R. Strackbein, of Washington, D. C., is the latest in a series of the letters to the editor on the present conditions of the American textile industry, due to rapidly increasing imports from Japan.

It is my understanding that the figures which are quoted in the letter which follows are taken from Government sources, carefully documented and accurate.

This letter clearly shows the adverse effects which these rapidly increasing imports are having upon the American textile industry:

JAPAN AND UNITED STATES TEXTILES

In your issue of June 16, Mr. Nelson A. Stitt replied to Mr. W. Ray Bell, president of the Association of Cotton Textile Merchants of New York, whose letter appeared on a previous day.

Mr. Stitt chides Mr. Bell for using the year 1947 as his anchorage for measuring the trend of cotton textile exports. Actually Mr. Bell did not have to use 1947, a record year, to establish the downward trend.

However, after drawing so fine a bead in challenging Mr. Bell, Mr. Stitt turns around and uses "the more realistic prewar period of 1936–38" as his own base for measuring the trend of such exports. Why not go back to the landing of the Pilgrim Fathers?

The present economy of the United States is of an entirely different order from our prewar economy. Why then try to hitch the textile, or any other industry to such an obsolete standard?

The textile industry is an important industry. It employs over a million workers; and in this respect outranks the great automobile industry. Yet everyone is aware of the importance of the automobile industry to our economy. When the industry sickens suffering spreads rapidly to other industries. Concern is expressed far and wide.

Now, I would not have the cotton-textile industry attain the barometric and psychological position of the automobile industry. One such is enough. The fact is, however, that the cotton industry as a whole, from the raw fiber to the product of the spindles, is badly beset; and that bodes ill for the whole southeastern section of the country and for a great part of New England.

The trade-agreements program has long been advertised as a prime disposer of our farm surplus products. That was avowedly one of its key virtues; and, of course, raw cotton stood No. 1 among such exports. Let us see what has happened.

In 1931–35, that is, at the beginning of the trade-agreements program, the average annual exports of our raw cotton (excluding linters) were 7,244,000 bales. Even this was well below the 1926–30 figure. In 1954 these exports had fallen to 4,321,000 bales and in 1955 nose-dived to 2,590,000 bales. What a proud GATT record.

Now, says Mr. Stitt as have others, imports of textiles from Japan are only a very small percentage of our total market even though they do amount to more than 150 million square yards. Presumably that is a healthy condition. Reducing the imports to an over-all average is like saying that a flood in one area of the country if spread over the whole country would have amounted only to a drizzle.

Mr. Stitt says Japan has imposed an export limitation on herself. She will export only so much cotton goods to us. In 1952 Japan placed a limitation of 12,000 tons on the exports of frozen tuna to the United States. That was after a bill proposing a tariff of three cents a pound on such tuna had passed the House. Later the Senate defeated the bill. Today that self-imposed limitation is over 50,000 tons.

Yet the State Department finds such self-imposed export quotas acceptable.

Mr. Stitt calls attention to Japan's greater purchase from us than the other way around. We sell more raw cotton to Japan than is contained in the textiles she sends us. On that theory we should insist that Brazil buy as much coffee from us as we do from her. Actually, Japan is buying less raw cotton from us than prewar and yet has become the world's No. 1 textile exporter while we are fourth.

The proper remedy for this import situation would be import quotas imposed by us rather than self-imposed bans controlled by Japan. The import quotas could be made sufficiently liberal to assure Japan a generous share of our market but we should hold the controls in our own hands. Otherwise uncertaintly would undermine their value.

O. R. STRACKBEIN.

WASHINGTON.

Micronesians Gaining Under United States Direction

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. SAYLOR. Mr. Speaker, so often we hear criticism of various activities and decisions of the Interior Department which are, for the most part, inspired by partisan political purposes.

It is therefore most gratifying and refreshing to note an article in the New York Daily News of July 1 which draws attention to the splendid performance of the Department in the administration of the Trust Territory of the Pacific Islands.

This article, authored by Peter Wallenberg, points up significant social and political progress which has taken place in this remote island area and I commend it to the Members of the House:

MICRONESIANS GAINING UNDER UNITED STATES DIRECTION

(By Peter Wallenberg)

More social and political progress has been made in the Pacific Island Trust Territory during the few years of American administration than in the almost 50 years of German and Japanese rule, a Micronesian educator said yesterday.

Alfonso Oiterong, 32, superintendent of schools in the Palau district of the Caroline Islands, came here as a special representative of the islanders to the U. N. Trusteeship Council which is discussing United States administration of the U. N. trust territory.

Oiterong who speaks English and Japanese fluently, is well qualified to talk about Micronesia. Born in the Palaus, he graduated from the secondary school there and was given teacher training in Japan, where he spent 3 years. When the United States occupied the Palaus during World War II he was singled out for further training and ultimately attended the University of Hawaii before taking up his job as school superintendent.

GREAT PROGRESS

Under United States administration—since 1947—he said, "education in the trust territory as a whole has been unbelievably progressive."

The people, he said, have become so interested in education that they now build schools and pay teachers' salaries out of locally collected taxes. The three R's are taught both in English and Micronesian. Vocational studies, citizenship, health, and sanitation are particularly stressed, Oiterong said.

SLOW MOVEMENT

"We, the people in the trust territory," he asserted, "owe a great deal of respect and appreciation to the United States Government and the U. N. for the student scholarships and fellowships that are granted every year." Elementary education is mandatory for all Micronesian children between the ages of 8 and 16.

Political progress, he said, must be slow because the islands were never a political entity. Some 2,000 islands in 72 clusters containing only 525 square miles of land, are spread out over more than 1 million square miles of ocean. Only 64,000 Micronesians inhabit this vast area comprising the 3 large island groups of the Marshalls, the Marianas, and the Carolines.

The three groups were originally taken over by Spain, then sold to Germany. Japan took them over during World War I, and the United States finally occupied them during World War II and now administers them under a U. N. trusteeship setup.

LOCAL ADMINISTRATION

In spite of great difficulties, Oiterong said, municipalities of from 100 to 2,000 inhabitants are now under native administration. Each has a Micronesian magistrate and judge who work with the traditional chief. Most districts, taking in a number of municipalities, have congresses which legislate on taxes and education.

The United States administration is headed by Acting High Commissioner Delmas H. Nucker, who has had wide experience as a Territorial administrator for the United States Department of the Interior.

Statement of National Federation of Post Office Clerks on Civil-Service Retirement Legislation

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 27, 1956

Mr. BYRD. Mr. Speaker, in the course of the hearings being conducted by the House Committee on Post Office and Civil Service on the subject of civil-service retirement legislation, the National Federation of Post Office Clerks on June 19, 1956, testified in support of S. 2875, the bill which passed the Senate on April 18, 1956. I believe the federation's statement, which was presented by Mr. E. C. Hallbeck, its legislative director, is of interest to our colleagues.

Legislation has long been needed to correct the inequities and deficiencies in our present civil-service retirement system. It is a distressing fact that the annuities being paid to retired employees average only $1,600 a year. According to recent actuarial figures submitted by the Civil Service Commission, 29,206 employees earn under $2,500. There are 983,259 employees whose salary is $4,000 or less. It is no wonder, then, that the separation rate of career Government employees is so abnormally high, and this failure on the part of the Government to meet the progress of industry in retirement matters is one of the very reasons why it is so difficult to attract men and women into the Federal service.

Ever since the original enactment of the civil-service retirement system, in 1920, it is apparent that the Congress intended that the Government should share equally in the cost of the program. While employees have met their share of the cost through regular payroll deductions, the Government, in practice, has failed to meet its share. For example, for the fiscal year ending June 30, 1955, through deductions from salaries and voluntary contributions, employees paid into the system $440,284,878.46, while the Government's contribution was only $33,678,729.94. The legislative proposals now under consideration would, for the first time since the enactment of the retirement program, provide machinery to require both the employer and the employee to share equally on a current basis the future service costs. There is no reason why the deferred compensation which ultimately becomes payable in the form of retirement benefits should not be accounted for as part of the cost of continuing Government operations.

The statement submitted by the National Federation of Post Office Clerks makes a number of worthy recommendations that should be taken into consideration in enacting the many long justified and sorely needed liberalized and expanded retirement, survivorship, and disability benefits in our retirement system. Through the legislative proposals now under consideration, the Congress holds in its hands the future security and living standards of millions of Americans who are giving their working years to the public service, and it behooves us to adopt the necessary and proper adjustments in the retirement system before the Congress adjourns.

Mr. Hallbeck's statement follows:

STATEMENT OF E. C. HALLBECK, LEGISLATIVE DIRECTOR, NATIONAL FEDERATION OF POST OFFICE CLERKS, TO THE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE ON PENDING AMENDMENTS TO THE CIVIL SERVICE RETIREMENT ACT, JUNE 19, 1956

Mr. Chairman and members of the committee, in order to identify myself for the record, I am E. C. Hallbeck, legislative director of the National Federation of Post Office Clerks, with offices at 711 14th Street NW., Washington, D. C.

We are highly pleased and gratified at the prompt action this committee is taking on the retirement question. It is one of the most important questions before the 84th Congress.

A surprisingly large number of bills to amend the Civil Service Retirement Act have been introduced and the Senate passed the bill S. 2875, which would provide many needed improvements in the retirement structure, including a new and more logical formula for the computation of annuities; an improved optional retirement procedure; much needed liberalization of the widow and dependent benefit features; improved disability retirement benefits with a much needed minimum benefit provision; a sound mandatory retirement feature, and several administrative improvements, is in our opinion, sound and desirable legislation. I am appearing in support of that measure.

I am aware that there are bills before this committee which, if enacted, would provide for joint coverage of postal and Federal employees under both social security and the Civil Service Retirement Act. The theory behind this sort of legislation is that since the dependents' benefits under social security are so much more liberal than those provided under civil-service retirement, that the extension of such social-security coverage to postal and Federal employees would provide these added benefits without appreciable increase in cost. I do not think that is true. There is no magic formula in social security which makes greater benefits possible at a lesser cost. The ultimate cost of benefits are the same under any system and any seeming difference in favor of social security results from the fact that social security does not at the present time truly reflect the costs of these benefits.

Employees desire a modern retirement system, within the framework of the present act, which will provide a reasonable annuity after 30 years of loyal and faithful service, with adequate provisions for the widows and dependents of employees or annuitants, as well as protection against the hazards that make disability retirement necessary before a normal retirement age, at a price which the employee can afford to pay. These benefits can be provided under the Civil Service Retirement Act, and the bill S. 2875 most nearly approaches that objective.

Because some pay acts define "basic salary" to exclude longevity pay and since there is no desire to exclude longevity pay from "average salary" for purposes of computing annuities, we suggest an amendment to section 1 (e), adding, after the words "basic salary" on line 13, the words "including longevity or meritorious pay."

Under the Railroad Retirement Act, officers of the railroad employee organizations are covered for the purposes of that act while so engaged. We believe similar consideration should be extended to officers of the Federal employee organizations and suggest that this purpose can be accomplished by amending section 3 (c) to add the words, "while serving as an officer of an employee organization, or" after the word "or" in line 2, page 9. We are particularly pleased with some of the optional features of section 6 of S. 2875. Certainly this section is a considerable improvement over present law. It will provide for what amounts to optional retirement after 30 years of service, with a reduction in annuity based on the age of the employee. Frankly, we take the position that there should be no reduction in annuity, regardless of the age of the employee, after he has performed 30 years of service. We know that there are some who will claim that the cost of such a program would be prohibitive. However, experience with optional retirement to date indicates that only a relatively small minority of employees elect to retire at an early age unless there is some all-compelling reason for such action. The principal reason is the health of the employee or his family. The number of employees who would actually retire at an early age is necessarily limited by the laws of economics. The man of 50 to 55, for example, ordinarily has family responsibilities, such as children in school or college, a home only partly paid for, and things of that sort, which make it virtually impossible for him to even think of anything which would have the effect of reducing his take-home pay. The jobs which people of that age could obtain in private industry usually pay a wage so low that the combination of that wage with an annuity is actually less than the employee receives in Government work. For that reason, we feel that optional retirement at an early age would be limited to those for whom there was a compelling necessity and that the ultimate cost to the retirement system would be much less than is commonly estimated.

Section 7 deals with retirements caused by disability of the employee. In this field, there is a notable need for improvement. The provisions of present law, particularly in cases where the employee has only limited service, are woefully inadequate. By providing for a minimum annuity of 40 percent of average salary in cases of disability retirement in section 9 of the bill, S. 2875 goes a long way in the right direction. My own view is that it would be entirely just and equitable to retire an employee on a minimum of half pay whenever permanent disability makes retirement necessary.

Section 9 (a) of S. 2875 provides that in the computation of annuities, the annuity "shall be (1) the larger of (A) one and a half percent of the average salary, multiplied by so much of the total service as does not exceed 5 years, or (B) 1 percent of the average salary, plus $25, multiplied by so much of the total service as does not exceed 5 years, plus (2) the larger of (A) 2 percent of the average salary multiplied by so much of the total service as exceeds 5 years, or (B) 1 percent of the average salary,

plus $25, multiplied by so much of the total service as exceeds 5 years: *Provided*, That the annuity shall not exceed 80 percent of the average salary: *Provided further*, That the annuity of an employee retiring under section 7 shall be at least (1) 40 percent of the average salary or (2) the sum obtained under this subsection after increasing his total service by the period elapsing between the date of separation and the date he attains the age of 60 years, whichever is the lesser, but this proviso shall not increase the annuity of any survivor."

I suggest that it would be completely equitable if the formula for the computation of annuities of employees were based on 2½ per centum of the average salary as defined in this bill. Such an amendment would have the practical effect of providing the same formula for the computation of employees' annuities as that provided for the Members of Congress.

Section 9 (g) of the bill provides for the designation by unmarried employees of a beneficiary having an insurable interest to receive an annuity after the death of an annuitant. In order to establish such a joint annuity, it is necessary that the employee be in good health at time of retirement and that he take a 10 percent reduction in annuity, plus an additional 5 percent reduction for each full 5 years the person designated is younger than the retiring employee.

In most instances that have come to my attention, the people who would take advantage of this provision are those who have dependent parents. That is particularly true of women employees. Under the circumstances, it appears to be unjust and inequitable to require an employee to take a reduction of 10 percent in order to protect people who are older than he and whose normal life expectancy is considerably less than that of the employee.

We suggest, therefore, that this section be amended to provide that a parent or parents may be designated by an unmarried employee to receive an annuity after death of an annuitant under the same conditions as those applicable to a wife or husband in section 9 (f).

The survivor benefits provided by section 10 of S. 2875 are highly desirable. In addition to providing a form of automatic coverage for the widow of the annuitant, increased benefits for the surviving widow and children of an employee who dies before becoming eligible for retirement are provided.

I believe, however, that there is one field not covered in the bill as it passed the Senate which should be given serious consideration. I refer to the case of an unmarried employee who is supporting a dependent parent or parents. In most instances, I believe the social need is as great in such cases as the need of surviving widows and children. I suggest that the committee consider amending section 10 (c) to read as follows:

"(c) If an employee dies after completing at least 5 years of civilian service, or a Member dies after completing at least 5 years of Member service, the widow or dependent widower of such employee or Member, or the dependent parent or parents of such employee or Member shall be paid an annuity equal to 50 percent of an annuity computed as provided in subsections (a) (b), (c), and (e) of section 9 as may apply with respect to the employee or Member: *Provided*, That if more than 1 dependent parent survives the employee or Member, the total annuity to both dependent parents shall not exceed the amount of annuity payable to a single parent: *Provided further*, That in the computation of annuities under this subsection such deceased employee or Member shall be considered as having not less than 15 years of civilian service prior to his or her death. The annuity of such widow or dependent widower or dependent parent or parents shall begin on the first day of the month after the employee or Member dies, such annuity or any right thereto shall terminate upon death or remarriage of the widow or widower or dependent parent, or upon the widower or dependent parents becoming capable of self-support."

This amendment in addition to providing coverage for dependent parents would also provide that the annuity in such cases be computed on the basis of at least 15 years of civilian service. In view of the fact that unmarried employees or Members make the same contribution as married employees, I think it is only just that some provision be made for their dependents just as provision is made for the dependents of married employees.

Section 15 of the bill deals with exemption from legal processes. We feel that this section should be amended to provide an exemption from Federal income taxes in the same manner and to the same extent as exemptions are granted to beneficiaries of the Railroad Retirement and Social Security Acts.

One very important feature of the bill is the method of financing. In addition to insuring stable contributions on the part of the Federal Government, the bill, S. 2875, as it passed the Senate, would increase employee salary deductions from 6 percent to 7 percent and I am confident that this increase will not meet serious objection from employees if the improvements to the retirement structure provided in the bill as it passed the Senate are retained. However, if the bill is amended so as to eliminate provisions for 30-year optional retirement or to decrease the amount of annuity resulting from changes in the formula for computation of annuities or if there is any serious depreciation in survivorship or dependent benefits, I am confident that any increase in the employees' contributions would be vigorously opposed and objected to.

With the amendments I have suggested, we feel that the enactment of S. 2875 would be welcomed by employees and that its enactment would make the career service of our Federal Government much more desirable.

In closing, I want to thank the chairman and members of the committee for the time and attention being given to this very important subject and to express the hope that the bill, S. 2875, will be reported to the House at an early date and that it will be enacted during the current session of the Congress.

Thank you.

Need for Federal Responsibility for Relief of Migratory Families

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. VANIK. Mr. Speaker, a few weeks ago a statement was made in this House attacking the city of Cleveland for violating the civil rights of an Alabama woman who was offered the alternative by the juvenile court of Cuyahoga County, Ohio, of either placing her adjudged neglected children in a county receiving home where they could get food, shelter, and supervision or returning to their home in Alabama. The woman in question had been adjudged guilty of contributing to the neglect of the children and the family had a legal residence in Alabama. The Alabama welfare agencies had acknowledged their responsibility for the family and had indicated their willingness to provide relief upon their return to their legal residence.

The judge in the Ohio court had no other alternative for this family for the reason that the family was not qualified for permanent relief in Ohio because of the 1-year residence requirement.

In the attack upon my city it was charged that section 2 of article IV of the United States Constitution which guarantees the right of every citizen to live anywhere in the United States was violated. This was certainly not the case. The right of any citizen to live anywhere in the United States does not include the right to receive relief, pensions, and other privileges for which each of the States have established some necessary residence requirements. This case certainly points up the need for some Federal supervision and Federal responsibility for the relief of migratory families in America. The citizens of one State should not be compelled to assume the full cost of providing for the relief and welfare of migratory citizens who enter that State frequently because their home State fails to provide adequately for their welfare. The interstate movement of families in despair is a national problem. The tragic fact is that this Nation professes more concern for the problem of the migratory bird than it does for the migratory family.

It is incumbent upon Congress to recognize the fact that the migration of families in America will be a constant problem and that those communities which are generous to their responsibility, to the destitute, the homeless, and the disabled, should be reimbursed for whatever expenditures they make to take care of this interstate problem. The migration of the destitute and the homeless to the more friendly and more generous attitude of northern cities should in some measure be compensated by the Federal Government. In no other way can the unquestioned constitutional right of every citizen to live anywhere in the United States be given meaning.

The family in question came to Ohio because Alabama apparently failed in its obligation to care for a needy case.

The civil rights of this family were not violated by Ohio—the State of temporary refuge.

In order to clear the record, I am submitting herewith a letter which I have today received from Mr. Bernard C. Wachtel, president of the Cuyahoga County Bar Association, which completely describes the case, along with the Cleveland Press editorial of Saturday, June 23, 1956, entitled "This Effort to Smear Ohio Is Absurd and Meaningless," and the editorial of the Cleveland Plain Dealer of Saturday, June 23, 1956, entitled "The Martha Winston Case"; also a copy of a letter dated June 15, 1956, addressed to the editor of the Cleveland Plain Dealer by the Honorable Albert A. Woldman, Judge of the Juvenile Court.

THE CUYAHOGA COUNTY BAR ASSOCIATION,
Cleveland, Ohio, June 29, 1956.

Hon. CHARLES A. VANIK,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN VANIK: Our attention has been called to the requests of two Southern Congressmen calling for a Federal probe of the Martha Winston case which was

tried before Judge Albert A. Woldman of the juvenile court of Cuyahoga County the early part of this month.

Because we have reason to believe that their requests are based upon distorted newspaper accounts which erroneously referred to the Winston family's leaving Cleveland for their native Alabama as court imposed "exile," the trustees of the Cuyahoga County Bar Association feel very strongly that any action predicated upon these incorrect newspaper accounts constitute an unwarranted and unjustified attack upon the juvenile court of Cuyahoga County, Judge Woldman, the Cuyahoga County Welfare Division which held the Winston family ineligible for public relief in Ohio, and upon the people of greater Cleveland generally.

The trustees of the Cuyahoga County Bar Association have caused an investigation to be made of the entire matter and have concluded that there is no basis for criticism in the handling of the case. We believe that you should be given the facts so that you may help set the record straight in Congress and uphold both the fine reputation of Judge Woldman and this community's nationally known position for a fair and intelligent attitude in racial matters.

We enclose herewith a certified copy of the court entries in this case which reflect the only authentic account of what actually occurred. We enclose also copies of editorials which appeared in the Cleveland Plain Dealer and the Cleveland Press commenting upon this case, and a copy of Judge Woldman's letter which was published in the Cleveland Plain Dealer on Sunday, June 17, 1956.

Our investigation reveals that the matter came before Judge Woldman in the Juvenile Court on a complaint filed by a representative of the Cleveland Board of Education charging that the children were neglected and that the mother had contributed to their neglect; that the evidence before Judge Woldman disclosed that the family was destitute and unable to qualify for public relief; that the children were neglected and that one, a girl 17 years of age, had recently given birth to an illegitimate child; that the children had not been in school since February; that the family lived in a condemned house in Area B which was soon to be demolished; that the family had legal residence in Alabama where the husband and father resided and operated a farm; and that the Alabama welfare agencies had acknowledged their responsibility for the family and had indicated their readiness to provide relief upon their return to their legal residence.

The court entries indicate that the children were adjudged neglected and ordered placed in a temporary county receiving home where they could yet food, shelter and supervision; and that the mother was adjudged guilty of contributing to their neglect. However, no disposition had ever been made of her case when it was reported to the court that she had left with her family for Alabama.

We agree with the conclusion of the Cleveland Press editorial which states, "The woman in question wasn't forced to leave * * * rather, she left (with traveling expenses paid by Cuyahoga County) after she was told the alternative was to place her children in foster homes."

We also agree with the conclusion of the Cleveland Plain Dealer editorial which states: "Judge Woldman handled the case wisely and humanely. He could have sent Mrs. Winston to jail for neglecting her children, while committing the children to an institution. Instead, he found a way of keeping the family together which was what the woman wanted."

We trust with this information at hand you will be able to present the truth of this matter to the House of Representatives and thereby remove the erroneous conclusions which so unjustifiably reflect to the discredit of Judge Woldman and this community.

Further, we are convinced that the relief problem created by our citizens who move from one State to another in an attempt to better their living conditions should receive the attention of Congress, to the end that the citizens of the United States may, within reason, establish themselves in communities where they deem it in their best interests to do so.

Thank you for your attention to this matter.

Sincerely yours,

BERNARD C. WACHTEL,
President, Cuyahoga County Bar Association.

[From the Cleveland Press of June 23, 1956]

THIS EFFORT TO SMEAR OHIO IS ABSURD AND MEANINGLESS

Efforts of an Alabama judge and a Georgia congressman to make the relief troubles of a former Cleveland resident a civil rights case are ridiculous.

The woman in question wasn't forced to leave Cleveland, as these men are trying to make people believe.

Rather, she left (with traveling expenses paid by Cuyahoga County) after she was told the alternative was to place her children in foster homes.

The family was eligible for relief in Alabama, but not in Ohio, because the children didn't qualify under residence requirements here. So relief officials paid the expenses for getting the family home, which is the standard way of handling these cases on both sides of the Mason-Dixon line.

It would be well if Ohio's laws were flexible enough so the county could be more helpful in cases like this one.

But unless other States also relaxed their laws, or the Federal Government stepped in, it would be impossible.

Easier residence laws would simply encourage prospective relief clients to shop around for "easy" States, which would impose too heavy a burden on States that were trying to do the best job.

[From the Cleveland Plain Dealer of June 23, 1956]

THE MARTHA WINSTON CASE

The case of Martha Winston and her 7 children, and 1 grandchild has attracted national attention because the news stories incorrectly said she had been "exiled" from Ohio to her native Alabama. Such was not the case. The family was destitute, but not eligible for relief under Ohio law because Mrs. Winston had not been a resident of the State for 1 year. Accordingly, when she was brought before juvenile court on a charge of neglecting the children, Judge Albert A. Woldman gave her a choice of having the children committed to a home where they would be cared for, or of returning voluntarily to Alabama where the family was legally entitled to relief. Mrs. Winston chose the latter.

Now an Alabama judge has gotten into the act, in an obvious effort to make it appear that a Northern State discriminates against Negroes. He has charged that Mrs. Winston was deprived of her legal rights by being "forcibly sent to Alabama," and he wants an investigation.

* * * * *

It was because of such cases as Mrs. Winston and her family that the Ohio Legislature a number of years ago enacted the law requiring 1 year's residence before a person became eligible for relief. Before that requirement, indigent people were coming to Ohio from other States for the purpose of drawing relief, which always has been dispensed more generously here than in some other parts of the country.

Judge Woldman handled the case wisely and humanely. He could have sent Mrs. Winston to jail for neglecting her children, while committing the children to an institution. Instead, he found a way of keeping the family together, which was what the woman wanted.

Anyone who tries to make political capital out of this case is either ignorant of the facts or is deliberately trying to incite racial animosity.

JUNE 15, 1956.

EDITOR, THE CLEVELAND PLAIN DEALER,
Cleveland, Ohio.

DEAR SIR: The unfortunate use of the word "exile" in describing the action of my court in the case of Mrs. Martha Winston, her 7 children and an 11-day-old grandchild, who voluntarily returned to Alabama where they were eligible for relief, is a complete distortion of the actual decision.

A complaint was filed by the Cleveland Board of Education charging the mother with contributing to the neglect of her children because she had kept them out of school since February. In addition, it was reported to the court that a 17-year-old daughter had given birth to an illegitimate child 11 days before this hearing; that the welfare agencies of Cuyahoga County had given the family emergency relief for 3 months from the children's arrival from Alamaba in October 1955, and had cut off all further relief in December because the family was not eligible under the Ohio law requiring residence of at least 1 year; that the family was living in a Cleveland city-owned house in area B which had been ordered razed, and that the family would soon be without shelter; that there was no food in the house, no milk for the 11-day infant, and no income whatever; that the husband and father of the seven children was a legal resident of Alabama, was operating a farm there and stood ready to accept the return of his family to the farm. (Not being divorced from her husband, Mrs. Winson's legal residence and that of the children is the residence of the husband.) That the welfare agencies of Alabama had been contacted, had acknowledged legal responsibility for the family and stood ready to give them relief on their arrival in Alabama.

I advised Mrs. Winston I had no right to tell her where she should reside and that it was her privilege to live wherever she wanted to. However, I pointed out to her that since she admitted that she could not support her family, or get relief in Ohio, or return to her legal residence in Alabama where relief was forthcoming, I had no alternative but to take immediate measures provided by law to protect the 11-day infant and the other children who were reportedly without food.

In accordance with the testimony given by the school and welfare representatives and by our probation officers, I adjudged the children to be neglected children, and the mother guilty to contributing to their neglect. The welfare division was instructed to give the family immediate temporary relief; the children were ordered placed in a county receiving home where they would be given food, shelter, and supervision.

Despite the fact that the children were without food, the mother objected to their placement in the receiving home because she did not want to be separated from them. I told her that the emergency situation left only two courses of action: Either the children must go to the receiving home in Cleveland, or she could go back with them to Alabama where they were legally entitled to relief. I withheld disposing of the mother's case to give her time to make her choice.

Two days later she decided to return to Alabama with her children. In fact, I was in the midst of a series of telephone conferences with some leaders of the local community, including representatives of the Urban League, the NAACP and the Call &

Post, to ascertain if some private help could be obtained for the family, when I was advised that Mrs. Winston had decided against having her children placed in a receiving home and preferred to return with them to Alabama.

The local Travelers' Aid furnished the family with transportation and food and contacted the Alabama welfare agency to receive them. There was no exile order by the court but only a voluntary choice by Mrs. Winston to escape a possible sentence for her neglect of the children, and to prevent them from being placed in a receiving home. No court could compel Mrs. Winston to return to Alabama had she preferred to remain in Cleveland under the above circumstances.

As chairman of the Unemployment Compensation Board of Review of Ohio, I had fought for the granting of unemployment compensation to workers who moved from one State to another for the purpose of finding employment. I believe nothing should be done to hinder American citizens from migrating to localities where they might improve their economic conditions. Today a mass migration is going on in our country. Families are on the move from one State to another. It is inevitable that problems like those of the Winston family should arise.

It is noteworthy that 45 of the 48 States have residence restriction like those of Ohio against granting relief to persons unable to qualify under residence requirements. The plight of the Winston family is typical of many other cases. The hands of courts and relief agencies are tied against granting long range help to nonresidents. Involved is a broad human problem which transcends the borders of any single State. It is a national problem. The rights and human dignity of unfortunate people will continue to be adversely affected until public relief is put on a national basis as in the case of relief for farmers for many years. Consideration must be given to the enactment of Federal legislation to help families who must migrate from one State to another in search of better living conditions. The hands of local welfare agencies and courts should not be tied so as to prevent granting aid and relief in worthy cases.

Sincerely yours,

ALBERT A. WOLDMAN,
Associate Judge, Juvenile Court of Cuyahoga County.

New England Industry

EXTENSION OF REMARKS
OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 2, 1956

Mr. PATTERSON. Mr. Speaker, recently I read an excellent pamphlet entitled "Salute to New England," published by Pan American Airlines. It is a report on the growing ties of New England industry with the markets and resources of Latin America. Since this directly concerns the future of New England industry, and particularly the people of the Naugatuck Valley, whose welfare is of the utmost concern to me, the pamphlet prompts me to make some urgent remarks.

As we all know, New England, long the center of America's industrial activity, recently found itself confronted with serious problems caused by conditions beyond its control. Manufacturers and laborers had to face ruinous competition from other areas whose labor and power were cheaper and where fuel and resources were more accessible. This was particularly true, for example, in our great textile industries, where only 1 of 9 New England workers is now employed, compared to 1 of 4 in 1920.

New England was in trouble. Unemployment was chilling the lives of many of our great one and one-half million labor force. Valuable plants active in strengthening the national defense were cutting down production.

This is why New England's great surge since the war has been so exciting to me. As a result of this surge our industry has both a new look and a new direction. Its new look is its new industries—plastics, aircraft, electronics, and nuclear power, to name just a few. Native New England ingenuity has rechanneled some of its great potential into these new fields and has nearly succeeded in solving the problems caused by cheap southern power and labor.

I do not mean to say by this that New England has a completely new look. This is not so. Connecticut's great metal factories, for example, alone employ over 300,000 workers, many in the Naugatuck Valley. Almost 150,000 more of our great labor force earn their livings producing such essential materials as furniture and paper, and rubber, leather and textile goods. All these long-established great industries are still the core of Connecticut's industrial life, yet the expanding new ones, such as nuclear power and plastics, have made New England even more the heart of American industry.

Yet even more important than the New Look of New England industry is its new direction—Latin America. Here is a vast land area, startlingly near New England, and superbly wealthy in natural resources, which is rapidly solving our crucial problems of costly domestic transportation and lack of native resources. The two areas are made for each other.

I am proud to say that our manufacturers in New England have been very quick to see the potentialities of this developing area. More and more, the great resources of Latin America—cheaply transported to such nearby ports as New York, Boston, Bridgeport, and New Haven—have been used by New England manufacturers in making their products. More and more, our finished goods are finding their way to the rapidly expanding Latin American markets. The combination is an unbeatable one. For example, already, 40 percent of New England investment is in Latin America; 40.5 percent of its waterborne imports are from Latin America. This represents more than $200 million worth of imports.

And since more than one-third of New England industry depends very heavily upon foreign imports, of which 40 percent are from Latin America, it follows that at least 200,000 of New England's working force totaling 1,500,000 people depend directly upon these imports for their livelihoods. About 450,000 depend upon them to a great extent. In our Naugatuck Valley this is particularly true, since Latin American imports are essential to these great factories.

Furthermore, Latin America provides New England industry with a $400 million export market yearly. This is 6 percent of the Nation's total to Latin America, and 2 percent of the nationwide trade to the whole world.

The most exciting thing about these statistics is that they grow by leaps and bounds every year. Both New England and Latin America are expanding quickly, and in expanding, become even more closely tied. Latin America's population is the most rapidly growing in the world. Its 175,000,000 people are increasing at the rate of 2½ percent a year. This means that by 2006 there will be 500 million people in Latin America in need of New England's finished goods. Furthermore, as they grow, they are becoming much more expert at harvesting their inexhaustible supplies of crude petroleum, fibers, hides, foods, and all kinds of ores for machinery, machine parts, transportation and electrical equipment, precision instruments, metal products, and finished goods of all kinds. These, needless to say, are just the raw materials New England needs—and they can be transported here more cheaply than similar materials found anywhere else in the world. The east coast of South America, for example, is only 200 miles farther from Bridgeport than it is from Miami. This fact of distance is clearly shown when we realize that the ties with Latin America are much stronger in New England than in the rest of the Nation. The more New England manufacturers turn to Latin America, the better the future of New England industry, and I am proud to say that New England manufacturers have been the first to realize this.

I want to stress this point with regard to the industries in the Naugatuck Valley. Not only will fine and inexpensive raw materials from Latin America make it possible for these fine industries to compete favorably with any area in the world, but Latin America offers unlimited possibilities as a market. The more we invest in their development, the faster this market will grow. Furthermore, Latin America can be tremendously beneficial to transportation facilities in the valley. Ports such as Bridgeport, New Haven and others nearby would benefit by concentrating upon this trade. Railroads would find their business booming even more if they acted as feeder lines from these ports to the factories in the area. And all transportation facilities, and consumers in general, would benefit by the cheaper goods produced as a result of less expensive raw materials and expansion of production.

So the most important thing of all about the New Look and the new direction of New England industry is not just that there are new industries or that they are turned in a new direction. The most important thing is that New Englanders keep up this trend. Ingenuity and resourcefulness have keep New England's place as America's industrial leader. The way to stay in the lead is to increase our ties with Latin America. We must invest even more in their undeveloped resources so that they may be-

come greater. In the process so will New England.

Pan American Airlines deserves praise for its continued keen interest in New England industry, especially Connecticut industry. This great, forward-looking airline has long been a great service to businessmen in New England, and its continued interest will be a tremendously important factor in our future. A regular and direct Pan American flight schedule operating out of Boston, New York, Hartford, and other convenient cities in the area could do as much for our industrial future as any other single innovation. Such a service would make Latin America much more accessible to New England businessmen and investors, and thereby increase the economic ties with Latin America many times over. We of New England thank Pan American for its "salute," and return it with hope for the future.

Western Borders of Poland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. GORDON. Mr. Speaker, by request of the Polish Western Association of America, Chicago, Ill., and under unanimous consent, I insert in the RECORD the position taken by this association with reference to the Polish western borders. A copy of this article was delivered to the German Chancellor, Dr. Konrad Adenauer, through the German Embassy in Washington, earlier this month, when he visited here:

POSITION OF THE POLISH WESTERN ASSOCIATION OF AMERICA WITH REFERENCE TO POLISH WESTERN BORDERS

The Polish Western Association of America is an organization of men and women interested in and largely descended from Polish western territories.

Aim of the Polish Western Association of America is to safeguard and strengthen the ties binding the western lands restored to Poland after the First and Second World Wars to the organic parts of Poland, as well as to correct misleading information coloring American opinion.

On the occasion of Chancellor Adenauer's visit to the United States, the association takes the liberty of calling attention to the fact that these western lands are the cradle of the Polish people and nation, and for thousands of years were the dwelling place of Poles and their Slavonic ancestors.

A thousand years ago when Poland entered upon the stage of recorded history as a lawfully ruled state established several hundred years earlier, these lands were governed by native Polish princes of the Piast family. One of them, Mieszko, for the sake of delineating on record the separateness of Poland from its German neighbors, rejects their offer, and, through the instrument of her Slavonic brother Czechs, enters the family of Western European culture.

Polish defense of these lands began when the Slavs along the Elbe and the western shores of the Oder succumbed, overcome by the German forces of annihilation or assimilation. The only Slavonic people remaining within the German realm were the Lausitzer Serbs, who today are demanding their freedom. In their struggle against the eastern German margraves, the Poles were repeatedly allied with the most illustrious Roman emperors of the German nation.

Polish arms, often victorious, permitted Polish knights to stake out the Saale River as a frontier, and were sufficiently effective to prevent the German "Drang nach Osten" from succeeding in conquering Polish lands in one fell swoop. The process, or the gradual tearing away of parts of Poland, took the Germans over 800 years. Last of the principal or biggest cities in the West, namely, Szezecin (Stettin), Wroclaw (Breslau), and Gdansk (Danzig), did not become Prussian until the 18th century.

The population of the western lands, and this until after 1945, was predominantly Polish. Their attachment to Poland, Polish origin and character, was affirmed and enscribed in blood alike in the armed resistance to Prussian occupation of Szezeclin (Stettin) and Gdansk (Danzig), and in the Polish uprisings in the 19th and 20th centuries. They further affirmed their ties with their outstanding contribution to the spread and development of Polish culture.

It is unjustly, therefore, that the German Government and German public opinion alike call this region Eastern Germany. They continue to regard this territory as only temporarily under Polish administration and stubbornly cling to geographic place names, Germanized for the most part in the 1900's. During the Second World War after Hitler's attack on Poland, all remaining semblance to their Polish origin was completely eradicated in thousands of instances.

During the time they belonged to Germany, these lands were deficit territories. They always ate up a large percent of the German national income. Learned men and journalists in Germany constantly called attention to the continuous exodus of Germans from these lands. This historic process reached a peak in 1945, when all of the German immigrants abandoned the territory. Only the native-born—that is the Poles—remained on the land.

Relatively few Germans were displaced, and then they were not compelled to do so in a later period.

One and the other, those who abandoned and those who departed Poland, were absorbed into the German economy. At the same time, the young, and so the most productive element does not want to even think of returning. German economists emphasize that without them the revival of Western German economy would not be possible.

Lands restored to Poland were wholly repossessed by the Poles and administered as their own. Today the majority of people on these lands are Poles, born there; and it is a question of only months before the population reaches and exceeds that which existed before the war.

There is only one problem and that is how do the Germans picture themselves taking over these lands again? There is talk of this not only by the man on the street and second-rate journalists, but also very frequently by ministers in Chancellor Adenauer's government.

This is nothing else but a hidden menace of a new war caused by Germany, inasmuch as the Poles will never give up these lands.

Objective German voices belong to a rare few, so it is that the declaration of West German Minister of Foreign Affairs Heinrich von Brentano was greeted with esteem when he declared that renunciation by the German people of questionable border expansion cannot be rejected.

Likewise, a proven friend of the Germans, former longtime United States Commissioner in Germany McCloy, came forth with the request that West Germany renounce expansion of its borders beyond the Oder and the Lausitzer Neisse, and thus pave the way to the unification of Germany. In this, he acknowledged the Polish point of view.

The Polish Western Association of America, numbering within its ranks Americans of Polish ancestry, regards the present Polish-German boundary along the Oder and Lausitzer Neisse Rivers as historically fair and as final. Further, it holds that the recognition of this boundary can end a thousand years of Polish-German border misunderstandings. Concurrently, it can mark the beginning of a new era of Polish-German cooperation, in which both Christian nations could stand as an effective bulwark against the eastern wave of barbarity threatening western culture and civilization.

Time and again, Poland performed such deeds in history, for example: defending Europe on the fields of Liegnitz in 1241, lifting the siege of Vienna in 1683, and through victory over the Bolsheviks in 1920, repelling Soviet imperialism already then tending toward the conquest of all Europe.

Rock Island (Ill.) Centennial Bridge Improvement

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. CHIPERFIELD. Mr. Speaker, I am delighted S. 2091, a bill authorizing the reconstruction, enlargement and extension of the bridge across the Mississippi at Rock Island, Ill., passed the House today.

This bill was sponsored by Senator DIRKSEN and had previously passed the Senate. I introduced a similar bill in the House.

The real purpose of the bill is to reconstruct, enlarge and extend the approaches to such bridge. This construction does not require any Federal appropriation and will not cost the Federal Government one dime but will be paid for by toll revenue collected from those who use the bridge.

The following statement from the House report concisely states the reasons why improvements are necessary:

GENERAL STATEMENT

The Rock Island bridge was completed in 1940 and since that time the average daily traffic over the bridge has increased from 4,000 to 12,000 vehicles per day. The bridge is a 4-lane roadway and can accommodate a large volume of traffic, but it is estimated that its present approaches nave only one-third to one-fourth the capacity of the bridge. Approximately 10 percent of the vehicles using the bridge are large trucks which are channeled through the business areas.

The metropolitan areas of Rock Island and Moline, Ill., Davenport, Iowa, and adjacent cities, has a total population of about 200,000. The area is highly industrialized, with an estimated 126 industries with 29,000 employees on the Illinois side, 179 industries with 15,000 employees on the Iowa side, and 6,000 employees at the Rock Island Arsenal located on an island in the river. Being one metropolitan area, the traffic across the river produced by this employment is extremely heavy on the available bridges.

Approximately eight blocks east of the Rock Island bridge is a free Government

bridge connecting Rock Island and Davenport by way of the Rock Island Arsenal. Practically all of the employees at the arsenal travel to and from their homes by motor vehicles over the free bridge. The present average flow over this bridge is 15,000 to 18,000 vehicles per day. This traffic is impeded by the opening of the bridge to permit boats to pass, which averages about 125 openings monthly.

Based on present revenue, the Rock Island bridge is expected to be toll free in 1959. The committee has been advised that city authorities believe that refinancing and extending the small toll of 10 cents per passenger vehicle is a practicable, equitable, and feasible method of improving the approaches to the bridge. They estimate that under this procedure the proposed improvements will be completely paid for and the bridge made toll free by about 1970.

The committee believes that S. 2091 should be enacted so that proper steps can be taken to permit the Rock Island bridge to be utilized to its designed capacity to relieve the existing and anticipated traffic conditions. The approaches to the bridge appear to be the key to the problem, and unless corrected to permit a free flow of traffic across the river, the economy of the area will be adversely affected and the movement of highway traffic will be impaired. Adequate approaches to the bridge, with attendant improvement of access roads and streets, will afford safe and rapid approach to the bridge and increase its utility; prevent congestion and overflow of traffic and trucks in the downtown city area; and handle the heavy increase in traffic expected from the nearby terminus of the Illinois toll road East-West Highway and the construction of a new bridge over Rock River.

The committee has been informed that the Secretary of the Army, the Secretary of Commerce, and the Director of the Bureau of the Budget have offered no objection to the enactment of this legislation.

Resolution Passed by New York Army and Navy Union

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. FINO. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a resolution passed at the recent State convention of the Department of New York Army and Navy Union, U. S. A.

The Army and Navy Union, U. S. A., the oldest veteran organization in this country, is to be commended for its important work in promoting, fostering, and encouraging perpetual fraternal comradeship. It lists among its members such personalities as Presidents William McKinley, Theodore Roosevelt, Harry Truman, and Dwight D. Eisenhower; Douglas MacArthur, Edward V. Rickenbacker, and many other famous persons.

The resolution, which follows, was unanimously adopted and expresses the appreciation of this fine organization for the efforts of Members of Congress who have been sympathetic to the problems and affairs of our veterans and servicemen:

At the 41st annual convention of the Department of New York Army and Navy Union, U. S. A., Troy, N. Y., June 21 to June 23, 1956, a resolution was unanimously adopted praising and extolling the Congressmen and two United States Senators, LEHMAN and IVES, all from the State of New York, who have sympathetically indicated and demonstrated sincere effort and activity to veterans and servicemen, and their families, and to the families of the men who sacrificed their lives in the defense of their country.

To you New York State Congressmen and Senators LEHMAN and IVES, please accept our most humble thanks for your unending and thoughtful consideration in enacting veterans' legislation for the benefit of all who served and are serving their country in peace and war. Our sincere hope that you will continue to serve your country prudently and unselfishly.

Value of Foreign Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Foreign Aid Also Improves Foreign Relations," which appears in the June 21, 1956, issue of the Leitchfield Gazette, of Leitchfield, Ky.

The editorial is as follows:

FOREIGN AID ALSO IMPROVES FOREIGN RELATIONS

Attempts by the national administration to restore cuts made in appropriations for foreign aid apparently are in for tough sledding created mostly by a line of thought which, although not justified by facts, is prevalent and not without logic. Objections to foreign aid by Congressmen are reflections of the objections made by private citizens toward paying tax money to foreign countries and people, regardless of the purpose. Reports of how Uncle Sam is being duped through foreign aid are rife, and the most far-feteched rumors find easy belief in the minds of those already prejudiced.

Oddly enough, some of the persons who oppose foreign aid also ask why the Russians are so successful in their efforts to mold thinking in satellite nations, implying that this country should use their methods. What these critics overlook is that the Russians are spending much more to force their way of life on subject nations than we spend to help keep our allies strong and friendly. If we were to adopt the Communist methods of winning friends the cost would be considerably more and the results probably less effective.

Foreign aid represents only a small part of our total budget, even through $5 billion is an astronomical figure that is too great for the average person to comprehend. Cutting over a billion dollars off what was supposed to be an adequate amount might make sense to harassed Congressmen who are faced with a constant barrage of questions about the need for foreign aid at all. However, weakening this country's position to assist friendly nations could be a bad policy in the end.

The often-heard statement that friends who must be bought are useless may be countered with the fact that we are not buying friends with the money. Friends are made or lost as a result of our actions rather than the amount of our aid because all the money in the world will not help a churlish giver. With so much debate over the value of foreign assistance as a policy, friendly nations naturally may be led to believe that our finances are being used to exploit rather than aid them. To avoid the likelihood of more than a minority holding this view, it would be advisable for all concerned to decide upon an amount to devote to foreign aid and strengthen arguments for continuing the aid to counteract claims of the poorly informed.

The Poznan Revolt

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. ZABLOCKI. Mr. Speaker, today's reports indicate that the 3-day revolt of workers in Poznan has been brutally crushed by the Communist security police and armored divisions.

On the heels of this announcement came the reports of the beginning of a bloody purge of the people of Poznan who rebelled against the unbearable situation created by the Communist aggression, economic exploitation and miserable living conditions under the Red rule.

Our prayers and deepest sympathy are extended to the courageous people of Poznan in these days of trial when they are exposed to the ruthless revenge of the Communist dictatorship which recognizes only the force of terror and police oppression.

Under leave to extend my remarks in the RECORD, I wish to commend to the attention of the membership of this body a statement issued by President George Meany, of the AFL–CIO, hailing the courage of the workers of Poznan and assuring them of American labor movement's full moral support:

Yesterday's uprising of Polish workers in Poznan demonstrates to the entire world on both sides of the Iron Curtain that the torch of freedom lit by the workers in East Berlin 3 years ago has not been extinguished.

Once again active leadership in the fight against Communist totalitarianism has been seized by heroic workers. This uprising is not the action of people who have deliberately measured the consequences of their acts. It stems from the irrepressible human desire for freedom which has burst forth in a symbolic chant, "We want bread". This cry will not fall upon deaf ears, because workers will recognize it as the echo of the demands of free trade unionists everywhere for "bread, peace, and freedom".

The Polish uprising once again provides evidence that the workers of the world are united in heart and mind despite different governmental regimes. They are united in their yearning for freedom and in their determination to break the chains of Communist enslavement.

We of the AFL–CIO are, indeed, proud of this memorable day of July 28, 1956. The free workers of America hail the courage of the workers of Poland. While we cannot extend a helping hand to them in their imprisonment behind the Iron Curtain, we want to assure them of our full moral support.

At the same time, I also wish to include in the RECORD an editorial which appeared in the Milwaukee Journal of June 30. The editorial aptly points out that "no amount of force can extinguish love of liberty among those who have experienced liberty." Even though the Poznan uprising has been crushed by tanks and guns of the Communists, the spirit of the Polish people will continue to fight for liberty and true independence for their nation.

The editorial follows:

THE CHILL WIND FROM POZNAN

The Polish uprising, like the East Berlin revolt of June 16, 1953, shows anew that people who have known national independence and democratic freedoms will not supinely accept Communist tyranny.

Soldiers may maintain Red control over them. Puppets may govern them from guarded headquarters. Police may silence their unrest. But the moment there is the slightest relaxation of force and terror, hatred of communism comes into the open and the spirit of revolt is in the air.

Tanks and guns quell uprisings, of course. Unarmed men are helpless against modern weapons. The day is past when revolutions can be made by men with muskets or Paris can be taken by a mob armed with scythes and pitchforks.

No amount of force, however, can extinguish love of liberty among those who have experienced liberty. It is Communists' belief that, given time, they can sell their doctrine to a people or can insure its permanence by force. The belief has never proved justified outside of Russia, where citizens have never known freedom. Even in Russia today there seems to be a stirring that troubles the men in the Kremlin.

It is in Poland that the world would expect the first signs of trouble for the Red oppressor. The Poles have experienced many occupations and suffered many repressions. They have died in many courageous revolts. They do not like Russains; they cherish independence; they are not fooled by puppets in their midst.

The chill wind from Poznan is blowing today through the government buildings in Warsaw. It must bring sympathetic trembles of uncertainty and fear in East Berlin, Prague, Budapest, Bucharest, and Sofia. Yes; even in Moscow.

Unreasonableness of Steel Industry

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the Washington Post and Times Herald of Monday, July 2, on the unreasonableness of the steel industry:

THE STEEL STRIKE

Officials on both sides are predicting that, now the major steel mills are closed, the strike will last for at least a month. If so, losses on both sides will be enormous. It is said that losses in wages and steel production will run to more than $40 million a day. As the mills had planned a reduction in output to 80 to 85 percent of capacity during the summer months, a short strike might not have any serious repercussions on the economy. But prolonged idleness in this basic industry could not fail to slow down construction and manufacturing over wide areas and to spread a havoc of unemployment.

Where the chief responsibility lies is difficult to determine. As in most controversies of this kind, fault may be found on both sides. The sharpest conflict appears to have arisen over the length of the proposed contract. Because of the vast outlays for plant expansion contemplated for the next 3 years, the industry sought a 5-year contract so as to eliminate the danger of frequent strikes and thus increase stability and make it easier to attract capital. The union refused to be bound for so long a period, although it is said to have been willing to negotiate a 3-year contract. No satisfactory middle ground could be found. Undoubtedly long contracts have many advantages, but the steel executives now have to ask themselves whether the present strike will not inflict precisely the sort of damage they sought to avoid by demanding a long contract to prevent strikes.

One other action that is difficult to explain is the industry's rejection of the union's proposal to extend the old contract for 15 days in the hope of averting a strike. The union's condition was that any wage gains finally agreed upon be made retroactive to the date on which the contract expired. That practice is widely followed in labor-management negotiations. Certainly it is not unreasonable. The unfortunate rejection of this offer cannot now be rectified, but the steel management can bid strongly for a short strike by initiating new negotiations, and both sides ought to be formulating new offers, for a compromise is the only feasible solution of controveries of this sort, whether the punishment the parties inflict on one another is long or short.

Criticism of Foreign Aid Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Uncle Sam's Nephews and Nieces Grow Critical of Vast Handouts Abroad," which appears in the June 19, 1956, issue of the Messenger, of Madisonville, Ky.

The editorial is as follows:

UNCLE SAM'S NEPHEWS AND NIECES GROW CRITICAL OF VAST HANDOUTS ABROAD

Scribblers for the Big Prints and commentators who generally are found in the camp of the give-away boys are shedding a lot of tears over the drubbing which has been given lately to the President's foreign aid program.

In Sunday's papers some of the scribblers forecast a break-up of the bipartisan foreign policy which has guided our relations with the rest of the world for some years, but these writers, it seems to us, ignore a simple fundamental principle which is behind the foreign-aid fund cuts. It is this:

The American people, who have given away to the rest of the world the tremendous and unbelievable sum of $115,000,000,000, are getting tired of the handouts.

This attitude on the part of the Great American Taxpayer and some of his representatives in Congress should not surprise anyone. It seems to us that the American people, to whom tax-paying has grown to be a critical levy upon income, have simply dropped their starry-eyed attitude toward the so-called downtrodden or unfortunate nations of the world and are beginning to count the cost and wonder what our $115,000,000,000 have produced either in improvement in the lot of downtrodden or in good will toward Uncle Sam.

The good will is desired by the sincere not as a matter of building up our national self-esteem, but as a means of putting across to the rest of the world our peaceful intentions, our free way of life, and our desire for world progress as well as American progress.

In this intent of ours, sad to say, we see little to indicate that we have scored anything like reasonable success. We haven't bought security with our money, even, a project in which we have invested $55 billion in foreign aid since World War II ended and the present great contest with the Russians began. Who will say today that we have gained lasting friends by our vast outpouring of good American dollars, or that communism has been contained in its original places as a result of our generosity?

The plain fact is that communism hasn't been contained, and everybody knows it. Communism, despite its smiles, is waging the same cold but deadly war, and it has chalked up gains in the East and Middle East which are startling and menacing in their extent.

Tito, who has received a lot of American dollars, is professing anew his love for the Russians. Our citizens don't like what is going on in Saudi Arabia. They don't like the attitude of Iceland, and they know that our big air bases in Morocco are in peril. And even the Greeks are turning against us.

The fact is, a lot of Americans and some of their representatives in Washington are asking themselves seriously whether we have any real friends in the world. This is causing them to take a hard look at this whole giveaway business. The average citizen doesn't have the slightest idea what $115 billion is, but he can figure out that it is one hundred and fifteen million thousands of dollars. And the administration wanted to kick up the giveaway, rather than pare it down.

No wonder Congress acted up. Members, we feel sure, have been talking with the folks back home.

Air Transport in Action

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 29, 1956

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Milton W. Arnold, vice president, Air Transport Association, from the June, 1956 issue of Air Force magazine, entitled "Aerial Lifeline in Reserve":

AERIAL LIFELINE IN RESERVE

(By Milton W. Arnold)

Come an all-out war, the Government has contracted to purchase an airlift package from the airline industry. The package is called CRAF, Civil Reserve Air Fleet.

CRAF is made up of a fleet of airliners capable of moving men, machines, and materiel to the four far corners in a civilian-operated airlift, the like of which the world

has never known before. Operationally, it it a plan worked out jointly by the Department of Defense, the Department of Commerce, and the operators of our civilian air transportation system.

The plan calls for integrating commercial airliners and the know-how of the air transport industry into the Military Air Transport Service's aerial supply line whenever it is necessary to support an emergency action. At the same time, a war air service pattern for the remaining civil airliner fleet is being worked out, designed to insure essential priority air traffic over the 80,000 miles of domestic airline routes and the 112,000 miles of our international system.

In short, the CRAF plan calls for taking the experience, manpower, and facilities of the commercial airlines and using them to augment the military airlift capacity (MATS), which would be taxed in the early stages of another war.

In the words of Lt. Gen. Joseph Smith, the Commander of MATS, who is charged with implementing the entire CRAF program, "CRAF is a mobilization of civil airlines capability. It is not a militarization of the airlines."

The plan provides for:

Orderly, yet rapid, transition of the civil airlines from normal schedules to contractual military support operations.

Limited modification of selected four-engine civil aircraft so that equipment for long-range, over-ocean operation could be installed quickly.

Assignment of actual routes and destinations to the civilian operators so that each airline can plan for the routes over which its aircraft will be flying.

Deferment for essential airline-operating personnel, as much as possible, from active military service.

Already certain phases of the CRAF program are in motion. There are still many things to be worked out, but the basic formula is off the runway and heading in the right direction. If needed, CRAF could be put into operation this minute.

Many of its planes, for example, have been tagged by N–number for the job. More than 80 percent of these planes have been modified to provide for a different kind of operation than their normal duties require. New planes have the necessary modifications built in, engineered, as a matter of fact, from their blueprint stages. The Lockheed Super G Constellations, for example, were designed with quick conversion interiors. In a matter of hours it could go from a 65-passenger capacity to more than 100.

CRAF planes aren't "mothballed. It is not a standby operation. These planes are busy day and night flying mail, passengers, air express, and freight. They constitute more than 45 percent of the civilian air industry's 4-engined fleet. CRAF planes every day are flying routes which at the moment might become vital new war supply lines.

Likewise, ground personnel, flight crews, station facilities, and maintenance operations have been keyed to the CRAF plan. Rendezvous points, hopping-off points, loading points, maintenance bases, and other operational tasks have been assigned specific carriers. As rapidly as possible, needed equipment and materials for the operation of the reserve air fleet are being stockpiled. Although flight crews have not been classified by name, pilots, copilots, flight engineers, navigators, and all flight personnel have been alerted and know they might be called on overnight.

The CRAF package, incidentally, has an estimated value of $400 million in aircraft equipment alone—on an initial equipment investment basis. To maintain and operate such a fleet on a standby basis would cost the Government another $300 million annually. Under CRAF, the cost is much less per year.

To understand CRAF we have to go back to an act of Congress in 1938. This law put the adolescent United States air-transport industry into long pants. Up to 1938 airline operations were in a state of confusion with cutthroat competition, a bad case of crash fever, and financial instability threatening our whole system of airlines. Passage of the Civil Aeronautics Act of 1938 helped a critical situation.

The act gave purpose and mission to the airlines under a system of regulated competition and rigid safety requirements. Its ultimate aim was, and is, that the industry will become self-sufficient while serving the commerce, the postal system, and the national defense of the Uinted States. Congress spelled out definite obligations that the air transport industry must perform as a defense partner.

Before it was 3 years old—still in the kindergarten of regulated competition under the Civil Aeronautics Act—air transport went to war. Six months after Pearl Harbor, more than half our commercial fleet—193 planes out of 359—was either sold outright or leased to the Government. One-third of the airline personnel, top executives, pilots, radio operators, flight superintendents, meteorologists, and maitenance crews went into uniform. Their know-how formed the nucleus of the Air Transport Command (ATC) and the Naval Air Transport Service (NATS), predecessors of today's worldwide MATS operations. Airline experience pioneered new air routes across the top of the world and around its hot, equatorial middle. It developed new techniques of flying, navigation, maintenance, at home and abroad, and helped write the bible for a global network of air transport.

By war's end, on Army and Navy errands, the airlines had flown the equivalent of 26,000 times around the world. They flew 8 billion passenger miles and 850 million ton-miles of cargo. They moved anything and everything that would fit into a plane's fuselage. World War II was the proving ground for a whole new concept of logistics.

It proved, beyond any doubt, the value of an air transport industry in being and showed how it could be used in time of national emergency.

On the strength of this a number of Government agencies and the airline industry itself began studying how to prepare the airlines for a future emergency.

The big concern was to eliminate the obvious mistakes of World War II. As somebody put it, "Then the airlines weren't drafted—they were atomized."

Too many planes were taken away from civilian war jobs too quickly. There was no worldwide route pattern in the beginning because there were only 1 or 2 overocean routes. Planes and crews got to places in a hurry, only to sit around and sweat out loading, maintenance, and uncalled-for operational delays. There was no system of air priorities worked out until months later. Airline know-how was scattered in a thousand directions before it could be collected to a single purpose.

In any future war, there would be no time to get organized. Needed air transport must be ready, on the shelf. This was proved in Korea. Using civil air transport for the Korean airlift was a sample of how ready-made and ready-for-action airlift could be used by contracting with the carriers.

This is the crux of the CRAF plan which came into being officially in 1951 after many discussions and surveys by the Department of Defense, Department of Commerce, and the civilian air transport industry. The result, CRAF, is a many-sided operation, organically. It is directed and supervised by the MATS Commander acting as an operating agency for the Department of Defense. Its operational control is under MATS. However, it is maintained and operated by the civilian air transport companies, using their personnel, planes, facilities, and experience on a contract basis. All activities are coordinated with a civilian agency, the Defense Air Transport Administration (DATA), acting for the Department of Commerce. Another agency to handle necessary air priorities is being established under jurisdiction of the CAB—to implement and run the war air service pattern.

The physical requirements of CRAF are continuously changing. Based on 1956 figures, however, the CRAF fleet will consist of more than 360 four-engined, overseas aircraft with a contingency reserve of 35 additional aircraft to replace losses. These include Douglas DC–4's and DC–6's, Lockheed Constellations, Boeing Stratocruisers, and the newer and larger DC–7's and Super Constellations.

Their airlift capacity has been estimated at 566,000 available ton-miles per hour. But the figure is being revised upward to around 797,000 available ton miles per hour on the basis of the proposed 1956–57 CRAF program that will include more of the bigger and faster planes.

Revised estimates indicate the numerical size of the fleet may be increased to at least 358 planes, but its airlift capacity will go up 39 percent while the number of planes increases by only 13 percent. "We are trying to keep virtually the same number of coins in our emergency fund," a DATA spokesman explained, "but we are putting in quarters instead of dimes."

Jet transports will eventually again double the capacity without substantially increasing the number. And CRAF planners are already counting on using jets in the reserve fleet.

It has been estimated that the 1956–57 fleet could move an infantry division (17,500 men) across the Atlantic in about 72 hours. This, of course, if everything was to be thrown into the breach at one time.

The CRAF planes have also been earmarked for specific pobs. DC–4's will be used for heavy cargo shipments. The other types will be used to haul personnel, plus, of course, normal cargo hold capacity.

Modification of the planes for CRAF has been in progress for more than 3 years, by the airlines under government contract at airline maintenance and overhaul bases. This program involves installation of necessary wiring and brackets so that the peacetime airliners can accept military equipment. Such equipment includes new electronic systems, navigational aids, and sea-rescue gear necessary for over-ocean operations.

Initial pre-D-day modification—brackets and wiring—adds about 50 pounds extra weight to the airliner. But the equipment itself will weigh almost half a ton. The fact that the planes are equipped to accept the extra black boxes, however, puts the reserve fleet that much closer to active readiness. It means planes unequipped to fly the ocean today can be fitted to fly anywhere in 48 hours.

CRAF is a 2-ocean operation, with an Atlantic division and a Pacific division. The routes for each division have already been designated. In addition to normal airline routes, several auxiliary routes have been selected exclusively for CRAF use. The airlines responsible for operating their planes over all the respective routes have their assignments. Likewise various airlines have been assigned as senior lodgers for each division—responsible for upkeep of CRAF bases which will become maintenance and refueling stops and necessary equipment stockpile centers for the operation.

Sixteen different airlines have been assigned to the Atlantic division and eight other companies have been assigned to the Pacific Division. Some operators provide services for both areas. Altogether, 24 different airlines participate in the CRAF

program. The majority are scheduled airline operators with the remainder coming from the nonscheduled and contract haulers. Each has its specific assignment.

American Airlines, Seaboard & Western Airlines, Pan American World Airways, and Trans World Airlines, for example, are the senior lodgers for the Atlantic division. They will maintain and supply CRAF requirements at bases like Idlewild in New York; Santa Maria Airport in the Azores; Gander Airport, Newfoundland; Wheelus Airport in North Africa. Other carriers like United Air Lines, Northwest Airlines, and Transocean Air Lines will be senior lodgers for the Pacific area at places like Honolulu, Wake Island, Elmendorf AFB, Alaska, and Travis AFB, Calif.

Equipment and supplies are being stockpiled at the various bases around the globe. Likewise, stockpiling of the necessary equipment for modification of the planes at the airlines' major overhaul bases has also been in effect. Under the contract arrangement the Government pays for this equipment, the stockpiling, the necessary modification work. But the civilian operators provide the planes and crews and put it to use.

One of the biggest problems facing CRAF today is getting enough personnel. It is estimated that it takes about 3.5 crews per airplane to keep the fleet operating at maximum capacity. That means something like 1,400 pilots, and a like number each of copilots, navigators, flight engineers, alone—a total of more than 5,000 flight personnel.

The personnel problems have recently been clarified to some extent. All airline pilots, other than those serving in a supervisory capacity, are definitely earmarked for duty with the CRAF program. No longer are personnel in this category "counted twice," i. e., they may no longer fill positions as mobilization designees within the Air Force structure while being counted as a CRAF crew member. Several plans are under consideration to further resolve the draft and reserve status of airline personnel other than air crew members.

Suffice it to say, everything possible is being done to keep essential personnel of the airlines for the CRAF operation in their jobs which can give maximum efficiency to the program. The whole theory of CRAF is based on the principle of utilizing experience and know-how to the highest degree.

The man who would actually trigger CRAF is the commander of MATS. But he will not set the program into motion without an Executive order passed on to him through the Department of Defense.

A full-scale war is the real test. Here's how CRAF would work for the first 48 hours:

(1) All CRAF planes, wherever they might be, would return to or head toward designated modification points (the respective airline maintenance centers) where necessary equipment for overseas operation would be installed.

(2) All CRAF crews would be alerted and flown to already designated flyaway points.

(3) Senior lodgers at the various overseas bases would be alerted and ready to receive the flow of CRAF traffic.

(4) As soon as the modification program was completed on each aircraft it would be flown to designated rendezvous points or assigned to a specific mission.

Simultaneously the war air service pattern for the remaining civilian fleet would go into effect under a priorities system.

This is the plan. This is CRAF. It is being revised and revitalized every day. How well it will work can only be learned when and if—God forbid—we ever have to use it.

Rebellion Within Poland

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. MADDEN. Mr. Speaker, I am herewith submitting for the information of the Members of Congress a copy of a telegram I received from the Indiana Department of the Polish American Congress. The same speaks for itself.

I am also submitting a copy of the letter which I have mailed to the Honorable John Foster Dulles, Secretary of State. This letter requests that our Government immediately instruct our representatives to the United Nations to resolve that the United Nations Organization make a complete investigation of the Poznan uprising and all internal and governmental conditions which incite rebellion on the part of the Polish people against communistic tyranny.

The telegram and letter follow:

JUNE 30, 1956.

Hon. RAY J. MADDEN,
House of Representatives:

The Polish American Congress of Indiana Department demands your appeal to the Department of State to immediately bring the Polish uprising at Poznan to the attention of the United Nations as a proof that Poland is still enslaved under the sharp communistic oppression. It is imperative that the State Department demand free election in Poland under the international control as per the Potsdam Agreement. A clear and determined position of the State Department in the defense of the Polish anti-communist heroes must be taken up immediately.

POLISH-AMERICAN CONGRESS
INDIANA DEPARTMENT,
ALOISE M. WOZNIAK, *President.*
THADDEUS WACHEL, *Secretary.*
T. S. KUBIAK, *Director.*
JOSEPH WIEWIORA,
Public Relations.

JULY 2, 1956.

The Honorable JOHN FOSTER DULLES,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: Enclosed you will find telegram which I have this day received from officers of the Polish American Congress, Department of Indiana, in regard to the uprising of the Polish citizens at Poznan. The request set out in the same should be given every consideration by our Government. The uprisings in Poland as well as the rebellion that took place in Germany 2 years ago, is an added testimonial of the unbearable enslavement of all captive countries under the Kremlin.

Judging from the propaganda machinery of the Commist tyrants, we can easily imagine the actions of the Kremlin if similar uprisings took place in any of the democratic nations of the world. The Communists would indeed carry on an endless propaganda if these conditions existed in any country outside of the Iron Curtain. Our Government has already overlooked and failed to take advantage of numerous opportunities to expose Soviet operation, enslavement, and tyranny over captive countries. One outstanding example was the failure of the State Department to allow the evidence and findings of the congressional Katyn Forest Massacre Committee to be sent to the United Nations. Another mistake was the opposition of the State Department to the sending of the findings and reports in the 83rd Congress of the Committee Investigating Communist Aggression. If we are to gain the confidence of the people of the world who love freedom, we must expose the truth about communism.

I believe that it is the duty of the State Department to immediately submit to our representatives in the United Nations, a demand for a complete and exhaustive investigation of the Poznan uprising, conditions and economic enslavement of the Polish people. History reveals that when tyranny and slavery exist in any part of the world, it is a threat to freedom everywhere.

Sincerely yours,

RAY J. MADDEN,
Member of Congress.

Hundred Billions and What Do We Get?

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, July 2, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Hundred Billions and What Do We Get?" which appeared in the June 27 issue of the Messenger, of Madisonville, Ky.

The editorial is as follows:

HUNDRED BILLIONS AND WHAT DO WE GET?
